FOREWORD

In this, the first issue of *THE AMERICANA ANNUAL*, it is important to state clearly its organization, scope and fundamental purposes. Arranged alphabetically, after the manner of the ordinary works of reference, it is intended to be a concise and independent encyclopedia of current events for the use of editors, educators, librarians executives, and, in fact, for everyone who would keep abreast of world progress, who wants to know the real significance of the events of the past year and who desires a ready source of dependable information on recent developments of lasting importance. Used with an encyclopedia for the historic background, it brings such a work fully down to date.

In dealing with a multitude of subjects the *ANNUAL* aims at comprehensiveness rather than highly specialized treatments, intelligible only to the expert. In the period covered by it aeronautics, art, medicine and surgery, wireless telephony, and almost every branch of science and industry have made enormous strides. These advances have been faithfully chronicled.

Among the outstanding features of this issue — to mention only a few — are the articles dealing with Agriculture in the United States, Anthropology, Archaeology, Architecture, Astronomy, Cancer and Its Control, Chemistry, Co-operative Movement, European Debts and America's settlement with Great Britain, Hydroelectric Development, Horticulture, International Peace and Arbitration, Medicine and Surgery, Merchant Marine of the United States, Meteorology, Progress in Education, National Debts of the World, events in the Near East, Painting and Sculpture, Physics, Radio Telephony and Telegraphy, the Reparations question, the Washington, Lausanne and other conferences, and World International Trade. The articles on the various countries and States show the progress of each in agriculture, industry, commerce, politics, government, sociology, finance, etc., while, as regards the United States, Canada and Mexico there are comprehensive reviews of all the activities of these nations. The great resources of the world — petroleum, cotton, iron, copper, sugar, etc., will be found adequately treated from the American and international viewpoints.

Over one hundred contributors co-operated in the preparation of the *ANNUAL* and to each the Editor desires to make appreciative acknowledgment. He desires also to express his thanks to the university and college presidents, and the many public officials — Federal and State — who courteously furnished statistical and other data.

A. H. McDaniel

PUBLISHER'S NOTE

In the building of *THE AMERICANA ANNUAL*, its projectors had but one thought in mind — to make it the best yearly encyclopedic survey published of the world's activities and progress.

It is hoped it will be found a worthy companion volume to its parent publication, *The Encyclopedia Americana*. The *ANNUAL* itself furnishes the best testimonial of its merits. Its publication places before the American people in permanent form a really up-to-date, authoritative and comprehensive record of recent events.

The painstaking efforts of Mr. A. H. McDannald, the Editor, and his staff have made the creation of the work possible; but we desire also to express our appreciation of the enthusiastic co-operation and support accorded him by contributors, public officials, secretaries of national organizations and others.

THE AMERICANA ANNUAL

A

ABBOTT, Lyman, American clergyman, editor and author: b. Roxbury, Mass., 18 Dec. 1835; d. New York City, 22 Oct. 1922. His father was Jacob Abbott, founder of the Eliot Church in Roxbury and author of the famous 'Rollo Books.' The younger Abbott was graduated from New York University with the degree of A.B. in 1853, thereafter studied law and was admitted to the New York Bar in 1856. Quitting the legal profession, he studied theology and was ordained to the Congregational ministry in 1860. His first charge was at Terre Haute, Ind., where he remained five years. He then came to New York and was pastor of The New England Church from 1865-69 when he temporarily abandoned the pulpit in order to devote his time to literary work. He returned to the ministry in 1888 when he accepted a call to the pastorate of Plymouth Church, Brooklyn, as successor to Henry Ward Beecher. This charge he held until 1899 when he retired in order to devote his entire time to literary pursuits. He entered the literary field as editor of the "Literary Record" of *Harper's Magazine*. He was editor also, for some time, of *The Illustrated Christian Weekly* and later became associate editor with Henry Ward Beecher of *The Christian Union*, afterward *The Outlook*, of which he was editor-in-chief from 1893 until his death. From 1865-68 he served as secretary of the American Union Commission (Freedmans). The degree of D.D. was conferred upon him by New York University in 1876, by Harvard in 1890 and by Yale in 1903. The degree of LL.D. was conferred upon him by Western Reserve University in 1900 and by Amherst College in 1908. Miami University conferred the degree of L.H.D. upon him in 1909. In 1857 Doctor Abbott married Miss Abby Frances Hamlin. She died in 1907. Six children survived him, Lawrence F. and Ernest H., who are connected with *The Outlook*; Mrs. Francis (Harriet F.) Jordan of Brooklyn, Herbert V., a professor in Smith College; Theodore J., a practicing physician in New York, and Miss Beatrice V., who lived with her father. France decorated Doctor Abbott with the insignia of the Legion of Honor in recognition of his services to that country and the Allies. The following is a list of Doctor Abbott's published works: 'Jesus of Nazareth'; 'Old Testament Shadows of New Testament Truth'; 'A Layman's Story'; 'How to Study the Bible'; 'Illustrated Commentary on the New Testament' (1875);

'Dictionary of Religious Knowledge,' in collaboration with T. J. Conant, (1876); 'A Study in Human Nature' (1885); 'In Aid of Faith' (1891); 'Life of Christ' (1894); 'Evolution of Christianity' (1896); 'The Theology of an Evolutionist' (1897); 'Christianity and Social Problems' (1897); 'Life and Letters of Paul' (1898); 'The Life That Really Is' (1899); 'Problems of Life' (1900); 'Life and Literature of the Ancient Hebrews' (1900); 'The Rights of Man' (1901); 'Henry Ward Beecher' (1903); 'The Other Room' (1904); 'The Great Companion' (1904); 'Christian Ministry' (1905); 'Personality of God' (1905); 'Industrial Problems' (1905); 'The Home Builder' (1908); 'The Temple' (1909); 'The Spirit of Democracy' (1910); 'My Four Anchors' (1911); 'America in the Making' (1911); 'Letters to Unknown Friends' (1913); 'Reminiscences' (1915); 'The Twentieth Century Crusade' (1918); 'What Christianity Means to Me' (1921); 'Silhouettes of My Contemporaries' (1921).

ABILENE CHRISTIAN COLLEGE, a coeducational institution, under the auspices of the Church of Christ, founded in 1906 and located at Abilene, Texas. In 1922-23 it had a faculty of 35 members, 728 students, property valued at \$350,000 and an income of \$10,000. Jesse P. Sewell is president.

ABORTION DISEASE. See VETERINARY MEDICINE AND SURGERY.

ABYSSINIA, known to the ancients as Ethiopia, an empire of north Africa, lying to the south of the Italian colony of Eritrea and north of British East Africa and Italian Somaliland, and having an area of 350,000 square miles and a population of 8,000,000. The reigning sovereign is the Empress Waizeru Zauditu, daughter of the late Emperor Menelik. She was crowned at the capital, Addis Abbaba, on 11 Feb. 1917. At the same time Ras Taffari was proclaimed heir to the throne. Feudal ideas pervade the administration and the political institutions of the country. Slavery is a recognized institution.

There is a standing army of 100,000 men approximately and a state militia of about 200,000 men. Both organizations are poorly equipped from a modern point of view.

The population is largely of Semitic origin. The ruling class are the Shoans who number about 1,500,000 and are Christians. Other race groups are the Gallas and the Danakil, both

Moslems, the Tigrians also of Semitic descent and the former ruling caste, and the Falashas who are of the Jewish faith. There are also some negroes, Armenians, Greeks and a few Europeans.

The Abyssinians are members of the Alexandrian Church from their conversion in the fourth century to Christianity. The chief bishop is always a Copt and is appointed and consecrated by the Coptic Patriarch of Alexandria. There are at present about 100,000 ecclesiastics who are governed chiefly by a native dignitary called the Echehgeh.

While education of all male children over the age of 12 was enjoined by an edict of 1907 it has never been enforced and remains a dead letter. There are a few schools but the attendance is very irregular as there is a popular prejudice against schools. The legal system is theoretically based on the Justinian Code but in practice justice is administered by the provincial governors and by petty chiefs with the right of appeal to the Emperor. Foreigners are tried by a mixed court or by their own consular courts.

Agriculture.—This industry is in a backward state. Cotton, sugar cane, dates, coffee and grapes are the chief crops. There are great numbers of cattle, sheep and goats. Horses and mules are raised everywhere for pack animals. Barley, millet, wheat and tobacco are grown in small quantities.

Industry.—The manufacturing industries are not well developed. Iron is found in considerable quantities and is made into articles of common use, such as hatchets, knives, etc. Coal, silver, copper and sulphur have been found in small quantities. Rubber and good lumber abound in some of the forest regions but await development.

Commerce.—Most of the commerce of the country is carried over the line of the Franco-Ethiopian Railway Company, extended to the capital in 1917. This road runs to Jibuti in French Somaliland from the capital and has a total length of 495 miles. The exports consist mainly of hides, coffee, ivory, and butter. Cotton goods, sugar, oil, and foodstuffs are the chief items on the import list. These articles come from France, Italy, England and the United States.

There are over 1,000 miles of telegraph line connecting the chief populous centres and linking up with the French colony of Somaliland. There are also telephone lines between the larger centres—cities they cannot be called in the western sense. The Menelik dollar is the standard coin of the country. It is worth about 50 cents in terms of the currency of the United States. It weighs slightly over 28 grammes and is .835 fine. The coin most in circulation is the Maria Theresa dollar of the same nominal value as the Menelik dollar.

The metric system of weights and measures is in use on the frontiers and generally in the export and import trade. In the interior a native system of weights and measures prevails.

ACADEMY, French, (L'Académie Française), the first and most important of the five academies of the Institut de France, founded in 1630 by Cardinal Richelieu, abolished by the Revolution, but restored in 1795 and reorgan-

ized in 1816. It consists of 40 regular members, who are often referred to as "the Forty Immortals." There are in addition 10 members-at-large, and from these the regular members fill vacancies. There are also foreign and corresponding members of the Academy. The "Immortals" at the end of 1922 were, with the year of their election, as follows: Le Comte d'Haussonville (1888), Charles Louis de Saulses de Freycinet (1890), Louis Marie Julien Viaud ("Pierre Loti," 1891), Paul Bourget (1894), H. G. Anatole Francois Thibault ("Anatole France," 1896), Gabriel Hanotaux (1897), Henri Emile Lavedan (1898), Frederic Masson (1903), Rene Bazin (1903), Alexandre Ribot (died January 1923; elected 1906), Maurice Barres (1906), Maurice Donnay (1907), Jean Richepin (1908), Raymond Poincare (1909), Eugene Brieux (1909), Rene Doumic (1909), Marcel Prevost (1909), Henri de Regnier (1911), Marshal Lyautey (1912), Pierre de la Gorce (1914), Henri Bergson (1914), Marshal Joffre (1918), Louis Barthou (1918), Rene M. A. Tardiveau ("Rene Boylesve," 1918), Francois de Curel (1918), Alfred Baudrillard (1918), Marshal Foch (1918), Georges Clemenceau (1918), Jules Cambon (1918), Henry Bordeaux (1919), Robert de Flers (1920), Joseph Bedier (1920), Louis Chevrillon (1920), Pierre de Nolhac (1922), Georges Goyau (1922).

ACADEMY OF SCIENCES, National.

By act of Congress, approved by President Lincoln on 3 March 1863, 50 eminent American scientists of the period were selected to form a body corporate under the name of the National Academy of Sciences. It was further provided that "the Academy shall, whenever called upon by any department of the Government, investigate, examine, experiment, and report upon any subject of science or art, the actual expense of such investigations, examinations, experiments, and reports to be paid from appropriations which may be made for the purpose, but the Academy shall receive no compensation whatever for any services to the Government of the United States."

The membership of the Academy is limited to 250 active members and 50 foreign associates. The members are elected in recognition of eminent contributions to science, upon nominations from the sections of the Academy. At the annual meeting of 1922, the following were elected:

Sections		Members Elected
Mathematics	..	Luther Pfahler Eisenhart
Astronomy	William Hammond Wright
Physics	George Kimball Burgess
Engineering	... Herbert Hoover, Ambrose Swasey	
Geology	Edward Wilber Berry, George Perkins Merrill
Chemistry	George Augustus Hulett
Botany	No elections
Zoology	Charles Rupert Stockard, Charles Atwood Kofoid
Physiology	...	Rufus Cole, Joseph Erlanger
Anthropology	..	Carl Emil Seashore

Albert Einstein was elected a foreign associate.

There are now 205 active members and 35 foreign associates.

As a means of stimulating scientific activity, medals and prizes are conferred at Academy dinners for distinguished contributions to science, and grants in aid of researches are made from the income from trust funds administered by the Academy. The medals awarded during 1922 are as follows:

The Henry Draper Medal, for eminent contributions to astronomical science, to Henry Norris Russell.

The J. Lawrence Smith Medal, for important investigations of meteoric bodies, to George Perkins Merrill.

The Daniel Giraud Elliot Medal and Honorarium, to Othenio Abel, in recognition of his work, 'Methoden der paläobiologischen Forschung.'

Full accounts of grants in aid of research are published in the 'Annual Reports' of the Academy.

At the request of the President of the United States in 1916, the Academy undertook the organization of research for the solution of military problems. The committee appointed by the president of the Academy for the supervision of this work was designated as the National Research Council (q.v.). So effective was the work accomplished by this committee during the war that, by executive order of the President of the United States, dated 11 May 1918, the National Academy of Sciences was requested to perpetuate the National Research Council.

The publications of the Academy include its 'Annual Reports,' the monthly issues of its *Proceedings*, and its occasionally published *Memoirs*. The Research Council issues a *Bulletin* and a *Reprint and Circular Series*.

A building for the National Academy of Sciences and the National Research Council, facing the Lincoln Memorial in Potomac Park, Washington, D. C., is now in process of erection. The building will be of marble with a frontage of 260 feet, a depth of 140 feet, and a height of 60 feet from the first floor. It will contain the offices and library of the National Academy of Sciences and National Research Council, an auditorium for the annual meeting and other sessions of the Academy, and halls for the exhibition of latest contributions to world knowledge. It will be the national home of science in America.

There are two meetings of the Academy held each year, the annual meeting in Washington, and the autumn meeting at such place as may be selected by the Academy. The autumn meeting for 1922 was held in New York City, 14, 15 and 16 November, the sessions for the three days respectively being at Columbia University, the Rockefeller Institute for Medical Research, and the United Engineering Societies Building.

The principal officers of the Academy are:

President, Charles D. Walcott, Smithsonian Institution, Washington, D. C.; vice-president, A. A. Michelson, the University of Chicago, Chicago, Ill.; foreign secretary, R. A. Millikan, Pasadena, Cal.; home secretary, Charles G. Abbot, Smithsonian Institution, Washington, D. C.; treasurer, F. L. Ransome, National Research Council, Washington, D. C.

CHARLES G. ABBOT,
Home Secretary.

ACCIDENTS. A wide divergence marked the estimates of the number of deaths from accidents in the United States during the year 1922. The lowest estimate placed the number of deaths at 75,000 and the highest estimate gives the number at 95,000. An even greater divergence is noticeable in the estimates as to the total number of injuries from accidents during the same year, the latter varying from 2,000,000 to 10,000,000. The reasons for this divergence are many. The Census Bureau covers merely the registration area of the United States and thereby many States are excluded from its tables. Even in the registration area the figures are open to question since in many cases the attending physicians give the final cause of death in the death certificate and make no mention of the contributory cause. The statistics of the casualty and insurance companies are defective for the same reason. Industrial accidents and deaths come nearer the truth owing to the fact that the figures are more carefully compiled by the compensation boards and industrial firms but their figures necessarily exclude all classes of accidents other than industrial. Illiteracy as a cause of industrial accidents has received great attention of late years. It is estimated that one-half of the accidents in factories is due to ignorance of the English language. The United States Department of Labor also proved in a recent survey that the rate of accidents in the iron and steel industry was higher among the non-English speaking operatives than among those who have a knowledge of English. In the mining industries the Director of the United States Bureau of Mines is authority for the statement that non-English speaking foreigners suffer twice the fatalities that the English speaking miners do.

Accidents in all branches of the mineral industry of the United States, including coal mines, metal mines, quarries, coke ovens and metallurgical plants except iron blast furnaces resulted in the deaths of 2,367 men in 1921. The figures for 1922 are estimated to be less than these because of the stoppage of the coal mines for several months beginning 1 April. Non-fatal injuries at coal mines are not reported to the Bureau of Mines; for all other mines, quarries, etc., the number of employees injured was 35,416 in 1921 as against 56,057 in 1920. The relatively great importance of public accidents as a factor in accident mortality has been signally demonstrated by statistics from several sources. An analysis of fatalities through accident in the United States for a single week showed that, of 1,208 accidental deaths, no fewer than 758, or 62.7 per cent, were caused by public accidents; 359, or 29.7 per cent, were the result of industrial accidents; and the remaining 91, or 7.6 per cent, were the result of home accidents. These data were gathered by the National Safety Council with the co-operation of 200 city and county coroners; the secretaries of 35 local safety councils, and 8,000 representatives of the Council's member companies.

A consideration of the causes of accidental deaths for the entire United States for a recent year showed the leading causes were falls, automobiles, burns, railways and drowning. Of these, burns result largely from home accidents; falls are more equally divided among public, home and industrial accidents; but the three remaining causes—automobiles, railways

and drownings — are almost entirely public accidents. These facts are sufficient evidence of the enormous amount of intensive safety work that remains to be done in the field of public accidents. Efforts were made in several cities of the United States to educate the public in the prevention of accidents, and with noteworthy success in New York, Saint Louis and Detroit. A "Safety Week" campaign was inaugurated in New York to reduce that city's annual toll of accidental deaths. Detroit reduced by nearly 50 per cent the number of accidental deaths in one year, and Saint Louis by a campaign of education lessened the number of accidental deaths of school children by 60 per cent and Baltimore in the course of one "safety week" campaign wholly eliminated during that week deaths from traffic accidents, railroad crossing accidents and deaths of school children. The National Safety Council continued its program for safety instruction in the public schools of the country and in many educational systems instruction in the promotion of accident prevention was undertaken. Saint Louis was a pioneer in this field and was closely followed by Detroit. All agencies are agreed that the only way to effect changes in present-day conditions is through education. This is being carried on through the press, from the platform and in the schools. The effective means is through school education. This not only reaches the child and builds up in him the necessary controls during his plastic period of growth, but the intensity with which these experiences take hold of the child, brings the instruction into the home and reaches adults. Thus the school provides for a new and ever-increasing complexity of social life and civilization. For automobile accidents, see under AUTOMOBILE, and for mining accidents, see MINES, BUREAU OF.

The annual report of the inspector of factories and workshops for Great Britain for the year 1921 was issued late in 1922. During the year, 92,565 accidents were reported, of which 951 were fatal, as compared with 138,773, of which 1,404 were fatal in 1920. The decline was almost entirely due to the phenomenal inactivity of industry throughout the year, including the prolonged coal strike which resulted in many iron mills and blast furnaces being completely closed down for a long period. These industries were heavy accident producers.

The number of accidents due to electricity was 322, 32 being fatal — a reduction of 20 per cent in the total and of 50 per cent in the fatal cases compared with each of the previous two years. There were 230 cases of lead poisoning, of which 23 were fatal. In 1900, the number was 1,058, of which 38 were fatal. There were no cases of phosphorus or mercury poisoning, but one case of arsenic poisoning. The figures for anthrax were 25 cases, with six fatalities. This low figure is held to be partly due to the inauguration of the Government station for the disinfection of wool at Liverpool.

ACIDS — Nitric, Sulphuric and Mixed. According to statistics furnished by Federal Census Bureau there was a considerable decrease in the activities of the establishments engaged primarily in the manufacture of sulphuric, nitric and mixed acids during 1921 as compared with 1919, the preceding census year,

the total value of products reported for the first mentioned year being \$20,529,000 compared with \$31,470,000 in 1919, a decrease of 34.8 per cent. Of 35 establishments reported as engaged in the manufacture of these acids in 1921, five were located in New Jersey, five in Pennsylvania, four in Ohio, three in California, three in New York, two in Maryland, two in Virginia and one in each of the following States: Alabama, Arkansas, Colorado, Connecticut, Illinois, Kansas, Massachusetts, South Carolina, Tennessee, Texas and Utah. New Jersey was the leading State in the industry in 1921, having produced 27 per cent of the total value of the products of that year. The decrease in production was accompanied by corresponding decreases in salaries and wages, cost of materials, etc. The number of persons engaged in the industry in 1921 was 3,139, compared with 5,860 in 1919. Salaries and wages paid in 1921 amounted to \$5,243,000, compared with \$10,096,000 in 1919. Materials used in 1921 cost \$9,714,000, compared with \$15,857,000 in 1919. The acids referred to are produced to a considerable extent by establishments engaged primarily in the manufacture of other products — sulphuric acid by manufacturers of fertilizer, explosives, chemicals in general and petroleum refineries; nitric and mixed acids by manufacturers of explosives and chemicals in general. For this reason the figures given below are not to be taken as representing total production. The sulphuric acid produced by establishments engaged primarily in that industry totaled 1,457,500 tons valued at \$15,332,700 in 1921, compared with 1,685,300 tons valued at \$18,113,000 in 1919. This was approximately 50 per cent of the total production of all industries.

Nitric acid produced in 1921 by establishments engaged primarily in the manufacture thereof was 2,110 tons, valued at \$663,700, compared with 3,150 tons valued at \$536,700 in 1919.

Mixed acids produced in 1921 by establishments engaged primarily in the manufacture thereof totaled 16,400 tons valued at \$1,316,000, compared with 28,200 tons valued at \$2,671,500 in 1919. In each case tons of 2,000 pounds are meant.

Under date of 28 Aug. 1922 the Federal Census Bureau issued a report stating that the manufacturers of fertilizer producing sulphuric acid and acid phosphate had on hand 1 Jan. 1922, 129,610 net tons of sulphuric acid (basis of 50° Be') and that during the six months which ended 30 June 1922 they produced 560,351 tons, consumed in the manufacture of fertilizer 650,189 tons and had on hand on 30 June 1922 110,657 tons. Purchases of sulphuric acids during the six months' period referred to exceeded the sales, according to this report, by 70,885 tons. The same establishments reported that their stocks of acid phosphate on 1 Jan. 1922 amounted to 2,129,339 net tons, containing 32,818,093 units of available phosphoric acid, averaging 15.9 per cent. They further reported that there were manufactured during the first six months of 1922, 1,198,724 tons of acid phosphate, containing 20,144,992 units, averaging 16.8 per cent. During the same six months there were sold 1,053,437 tons of acid phosphate, while there were used in manufactured goods sold 1,031,240 tons, making the total of acid phosphates sold as such

or in manufactured goods 2,084,677 tons. It was stated that the data above given were compiled from reports made by 198 fertilizer establishments, of which 69 manufactured sulphuric acid. These establishments it was asserted represent practically all of the fertilizer industry in the country other than the dry mixing plants.

ACOUSTICS IN SEA-DEPTH MEASUREMENTS. See Physics.

ACTORS' EQUITY ASSOCIATION. **The.** An organization of stage and other performers founded at New York (affiliated with the American Federation of Labor) 26 May 1913. Its jurisdiction extends over dramatic and musical comedy productions, certain classes of tabloids, tent shows and carnivals. Its first president was Francis Wilson. Originally it had no connection with the American Federation of Labor. It was formed to correct certain longstanding abuses, such as prolonged rehearsals without pay, an unlimited number of performances without extra pay, dismissals without notice, probationary rehearsals often lasting eight and ten weeks at the end of which time the actor was dismissed without salary for the time so given, the custom of compelling actresses to supply expensive wardrobes, often of a kind which could not be used off stage and which were used for only a few weeks and possibly days owing to the short run of the play and similar abuses. Correction of these points the Actors' Equity incorporated in a contract which they attempted to have issued by the United Managers' Protective Association. This they were unsuccessful in doing and, for greater strength, on 19 July 1919, the Actors' Equity Association affiliated with the American Federation of Labor. The Producing Managers' Association, an outgrowth of the United Managers' Protective Association, refused to recognize the Equity or to issue its contracts. On 7 Aug. 1919 the Actors' Equity Association called a strike on the Producing Managers' Association, closing every theatre in New York in which legitimate productions were made. The strike ended 6 Sept. 1919, the actors winning recognition of their association and a contract which limited free rehearsals to four weeks with dramatic productions, five with musical, extra pay for all over eight performances in a week, probationary rehearsals for ten days only, the actor to receive two weeks' salary if dismissed after this time; pay for layoffs, a week's notice of the closing of a play, a two-weeks' individual notice and a guarantee of at least two weeks' salary after the opening of the play. In September 1921 the Actors' Equity put into effect the Equity Shop ruling affecting all independent managers, that is those managers not belonging to the Producing Managers' Association. Equity Shop means that no member of the association will appear in any production which is not 100 per cent Equity. At the same time the association obligated itself to accept for membership any actor who applied, providing he had no affiliations detrimental to the association. Any independent manager is privileged to have a 100 per cent non-Equity company. The association gives legal aid free of charge. Much of its work has been that of relieving the condition of stranded companies and investi-

gating the finances of managers engaging companies. Equity members are assured of the financial standing of their employers during the early days of rehearsal. The association has also interested itself in certain legislation affecting the theatrical profession, such as securing sanitary theatres, etc. Its officers for the year 1921-22 were: President, John Emerson; Vice-President, Ethel Barrymore; Second Vice-President, Frank Bacon (deceased 1922); Executive Secretary, Frank Gillmore. With the exception of the executive secretary, who is appointed by the council, all other officers are elected. The governing body of the association is the council elected with the officers at annual meetings. It has 10,000 members in good standing, including motion picture actors. The main office is at 115 West 47th street, New York; there are branch offices in Chicago, Kansas City and Los Angeles. The Chorus Equity Association is a branch of the Actors' Equity, formed 19 Aug. 1919 during the strike. Its contract is similar to that of the Actors' Equity, with the exception of the fact that chorus people rehearse four weeks instead of five, they have a minimum salary, all costumes including shoes and stockings must be furnished as well as sleeping cars for traveling companies. Its membership consists of chorus people employed in the field over which the Actors' Equity has jurisdiction. Its president, vice-presidents and council are identical with that of the Actors' Equity. It has an executive committee elected from its own membership, a chairman of the executive committee who has a seat on the Actors' Equity Council and a recording secretary. Its executive secretary is appointed by the council. The executive secretary for the year 1921-22 was Dorothy Bryant. It has 2,000 members in good standing.

ADELPHI COLLEGE, a non-sectarian educational institution for women, founded in 1896 and located in Brooklyn, N. Y. Statistics for 1922-23 show a faculty of 25 members, 337 students, property valued at \$375,000 and an income of \$100,000. Frank D. Blodgett, A.M., LL.D., is president.

ADEN, a peninsula and town on the southwest coast of Arabia, about 105 miles east of the Strait of Bab-el-Mandeb, which has been a British possession since 1839. Included in the settlement are the island of Perim, at the entrance to the Red Sea; Little Aden, a peninsula not unlike Aden itself; the settlement and town of Shaikh Othman on the mainland, with the villages of Imad, Hiswa and Bir Jabir. The Kuria Muria islands, off the coast of Arabia, also are attached to Aden. The entire protectorate, which is subject to the Bombay Government, has an area of approximately 9,000 square miles. Aden, itself, has an area of 75 square miles; Perim, an area of five square miles. The population numbers 54,923. The chief imports are cotton textiles, grain, hides and skins, and tobacco, fruits and vegetables, coal, coffee and sugar. The value of all imports amounted to \$33,127,000 in 1920. The chief exports are coffee, gums, tobacco and foodstuffs generally, the value of which in 1920 aggregated \$29,765,000. The trade is largely a transshipment one, as Aden itself produces little. Its chief industries are

the manufacture of salt and cigarettes. Aden is of the greatest importance as a coaling station on the route to the Far East. It is strongly fortified. The government is administered by a Political Resident who is also Commander of the Troops. The Political Resident in 1922 was Major-General T. E. Scott.

ADRIAN COLLEGE, a Methodist Protestant co-educational institution incorporated in 1859 and located at Adrian, Mich. Statistics for 1922-23 show a faculty of 16 members, 175 students, property valued at \$400,000 and an income of \$60,000. Harlan Luther Feeman, M.S., D.D., is president.

ADVENTISTS. See CHURCHES IN THE UNITED STATES, STATISTICS OF THE.

ADVERTISING. It is a common view that advertising is a barometer of industry in general, and that it goes up and down with the volume of trade. It is now carried on upon so large scale as to be properly classed as itself an industry, but the record of the last few years has upset some preconceived notions as to its value as a measure of prosperity. Both newspapers and magazines received large advertising patronage during the war. Paper being scarce, publishers had all they could do to get enough to carry their advertising pages. But singularly enough after the war was ended, and the most ordinary foresight indicated reduced business all around, advertising increased in quantity, and prices stiffened rather than lowered. The newspapers and magazines of the United States carried 25 to 50 per cent more advertising in 1920 than in 1919. This surprising condition was attributed to two causes: (1) Dealers were generally overstocked and extremely anxious to dispose of their goods before the prices went lower, as they felt was the trend; (2) profit taxes were very high, and many concerns deemed it best to put much of their profits back into advertising, rather than to register them and pay tax on them. The next year's advertising record (1921) showed more surprises; newspaper advertising nearly held its own—in some instances gained; magazine advertising fell off more than a third, and 20 to 25 per cent below 1919. In 1922 newspaper advertising still held most of the gain scored in 1920, and magazine advertising recovered much of the ground lost. Advertising may be said to be again normal; but it appears that it has not followed, much less led, the course of the average business industry. The figures are full of interest to those engaged in advertising.

The following table shows the number of lines of advertising carried by leading American newspapers and magazines during the month of July in the four years 1919-22:

	1919	1920	1921	1922
109 leading newspapers totaled.....	52,000,000	77,000,000	85,000,000	76,000,000
Five leading magazines.....	145,000	173,000	118,000	122,000
Five women's magazines.....	220,000	296,000	163,000	186,000
Five class magazines.....	186,000	226,000	109,000	151,000
Five popular weeklies (four issues).....	487,000	577,000	372,000	363,000

July was selected as a dull month, showing the best averages. But the table fails to illustrate the truth in one instance. The newspapers did not score a gain through the year of 1921, but showed a slight loss, about 9 per cent as against the preceding year. The possibilities of advertising, even in hard times, are illustrated by one large advertiser, who used 992 newspapers in 1922, as against 112 the previous year, and who mailed 30,000 large colored window posters to dealers.

According to an advertising survey issued by the Curtis Publishing Company in September 1922 advertisers spent \$95,439,236 in 1921 in 72 monthly and weekly magazines, women's publications and farm journals. The same publications in 1920 had an advertising income of \$132,414,799; in 1919 it was \$97,208,791; in 1918 it was \$61,312,888; in 1917, in 77 publications, some of which have been merged with members of the present list, the advertising expenditures totaled \$57,793,628; in the same number in 1916 they were \$51,867,803; in 1915, in 76 publications, they were \$38,737,336.

Publications are listed below in the order of their total income for 1921:

already outgrown romance and was recognized as a practical art. Great national organizations such as the Chamber of Commerce of the United States, American Bar Association, Society of Automotive Engineers, American Society of Mechanical Engineers and others, co-operated with groups including the Department of Commerce, National Advisory Committee for Aeronautics, National Aircraft Underwriters Association, Aero Club of America, the Aeronautical Chamber of Commerce and the Manufacturers Aircraft Association in impressing upon the country the need for developing aviation as a means of transport and for the national defense. In this work, they had the whole-hearted support of the federal, military and naval branches.

"The National Advisory Committee for Aeronautics realized that, before definite improvement in aircraft could be made, accurate information on existing planes should be obtained. Accordingly, during the year remarkable instruments were perfected which register fully airplane tests, without depending on the pilot's individual opinion concerning performance qualities of a new machine.

"Aerial photography has become important and practical by means of special Fairchild and Eastman equipment developed during the year. Radio communication has progressed rapidly under the experiments of the Federal bureaus and the Radio Corporation of America.

"Large and powerful motors such as the Packard and Wright with 600 horsepower, the Aeromarine U-8-73, which passed a 300-hour test, the Curtiss D-12, which clinched its claim to fame as a pursuit engine, when the planes it powered won first, second, third and fourth places in the Pulitzer Trophy Race were among the year's developments. Then there is the Lawrence radial, air-cooled motor, winner of the Curtiss Marine Trophy race at Detroit in October, a performance which established it as one of the most successful of its type on earth.

"The United States Air Mail has continued its wonderful demonstration of practical flying. Its actual operations have been confined to the transcontinental route between New York and San Francisco. Mail planes in July had completed their fourth year of flying operations, traversing 1,750,000 miles in 12 months without a fatality and carrying 49,000,000 letters. Several new planes were developed for mail carrying service. One of the many improvements is the Aeromarine wing, which adds hundreds of pounds to the carrying capacity of a mail plane. Another new wing which increased the performance of certain types of planes was developed by Lawrence Sperry who also perfected a device by which he successfully dropped the entire undercarriage of his plane, wheels and all, after taking off. He then landed on a skid, which so reduced his landing speed that he was able to alight in very small spaces. Many other devices were created to make the airplane easier and safer to operate, among them the lateral 'pressure equalizer' which Grover Loening installed on his monoplane flying yachts. The development of the reversible propeller, the supercharger and the Gallaudet geared propeller mechanisms is being carried on in the United States at various laboratories and factories. The world's altitude record (34,509 feet) made by Lieut. J. A. Ma-

cready 28 Sept. 11, and which was made possible by the supercharger developed by the Army Air Service at Mook Field, has not been surpassed. Parachutists known as aerial life preservers, have become dependable. While many civilians have contributed much to parachute development, the 19 jumps have been made by army aviators. Lt. June Capt. A. W. Stevens broke the official record by dropping 24,206 feet over McCook Field.

"On 17 April, (Efford Webster in a Loening air yacht flew with a passenger from Palm Beach, Fla., to New York between daylight and dark. His flying time was 9 hours and 56 minutes for the 1,220 miles which he covered with one stop for fuel. Another world's record was made by army pilots in September when Lieuts. Oakley Kelly and J. A. Mearns flew 2,060 miles between San Diego, Calif., and Indianapolis, Ind., without stopping. A few days previously they had made another record duration flight remaining in the air 35 hours, 18 minutes and 30 seconds, in the same plane, an Army-Fokker T-2 monoplane with liberty motor.

"The United States Naval Bureau of Aeronautics operated with the fleet and also along the coast. Naval aviators mapped and surveyed the coastline. The rapping of the Mississippi delta, completed during the year, is a notable instance of the valuable peacetime work rendered by the services, as is the forest fire patrol maintained by the Army Air Service. Eighty-seven planes equipped with radio operated over the national forests on the Pacific Coast, saving millions of dollars worth of standing timber because the aerial observers could detect, locate and report small fires before they got beyond control. Naval aviation reached a high degree of efficiency in defensive work. In September naval torpedo planes operating off the Virginia capes demonstrated the practicability of torpedo attack from the air. The number of hits scored against surface craft was a success. In August, Flying Plane No. 1, at San Diego, made an enviable record with machine guns in aerial combat. The squadron attained a maximum of 145 hits in 27 seconds.

"The lighter-than-air program has been continued with all the command of the army and navy. The rigid airship ZR-1 is now being completed. The giant hangar at Lakehurst, N. J., at the other end of the ZR-3, is being built for the new Zeppelin plant in Germany as part of the Zeppelin award. The Goodyear Tire and Rubber Company at Akron, Ohio, is building a rigid airship 300 feet long for the Army.

"The experimental rigid airship Langley was commissioned early in August. Two other ships, the Lexington and the aircraft carrier fleet. The catapault for launching the decks of battleships has been placed on all ships, which will be placed on one plane ready for instant service. The sea of ship planes is not confined to the craft, but even submarines are seen to sea with a plane aboard.

"The Army, Navy and Marine are developing aerial beacons with the aid of the American Gas Accumulator Co. The Gen-

AERONAUTICS

eral Electric Company and other manufacturers. The Navy has installed an AGA beacon at Hampton Roads, the Army a similar type at McCook Field where night flying is the rule instead of an exception. The Air Mail is perfecting its night-flying equipment between Chicago and Cheyenne, so that when in operation contiguous flying mail service will be possible from coast to coast.

"The Army Air Service has patrolled the Mexican border daily. Regular routes have been established throughout the country, principally between all military posts, and practically all official travel is done by plane. The Army airship C-2 made a fine cross-country flight between Langley Field, Va., and Ross Field, Calif., in a successful test to demonstrate the possibilities of airship navigation from coast to coast. Many other long flights have been made by Army fliers. Lieut. James H. Doolittle on 5 September made a one-stop flight from Jacksonville, Fla., to Coronado, Calif., 2,275 miles in 21 hours and 19 minutes.

"The Aeronautical Chamber of Commerce of America was organized last January. During the year it more than doubled its membership, showing the growth of the industry among manufacturers and operators.

"American aviation, meanwhile has attracted the interest of the people. At the First National Air Institute in Detroit in October, papers were read by representative leaders in finance, business, industry, law, insurance and the aviation industry. Their views coincided in that they endeavored to show the vast influence aviation must have in everyday affairs. At the Second National Aero Congress, following the institute, the National Aeronautic Association was organized. Its membership propose to help 'make America first in the Air.' The Association is not industrial, nor does it represent any particular group, but is representative of all citizens who are determined to foster aviation as a vitally important arm of the national defense."

Commercial Aviation.—In Europe, in addition to the numerous short airway routes, as that between Paris and London, there are now established the following long distance routes: 1. London, Amsterdam, Bremen, Hamburg, Copenhagen; 2. London, Amsterdam, Bremen, Hamburg, Copenhagen and Berlin; 3. London, Brussels, Dortmund, Berlin; 4. London, Paris, Lyons, Geneva; 5. London, Paris, Lyons, Marseilles; 6. Amsterdam, Brussels, Geneva; 7. Paris, Strasbourg, Prague, Warsaw, Vienna, Budapest, Bucharest, Constantinople; 8. London-Cologne; 9. Manchester, London, Moscow; 10. Danzig, Warsaw, Lemberg; 11. Paris-Amsterdam; 12. Prague, Strasbourg; 13. Königsberg, Moscow, this last making railway connection with other lines at Berlin. Brazil has one regular route between Rio Janiero and Porto Allegre.

During 1922 there were in the United States over 150 landing fields, and over 25 companies operating some 1,400 planes, and carrying passengers for pleasure flights. A fine illustration of one of these is the Menrosa seaplane, whose hangar is at Keyport, N. J. It has 104-foot wing spread, and is driven by two 400 horsepower Liberty engines. Passengers, sometimes to the

total of 27, are carried to 87th Street landing, New York. The Aeromarine Airways on 9 May 1922, landed a party of 12 in New York, from the seaplane *Santa Maria*, from Havana, in 17 hours, 35 minutes, with seven landings. They saved 40 hours, as compared with the rail trip. Commercial companies in the United States made 130,736 flights in 1921, covering 2,907,245 miles and carrying 122,512 passengers. In that year there were in all only 24 accidents, of which three were due to "stunt" flying, two to carelessness on the field and one to storm.

In its annual report of commercial flying filed with the Bureau of Aeronautics of the Navy, Aeromarine Airways, Inc., announced that it had carried 9,167 passengers during the year ended 1 Nov. 1922, and that it carried more than 20,000 passengers on its three divisions in the past two years without an accident.

At the Great Lakes division, where a daily service was maintained between Cleveland and Detroit, 412,854 passenger miles were flown in 574 flights and 4,388 passengers were carried. In 744 flights 2,399 passengers were carried by the Key West-Havana, Miami-Bimini and Nassau-Palm Beach division. Special flights also were made from New York to Florida during the year.

The New York division, which includes service from this city to Atlantic City, New England and sightseeing around Manhattan Island, also made a good showing. In 807 flights, during which 57,658 miles were flown, 2,380 passengers were carried.

The company announced that in January 1923 it would establish a line between San Juan and Kingston, Jamaica, connecting with Key West and Havana.

Statistics presented in the following table reveal the extent to which commercial aeronautics has developed in France:

OPERATIONS OF FRENCH AERIAL COMPANIES IN 1919, 1920 AND 1921

Items	1919	1920	1921
Number of voyages made.....	988	2,368	6,221
Number of kilometers covered.....	265,784	853,959	2,350,705
Number of passengers transported.....	588	1,721	10,336
Merchandise and baggage transported, kilos.....	6,966	48,100	166,490
Mail transported, kilos.....	397	3,925	9,481

In number of voyages, in distance covered, in passengers, freight and mail carried there has been a very large increase. Mere growth, however, does not in this case necessarily indicate healthy expansion of the industry as a business enterprise. As is well known these companies are heavily subsidized out of public funds. Whether or not—or if so, how soon—these concerns can operate upon a self-sustaining basis is by no means clear. The Royal Dutch Aerial Navigation Company also made progress. During the seven months ended 15 Nov. 1921, the lines from Amsterdam to London and from Rotterdam to Hamburg transported 632 passengers, 27,000 kilograms of goods and 1,200 kilograms of letters. In the same period of 1922, 864 passengers, 55,000 kilograms of goods and 8,000 kilograms of letters were moved, besides 2,000 kilograms of parcels.

The company intends to start a service from Amsterdam to Paris in 1923 with the latest Fokker type of airplane, carrying eight passengers and wireless installation.

One million kilometers (621,370 miles) of flying with passengers, freight, and mail were completed by the Royal Netherlands Aeroplane Company, on 22 July 1922. They report that not a single accident had occurred. This company has a daily service between Amsterdam and Paris and a twice-a-day service between Amsterdam and London. The distance over each of these routes is approximately 300 miles.

In April 1922, the British Air Ministry reported that England's air traffic had decreased. Fewer passengers and less tonnage were carried than in the two preceding summers.

From May to September, 1919, 58,132 passenger and 20.2 tons of freight were carried; from October, 1919, to March, 1920, 9,808 passengers and 25.8 tons of freight; from April to September, 1920, 32,345 passengers and 86.5 tons of freight; from October, 1920 to March, 1921, 10,103 passengers and 38 tons of freight; from October, 1920, to March, 1921, 31,853 passengers and 9 tons of freight.

During the summer of 1921 passenger traffic reached its height in August, when 9,609 persons were carried; of these, 2,021 were cross-Channel passengers, mainly residents of Great Britain and France.

Subsidies amounting to £200,000 per year, were being paid by the British government to provide a regular air service between London and Paris, will be continued for some months. A permanent scheme of subsidies is contemplated, however; it is proposed that the government shall pay to certain approved British firms operating cross-Channel air service, with British machines and engines, a subsidy equal to 25 per cent of their gross earnings and that the Air Ministry shall provide a portion of their fleet on a hire-purchase basis at less than cost price.

Germany's commercial flying program for 1922 aimed especially to develop connections with Russia and the Baltic border states. Among the most striking changes in the 1922 program was the abandoning of the air lines, Berlin-Braunschweig-Dortmund and Bremen-Muenster-Dortmund, because of the small demand for the services they offered against railway competition. From a purely business standpoint, aviation companies considered the 10 toll marks per air-kilometer flown, paid by the government for mail-carrying flights in 1921, as inadequate without the added revenue from sufficient passenger carrying. Out of 4,781 air kilometers, included in Germany's 1922 air routes, 2,268 kilometers embraced routes connecting Hamburg and Berlin with the east—that is, via Stettin, Danzig, and Koenigsberg to Kovno, Riga, and Reval. The above total does not include the air lines connecting seaside resorts—namely, the Hamburg-Westerland and the Bremen-Norderney—as these lines are pre-eminently pleasure routes that are run only from 1 July to 15 September.

The important connection between Koenigsberg and Moscow, opened on 1 May 1922, is also excluded. This is operated by a newly founded company, the German-Russian Air Transportation Company, participated in by the Russian Soviet Government and by the German Aero Union Aktien Gesellschaft. The German Aero Union is promoted jointly by the Allgemeine

Elektricitäts Gesellschaft, the Hamburg America Lines, and the Zeppelinbau Corporation. Air connections between Berlin and Moscow are made twice a week. The duration of the flight between Koenigsberg and Moscow is about one-half day, whereas it requires four and one-half days to make the journey by rail.

The South African Airways Company, Ltd., whose capital is £200,000, was organized in 1922 to inaugurate commercial aviation in South Africa. The main route is from Cape Town to Johannesburg.

Construction.—The year 1922 saw immense improvement in the number and character of the instruments used in flight, and even the list is formidable. A plane for a long distance flight must now have an oxygen supply, electrically heated suits with dynamo, etc., for both pilot and mechanic, a set of navigating instruments, a radio outfit, a thermometer, tachometer, pressure-gauge, gasoline gauge, flow meter, stabilizer, inclinometer, banking indicator, altimeter, barograph, statoscope, rate-of-climb indicator, air-speed and ground-speed indicators, and various minor aerographic instruments.

These instruments may be divided into three broad classes:—(1) Engine instruments, (2) Performance instruments, and (3) Navigation instruments.

The engine instruments, which should preferably be situated in the same part of the dashboard, comprise the revolution indicator, oil (and air) pressure gauges, gasoline depth gauges (for indicating the quantity of gasoline in each tank), radiator thermometer, and in some cases an outside air temperature thermometer. The instruments employed for performance indication comprise the air-speed indicator, the altimeter, the bubble, and the rate-of-climb meter. Navigation instruments employed by the pilot include the compass, gyroscopic turn indicator, watch, and occasionally a drift indicator of the negative lens (in the floor) or wire grid type.

The observer's instruments vary according to the type of machine and the object of the flight. They may be wireless, photographic, bombing, or navigation instruments, and it is therefore not possible to specify any standard equipment.

The most notable progress in aircraft instruments has been in connection with the development of more accurate air-speed indicators, with external correctors for air density. Altimeters in which the lag is greatly reduced, and in which correction can be made for the departure of the temperature lapse rate from the isothermal one on which the calibration is based, are now replacing the earlier types.

Much progress is being made with gyroscopic turn indicators, in which the gyro wheel is driven by the relative air stream, electrically, or by means of a Venturi tube system. This type is superior in every respect to the static-head type which it has replaced. It is an invaluable instrument for flying in fog, in clouds, or at night, and for holding a straight course, in conjunction with the compass, for navigation purposes.

Marked progress has been made with compasses; the earlier quick-period types with their inherent oscillation and turning errors, are being

replaced by slower-period types and aperiodic forms. The result has been considerable improvement in course indicating and in the behaviour of the compass during turns.

Instruments for measuring the rate of ascent and descent of an aeroplane or airship are now becoming available. The rate of leakage of pressure from an aneroid box is the basic principle of a successful type.

An outstanding recent invention is steering by wireless. In a French experiment in September a 300 horsepower plane took the air without a pilot and was manoeuvred through a small set of ivory keys in a building on the field. The plane contained a wave receiver—automatic stabilizer and servo, which commanded at once the gas, spark and steering apparatus.

Under the fuselage is an apparatus to govern landing. This is in the form of a shaft at one end, which automatically detaches with the stopping of the motor. When this end touches the earth it throws the machine into vertical and brings it to a safe landing.

On 14 November the Army Air Service of the United States announced the development of a pilotless army plane, equipped with an automatic control device said to be more accurate and dependable than a human pilot, to a point where it had made successful flights of more than 90 miles. This American automatic "pilot" is capable of being mounted in any type aeroplane.

Air Service officials characterized the invention as "the dream of engineers and inventors the world over ever since the solution of heavier-than-air flight."

It was said the invention would lead to new methods of bombing, one official asserting it would be entirely practical to load a plane with explosives that would discharge on contact with any target on land or water with great destructive effect. Other military usages, it was predicted, would be discovered as the experiments continued.

Sailplanes or Gliders.—The development of the motorless plane or glider from planes capable of sustained flights of from one to three minutes to machines capable of remaining in the air over three hours was an outstanding aeronautical achievement of 1922, recalling the pioneer days of the science. In 1920 and 1921 gliding flights were made in Germany at the Wasserkuppe, and the lessons there learned were turned to good account in the third annual contest held at the same place in 1922. The world was first startled on learning that a student named Martens had remained in the air for one hour and six minutes, during which he sailed nine times over his starting point. A few days later another student, Hentzen, made a flight of two hours only to beat this record on 24 August by remaining in the air for three hours and ten minutes. French experiments at Clermond-Ferrand the same month produced no remarkable results. On 21 October at Firle, England, M. Maneyrolle, a French airman, kept a monoplane glider in the air for three hours and twenty-one minutes, thereby setting a new endurance record for motorless flight. Glenn H. Curtiss, famous American pioneer airman,

experimented with a marine glider in the waters of Manhasset Bay in September. No attempt was made to set a new record of endurance. M. Maneyrolle's record was broken 3 Jan. 1923 by the French military aviator Thoret who set a new world record for gliding by remaining in the air for seven hours and three minutes at Biskra, Algeria. The record-breaking flight was made with an aeroplane, the propeller of which had been wedged to prevent operation of the motor. On 31 Jan. 1923 a new world's gliding record was made by the French pilot Barbot, who remained in the air 8 hours, 36 minutes and 55 seconds.

Experimentation.—There are thousands of experts, engineers, aviators and inventors, at work perfecting and improving details of aeroplanes. Much is expected from the motorless sailplanes and gliders, the signal feats of which are noted in the preceding section. Some interesting experiments were made during the year with extensible wings. The extension at will of the wings is one means by which a plane capable of a speed of 200 or 250 miles an hour can maintain itself in the air at a speed of six to 10 miles an hour. The development of the pilotless plane has been already noted. The work of the early experimentors is being gone over with the greatest care and detail. For stationary experiments, wind-tunnels are used, in which models can be suspended, and the action of air-currents at known speeds can be measured on designs of all sorts. Models are sometimes hung upside down in a wind-tunnel to note the results. Gusts of wind are introduced, and their effect observed on models of differing proportions. The angle of propeller blades and their width have been the subject of much study, and it appears that for slow speed a wider blade with greater angle is necessary to increase the thrust. The point of greatest efficiency of a propeller is about two-thirds way from the hub and one-third from the tip. Being rigid and without a hinge they cannot accomplish all that is possible with a bird's wings. It is found necessary in practice to vary their proportions according to the power with which they are to be driven and the speeds that are expected of them.

To gain sustaining power, the helicopter has been tried, with little success, until recently, when E. Berliner produced a plane of this type, which was flown at College Park, Md., showing ability to rise vertically and then proceed horizontally. Whether this will prove a commercial success is still an unsolved problem.

Various efforts were made to develop the helicopter. A helicopter invented by a German named Hanschk was exploited in Holland in July. Allied restrictions preventing the inventor from operating in Germany. Marquis Pateras Pescara, an Argentine airman, succeeded in raising himself six feet in a helicopter of his own invention in a test held near Paris in March. The French war office purchased exclusive rights to the machine. Louis Brennan, inventor of the torpedo which bears his name and also of the gyroscope, gained fresh laurels on 5 June by completing experiments with a helicopter to meet the conditions laid down by the British Air Ministry for a machine of this type. Late in

January 1923 it was announced that a helicopter, built in Dayton, Ohio, by the Russian inventor, Dr. George de Bothezat, had been put through a satisfactory flight on 18 Dec. 1922 and later had made a second flight rising four feet with two passengers.

Engines.—Engines for airplanes have steadily developed in size, and there is a tendency to return to the simple types. A row of six cylinders in line on a crankshaft, as in an automobile, has some primary advantages over all the peculiar and freak type of cylinder arrangement that have characterized the principal engines of the war period. The striking Gnome, with its cylinders all in a circle, is not much used, though both French and German manufacturers have imitated it; the setting of cylinders at the angle of a V and a W seemed a great thing to permit the use of an increased number of cylinders, but when all is said and done, to go beyond six cylinders on a crankshaft means to warp the shaft and invite greater vibration; and while it may be that all of these types will persist to some degree, yet the greater number of new engines are clinging to the old design. Engine weights have been brought very low per horse-power, yet the lightest are not necessarily the best. Among a series of high-grade engines that were tested, it is noticeable that the Liberty weighed 2 to 2.45 pounds per horsepower, and the German Benz and Austro-Daimler considerably more. A Curtiss K6 showed only 1.81 pounds per horsepower and a Rolls-Royce 1.97, and another of same make 2.68. The diameter of engine cylinders is practically limited to 6 or 7 inches, owing to the difficulty of keeping larger sizes cool. A number of 400 horsepower engines have lately been produced, and some larger, but it seems likely that somewhat less horsepower will become standard practice, and that when more power is wanted, more engines will be used. Air-cooling has not many advocates, and water-cooling will undoubtedly characterize the engines of the future. Aluminum pistons have proved satisfactory, but steel is used for most parts. The typical airplane engine of today is of six cylinders in line, water-cooled, the main shaft carrying the propeller, and a vertical shaft driving the camshaft; at the lower end of the latter is the centrifugal water-pump, and the magneto adjoining is driven by helical gears.

A new type of aeroplane engine was developed in England during 1922. It is a six-cylinder crude-oil engine which develops about 1,000 horsepower and is no heavier than the types hitherto used in aviation and burning high-grade and costly fuel. Another engine type, also developed in England during the year consists of 16 cylinders arranged in four rows of four, in the form of the letter X. It is of 1,000 horsepower. Six of this type were ordered by the British government. The weight is about three pounds per horsepower. The shaft turns 1,800 revolutions a minute.

In America the Navy Department announced important changes in the Liberty motor, which in actual use had not stood up as the perfect aircraft engine. Its many good qualities stimulated the effort to correct existing deficiencies rather than turn to a new design. To this end

the Bureau of Aeronautics tackled the problem and eliminated the defects.

PRINCIPAL AEROPLANE RACES OF 1922

Race	Pilot Winner	Plane	Motor	Time	Distance	Miles per hour	Date
Pulitzer Trophy	R. L. Maughan, U. S. A.	Curtiss H. S. Pursuit.	Curtiss 375 H. P.	H. M. S. 45.10.62	250 Km. (155.34 miles)	205.8	Detroit-12-14, Oct. 1922.
Liberty Riders' Trophy	T. J. Keating	La Fere Obs.	Liberty 400	2.00.10.74	257.74 miles	128.8	12 October 1922.
Detroit-Newell Aerial Mail	E. H. Nelson	Martin Tanager	Liberty 400	2.27.20.72	257.74 miles	103.	12 October 1922.
Wm. Mitchell Trophy	D. F. Stacey	Morse, M. B-3	Wright 300	50.25.73	200 Km., 124.274 miles	147.8	12-16 October, 1922.
On to Detroit Race	W. H. Beech	Laird Swallow	Curtiss OX-5-90	57.18. —	810 miles for 220 points	147.8	October, 1922.
Curtiss Marine Trophy	A. W. Gorton, U. S. N.	Navy T R-1	Lawrence J-1 H. P. 220	85.13.17	160	112.6	October, 1922
Detroit Country Club Trophy	H. R. Harris	Honey Moon Ex.	Liberty 440	1.54.40.35	257.74 miles	134.9	October, 1922.
Deutsch de la Meurthe Cup	Larne	Nieuport 1920-(Mod.)	Hispano 320	10.14.02	30 Km.		
Round Britain	P. L. Barnard	D. H. 46		20.41.8	300 Km.		Etampes, France, 30 Sept.
British Air Derby	J. H. James	Mars I Basuel	Napier-Lyon 450	41.27.2	200 Km.		9-10 Sept. Croydon-Glasgow and return.
				62.11.8	300 Km.		
				5.62.39			
				Actual 6.30.37			
				1.6.48.75	200 miles	177.8	

Lighter-than-air-Craft.—The many Zeppelin accidents of the past, and the continued series of

fatalities that have attended the operation of enormous sausage-shaped airships, together with their great cost, and limited possibilities of use, has checked development of this type of craft. It never would have acquired the prominence it did in aviation had it not been for the persistence of Zeppelin and his backing by Kaiser Wilhelm, for far-sighted aerial engineers long ago saw that an airship with such immense surfaces must be the victim of even a moderate windstorm, and that it always must be built far too light to permit any real rigidity and permanence. The most serious accident to such a craft in the United States was the collapse of the *Roma* at Hampton Roads on 21 Feb. 1922, with a loss of 34 lives. This dirigible had been constructed for the United States government in Italy. The explosion which destroyed the United States army airship C-2 near San Antonio on 17 October and the determination of the United States Navy and War departments to employ helium gas for their major air operations helped to revive interest in a greater government program for the extraction of this non-inflammable gas and the discovery of new supplies of helium. At the end of the year the only plant in existence was that at Fort Worth, Texas. The spherical balloons hold their own for observation purposes, county fairs and annual races. The 1922 international balloon race for the Bennett trophy was started 6 August from Geneva, Switzerland, and won by DeMuyter of Belgium, who landed in Oknitsa, Rumania, a distance of 852.53 miles after a flight lasting

25 hours and 40 minutes. Captain H. E. Honeywell, of the United States finished second, having landed in Tapio-Szecsco, Hungary, 659.28 miles from Geneva after a flight of 26 hours 30 minutes. He was awarded the duration prize. The National Balloon Race started from Milwaukee, Wis., 30 May 1922. The results as checked by the United States Coast and Geodetic Survey were: Westover and Bond landed Saint Jerome, Canada, 866.5 miles from Milwaukee; Honeywell and Wade landed Neosho, Mo., 553.4 miles and Reed and Mullenax landed at Eminence, Mo., 431 miles; Van Orman and Morton landed at Fayette, Mo., 370.6 miles. There were eight other balloons in the race.

On 29 March 1923, at Dayton, Ohio, Lieut. L. T. Maitland in an Army Curtiss machine, equipped with a Curtiss D-12 motor, flew four times over a one kilometer course at a speed of 386.17 kilometers, or approximately 240 miles an hour, thereby breaking the world's record of 234.06 miles an hour established on 15 Feb. 1923 by Sadi Lecoq, the French aviator.

American Aeroplane Markets.—The Automotive Division of the United States Department of Commerce published late in 1922 the following detailed review of the aeroplane manufacturing industry in the United States.

The demand for airplanes in the past has been chiefly for military uses; the demand in the future will be principally for peace purposes. Its big field will be as a common carrier and for mail service, although even now airplanes are being more widely used in forest patrolling,

surveying of all kinds, aerial photographing, and for sport and pleasure.

In the commercial field the greatest needs are swifter dispatch and less waste, and these are being met by the improvements in airplane construction, decreases in operating costs, and steadily increasing safety and reliability—all features that have been basic also in placing commercial flying on a sound financial basis. While freight transportation by air is still limited to articles of small bulk and high value, it will undoubtedly include heavier and bulkier commodities as the service develops. Even today the airplane is cutting into the express business of Europe, especially across the English Channel.

Although American distances require the element of speed in transportation, many of the foreign-market countries need air lines for other reasons. For example, where rail and water transportation facilities are still inadequate in regions that are fairly populous and rich in natural resources, or where the likelihood of their provision there is extremely remote, air transportation is the only recourse for the development of the country—at least in the early stages.

The Foreign Demand and the American Product.—The airplane as a means of traffic has come to stay, and its use will steadily increase both at home and abroad. American manufacturers are equipped to secure their share of the resulting foreign demand, whether of the military or the commercial type, and they can secure it by appropriate collective action. In this effort they should be aided abroad by the demonstrated success of American planes in the United States, where—in addition to numerous other air lines—the largest hydroplane service in the world has developed during the past two years, closing the 1921 season with 31 flying boats and with a record of 6,814 passengers carried over 95,020 miles without a single accident. The record of the United States Air Mail Service furnishes another example of the excellence of American planes. But the largest demand for American airplane products will come when the individual types in vogue to-day are displaced by standardized planes.

Meanwhile, the foreign demand must be developed, if American manufacturers secure a larger share of airplane business from foreign countries than they have in the past. Table 1 shows what that past participation has been, as one of the four largest airplane-producing countries of the world.

It will be noted that in 1913 the United States supplied about 3½ per cent of the total export trade (excluding Italy, for which airplane figures were not shown); in 1920, the share of the United States was about 9.7 per cent; and in 1921 it amounted to but little more than 4.1 per cent.

The rise and decline in foreign demand for American airplanes and parts since 1912, as an accompaniment of the war and its aftermath, is shown in Table 2 giving the value of airplanes exported from the United States.

Most of the large exports of planes and parts during 1915 and 1917 were shipped to England for military purposes. Airplanes shipped

TABLE 1.—Exports of airplanes and parts from the United States, Great Britain, France and Italy during the calendar years 1913, 1920 and 1921, by values.¹

COUNTRY OF ORIGIN	1913	1920	1921
United States.....	\$86,931	\$1,152,649	\$472,548
Great Britain.....	237,538	6,990,925	6,518,468
France.....	2,096,719	3,098,585	2,977,628
Italy.....	(?)	547,668	801,894
Total.....	\$2,421,188	\$11,789,827	\$10,770,538

¹ Original values have been converted at the average rate of exchange as compiled by the Federal Reserve Board; namely: For 1920, £1 = \$3.66427; 1 franc = \$0.0704; 1 lira = \$0.0497. For 1921, £1 = \$3.849056; 1 franc = \$0.0745544; 1 lira = \$0.042936.

² Not shown in export statistics.

³ Parts not included in export statistics.

TABLE 2.—Exports of airplanes and parts from the United States, 1912-1922.

CALENDAR YEARS	Airplanes			Parts, value
	Number	Value	Unit value	
1912.....	35	\$113,251	\$3,235
1913.....	19	61,325	3,225	\$25,606

1922 (January-June).....	26	30,080	1,156	49,711
Total.....	876	\$6,367,745	\$7,269	\$30,639,469

to the Allies on government transports are not shown in statistical compilations.

Exports of airplanes and parts, exclusive of engines, during the first six months of 1922 have shown a large decrease in proportion to similar exports during the preceding years, the values for half of 1922 being only one-third of the export values for the half of 1921, and only about one-eighth of those for the half of 1920.

Exports of planes and parts from Great Britain for the first six months of the year 1922 amounted to £749,419, as compared with exports valued at £543,476 for the same period of 1921—an increase of 37 per cent.

Although the best market for American airplanes in 1913 and 1918 was in Europe, in 1919 the market turned to Latin America (excepting for 25 planes shipped to the Philippines), and has since remained there.

Foreign Markets for Airplane Parts 1913-1922.—In 1913 airplane parts exported from the United States had a value of \$25,802; in 1918, a value of \$14,670,269; in 1921, a value of but \$157,608 and in 1922 a value of only \$49,711.

England was the outstanding market for American airplane parts until 1921, when it gave

way to Canada; the latter has since maintained its lead.

AFGHANISTAN, a country of Asia, bounded on the west by Persia, on the north by Russian territory, on the east by British India, and on the south by Baluchistan. Its area is about 250,000 square miles and its population numbers about 6,500,000. The reigning Amir is Amanullah Khan, the third son of the late Emir, Habibullah Khan, who succeeded his father on the latter's assassination on 20 Feb. 1919. The government is monarchical under this hereditary prince, who exercises a power proportioned to his ability and character. The four provinces into which the country is divided are governed by a Hakkim or Governor and justice is dispensed under his jurisdiction by subordinate officials. The dominant race is the Afghan, nearly all of whom are Moslems.

The largest cities are: Kabul, the capital, population 150,000; Jalalabad, 150,000; Kandahar, 31,500, and Herat, 25,000.

Criminal cases are adjudicated by government officials, but civil cases are adjudicated by a Khazi, who follows the precepts of the Koran.

The revenues of the state are in a chaotic condition, due largely to exactions of local officials. The taxes vary according to the advantages of irrigation enjoyed. A close estimate of the total revenue accruing to the government would be about 15,000,000 rupees.

Since 1919 the subsidy formerly granted to the Emir by the British government of India has been discontinued.

The strength of the armed forces of the nation is about 100,000 men, including 20,000 cavalry and about 400 guns. The rocky fastnesses of the region permit of easy defense against an invading foe.

Agriculture is fairly well developed and there are numerous irrigation systems. There are two crops sown yearly: Wheat, barley, peas and beans are sown in the autumn and harvested in the summer; rice, millet and maize are sown late in the spring and harvested in autumn. Fruits grow in the greatest abundance and form a large part of the diet of the inhabitants. Great quantities are exported in the dried state. The famed fat-tailed sheep forms the chief meat diet. Its wool and hide are important items of export.

Copper, lead, iron and gold are found in many parts of the country, the iron especially being of excellent quality. Silks, carpets, felts and articles from the hair of goats and camels are the chief manufactures.

Much of the trade is with India which receives fruits, vegetables, grain, crude drugs, spices, cattle, hides, wool and tobacco, and sends to Afghanistan cotton goods, dyes, hardware, leather, etc. The amount of the trade with India is approximately \$16,000,000 annually, about equally divided between exports and imports.

There are no railways in the country, but there are about 200 miles of telephone lines.

The usual currency unit is the Kabul rupee, worth about 15 cents in American currency.

AFRICA. The present condition of the population, trade, commerce, industry, etc., of this continent will be found fully described

under the articles on the respective countries, Egypt, Abyssinia, South Africa, etc. (qq. v.).

AGNES SCOTT COLLEGE, a non-sectarian educational institution for women, founded in 1889 and located at Decatur, Ga. In 1922-23 it had a faculty of 45 members, 464 students, total assets valued at \$1,752,000 and an income of \$250,000. F. H. Gaines, D.D., LL.D., is president.

AGRICULTURAL BLOC, a group of United States Senators and Representatives formed during the extra session of the 67th Congress and self-described as "a casual, voluntary, and purely informal gathering of men who sought to formulate and help enact a constructive national agricultural program . . . as an emergency measure for handling some of the legislative features of the great and most unusual agricultural emergency." The group included about 20 senators mainly from the Western and Southern States and in the House of Representatives there was at least one member from every important agricultural State. The bloc ignored party lines. It was attacked by the great industrial interests and by others on the ground that its object was class legislation. It was defended especially in the West and South as an attempt to achieve openly and above board what other interests had been doing covertly for a generation. The formation of the bloc and its activities focused public attention on the agricultural situation and many of its efforts for the betterment of American agriculturists resulted in the enactment of important agricultural legislation. See AGRICULTURE.

AGRICULTURAL CREDIT ACT. See RURAL CREDITS.

AGRICULTURAL EDUCATION. Although there has been a marked agricultural depression throughout the country during the past few years, the agricultural colleges have received very liberal appropriations from the State and Federal governments. The country as a whole is rapidly reverting back to a normal basis and there has been a healthy growth during 1922 of these agricultural colleges that are supported by popular taxation. Fields of activity have been widened and much intensive and progressive work has been inaugurated. The establishment of professional courses in the land grant colleges for the training of teachers is progressing satisfactorily. Many such institutions are offering rather complete work in general psychology, educational psychology, methods of teaching and other like professional studies. Courses in methods of teaching agriculture are being opened rapidly and are becoming very popular. Unfortunately many of these courses are designed for undergraduate students only and are unavailable to resident teachers in service. About 15 of the 48 agricultural colleges report rapid advancement in

courses in professional training for teachers. Improved curricula, better morale and professional spirit, and better methods of procedure are among the points noted. There seems to be a much more receptive attitude among professional school men toward the proper and advanced training of agricultural teachers than has been in evidence heretofore. All this insures better teaching in our land grant colleges. Many of the State agricultural institutions of learning report appropriations to be expended for extension of equipment and increase of teaching efficiency. The University of Missouri reports \$1,035,000 that will be used for new buildings and equipment; the total appropriation available to the New Jersey State College and Station for various expanding purposes will be \$521,200 while the Massachusetts College of Agriculture will erect, at a cost of \$300,000 a new chemical laboratory to take the place of the old laboratory used since the opening of the institution which was recently totally destroyed by fire. The experiment station connected with the Massachusetts college now receives \$83,300 for maintenance. In the South, like increases in appropriations are found. Virginia has appropriated \$50,925 for the fiscal year ending 28 Feb. 1923 and \$52,925 for the following year. These are increases of 70 and 76 per cent over the two preceding years. South Carolina has appropriated \$25,000 for experimental work at the college and another \$25,000 to be used at the sub-stations and for co-operative experimental work. North Carolina has erected many new buildings on the college campus and has increased the efficiency of every department of agricultural work. The total appropriation in Mississippi amounts to \$165,200 which includes increases to the main and all the substations. A college has recently been established in Alaska offering courses in agriculture, mining, general science and home economics. The original grant by the Territory for this institution was \$60,000 and this has been supplemented by a Territorial appropriation of \$41,000 for buildings and equipment. This college will receive \$50,000 annually from the Federal treasury under the Morrill Act and Nelson Amendment.

Vocational Agricultural Education.—The Federal Act of 1917—known as the Smith-Hughes Act, established the system of vocational education now in use in our country. This act provides for vocational education in agriculture, home economics and the trades and industries. It also provides for the preparation of teachers of vocational subjects in co-operation with the various States. The vocational agriculture comprehended by this act is generally introduced as a branch of the regular high school curriculum. The farm interests are closely related to the school work by the field practices that are required upon the part of the students while studying the subject. These practices are such that they must function on the farm. Teachers to be employed in the vocational schools must be graduates of colleges offering four-year courses in agriculture. As these teachers will need professional pedagogic training most of the State colleges have opened departments of education to fit their students for this demand. The principles of scientific agriculture are being advanced rapidly by these

graduates who go into the vocational schools to teach and better farming is becoming the marked results of their labors. Thus the program of vocational agriculture is laying a foundation for far better business methods in this important occupation. Under Federal aid the number of schools teaching vocational agriculture has increased from 609 in 1918 to 2,175 in 1922 while the number of teachers in these vocational schools has increased from 895 to 2,290 in the same years. During that time, the number of pupils in the school increased from 15,543 to 60,236. The types of schools that have gradually evolved under this act are known as: (1) all-day schools; (2) part-time schools, and (3) evening schools. Each of these fills some local need or condition but the first, the all-day school, is by far the most numerous type. During the year 1921-22 there were 3,762 white men enrolled in teacher-training classes in the agricultural colleges of the country. Of these 2,452 were taking the regular college work and 1,310 were doing summer work; 991 men were trained and graduated for this important educational work. During this same time, the colored teacher-training institutions turned out 344 men. In every State of the Union there is at least one designated institution where teacher-training work is given for white men while there are like institutions in 17 States for educating colored agricultural teachers. After a certain designated time no funds will be available under the Federal Vocational Education Act unless 20 per cent of the teacher-training fund is expended for training teachers in agriculture. There was little attempt made to give the negroes a systematic training in agriculture while in the elementary schools until after 1916. During the first year of the Federal Vocational Education Act there were 39 departments of agriculture organized in negro schools in nine Southern States. These departments had an enrollment of 1,025 pupils. During the year 1921-22 there were 165 vocational agricultural departments in colored schools with an enrollment of 4,064. During 1921 there were 21 part-time schools for negroes with an enrollment of 460. During the school year of 1921-22 these schools increased in number to 64 with an enrollment of 1,035. Most of the colored land grant colleges now have satisfactory teacher-training courses for teachers of agriculture.

College Statistics.—During 1920-21 there were 14,997 men and 1,996 women engaged in sub-collegiate, extension and correspondence courses. The sub-collegiate courses represent those secondary institutions of education that are directly under the supervision of some college of agriculture and that are used to prepare students for the higher institutions. During this same time there were 16,414 men and 530 women doing under-graduate work and 751 men and 71 women doing advance graduate work in these higher institutions. The agricultural colleges graduated 751 men and 71 women. In the colored agricultural and mechanical colleges the total number of students doing all grades of work was given as 847.

Secondary Vocational School Statistics.—During the year 1921 there were 38,037 men and 2,726 women engaged in all-day vocational schools conducted under the Federal Vocational

Agricultural Act. In 1922 these figures for men were increased to 50,313 while those for women decreased to 2,648. During the same years the number of men in part time courses increased from 1,389 to 5,632 while the women increased in number from 61 to 310. The number of men engaged in evening class work did not vary during the two-year period.

Elementary Agricultural Education.—Several States have laws upon their statute books making the teaching of agriculture compulsory in the elementary schools but as yet these laws are indifferently enforced. However, there is a growing sentiment in favor of a better enforcement of these laws and facilities are rapidly coming into existence to make the teaching of agriculture in rural schools more feasible and more efficient. Vocational agriculture can be made especially effective in consolidated schools or in schools having two or more teachers. The need for a broader and better teaching of this subject in rural schools is becoming better understood by State superintendents of education, State supervisors of vocational agriculture and by teachers in normal schools who handle this subject. Outline courses in the teaching of agriculture are issued by several States. These courses have been written and adapted to rural conditions and rural aspirations. Most normal schools have well-balanced courses in agriculture and are doing much to meet the increasing demands made by the rural districts for teachers of this type.

Agricultural Training for Disabled Ex-Service Men.—During the year 1922-23, vocational training was given by the Rehabilitation Division of the United States Veterans' Bureau to more than 11,000 men; 2,000 of these men were pursuing regular college courses that lead to degrees in agriculture, 4,000 took what is known as the unit or two-year type which requires only an elementary education for preparation and 5,000 were pursuing practical short courses that were adapted to meet the needs of the man who had less than a grammar school education. In training these men, the Rehabilitation Bureau made use of practically every agricultural college and many of the secondary schools of agriculture in the country. Special training institutions were opened at many of the army camps, notably at Camp Sherman, Chillicothe, Ohio. Wherever this training has been instituted, an ample teaching staff has been provided and sufficient building space for classrooms, laboratories, etc., has been obtained. In many cases excellent dormitory facilities are available and frequently there are accommodations for the families of the trainees. Courses are offered at these schools in agronomy, dairying, horticulture, entomology, botany, economics, animal husbandry, arithmetic, geography and drafting. Many farms are being utilized to give the necessary field work whereby the men may secure the practical training necessary to successfully complete the agricultural job.

Foreign.—The British Government plans to utilize a 1,300-acre estate presented by Lord Lee, first Lord of the Admiralty, for a model stock-raising farm. The farm will be used to demonstrate the growth and value of improved varieties of cereals and fodder crops in connection with the intensive breeding of livestock. Ex-

periments will also be made with the improving of grasslands for rearing such stock. Headquarters buildings for the British National Institute of Agriculture have been completed at Cambridge. About 30 acres of land surrounding these buildings are used for testing purposes. The French government is studying the agricultural possibilities of French Nigeria through the work of a scientific commission. Attention has been given especially to lands lying between Bamoko and Timbuctoo. A broad survey is to be made of this region with especial attention given to the production of cotton. The West China University will inaugurate agricultural instruction very soon. This is the fourth Christian institution in that country to offer such courses, the other three being located at Peking, Canton and Nanking. The West China University is located at Chengtu and offers exceptional opportunities in a territory inhabited by a hundred million people.

AGRICULTURE IN EUROPE. Early in January 1923, Alfred P. Dennis, Special Agent of the United States Department of Commerce, cabled to the department a summary of the 1922 agricultural year in Europe, in which he stated that crop results confirm the extent of the slowness in the recovery of European agriculture. The 1921 wheat crop was excellent, in both yield and quality, but the root and forest crops were severely cut by drought. The conditions were exactly reversed in 1922, for the wheat crops were exceptionally poor and the root and forest crops were favored by the wet summer and autumn, and were the best in years. The estimated grain yields of Europe, excluding Russia, for 1922, 1921 and the pre-war average are shown in the following table:

PRINCIPAL CROP YIELDS OF EUROPE, PRE-WAR AVERAGE, 1921 AND 1922.

(In millions of bushels or metric tons.)

	Amount produced		
	Pre-war average	1921	1922
Wheat..... bushels	1,279	1,222	1,009
Rye..... do.	800	759	700
Barley..... do.	603	570	579
Oats..... do.	1,728	1,500	1,500
Corn..... do.	538	404	326
Total cereals..... do.	4,948	4,455	4,114
Potatoes..... metric tons	102	82	125
Sugar beets..... do.	38	27	32

Exclusive of Russia, the European raw sugar production of 1922 is recorded at from 600,000 to 650,000 tons over last year. For the first time in eight years Germany, it was said, may have a small surplus of sugar for exportation. A marked increase over the previous year in the yields of potatoes, turnips, cabbage and other vegetables served to raise the total food production to a level not far below that of 1921, but the increases were for the most part in foods of relatively low nutritive value. Russia made a fair recovery from its agricultural plight of 1921; the national grain production rose to about 50 per cent of the pre-war yields, while the sugar crop of the 1922 season was expected to be 220,000 tons, or more than four-fold that of 1921.

Grain Import Requirements.—The grain import requirements of Europe Mr. Dennis stated, are certain to exceed those of the previous cereal year. From the beginning of the present season, 1 August to 23 December, European takings of North American wheat ranged around 180,000,000 bushels, or 12,333,000 bushels more than in the same period of 1921. The heaviest European importers in the period named were as follows: United Kingdom, 56,000,000 bushels; Italy, 41,000,000 bushels; France, 22,000,000 bushels; Netherlands, 14,000,000; and Germany, 11,000,000 bushels. The demand for North American flour kept pace with the demand for wheat, but imports of corn were disappointing, running about 8 per cent less than for the same period of the previous year. The rise in the price of corn and a more plentiful supply of cheap barley somewhat affected the corn import trade. Poland made the relatively best agricultural showing of any European country during 1922, and became self-sustaining. The Spanish farmers had a good year and the grain import trade was declining at the close of the year. Greece was severely pressed for food, with its loss of important grain producing territory, and the sudden increase in its population.

European farmers as a class, according to Mr. Dennis, are relatively well off, particularly those who put their war profits in real estate or farm improvements. The debtor class, especially in central European countries, profited by the depreciated exchange and farmers in Germany, Austria and Hungary are paying off mortgages of long standing by the simple device of selling a few head of livestock. On the other hand, farmers who put their savings in national war loans, or depended upon co-operative credit organizations for seasonal assistance, were said to be in bad straits.

The course of the war tended to divert the stream of wealth from the cities to the country in the case of France and Denmark, and farmers in both those countries are regarded as relatively prosperous. The British farmers are oppressed by the burdens of war taxation and high labor costs, whereas in Bulgaria the farmers are fairly prosperous and contented, because men who own soil work it themselves and are not concerned with labor costs. The farmers in Germany, Austria, Hungary, Yugoslavia, Rumania and Russia have been thwarted and discouraged by state interference with trade in farm products. The systems of price-fixing, grain requisitioning, and export embargoes, Mr. Dennis said, are

already crumbling, and relaxation of state interference with free movement of farm products would greatly benefit the farmers of eastern Europe.

AGRICULTURE IN THE UNITED STATES. A broad view of agriculture in this country during 1922 shows that the physical basis of prosperity is here—food in abundance and the raw material which goes into various products—but the real satisfactions of prosperity for the farmer have not been reached. It might have been a prosperous year for agriculture and for the nation but for the distorted relationship between prices received for farm products and prices paid for the things the farmer must buy. The general agricultural survey is thus vividly initiated by Secretary of Agriculture Wallace in his annual report.

Laboring under discouragements for the third consecutive year the farmer, in contrast with various other groups, has produced abundantly without cessation. The total production of the 14 principal crops in 1922 was greater than 1921 and above the 10-year average. But in spite of this great quantity of actual wealth produced, farm people, comprising one-third of the nation's population, had a greatly reduced purchasing power resulting from the decline of farm prices to a point near the pre-war level while prices of other commodities were 50 to 100 per cent above it.

Secretary Wallace diagnosed the discrepancy between farm prices and prices of other commodities as due to over-production of many farm crops, continued high freight rates, economic depression and depreciated currency in European countries, interference with the efficient functioning of necessary industries, and unnecessary high cost of distribution of some farm products. Taxes, too, have become a galling burden on the farmer. An investigation of a large number of farms in 1913 showed taxes were 9.8 per cent of the farmer's income. On the same farms last year they amounted to nearly one-third of the income.

But in spite of all these adverse conditions Secretary Wallace predicted no general breakdown of the agricultural industry. He sees in the record of the past year's production a vivid illustration of the vitality of American agriculture and of the courage and hopefulness of the American farmer, although many thousands of them have not been able to weather the storm. Most of them, however, succeeded in maintaining themselves and their hold upon the land by the exercise of the most rigid economy—economy which contributed to the difficulties of manufacturers, dealers and retailers during 1922.

The end of the year saw a gradual improvement in progress, an improvement which had placed the farmer in a better financial condition. The aggregate value of the crops in the country was about a billion and three-quarters dollars more than in 1921. The cotton country closed the year in better shape than it had been for three years; the sheep industry, especially in the range region, was out of the slough of despond at the beginning of the new year. Fattening hogs and cattle was fairly profitable as corn was low in price. Cattle raisers, however, did not do so well.

Regional Conditions in General.—In reviewing conditions by regions it is found that the corn belt experienced some revival over conditions in 1921. This was due to a considerable extent to improved livestock prices. The price of corn gradually strengthened during the year, but more important was the spread which early developed between hog and corn prices, making it possible for considerable grain to be marketed at some profit in the form of pork. Cattle prices also moved up something like \$2 a hundred pounds during the year, which proved a stimulus to feeding. Sheep and lambs likewise improved in prices.

In the wheat belt, with little diversification of products, the effect of unsettled world conditions tended to retard recovery. Wheat prices, while they appeared moderately stronger during the fall of 1922, were not high enough to bring prosperity to this section of the country. Much of the northern spring wheat territory witnessed a crop failure four years preceding the past season. During the past year the crop was much improved but the growers were obliged to sell at almost bankruptcy prices.

The cotton States have enjoyed the most marked recovery of any region, taken as a whole. This has been based, of course, on the strong upward trend of cotton prices. Farmers received from five to eight cents a pound more for cotton than in the fall of 1921 and double the prices of early 1921. The cotton belt west of the Mississippi River was hit by a severe drouth during the growing season while the eastern territory was badly ravaged by the boll weevil. These unfavorable circumstances combined to make a shortened crop.

Conditions in the dairy, hay, fruit, potato and diversified regions of the East were none too good the past year. The East was one of the last agricultural regions to feel the severity of the depression and in many respects was in the same condition during the summer of 1922 as the corn belt witnessed two years earlier. Dairy products dropped to low levels while the abundant production of apples and potatoes led to exceedingly low prices. The close of the year saw a great deal of pessimism throughout this region. The East, on the other hand, has been relatively less burdened with war-time debts and has had less inflation to contend with. Although generally discouraged at the poor market for its products the past year, the East is fundamentally in sound condition and so far has escaped the very keen distress witnessed farther west and in the South.

In the range country of the Far West the general trend during the year was toward improvement. Generally speaking, stockmen were able to meet or refinance a good share of their debts and so recovered a fair measure of financial equilibrium. The number of sheep and cattle appeared to have increased steadily. Many sections of the range, however, were handicapped by unusual drouth.

The Pacific Coast did not experience the degree of war-time inflation nor the pronounced slump which followed the price decline throughout the country to the eastward. The coast has been relatively prosperous through the entire post-war period. Producers in this section were

handicapped the past year by railroad strikes and they felt some reaction from weaker eastern markets. Fruit growers, stockmen and general farmers have fared reasonably well and expressed normal satisfaction with the outlook.

Review of Certain Major Crops.—Based on the government's final crop report of the year it was estimated that the country's crops in 1922 were worth seven and one-half billion dollars, taking as a value the 1 December farm prices. This gave the 1922 crop an increase in value of \$1,800,000,000 over the 1921 crop, reflecting increases in prices from a year ago and increased production of some farm crops. The aggregate value of the 1922 crop was about the same as that for 1916 but lower than any year since 1915, except last year. It was only a little more than half as much as the record value of 1919.

The production of cotton was the smallest in 20 years, excepting last year's small crop, but based on 1 December farm prices it was the fourth most valuable ever grown. In the final estimate the cotton crop of the year was placed at 4,767,000,000 pounds of lint, which is equivalent to nearly 10,000,000 bales of 500 pounds gross weight. While there was a large acreage of cotton, the boll weevil got in its work with extremely heavy damage and drouth in many sections materially assisted in keeping down the production. South Carolina and Georgia were the most severely affected of any of the cotton-growing States, their production being about 40 per cent of the average of the five years from 1916 to 1920.

The winter wheat crop was somewhat smaller than 1921, but the spring wheat crop was materially larger. The total wheat crop, therefore, amounted to 856,000,000 bushels, compared with the production of 814,000,000 bushels in 1921, and a somewhat greater figure than the five-year average from 1916 to 1920.

The corn crop was placed at 2,890,000,000 bushels, which was somewhat smaller than 1921 but slightly more than the five-year average. The outstanding feature of the corn crop was the increase in value of \$600,000,000 over the aggregate value of the 1921 crop. Oats with an estimated bushelage of 1,215,000,000 was considerably larger than the 1921 crop but less than the average. Barley was about an average crop although considerably larger than that of 1921.

The crop of white potatoes the past year was one of the heaviest ever produced. The final estimate was 451,000,000 bushels as compared with 361,000,000 bushels in 1921 and 373,000,000 bushels for the five-year average. Though the crop as shown was considerably above that for 1921, the aggregate value was placed at more than \$100,000,000 below that for 1921. Prices of potatoes have been very low in response to the indications of an abnormally large crop and in consequence the potato growing sections of the country have experienced particular depression.

In both production and value, the 1922 tobacco crop increased considerably over the 1921 figures, though the production was slightly under the five-year average. Final estimates placed the 1922 tobacco crop at 1,300,000,000 pounds with an estimated value of \$306,000,000 as compared with 1,000,000,000 pounds in 1921 with a value of \$213,000,000.

There was a heavy production of fruit during the past year. Apples in particular were estimated at more than twice the 1921 crop and considerably larger than the five-year average. The final estimate placed the total production of apples at 203,000,000 bushels, while the 1921 production was slightly less than 100,000,000 bushels. The value of the 1922 crop, however, was placed at \$202,000,000 as compared with \$166,000,000 for 1921, which shows the comparative low values for apples during the past year as a result of increased production. The commercial apple crop alone was about one-half larger than that in 1921.

Livestock Production and Movement.—The total value on 1 Jan. 1923 of all animals, on farms and ranges, according to final estimates, was \$5,111,256,000 as compared with \$4,799,170,000 on 1 Jan. 1922, an increase of \$312,086,000 or 6.5 per cent. On 1 Jan. 1921, the total value was \$6,051,202,000, and on 1 Jan. 1920, \$8,165,194,000. The total value estimated at the beginning of 1923, though lower than 1920 and 1921, indicates the general increase in farm prices over 1922.

In actual numbers, from 1 Jan. 1922 to 1 Jan. 1923, horses decreased 203,000; mules increased 39,000; milk cows increased 347,000; other cattle increased 373,000; sheep increased 882,000; and swine increased 5,590,000. The number of horses on farms on 1 Jan. 1923 was 18,853,000 as compared with 19,056,000, 1 Jan. 1922. Mules on farms, 1 Jan. 1923 numbered 5,506,000 as compared with 5,467,000, 1 Jan. 1922. In total value from 1 Jan. 1922 to 1 Jan. 1923, horses decreased \$29,180,000; mules decreased \$8,843,000; milk cows increased \$13,970,000; other cattle increased \$87,494,000; sheep increased \$104,394,000; and swine increased \$144,251,000.

In reviewing the number of meat animals on farms 1 Jan. 1923, milk cows total 24,429,000 as compared with 24,082,000 on the same date in 1922. The aggregate value was \$1,241,673,000 as compared with \$1,227,703,000 in 1922, although the average price per head remained practically stationary during the two years, or a little over \$50. The total number of beef cattle was 41,923,000 as compared with 41,550,000 on 1 Jan. 1922. Beef cattle values increased to \$1,076,254,000 as compared with \$988,760,000 on 1 Jan. 1922 and the 1923 value per head of \$25.67 was a fair increase over \$23.80 for 1922. The total number of all cattle was 66,352,000 on 1 Jan. 1923 as compared with 65,632,000 in 1922. It should be kept in mind that the number of domestic animals in cities and villages is not taken into account in these figures.

Figures on sheep show clearly that this class of livestock was the most profitable in 1922. The total estimated number on farms on 1 Jan. 1923 was 37,209,000 as compared with the 1922 total of 36,327,000. This shows a comparatively slight increase in number but the 1923 total value was \$278,939,000 as compared with \$174,545,000 in 1922. The sheep value per head on 1 Jan. 1923 was \$7.50 as compared with the much lower figure of \$4.80 in 1922.

The total value of swine at the beginning of 1923 showed a good increase over 1922 but this was due largely to the increase in numbers. On 1 Jan. 1923 the number of swine was estimated at 63,424,000 as compared with 57,834,000 in 1922.

The total value on 1 Jan. 1923 was \$726,699,000, while on the same date in 1922 it was \$582,448,000. The value per head increased from \$10.07 in 1922 to \$11.46 on 1 Jan. 1923.

During the first 10 months of 1922, receipts of cattle and hogs at public stockyards were comparatively heavy, whereas those of sheep were relatively light. Receipts of cattle and calves amounted to 18,965,000 head which was 15 per cent greater than similar movements in 1921 and constituted the heaviest run since 1919. Hog receipts for the 10-month period totalled 34,642,000 head, an increase of 3.5 per cent over 1921 and represented the heaviest movement to market since 1919. As might be expected, in view of the relatively small numbers estimated on farms at the beginning of the year, sheep receipts at public stockyards showed rather sharp decreases. Receipts during the first 10 months of 1922 totalled 18,560,000 head which was a decrease of slightly more than 9 per cent as compared with movements in 1921 and constituted the lightest run since 1918.

Although in the main the marketward movement of livestock during 1922 was relatively heavy, there was a compensatory movement in the form of shipments of stocker and feeder animals back to the country. Cattle on feed in 11 corn belt States on 1 December showed an apparent increase of 27 per cent over the number on feed on the corresponding date in 1921. Iowa led with an increase of 50 per cent, followed by Illinois with 35 per cent and Nebraska, Missouri and South Dakota with 25 per cent each. Shipments of stocker and feeder cattle and calves from 67 public stockyards for the four months preceding 1 December were the heaviest on record, being 2,652,000 head as compared with 1,869,000 in 1921 and 2,570,000 in 1919, which was the record year for such movements prior to 1922. It was also estimated that there were approximately 20 per cent more sheep and lambs on feed on 1 December as compared with the number at the same time in 1921.

Agricultural Legislation.—The national Congress early in the year addressed itself to the imperative need of enacting such legislation as would tide agriculture over the period of depression and place it upon a substantial national basis. Considering the financial stringency which was forcing farmers to sacrifice their crops at whatever prices they could get, Congress breathed new life into the War Finance Corporation. The Corporation itself did not function very actively until late in the summer of 1921 when Congress added greatly to its powers, authorizing it to carry financial help directly to domestic agriculture and making available practically \$1,000,000,000. The Corporation functioned actively and effectively during the entire year.

Congress practically doubled the ability of the Federal Farm Land Banks to loan on farm mortgages by providing for an enlargement of their capital stock from loans from the Treasury. This help came just at the time when there was a tremendous demand for farm mortgage loans, a demand so heavy that the Farm Land Banks could not begin to meet it. These banks were put in a position where they could loan at the rate of almost \$300,000,000 a year at an interest rate of 5½ per cent. In 1921 thousands of farmers were required to pay 7 and 8 per cent

including interest and commissions for farm mortgage loans.

One of the comparatively recent acts of Congress was the passage of the Packers and Stockyards Act. This law brings the packing houses, the stockyards, the commission merchants and other stockyard agencies under the supervision of the Secretary of Agriculture. He has authority under the law to inquire into the manner in which the business is conducted, to examine books, to subpoena witnesses and require them to testify under oath. In short he has ample authority to look into all phases of the livestock business as conducted by the packers, commission merchants and stockyards, including the authority to determine whether charges are fair and just. Under this law it will be possible to make a thorough study of the livestock business from the time the animals leave the farm until the meat reaches the city wholesaler and to correct any unfair practices at any point along the way.

Another law of a similar nature is the Grain Futures Act which brings the various exchanges under the supervision of the Secretary of Agriculture. This law gives the supervising agency authority to inquire into the manner in which grain is bought and sold, and into future contracts made upon the principal grain exchanges of the country. It does not prevent hedging or legitimate trading but it carries the power to prevent unfair manipulation and to correct improper practices by those who deal in grain futures. When this law was first passed an appeal was made to the courts and it was held unconstitutional. It was redrafted and again passed by Congress.

Recognizing the fact that farmers' co-operative associations are not only right but desirable, Congress passed a law which gives farmers the right to form such associations, and at the same time safeguards the public interest against abuse by giving the Secretary of Agriculture authority to see to it that they are not used as monopolies to unfairly enhance prices.

The law which created the Federal Reserve Board provided that in appointing members of that board the President should have due regard "to a fair representation of the different commercial, industrial and geographical divisions of the country." In order that agriculture might be justly recognized, Congress amended the act so that now it reads that in appointing members, the President shall have due regard to "a fair representation of the financial, agricultural, industrial and commercial interests."

The following is a list of the more important books on agriculture published in 1922: Bahr, Fritz, 'Commercial Floriculture'; Bailey, L. H., 'Apple-tree'; Birch, R. R., 'Hog Cholera, Its Nature and Control'; Brown, G. R., 'Melon Care and Culture Step by Step on Clay Soil'; Crawshaw, F. D., and Lehmann, E. W., 'Farm Mechanics'; Cruess, W. V., and Christy, A. W., 'Laboratory Manual of Fruit and Vegetable Products'; Davis, B. M., 'Principles of Farm Practice'; Douglass, B. W., 'Fruit-growing'; Foster, W. A. and Carter, D. G., 'Farm Buildings'; Freeman, E. M., 'Home Vegetable Garden'; Gardner, V. R., Bradford, F. C. and Hooker, H. D., 'Fundamentals of Fruit Production'; Gourley, J. H., 'Text-book of Pom-

ology'; Graton, Louis, 'Intensive Strawberry Culture'; Hedrick, U. P., 'Cyclopedia of Hardy Fruits'; Hottes, A. C., 'Little Book of Annuals'; Jackson, H. W., 'Successful Backyard Poultry Keeping'; Lamon, H. M., and Slocum, R. R., 'Ducks and Geese'; Lamon, H. M. and Lee, A. R., 'Poultry Feeds and Feeding'; Lamon, H. M. and Slocum, R. R., 'Turkey Raising'; Lyon, T. L. and Buckman, H. O., 'Nature and Properties of Soils'; McCandlish, A. C., 'Feeding of Dairy Cattle'; Majonnier, T. and Troy, H. C., 'Technical Control of Dairy Products'; Plumb, C. S., 'Study of Farm Animals'; Powers, W. L. and Teeter, T. A. H., 'Land Drainage'; Richardson, A. W., 'Poultry'; Sherlock, C. C., 'Modern Farm Hen'; Van Wagenen, Jared, 'The Cow'; Watts, R. L., 'Vegetable Growing Projects'; Burritt, M. C., 'County Agent and the Farm Bureau'; Chase, L. A., 'Rural Michigan'; Davenport, A. C., 'American Live Stock Market'; MacGarr, Llewellyn, 'Rural Community'; Myrick, Herbert, 'Rural Credits System for the United States'; Sanderson, E. D., 'Farmer and His Community'; Sherlock, C. C., 'Modern Farm Co-operative Movement'; Smith, J. G., 'Organized Produce Markets.'

Published in England: Davidson, H. C., 'Vegetable Culture'; Edmonds, C. R., 'Diseases of Animals in South Africa'; Fletcher, F. J., 'Market Nursery Work'; Kirk, Hamilton, 'Canine Distemper'; Orr, John, 'Short History of British Agriculture'; Smith, K. M., 'Insect Pests of the Horticulturist'; Wilkins, V. E., 'Agricultural Research and the Farmer'; Woolley, R. V. G., 'Tomato Cultivation'; Wright, H. J., 'Plant Pests and Parasites'; Wright, W. P., 'Practical Gardening.'

F. M. RUSSELL,

United States Department of Agriculture.

AGRICULTURE, INTERNATIONAL INSTITUTE OF, (Rome.) The aim of the International Institute of Agriculture (Villa Umberto I., Rome) is to protect and favour agriculturists throughout the world. Sixty-three nations are united in this work of culture and of peace, which is directed by a permanent committee of delegates. A citizen of the United States, Mr. David Lubin, conceived the idea of founding such an institution and was strongly supported by H. R. M. the King of Italy and the Italian government.

A conference meeting in Rome, approved of the convention on 7 June 1905. This conference prescribes the regulations and workings of the institute, which are, likewise, approved of by the delegates of the General Assembly which convenes in Rome every two years. The last of these assemblies was held in May 1922. In accordance with the convention of 1905, the institute undertakes to study, centralize and communicate all agrarian information, as well as technical and economic matters concerning agriculture, to the various states. In certain cases, the institute may submit measures for the protection of the common interests of agriculturists and the improvement in their condition to any government. The Institute publishes various works and monographs. Among the more important are: three bulletins, two quarterly and one monthly, on agrarian statistics; 'The Inter-

AGRICULTURE

national Yearbook of Agricultural Statistics' and the 'International Yearbook of Agricultural Legislation.'

The heads of departments in 1922 were: President, H. E. Hon. Edoardo Pantano; vice-president, Louis Dop; general secretary, Prof. Carlo Dragoni; librarian, Prof. Arturo Bruttini; chief of service, general statistics, Prof. Umberto Ricci; chief of service, agricultural information and plant diseases, Dr. Jules Saulnier; chief of service, social and economic institutions, J. K. Montgomery.

AGRICULTURE, United States Department of, an executive department of the Federal government whose head is a member of the President's cabinet with the title of Secretary of Agriculture. The personnel of this department on 1 Jan. 1923 was as follows: Secretary of Agriculture, Henry C. Wallace; Assistant Secretary of Agriculture, Charles W. Pugsley; Director of Scientific Research, E. D. Ball; Weather Bureau, C. F. Marvin, chief; Bureau of Agriculture Economics, H. C. Taylor, chief; Bureau of Animal Industry, J. R. Mohler, chief; Bureau of Plant Industry, W. A. Taylor, chief; Forest Service, W. B. Greeley, chief; Bureau of Chemistry, W. G. Campbell, acting chief; Bureau of Public Roads, T. H. MacDonald, chief; Bureau of Soils, Milton Whitney, chief; Bureau of Entomology, L. O. Howard, chief; Bureau of Biological Survey, E. W. Nelson, chief; States Relations Service, A. C. True, director; Division of Publications, J. L. Cobbs, chief; Packers and Stockyards Administration, Grain Future Administration, Chester Morrill, in charge; Federal Horticultural Board, C. L. Marlatt, chairman; Insecticide and Fungicide Board, J. K. Haywood, chairman; Fixed Nitrogen Research Laboratory, F. G. Cottrell, director.

The net cost to the Federal government of the regular activities of the Department of Agriculture during the fiscal year 1922 was approximately \$34,000,000 as indicated in the following table:

Agricultural Appropriation Act, fiscal year 1922 (exclusive of funds carried therein but made available for services outside of the department)	\$30,409,643 00
Agricultural Appropriations Act, 1923, immediately available funds expended during 1922	35,982 00
Deficiency Appropriation Acts (Aug. 24, 1921, Dec. 15, 1921, and March 20, 1922)	1,627,875 00
Permanent annual appropriation for meat inspection (Act of June 30, 1906)	3,000,000 00
Protection of lands involved in Oregon and California railroad forfeiture suits (Sundry Civil Appropriation Act, 1922)	30,726 00
Increase of compensation (Legislative Act, 1922)	3,137,882 00
Printing and binding (Sundry Civil Act, 1922)	725,000 00
Allotment for fixed nitrogen research (transferred from appropriation placed at disposal of the President by the National Defense Act of June 3, 1916)	500,000 00
Total	\$39,467,108 00
Excess of unexpended balances and surplus fund, fiscal year 1922, over balances of appropriations from prior years	14,450 00
Actual expenditures from Federal funds for regular work	\$39,452,658 00
Less receipts, 1922, deposited in United States Treasury to credit of miscellaneous funds	5,209,364 81
Net cost of regular work	\$34,243,293 19

Of the total expenditure of \$39,000,000 for the regular work of the Department, approximately \$9,000,000 or 23 per cent was used for research work; \$3,000,000 or 8 per cent was used for extension activities; \$20,000,000 or 51 per cent for service and regulatory activities; and \$7,000,000 or 18 per cent for campaigns for the eradication and control of various animal and plant diseases and pests.

In addition to the \$39,452,658 used by the Department for the conduct of its investigative, regulatory and other activities, \$105,790,311.81 was expended during the fiscal year 1922 from appropriations administered by the Department other than those used for the prosecution of its regular work. These expenditures were made up as follows:

Extension work in agriculture and home economics (provided by the Smith Lever Act of May 8, 1914, and supplementary funds made available by the Agricultural Appropriation Act for the fiscal year 1922)	\$5,474,050 00
Research work of state agricultural experiment stations (provided by the Agricultural Appropriation Act for 1922 to carry out the purposes of the Hatch and Adams acts)	1,440,000 00
Federal aid road construction (provided by acts of July 11, 1916, Feb. 28, 1919, and Nov. 9, 1921)	93,319,773 05
Farmers' seed grain loans (provided by special act of March 20, 1922, and Agricultural Appropriation Act of March 3, 1921)	2,811,966 96
Payment from national forest receipts for benefit of county schools and roads	1,082,679 99
Acquisition of lands by National Forest Reservation Commission for protection of forested watersheds of navigable streams (provided by Agricultural Appropriation Act of 1922 and prior years)	839,916 37
Expenses of National Forest Reservation Commission (provided by act of March 1, 1911)	186 00
Refunds to users of national forest resources of moneys deposited by them in excess of amounts required to secure purchase price of timber, use of lands, etc.	71,086 82
Study of short-time rural credits (provided by Agricultural Appropriation Act of 1922 for use of a special congressional committee)	5,000 00
Work done by the Department of Agriculture for other departments at their request, under authority of Sec. 7, Fortifications Act of May 21, 1920	18,167 67
Payments during 1922 from balances remaining available of outstanding accounts for expenses incurred during 1921 and prior years	727,484 95
Total expenditures from Federal appropriations administered by the Department of Agriculture but not used for its regular work	\$105,790,311 81

Incident to the Department's work during the fiscal year 1922 direct receipts aggregating \$8,403,394.05 were turned into the Treasury. Fines imposed by and judgments recovered in the courts in connection with the enforcement by the Department of the regulatory acts which devolve upon it for administration and execution, amounted to \$168,769.36.

Of the total receipts of \$8,403,394.05 for the fiscal year 1922, \$5,209,364.81 (of which \$4,628,462.42 was derived from business on the national forests) was collected in connection with the regular work of the Department, and all of this amount was turned into the general fund of the Treasury; \$2,202,269.62 (of which \$1,878,188.14 was derived from business on the national forests) was available for use in connection with the regular work of the Department.

tion with the Department's regular activities; and \$991,759.62, representing reimbursement for cost of distributing surplus war materials to States for use in road construction work and repayments by farmers of seed-grain loans, was available for use in connection with projects administered by the Department, apart from its regular activities. For the fiscal year ending June 1923, the expenditures for the work conducted and administered by the Department will not materially differ from those for the fiscal year 1922.

Work of the Department of Agriculture During 1922.—The efforts of the Department of Agriculture during 1922 were directed to be of the greatest possible service in the task of restoring agriculture to a prosperous basis—to help the farmer through the period of depression and to place his business on a permanent and satisfactory foundation. Of first importance are certain fundamental changes in the reorganization of the regular activities of the Department. In the budget for the fiscal year 1924, Congress was asked to provide for a director of extension work. Under the former arrangement there was no one person charged with the responsibility of co-ordinating all of the extension work of the Department. It is the plan to bring under this directing head all of those offices which have to do entirely with extension work. These are the office of co-operative extension work in the States Relation Service, the office of motion pictures in the Division of Publications and the office of exhibits which was temporarily attached to the office of the Assistant Secretary. The plan makes unnecessary the States Relations Service, the office of the Director of Information, and the Division of Publications, and when put into effect will do away with them as such. The other offices in these divisions will be placed under the supervision of the Director of Scientific Work, the Director of Regulatory Work or within the Secretary's office proper. When the complete plan of supervision is put into operation the three general classifications of the Department's work—research, regulatory and extension—will come under a single directing head, each responsible to the Secretary.

In order to consolidate the branches of the Department doing economic research work the new Bureau of Agricultural Economics was established during the summer of 1922 after several months of preliminary study and working out of details. Included in this Bureau are the former Bureau of Markets, the Bureau of Crop Estimates, and the Office of Farm Management and Farm Economics. The Department is thus enabled to make a comprehensive study of economic questions involved in production, marketing and distribution of farm products, following every step of these processes.

Of particular interest to the women of the country was the announcement made by the Secretary of Agriculture during the summer of the past year to the effect that the scientific work of the Department as it pertains to home economics was to be greatly strengthened. It is the plan of the Secretary to take the home economics work as it has been conducted under the States Relations Service, co-ordinate with it the

related activities, in the Department and head it up in a new Bureau of Home Economics. This new bureau would rank in importance with the other bureaus in the Department and be in charge of a woman, scientifically trained and with a clear knowledge of the problems facing the women on farms and in the cities.

With the desire to be of the largest possible service in serving agriculture, comprehensive studies of the conditions which influence the profitable production of various crops are made possible through the establishment of commodity councils during 1922. These councils are composed of representatives of the various bureaus and suborganizations of the Department which have anything to do with the crop being studied.

The first of these—the Cotton Council—will serve as an example. Meetings of this council are attended by the people who understand the soils of the cotton belt, by those who have made a study of varieties as adapted to certain soils, by the experts in cultural methods, by the entomologists who understand injurious insects, their habits and methods of combating them, by specialists who understand grading and marketing methods and the conditions which influence demand both at home and abroad, and by many others who have information needed to bring about the most economical production and marketing of cotton.

It is expected that out of the Cotton Council will come certain definite Department policies with regard to this crop. The same general policy is being followed with regard to the other agricultural crops so that the Department might co-ordinate its views and present a solid front.

Gratifying progress was made during the past year in the eradication of certain plant and animal diseases. Extensive surveys show that cattle tuberculosis is present in only about 1 per cent of the cattle in 42 per cent of the areas of the United States, and that in a large additional area it does not exceed 3 per cent. The remaining area is much more seriously affected but the evidence at hand indicates that this costly disease will finally yield to the scientific methods now employed.

The efforts to wipe out some plant diseases by exterminating the intermediate host met with encouragement during the year's work of the Department. The warfare against the black-stem rust of wheat in the Northwest and against the white-pine blister rust in the forests are cases in point. The part played by the barberry in the transmission of the wheat-stem rust is now generally recognized and scientists, extension workers, farmers and people and communities interested in the wheat trade, are co-operating in an extensive campaign to eradicate the barberry. In a farm to farm survey to eradicate the barberry which has been in steady progress during the past three summers, 447 counties have been covered by squads of fieldmen. It is estimated that it will be necessary to survey about 800 counties in all. Although the magnitude of this task was found greater than expected it is believed that with continued appropriations and co-operation on the part of interested parties the campaign can be carried to a successful conclusion.

The white-pine blister rust is spread some-

what after the manner of the rust of wheat, the intermediate host being the currant and gooseberry bushes. It is found in the New England forests and points in the Northwestern forests. Through quarantine and other methods of control which have been successful in New England it is hoped to check the spread of the disease.

Similar to the warfare against plant and animal diseases and insect pests is the struggle to control or eradicate predatory animals and rodent pests. The annual loss to agriculture from injurious rodents has been estimated to exceed \$500,000,000. This has been materially reduced through the campaigns which have destroyed most of the rodents on almost 100,000,000 acres of public and private lands.

The warfare against insect pests destructive to American crops grows in intensity. The past year has witnessed successful inroads made on the ravages of these pests. During the year the boll weevil has caused unusual damage to the cotton crop. The campaign against this pest has been waged with unremitting vigor and each year some gains are made, notwithstanding the increased damage being done. The results of the lime-arsenate dust treatment against the boll weevil give increasing assurance that where this method of control is properly applied it will be most helpful. The method is still expensive, however, and the cost has not been reduced to a point where it can profitably be used on land which grows less than one-half bale of cotton per acre a year.

The fight against the pink bollworm, which is regarded as an even more serious pest than the boll weevil, has given the Department encouragement. The Japanese beetle has developed into a serious pest but through a Federal quarantine the Department is attempting to hold it in check. A hopeful development in the fight against the European corn borer is the discovery of what seems to be a rather effective parasite of the insect. No new outbreak of the corn borer was reported during the past year.

Plans were made during the year to greatly improve and broaden the statistical work of the Department, especially as it relates to crop and livestock production. A committee of experienced statisticians of national standing was called in and asked to consider carefully the prevailing statistical methods and make recommendations. This committee spent some time in Washington and made recommendations of value, which are being adopted as rapidly as possible.

The necessity for establishing grades and standards for farm products of all kinds becomes increasingly evident. Clearly defined and generally accepted grades not only prevent innumerable irritations, annoyances and abuses, but help the farmer produce to better purpose and with fuller understanding of market needs. In the case of many farm products acceptable and fairly well understood grades already have been established.

The standards for grade and color of American Upland cotton and for American-Egyptian cotton were revised during the year and a change was made in the grade names by the introduction of the numerical system to supple-

ment the present grade names. Much progress was made in the wool standardization work. More than 500 sets of the tentative wool grades were prepared and delivered to those interested. Up to the close of the year, grades had been formulated and recommended for 14 of the more important fruits and vegetables. Tentative standards were prepared for eggs and attention given to the preparation of standards for live and dressed poultry. Tentative hay grades have been formulated for timothy, clover, timothy and clover mixed, mixed grass and timothy, and grass mixed hay.

During the past year there has been an unprecedented increase in the number of applications received from warehousemen who operate on a large scale under the United States Warehouse Act. At the beginning of the fiscal year 1921 there were licensed 238 cotton warehouses, having a combined capacity of approximately 430,000 bales. By the close of 1922 this number had increased to 268 warehouses having a combined capacity of 1,210,000 bales. The number of grain warehouses licensed under the act increased from 56 having a capacity of 2,110,000 bushels to 263, with a capacity of 14,441,000 bushels. The number of wool warehouses increased from five with a combined capacity of 24,375,000 pounds to 18 with a capacity of about 27,500,000 pounds. During the year 14 warehouses controlling space to accommodate 68,395,000 pounds of tobacco were also licensed. Prior to 1922 no tobacco warehouses were licensed. A marked interest developed also among warehousemen in sections in which no interest had been shown prior to this year.

Ten thousand two hundred and forty-seven miles of road projects were brought to completion during the year through Federal aid to the States. Prior to the fiscal year 1922, 7,469 miles had been completed. This brings the total completed up to the end of the year to 17,716 miles. At the close of the year the projects under construction, amounting to approximately 14,500 miles, were estimated to be about 56 per cent complete.

Agricultural Extension Work.—The extension work of the Department was reorganized during the year, the two offices through which this work had previously been administered being combined into a single office. This was done in the interest of simplicity of administration and unity of program and effort. An attempt was also made during the year to further define and clarify the function of the county agent, especially with regard to marketing problems. The Secretary of Agriculture ruled that it is as much the business of extension agents to aid farmers in an educational way in such problems as it is to advise them on matters of production. The fact, however, was emphasized that the extension agent is essentially a public official and therefore may engage with propriety only in business of a public nature.

About 4,000 persons were employed in the work. Approximately 2,100 of the 3,061 counties in the United States are now organized for extension work and it is estimated that 2,500,000 farms and farm homes were reached and influenced to adopt better methods in the various enterprises of the farm and farm home.

The county agent work dealt with various phases of soil, crop and live stock improvement; control of plant diseases and insect and rodent pests; farm management, and marketing. The home demonstration work dealt with such subjects as food and nutrition; clothing; home management; equipment, and beautification. Nearly 500,000 farm boys and girls were enrolled in various forms of club work. Much progress is reported in improving methods of organizing and conducting extension work.

Experiment Stations.—Agricultural experiment stations supported by Federal and State funds are in operation in every State of the Union. In addition to these State experiment stations, experiment stations, supported entirely by Federal funds, are maintained under the direct supervision of the Department of Agriculture in Alaska, Hawaii, Porto Rico, Guam and the Virgin Islands. The latter stations have made noteworthy progress in introducing improved farming methods and in developing a more diversified, evenly balanced and self-sustaining agriculture in these territories.

The total number of persons employed by the State experiment stations increased from approximately 1,700 in 1920-21 to 1,750 in 1921-22. The number of persons employed by the Alaska and insular stations was about 30.

A recent survey of the research work of the experiment stations shows that they are engaged on more than 4,850 projects, covering almost every phase of the diversified agriculture of the United States and its insular possessions. About one-third of the projects deal with field crops, soils and fertilizers; one-sixth with botanical and horticultural subjects; and one-eighth with investigations in animal husbandry, dairying and related subjects; the rest being of a miscellaneous character, including investigations in rural engineering, economics and various other subjects. In general the past year was especially characterized by active development of the work of the stations to meet the varied needs of the agriculture of the country.

United States Department of Agriculture.

AIRCRAFT. See AERONAUTICS.

AIRCRAFT CARRIERS. Ships for the carrying of aircraft are still in the experimental stage although great strides have been made since the close of the World War with this type of vessel. The admiralties of the world have devoted a large share of their attention to the development of vessels of this kind and at the Washington Conference on the Limitation of Armaments great prominence was given to the ratio of aircraft carriers. It was there recognized that an important stage had been reached in the history of naval architecture and that the decisions embodied in the final treaty implied that the carrier had developed from the stage of an improvised auxiliary vessel to a definite type of regular war vessel. This important type of vessel was called into existence by the rapid technical development of the aeroplane for war purposes. The value of the aeroplane for scouting, fire control, etc., led to a demand for a kind of ship to act as a carrier for numerous fighting and scouting planes and with a speed

sufficient to enable it to accompany the fleet in action. The urgency of the war period necessitated the adaptation of vessels already in existence to this purpose. In 1922, four years after the Armistice, it remained to be determined whether the aircraft carrier generically should be of one standard type, or of three types, each adapted to a special purpose. The naval architects of the world are grappling with many difficulties that lie between the adapted types and the tentative types and the evolved efficient types that the tacticians demand. In 1919 the British post-war naval organization provided for a flying squadron of not fewer than six carriers with the Atlantic Fleet. Up to the end of 1922, however, at different times the *Furious*, *Eagle* and *Argus* have at one time or another been in commission with the Atlantic Fleet, but the full squadron has not been brought into existence. At the beginning of 1923 the British and Japanese navies were the only ones constructing vessels definitely designed as aircraft carriers. The British vessel is the *Hermes*, the published details of which are: Length, 548 feet; breadth, 70 feet; displacement, 10,950 tons; speed, 25 knots; fuel capacity, 2,000 tons of oil; armament, 10 5.5-inch guns and 4 4-inch a. a. guns. The hull has a straight stern and a wide flare at the bows, so as to ensure as dry a deck as possible for the alighting aircraft. The Japanese vessel is the *Hosho*, which has a displacement of 9,000 tons, a speed of 21 knots and four 4.7-inch and two a. a. guns. Her top deck is flush from bow to stern. The masts and charthouse telescope into the hull and the smoke escapes are carried aft horizontally. A large elevator carries the assembled aeroplane from the "hangars" on the lower decks to the flying-off deck. The United States Navy has the *Langley* (the ex-*Jupiter*), a converted collier, so fitted that the smoke escapes are adapted to turn upward or downward at the point of discharge. When the stacks are turned downward the smoke is passed through a water spray. The *Langley* is fitted with catapult starting devices as well as braking gear for stopping machines landing on the deck. The starting gear is becoming of less importance as the length of the flying-off decks increase. On the other hand braking gear has been a vital necessity from the beginning of the development of the carriers and is still of importance. An early device consisted of wires stretched athwartship, with sandbags attached to their ends. Trailing hooks beneath the aeroplane caught the wires and the load dragged it back until the machine was brought to rest. The device was primitive and full of disadvantages. The problem proved to be highly complex on account of the danger of putting too great a stress on the fabric of the aeroplane; also on account of the necessity of preventing the machine from rolling over the side or from being blown over or blown astern as it lost speed. Moreover, there arose the necessity for a gear that would operate immediately upon a second machine landing behind the first. The nature of the gear in the various navies is more or less secret, but the gear used by the American Bureau of Aeronautics in its experiments for a suitable braking gear for the *Langley* is described as follows: On revolving

platform are stretched fore and aft wires six inches apart and about nine inches above the platform. These wires are led up over a ramp on one edge of the platform and extend over the other edge where they go over another ramp. Under these wires are stretched athwartship wires to the ends of which are secured sandbags. To the axle of the aeroplane are attached a row of hooks projecting downward. A trailing hook is secured to the under carriage and two other hooks to the tail skid. In operation the aeroplane lands on the flying field and rolls up over the first ramp, it then drops down upon the wires, the wheels rolling between the fore and aft wires. The hooks from the axle engage these fore and aft wires and force the aeroplane to move directly forward into the wind without swerving. The trailing hook drops between these wires and picks up one or more of the athwartship wires. The sandbags on the ends of these immediately exert a drag on the aeroplane which brings it slowly to rest. As the tail drops, its hooks on the skid engage the fore and aft wires and prevent the plane from going over on its nose. A second aircraft carrier of the United States Navy is the *Wright*. This vessel is fitted aft with a balloon well 100 feet long, 40 feet wide and 30 feet deep, with a second well for the stowage of a smaller balloon. The *Wright* carries a plant for the generation of hydrogen gas and the wells are protected from the weather by sectional hatches which can be shifted into position by a trolley running from the deckhouse to the stern. Forward, there is a large machine shop and amidships are an aerological laboratory and a photographic department. There is of course hangar space for several aeroplanes. The *Wright* carries only four 5-inch guns. The question still to be answered fully by naval architects at the end of the year was the suitable size of the aircraft carrier. Both the United States and Japan converted two each of their scrapped cruisers into carriers, constituting thus four great aerodromes of 33,000 tons each and each carrying about 125 aeroplanes. The Washington Treaty limited the tonnage total of aircraft carriers in the navies of the Great Powers. The United States and Great Britain may only build up to a total of 135,000 tons and Japan to a total of 81,000 tons. The size of the British *Hermes*, a craft especially designed for the carriage of aeroplanes, is the first answer to the question of size, but by no means settles this question definitely.

AKRON, Municipal University of, a non-sectarian, coeducational institution located at Akron, Ohio. It was founded in 1870 as Buchtel College of Liberal Arts, and in 1913 the name was changed to Municipal University of Akron. In 1922-23 it had a faculty of 55 members, 813 students, property valued at \$735,000 and an income of \$193,570. Parke Rexford Kolbe, Ph.D., is president.

ALABAMA, one of the Southern States of the Union situated on the Gulf of Mexico between Florida and Mississippi. The State has a gross area of 51,998 square miles, of which 51,279 represent land surface. The geographic centre of the State is in Chilton County, 12 miles

southwest of Clanton. The inhabitants of the State numbered 2,348,174 in 1920, compared with 2,138,093 in 1910 and 1,828,697 in 1900. Alabama ranked 18th among the States in total population in 1920. It has 45.8 inhabitants to the square mile. Of the entire population in 1920, 1,447,032 were white and 900,652 were negro, 85 Asiatics and 405 Indians. The foreign born numbered 17,662, of whom 2,427 were Germans, 1,665 English, 1,291 Irish and 454 Scottish. The rate of illiteracy in 1920 was 16.1 per cent of the total population; being 6.3 per cent among native whites and 31.3 per cent among the negro inhabitants. Montgomery, the capital, has a population of 43,464. Other chief cities are: Birmingham (178,806); Mobile (60,777); Bessemer (18,674); Anniston (17,734), and Selma (15,589).

Education.—In 1922 there were 367,206 pupils in the public schools of the State and 12,558 teachers. There are seven public normal schools with 2,402 students. For higher education there are several institutions, the larger of which are: the University of Alabama with 135 professors and 4,029 students; the Alabama Polytechnic Institute, with 114 professors and 1,425 students; the Alabama Woman's College, with 35 professors and 402 students; and the Tuskegee Normal and Industrial Institute for colored students, with 231 professors and about 2,000 students.

Finance.—The State revenue is derived from property taxes of all kinds, the assessment being made at 60 per cent of the cash value for State and county taxes. Occupation taxes also furnish some revenue. The assessed value of the real property in the State in 1922 was \$952,602,224. The following table shows the condition of the State treasury to the beginning of the current fiscal year:

Balance on hand, 1 Oct. 1920...	\$178,560 21
Receipts during fiscal year.....	13,430,728 63
Total	\$13,609,288.84
Disbursements during last fiscal year	\$12,830,733.03
Balance at beginning of current fiscal year	\$624,639 67

The bonded debt on the same date amounted to \$8,557,000 and the floating debt to \$522,302.73.

Agriculture.—The products of the State are still largely agricultural although mineral industries have assumed prime importance in the last decade. Alabama is one of the great cotton States and produces about one-fourteenth of the cotton of the country. The yield of cotton in 1922 was 835,000 bales as against 580,000 in 1921 and 663,000 in 1920. Other principal crops are Indian corn, wheat, oats, potatoes, hay and vegetables. The yield of these in 1922 were as follows: 3,840,000 bushels potatoes; 13,490,000 bushels sweet potatoes; 760,000 tons hay; 5,540,000 bushels oats; 218,000 bushels wheat; 50,932,000 bushels Indian corn. In 1922 the value of all farm animals in the State was estimated at \$72,497,000. There were in the State 130,000 horses, 299,000 mules, 506,000 milk cows, 515,000 other cattle, 220,000 brood sows, 1,087,000 other hogs, 83,000 sheep and 6,027,000 chickens.

Manufactures.—The last census of United States manufactures places the number of manufacturing establishments in Alabama at 3,654, employing 120,889 persons, of whom 3,914 were proprietors or firm members, 9,816 were salaried employees and 107,159 were wage earners. These establishments used 628,376 primary horsepower, were capitalized at \$455,592,733. In the year named there were paid in salaries and wages \$117,633,205 and \$2,177,015 for contract work. Rent and taxes accounted for \$10,289,027. Materials cost \$300,664,290. The value of the manufactured products was \$492,730,895, thus making \$192,066,605 the value added by manufacture.

Iron and steel manufacturing is the second industry of the State, being surpassed by agriculture. Lumber and timber products form the third industry of importance. The chief woods supplying lumber are yellow pine, oak, gum, maple, ash, hickory, cypress and tupelo. Nearly all the external commerce of the State passes through the port of Mobile.

The railroad mileage is 5,378. River navigation is also important, the Tombigbee and Warrior rivers being navigable for 400 miles. At Muscle Shoals on the Tennessee is a large nitrate fixation plant constructed by the Federal Government during the World War but not to the point of production. Efforts were made by Henry Ford to secure the plant for the making of nitrates and the development of waterpower.

Government.—The Legislature consists of a Senate of 35 members and lower Chamber of 106 members; members of both houses are elected for four years and the legislature meets quadrennially.

The Governor in 1922 was Hon. Thomas E. Kilby, whose term expired 19 Jan. 1923, when he was succeeded by the Hon. W. W. Brandon. The members of the Supreme Court in 1922 were: Chief justice, John C. Anderson; associate justices, Thomas C. McClellan, A. D. Sayre, Ormond Somerville, Lucien D. Gardner, William H. Thomas and B. M. Miller. Other State officers in 1922 were Lieutenant-Governor, Nathan L. Miller; Secretary of State, William P. Cobb; Attorney-General, Harwell Davis; Treasurer, Robert L. Bradley; Auditor, H. F. Lee; Superintendent of Education, John W. Abercrombie.

Legal holidays in the State are: Sundays; 1 January; 19 January (Robert E. Lee's Birthday); 22 February (Washington's Birthday); Mardi Gras; Shrove Tuesday (movable according to time of Easter); 13 April (Thomas Jefferson's birthday); 26 April (Confederate Memorial Day); 3 June (Jefferson Davis' Birthday); 4 July (Independence Day); first Monday in September (Labor Day); second Thursday in October (Fraternal Day); 11 November (Armistice Day); Thanksgiving Day; 25 December (Christmas Day).

ALABAMA POLYTECHNIC INSTITUTE, a State co-educational institution, founded in 1872 and located at Auburn, Ala. In 1922-23 it had a faculty of 114 members, 1,425 students, property valued at \$948,375, and an income for teaching of \$299,217.09. Spright Dowell, LL.D., is president.

ALABAMA, University of, a State co-educational institution founded in 1831 and located at University, Ala. In 1922-23 it had a faculty of 135 members, 4,029 students, (including 2,000 in summer school), property valued at \$1,500,000 and an income of \$450,000. George H. Denny, LL.D., is president.

ALABAMA, Woman's College of, an educational institution under the patronage of the Methodist-Episcopal Church, South, founded in 1909 and located at Montgomery, Ala. In 1922-23 it had a faculty of 35 members, 402 students, property valued at \$500,000 and an income of \$120,000. Walter D. Agnew, is president.

ALASKA. The Territory of Alaska made appreciable progress during the year 1922. In business and industrial activity it approached the pre-war basis. Owing to a successful fishing season and renewed mining operations its production of material wealth showed a substantial growth compared with immediately preceding years. The larger gains were recorded the latter half of the calendar year and gave abundant promise of further prosperity in 1923.

The following table shows the value of the merchandise shipped to the United States from Alaska in 1922, as compared with the value of that shipped in 1921:

	VALUE OF MERCHANDISE SHIPPED TO THE UNITED STATES FROM ALASKA.	
	In 1921 Dollars	In 1922 Dollars
Fresh halibut and all other except salmon.....	576,660	446,369
Fish, dried, etc.....	456,993	130,378
Fish, pickled and all other.....	94,617	6,390
Salmon, canned.....	19,559,628	29,487,626
Salmon, all other.....	1,141,972	1,395,267
Herring, Scotch cure and salt (not separately specified in 1921).....		2,402,914
Herring, canned.....	887	8
Clams, canned.....	11,348	180,873
Fish fertilizer.....	9,045	157,578
Shrimps.....	123,310	144,471
Fish and whale oils.....	32,256	292,140
All other fish products.....	922,466	76,779
Total fish.....	22,929,182	34,720,793
Copper ore.....	7,974,270	9,833,444
Furs.....	3,300,022	3,561,291
Gypsum.....	112,680	84,230
Lead ore.....	61,621	36,120
Lead bullion.....	1,733	
Marble.....	70,880	152,046
Palladium.....	8,295	
Tin ore.....		4,650
Platinum.....	1,930	
Lumber.....	6,897	61,930
Reindeer meat.....	18,534	24,600
All other Alaska merchandise.....	73,086	117,428
Total Alaska merchandise.....	34,559,130	48,596,532
U. S. goods returned.....	1,796,782	1,598,110
Foreign merchandise.....	561,012	888,353
Total merchandise.....	36,916,924	51,082,995
Gold.....	6,543,430	6,660,978
Silver.....	806,712	770,897
Grand total.....	44,267,066	58,514,870

Exports to the United States reached a total of \$58,514,870, an increase of \$14,247,804 over the aggregate for 1921. The major volume of business was in fish and fish products, \$34,720,793, a growth of \$12,000,000. Shipments of copper, gold, silver, lead and tin reached a valuation of \$17,306,089, an increase of \$2,000,000.

Marble of the value of \$152,046 was exported as compared with \$70,880 in 1921. Reindeer meat shipped to the States for consumption yielded \$24,600, a small growth, as this industry is not yet commercialized. Lumber exports, chiefly to foreign ports, brought \$61,930, as against \$6,897 in 1921, thus showing that the vast forests have barely been touched. Fur shipments were valued at \$3,561,291, an increase of \$261,269 compared with the previous year.

Imports to the Territory of all kinds approximated \$30,000,000, exceeding those of the preceding year by \$8,000,000.

Tourists to the number of 5,537 visited Alaska, an increase of 2,095 over the number in 1921.

A gradual return to more normal economic conditions quickened recovery from depression following the World War and gave a general impetus to business and industry. Interest in the Northland was awakened throughout the country and a steady growth of population is in prospect.

The Territory has about 60,000 permanent inhabitants, of whom nearly one-half are native-born Indians and Esquimaux. The larger communities are along the southeastern and southwestern coasts and Cook's Inlet.

Juneau, the capital, in Gastineau Channel, has a varying population of 3,000 or thereabout, and other more important centres are Ketchikan, the first port of entry, after crossing Dixon's Entrance; Sitka, the former capital, on Baranoff Island; Wrangell, Petersburg and Skagway, the latter a terminus of the White Pass Railroad and gateway to the Yukon—all in Southeastern Alaska. The average tourist of the scenic Inside Passage sees these communities on its picturesque shores, but if he proceeds no farther he cannot grasp the magnitude or comprehend the greatness of Alaska as a whole.

Westward, across the Gulf of Alaska, in Prince William Sound, is Cordova, gateway to the Copper River Valley and terminus of the Copper River and Northwestern Railroad, built by private enterprise at a cost of \$20,000,000, extending 191 miles past Childs and Miles glaciers to the famous Kennicott Copper Mines. This railroad traverses a picturesque glacial and mountainous country, sparsely populated, and its business is limited largely to the transportation of ore to tidewater. At Chitina, 130 miles inland by rail, connection is made with a branch of the interior highway which leads by a chain of lakes and over beautiful slopes, with a view of smoking Mount Wrangell in the distance, affording a wonderful automobile trip. Cordova is a thriving centre of 1,000 people.

Valdez, on the bay of that name, reached through Prince William Sound, is the next town beyond and the starting point of the interior highway, called the Richardson Trail, which winds through Keystone Canyon and over Thompson Pass and the Alaskan Range to Fairbanks, the most important town in the interior, a distance of 372 miles. This highway, the nucleus of the road-building system, is kept in excellent condition and is traveled by automobile in summer and dog team in winter.

Beyond Valdez, a short day's journey by water, is Seward, on Resurrection Bay, the

southern terminus of the government railroad. Strategically situated, in closest proximity to the Alaska Peninsula and Kodiak and Aleutian Islands, and the gateway to the great interior, Seward is naturally an important centre of activity. Private capital years ago here projected and began building the Alaska Northern Railroad, but the enterprise failed and the abandoned line was taken over and became a part of the government railroad project inaugurated in 1914.

Government Railroad.—Officially designated The Alaska Railroad, extending from Seward through the Kenai Mountains and along Turnagain Arm to the new town of Anchorage, on Cook Inlet, base of construction and operation, and thence through the Matanuska and Susitna valleys and over the Broad Pass, of the Alaska Range, to Tanana, and on through the rich Tanana Valley to Fairbanks, the northern terminus—a distance of 467 miles—the government railroad penetrates the very heart of Alaska and is the outstanding achievement in the opening and development of the Northern domain. Branch lines to the Matanuska coal fields, near Anchorage, and to Chatanika, beyond Fairbanks, increase the total mileage to 540, not including spurs. Its cost to date is \$56,000,000, the outlay having been increased by abnormal conditions created by the World War, during which period construction work was wholly or partially suspended for a time because of inability to secure material and labor. Nevertheless, the expense per mile compares favorably with that of private enterprises of like character confronted with similar natural difficulties and the gigantic work throughout has been notably free of even a hint of scandal or graft. Expert opinion pronounces it one of the best built railroads in the world. Originally the Alaska Engineering Commission, to which, under the Interior Department, the colossal project was entrusted, had three members and its work was divided, but the successful consummation of the undertaking was in the hands of Col. Frederick Mears, United States Army, who had previously had a large part in the construction of the Panama Railroad and who, during the suspension of the work in Alaska, served overseas as general manager of the American Railroad Department in France.

Final construction work on The Alaska Railroad proceeded uninterruptedly and the close of the year witnessed the virtual completion of the 700-foot, single-span bridge over the Tanana River at Nenana, one of the largest of its type in the world. The completion of this bridge, which was expedited by weather conditions, will be followed at once by the conversion of the line from Tanana to Fairbanks from narrow to standard gauge and by the early spring of 1923 through trains will be operated the whole length of the railroad on probably tri-weekly schedule. During the year a twice-weekly service was maintained, with transfer by ferry at Nenana, and the freight and passenger traffic exceeded the most sanguine estimates. For 1921, with the railroad in partial operation, the revenues approximated \$480,000 or \$40,000 per month. For 1922 the combined revenues, or gross passenger and freight receipts, reached \$573,426.75. The railroad carried 36,665 passengers and 40,690

tons of freight. In its preliminary stages it is justifying itself and confirming the wisdom of Congress. A broad policy of development, with a definite colonization plan, was intended to be effective concurrently with the building of the railroad, but the World War estopped consideration of plans to that end, and needed legislation to provide such a general policy has since been deferred. Nevertheless, without the contributory aid of co-ordinated and concerted effort to encourage settlement and industry, the railroad is proving of incalculable benefit to Alaska in lowering freight rates, reducing the cost of living and solving general transportation problems. No greater difficulties of operation have been encountered in winter than are commonly met and overcome by overland trains in the States.

Besides The Alaska Railroad and the Copper River and Northwestern, the White Pass, a foreign corporation, has 20 miles of railroad in Alaskan territory, from Skagway, at the head of Lynn Canal, to the Canadian boundary line at the Summit. Its trains are operated in conjunction with the Canadian steamships and make strong appeal to tourist travel.

Steamer service on the Yukon, below Dawson, has been greatly curtailed since the operation of The Alaska Railroad and during the year this entailed serious hardship to communities along the great river. The *General Jacobs* and *General Davis*, army boats, heretofore operating from Fort Gibbon (Tanana), now abandoned, have been transferred to the Alaska Engineering Commission, and it is proposed, with the assent of Congress, to operate them in conjunction with The Alaska Railroad, as it is deemed of the utmost importance to provide freight and passenger facilities on the Yukon and its tributaries during the navigable season.

Road-building.—Roads and trails, all through the Territory, are necessarily required to open and develop Alaska. Excellent headway has been made. Road-building has been continuous in the last decade under the direction of the Alaska Road Commission and, in recent years, the Bureau of Roads has built a number of local roads. Both are Federal agencies. The one builds roads and trails in the interior and the other only within and adjacent to forest reservations along the coasts. The Territory contributes in a limited way to road building and merges its projects with those of the Alaska Road Commission for economical ends in avoidance of duplicated effort.

The highway from Valdez and Chitina to Fairbanks is the main artery of the Alaska Road Commissions system. Although its use has been temporarily curtailed by the completion of the railroad, its permanent value and the wisdom of its upkeep cannot be doubted. Population will demonstrate its utility and the farsightedness of its builders.

Naturally the unopened interior most urgently requires roads and trails. Arteries to the railroad are essential that it may the more quickly come into full usefulness and be made to pay. Promising mineral districts, notably the Kantishna, the Copper River and Kuskokwim, wait for roads and trails to make possible their development.

In the forest reservations on the coasts, 20,-

000,000 acres, embracing many sections of un-forested lands, the problems of transportation, in great measure, are obviously those of water. Therefore, in Alaska the Bureau of Roads is unable to contribute largely to the general development of the Territory.

Mining.—While no new mineral discoveries of momentous importance were recorded during the year, impetus was given to mining enterprises by improved economic conditions and better transportation facilities. The working season of 1922 was marked at its opening by renewed and enlarged activities and the output of ore for smelting increased notably. Placer mining was successfully pursued in the Fairbanks region and elsewhere, and preliminary plans were effected for the resumption of dredging operations on an extensive scale on the Seward Peninsula, with Nome as a base. On the islands and mainland of Southeastern Alaska promising projects made headway. Established enterprises operated profitably as heretofore, producing ore to the value of millions, and newer lode properties underwent large and successful development. Mines at Willow Creek, above Anchorage, within reach of the railroad, and at the boundary line, in the vicinity of Hyder, a growing camp on the Portland Canal, received especial attention and gave gratifying promise. Rich claims are dormant in the various sections because of transportation and moneyed needs. In spite of the enormous yield of gold for years, Alaska, save in spots, has been prospected only in a desultory way and its deposits of precious metals are yet untold. But capital is required to reveal and demonstrate this unquestioned mineral richness and turn it to account. Nuggets are no longer found in paying quantities in the hills and streams and fortunes are not to be made "on a shoestring." The day of such things is gone. Dr. Alfred Brooks, of the United States Geological Survey, in his summary for the year, says "the Alaska mining industry is advancing, not retrograding" and that it is "now on a more substantial basis than ever before."

Oil.—Prospective oil discoveries in the vicinity of Cold Bay, on the Alaska Peninsula, and preparations for drilling by big organizations riveted popular attention upon that region and gave evidence of an impending stampede. Countless claims were staked and filed and, during the year, important activities, supported by ample capital, were under way and the utmost confidence was felt in the prospects. It was recognized that a strike of oil at tide-water would speed prosperity for the Territory and make for population and transform a barren country. Seepages in the Matanuska district in proximity to the railroad, giving abundant signs of oil deposits, also commanded notice. Meanwhile, the Katalla field, on Controller Bay, continued to yield high-grade oil of paraffin base in limited quantities from 13 wells. The extraordinary quality of Alaskan oil gives added interest to this natural resource.

Coal.—Alaska coal, long locked up, came into large local use by communities to the westward and the interior reached by the railroad, and the production is steadily increasing as obstacles are overcome. Several companies are operating

Matanuska mines profitably and the ensuing year should see all along the coasts Alaska coal supplanting the product now and hitherto imported from British Columbia and the States. For half a century unavailable, it is being made available at reasonable cost and the government is wisely encouraging private enterprise by building roads and spurs to going mines and buying coal for the railroad from one of these. The so-called lignite—actually a low-grade bituminous—under production in the Nenana or Healy fields, in the interior, is now extensively used most helpfully and these coal beds, easily accessible, are wide and appear inexhaustible. The production of coal, coincident with the completion of the railroad and a resultant part of that great project, means much materially to the whole of Alaska and results are far-reaching.

Fisheries.—It is estimated that 20,000 persons were employed in the fisheries of Alaska during the season of 1922, exceeding by 5,000 the number engaged in 1921. The total active capital represented in the fisheries approximated \$50,000,000 and the catch was valued at \$34,720,793. Salmon and halibut comprised the bulk of the product as heretofore. The run in some of the waters was unexpectedly large and tended to dispel the growing fears of depletion. In the Bristol Bay region the season was extraordinarily successful. The herring industry showed remarkable growth and convincing signs of permanency, and the canning of clams and shrimps assumed large business proportions.

Conservation of the fisheries is taking more practical form in needed regulation by the Department of Commerce through its Bureau of Fisheries. In its own interest, to safeguard the fish supply of the future, the industry requires and is to-day welcoming regulation and supervision. Overfishing during the war, under the spur of seeming necessity, demoralized the trade and poor seasons following created widespread alarm lest salmon and halibut be nearing exhaustion. The productive season just closed found some canneries unprepared and the resultant waste of unmarketable fish dumped back into the sea was large. Adequate facilities for canning and packing were often lacking. Under normal conditions, year after year, the waste is heavy in the rejection of fish because of size or species. Wholesome fish food in quantity sufficient to meet the needs of great communities in populous centers, or suffering foreign lands, is annually cast to the depths. Failure to utilize by-products involves a further waste. The setting aside of fishing reserves by order of the President now gives the Bureau of Fisheries full authority to make and enforce rules and regulations limiting the catch and number of traps and curtailing fishing areas and closing streams in the public good. Supervision of the canneries will mean simultaneously a closer inspection of the alien, largely coolie, labor brought to Alaska during the season. The migratory character of the industry in certain districts reduces to the minimum its benefits to Alaska, save in taxation imposed and paid. Great fleets come into the waters provisioned for the short season, with hordes of alien laborers, and make their enormous catches and go out. Naturally there is not native labor sufficient and available in remote

regions for fishing needs. Much of the land all along the coasts is fertile and adaptable to gardening and small farming. Fishing villages should spring up and the big packing companies are asked to aid in establishing such permanent communities.

Agriculture.—Of the 600,000 square miles comprising Alaska, it is estimated that 100,000 square miles are suited to agricultural development. The government railroad makes the best of this land accessible. Farming in the interior continues to advance and the acreage under cultivation in the Tanana, Matanuska and Susitna valleys is annually showing an increase. Almost everything is grown except corn, cotton, beans, melons and fruits. Wheat of finest grade has averaged from 25 to 30 bushels per acre. Small homesteaders near markets thrive and industrial population will stimulate agricultural development throughout the interior. Berries grow wild in great abundance everywhere. Millions of acres of inland are naturally adapted to grazing and dairying and the prospects in this direction are very bright.

Native agricultural products, as the territory settles up, will supply the needs of a large population and it is within reason to believe that, in course of years, Alaskan meat and dairying products will figure largely in the outside markets of the world. The agricultural experimental stations have rendered a magnificent service to the Territory in its retarded infancy. The farming possibilities of the great interior, added to fishing, mining and timber resources, strengthen faith in the permanent future of Alaska. A country fair held at Juneau, the capital, in September, attracted wide attention because of the wonderful exhibits of vegetables produced from the rich virgin soil on the coasts.

Reindeer.—Reindeer were first imported from Siberia about 1892 under the direction of the United States Bureau of Education with the object of making the natives economically independent. Laplanders were then brought to Alaska to instruct the natives in the care of reindeer and the importation of animals was continued during the 10 succeeding years until by 1902 the number had reached 1,280. Herds are now distributed among the principal native settlements from Point Barrow to the Alaska Peninsula. It is estimated that if there was the usual 20 per cent annual increase in 1922 the number of reindeers now in Alaska is approximately 259,000, two-thirds of which belong to the natives and one-third to the Laps and whites. The reindeer industry is rapidly extending and is greatly facilitated by the operation of the railroad.

Agricultural College and School of Mines.—A potent sign of the times was the opening in September of the Agricultural College and School of Mines at Fairbanks—the first institution of higher and technical learning in the entire Northland. Its enrollment is steadily increasing.

Forests.—The vast forests of Alaska are on the coasts, where the annual precipitation is abnormal, and they are thus virtually undangerous by fire. Otherwise, covering 20,000,000 of reserved acres, an army of fire wardens would be necessary for their protection. While Wash-

ington, Oregon and Idaho sustained heavy damage during the summer of 1922 from forest fires, Alaska was untouched save by a blaze in scrub timber and undergrowth on Baranoff Island, in June, which entailed small loss. Nature in copious rainfall freely affords protection which human hands could not give. Hence, the Forest Service in respect to fire hazards, is practically relieved of the obligation of guardianship in Alaska and enabled to devote its attention to the classification of lands for survey, the granting of timber-cutting rights, the leasing of small homesteads and fox farms within the reserves, principally on islands, the locating of power sites, and other duties.

Pulp and paper manufacturing enterprises, to which Alaska offers a most inviting field, are undoubtedly forthcoming. Companies are formed and being formed. Adverse economic conditions and difficulties of capitalization have delayed the consummation of such projects, but Alaska is sure destined to supply in large measure the pulp and print paper needs of America. One pulp mill is operating successfully on a limited scale and large projects are under way.

Practically all of the timber used locally in southern Alaska is supplied by the national forests. A total of only 18,000,000 board feet was cut from these forests for commercial use during the past fiscal year. In addition 3,000,000 board feet was taken free of charge from the Chugach forest by the Alaska Railroad Commission. No permits are required for, nor is a record kept of, the timber used by prospectors, settlers, farmers, or fishermen for personal use or for prospecting. See also FOREST SERVICE, UNITED STATES.

Public Schools.—Sixty-six schools for white children and children of mixed blood who lead a civilized life were maintained during the year. These are located all the way from Kotzebue Sound in the northwest part of Alaska to Portland Canal in the extreme southeastern section. One hundred and sixty-seven teachers were employed and the enrollment was 3,654 as follows: Elementary school, 3,207; high school, 447. The cost of maintaining these schools was \$362,190.93, representing a per capita expenditure of \$99.12. Schools are directed by a board of education with the governor as chairman and a commissioner of education, appointed by the board, is chief executive officer. The average school year is nine months. The public schools of Alaska are supported largely by the Territorial government. Schools in incorporated towns receive support to the extent of 75 per cent of the cost of maintenance up to a maximum of \$20,000. This restriction affects only two of the schools. The remaining 25 per cent is derived from local municipal taxation. Territorial appropriations are augmented by a small refund of Federal license taxes collected in Alaska. High school teachers are required to be college or university graduates. Seventy per cent of the elementary school teachers are either normal school or college graduates.

Native schools are conducted by the Federal Bureau of Education. See also EDUCATION, UNITED STATES BUREAU OF.

Territorial Finances and Banks.—The reve-

nues for the year amounted to \$575,475.70 as follows:

General Fund.....	\$486,580 75
School Fund, Current.....	88,696 45
School Fund, Permanent.....	198 50
Total.....	<u>\$575,475 70</u>

The total revenues for 1921 were \$563,474.01, showing an increase of \$12,001.69 for the year 1922. The total expenditures for the year were \$583,089.57.

Fifteen Territorial and three National banks do business in the territory. The Territorial banks are located at Ketchikan, Wrangell, Petersburg, Douglas, Juneau, Skagway, Cordova (2), Valdez, Seward, Anchorage (2), Iditarod, Nome, and Hyder and the National banks at Juneau, Fairbanks, and Anchorage. Aggregate banking figures for the Territory in October were as follows: Capital, \$805,000; surplus and undivided profits, \$578,012.59; savings and checking deposits, \$7,472,142.05.

Health.—The Territory enjoyed complete freedom from epidemic during the year and health conditions continued good, with a low rate of mortality.

Labor.—No strikes or labor disturbances occurred in any branch of industry.

Game.—Animals and birds abound in Alaska. Fur-farming is extending. Reports received from wardens agree, in the main, that game, large and small, is plentiful—in some districts increasing and nowhere being ruthlessly depleted.

Postal Progress.—Mail facilities appreciably improved during the year. The installation of a monthly service from Seward to the Alaska Peninsula and the Aleutian Islands, by means of subsidy to a steel steamer, proved a boon to the people of those remote regions and gave stimulus to life and industry. Better service was also provided in the interior. Few localities are now wholly cut off from the outside world.

Climate.—Misconception of the climate of Alaska is general. The ports of the coast, save at Nome and in the far north, are open the year around, with regular steamer sailings. In Southeastern Alaska the temperature is equable, averaging 40 degrees for the year, and the record on the Southwestern coast was but slightly lower. The highest temperature, 88 degrees, was at Strelna, on the Copper River Railroad, on 5 July, and the lowest 59 degrees below, at Allakaket, on the Arctic Circle, near the intersection of the Koyukuk River, on 4 March. The weather in the interior is similar to that of Montana, the Dakotas and Northern Michigan.

Purchase of Territory.—It has always been understood that the United States, in 1867, paid Russia \$7,200,000 for Alaska, but the "Letters of Franklin K. Lane," late Secretary of the Interior, disclose the information that of this sum \$1,400,000 covered a reimbursement of the expense of the visit of Russian fleets to American harbors of the North, a demonstration of friendship at a crucial period of the Civil War, and that the actual purchase price of the Territory, negotiated by Secretary of State Seward, was \$5,800,000.

Among the recently issued books relating to Alaska are the following: Stefansson, 'North-

ward Course of Empire'; Gilman, 'The American Northland'; Henderson, 'Civil Government of Alaska'; Brooks, Alfred, 'Minerals of Alaska'; United States Biological Survey, 'Reindeer Industry'; Rand McNally and Company, 'Alaska and Yukon'; Alaska Engineering Commission, 'Railroad Guide.'

SCOTT C. BONE,
Governor of Alaska.

ALBANIA, a geographical district of Europe and at present an independent state. It is made up of the former Turkish provinces of Janina and Scutari and of parts of the former vilayets of Kossovo and Monastir and is bounded by Jugoslavia, Greece and the Adriatic Sea.

The estimated area of the country is between 10,500 and 11,500 square miles. An international commission is at present determining the boundaries of the country. The population is about 1,400,000. The chief towns, with their populations, are as follows: Durazzo, the provisional capital, 5,000; Scutari, 32,000; Elbasan, 13,000; Argyrocastro, 12,000; Tirana, 12,000; Berat, 8,500; Korytza, 8,000; Valona, 6,500.

The Albanian people are divided in two great groups—the Ghegs, who dwell mostly in the north, and the Tosks who preponderate in the south. Religion causes a further division; about two-thirds of the population being Moslems and the remaining third Christian, being divided about equally between the Roman Catholic and the Greek Orthodox faiths.

There is an hereditary aristocracy in the country and a well defined feudal system. The clan system is in vogue.

There are very few schools in the country and these few are for the most part under the supervision of the Jesuit order. In recent years a normal school has been opened at Elbasan and a high school for boys at Scutari.

The Ottoman code of law is in force in the greater part of Albania, but strictly speaking no universal system of justice has been in force.

The greater part of the country remains uncultivated and those tracts under cultivation are dealt with in a most primitive way. The most fertile regions are the Adriatic littoral and the Korytza Basin. Here tobacco, olive oil and wool are the chief products. A coarse woollen cloth is made from the wool and about the sole textile product of the country. Copper, coal, gold, silver, lead and oil are said to be obtainable in commercial quantities, but the disturbed state of affairs have thus far hindered development.

There are few roads and no railways. There are five ports: San Giovanni di Medua, Durazzo, Valona, Porto Palermo and Santa Quaranta. There are no banks and although the country is said to be on a gold basis there is no currency. There is no state debt.

Recent History.—On 3 June 1917 the commander of the Italian forces in occupation of Albania proclaimed it an independent country and set up a provisional government at Durazzo. In 1921 difficulties arose with Serbia over the settlement of the eastern boundary and an invasion of the country by the Serbians was prevented only by the firm action of the Allied countries. At the head of the state is a Council

of Regents, composed of the representatives of the three great religious bodies in Albania. There is a Parliament of 77 members. Early in 1922 there were several changes of the cabinet. The Evangheli cabinet fell after a term of office lasting scarcely a month and was succeeded by that of Prishtina, which lasted but a few days. It was succeeded by the Kosturi cabinet which set out as a business administration. The Mirdites (Catholic Albanians of the north) appealed to the League of Nations, asking for protection against the encroachment of the Moslem government of Tirana. They formed their own independent republic and sought the recognition of the Allies.

On 8 March 300 rebels undertook to overthrow the Tirana government and to set up a government of their own. They were repulsed in a long day's battle at Tirana on the 10 March and the movement collapsed with the capture of the leaders on the same day. The revolt was the second deliberate attempt to embarrass the government in the presence of foreign diplomats, the Frontier Commission representing the Council of Ambassadors being then in Tirana at work on the details of the boundary settlement. Albania was formally recognized by the United States on 27 July 1922. The official announcement added that the Albanian government had been recognized by most of the great nations of Europe. The Albanian government invited the League of Nations to send representatives to study the Albanian situation at first hand. On 13 Oct. 1922 the Albania delegation to the League of Nations at Geneva announced that the definite form of the country's constitutional régime would be determined by a constituent assembly. The statement was made in reiterating the denial that Albania had become a republic.

ALBANY COLLEGE, a Presbyterian educational institution, founded in 1867 and located at Albany, Ore. In 1922–23 it had a faculty of 14 members (college 10, school of music 4), and a student enrollment of 74 in college and 111 in the school of music. The institution had property valued at \$98,056.58, an endowment of \$260,842.37, and an estimated income of \$30,000. R. E. Baker is vice-president.

ALBANY, Duchess of (Helène Frederica Augusta); b. 27 Feb. 1861; d. Innsbruck, Austrian Tyrol, 2 Sept. 1922. She was the daughter of the Prince of Waldeck-Pyrmont and sister of Queen Emma of Holland and, consequently, was aunt of the present Queen Wilhelmina. She was also aunt by marriage of the former Emperor Wilhelm of Germany, the Tsarina of Russia, King George of England and Queen Victoria of Spain. On 27 April 1882, she was married at St. George's Chapel, Windsor, to Leopold, Duke of Albany, the eighth child and youngest son of Queen Victoria, and went to live at Claremont. The Duke died suddenly in 1884 in the South of France, leaving her with a daughter. A posthumous son, Arthur Charles Edward, was born in July 1884 and succeeded to the Dukedom of Albany. In 1900 he became Duke of Saxe-Coburg on the Duke of Connaught's refusal of the title because he would not forswear his British allegiance. The Duke was removed from the British Peerage in

1917 by Act of Parliament for his German sympathies. He also renounced his honorary position as colonel-in-chief of the Seaforth Highlanders. The position of the Duchess of Albany as a British Princess whose son was a ruling German Duke was difficult. She was loyal to British interests and very active in war charities and gave up her home at Claremont to wounded officers. To raise money for her welfare work in Deptford, one of the poorest suburban districts of London, she sold her historical pearl necklace, worth £2,700, given to her by Queen Victoria, and organized a great costume ball at Devonshire House, which proved to be one of the most brilliant post-war festivities. The Duchess was very popular with her neighbors at Claremont.

ALBERT, Prince of Monaco: b. Paris, 13 Nov. 1848; d. there, 26 June 1922. He was the son of Prince Charles (3d) of Monaco, whom he succeeded as ruler of the principality in 1880. Prince Albert was a descendant of the Grimaldi family of Genoa, which has had possession of Monaco since 968. Consequently he was a member of one of the oldest dynastic houses in Europe. For 30 years he reigned as absolute sovereign of his small kingdom (eight square miles territory, with 23,000 subjects); but in 1911 he gave his people a constitution that provided for a national council elected by universal suffrage, which they have not accepted. Prince Albert owned the famous gambling-halls of Monte Carlo, from which he derived an enormous income, running from \$500,000 to \$1,000,000 a year. A portion of the funds were used to finance Prince Albert's researches in oceanography, which have been of great value to the world. As early as his 18th year he made the study of marine fauna and flora and all questions connected with oceanography, his chief pursuit. He equipped four yachts for deep-sea dredging and investigation of ocean currents; and in the latter field his discoveries are said to have aided the Allies in charting the drift of German and Allied mines in the North Sea and English Channel. During the war Prince Albert placed at the disposal of the American government his private estate at Monte Carlo for convalescent soldiers; and from 6,000 to 8,000 wounded enjoyed this retreat. The Germans seized the Prince's Château de Marchais near Rheims, threatening to destroy it unless they had a ransom of \$100,000. The money was never paid. In addition to his sea-studies, Prince Albert was interested in palaeontology, and organized excavations in the caverns of southern France and Spain that brought to light bones and flint tools of the Stone Age. In 1910 he established at Monaco a museum of oceanography to contain his marine collections; and in 1920 he founded a museum of human paleontology in Paris. In 1921 the National Academy of Sciences of the United States gave him the Agassiz gold medal for his work in oceanography. He made three visits to this country: in 1868 as a sailor in the Spanish navy; in 1893; and in 1921. He first married Lady Mary Douglas Hamilton, whose son Prince Louis, succeeded him as ruler of the principality at the age of 62. The Prince's first marriage was

annulled in 1880; and in 1889 he married the Dowager Duchess of Richelieu (Miss Alice Heine of New Orleans); but was divorced in 1902.

ALBERTA, a province of the Dominion of Canada, created out of the old Northwest Territories in 1905 under the terms of the British North America Act of 1867. It is bounded on the west by British Columbia, south by the United States, east by Saskatchewan and north by the Northwest Territory. The province has an area of 255,285 square miles and a population of 581,995 in 1921. The rural population is about three-fifths of the total. The chief cities, with their populations, are: Calgary (56,514); Edmonton (53,846); Lethbridge (9,436); Medicine Hat (9,272); Red Deer (2,203); and Wetaskiwin (2,048). Vital statistics for the year 1920 showed 16,565 births, 5,510 marriages, 5,675 deaths, an excess of 10,890 of births over deaths. There are 3,154 schools with 121,567 pupils. The University of Alberta had in 1922-23, 1,260 students. The provincial revenue is derived from Dominion subsidies, school lands, and provincial sources. With about two exceptions all the taxes except those on land values have been abolished throughout the province thus closely approaching the single tax idea. Provincial revenue from all sources in 1921 aggregated \$17,887,517 and expenditures \$17,364,466. The public debt of the province amounted to \$41,989,900 in 1920, less a sinking fund of \$1,231,159. Agriculture is the pre-eminent industry of the province although asphalt and coal are known to exist in rich deposits. The products of the province are dealt with under the article on the Dominion of Canada (q.v.). The executive authority of the province is vested in the lieutenant-governor, an appointee of the Dominion government, nominally at least, but actually it rests in the executive council or cabinet of the legislature. All provincial legislation is referred to the Dominion government at Ottawa for its approval. Members of the legislature are elected by direct popular vote. Women possess the right of suffrage. The legislature has 61 members, made up of 38 United Farmers, 14 Liberals, 4 Laborites, 3 Independents and 1 Conservative in 1922. The Lieutenant-Governor in 1922 was His Honor R. G. Brett. The Premier, President of Council, Provincial Secretary and Treasurer was Hon Herbert Greenfield.

ALBERTA, University of, a non-sectarian co-educational institution, founded in 1908 and located at Edmonton, Alberta, Canada. In 1922-23 it had a faculty of 125 members, 1,260 students, property valued at \$4,000,000 and an income of \$802,000. Henry Marshall Tory, M.A., D.Sc., LL.D., is president.

ALBION COLLEGE, a Methodist Episcopal but non-sectarian co-educational institution founded 25 Feb. 1861 and located at Albion, Mich. In 1922-23 it had a faculty of 40 members, 617 students, property valued at \$367,723.12 and an income of \$134,523.69. John W. Laird, M.A., D.D., LL.D., is president.

ALBRIGHT COLLEGE, an Evangelical co-educational institution, formally opened in 1894 and located at Myerstown, Pa. In 1922-23 it had a faculty of 18 members, 234 students and

property valued at \$365,000. Income figures not available. Rev. Levi Clarence Hunt, A.M., B.D., D.D., is president.

ALCOHOL. See PROHIBITION ENFORCEMENT.

ALDRIDGE, George Washington, American public official and Republican political leader: b. Michigan City, Ind., 28 Dec. 1856; d. on golf course near Rye, N. Y., 14 June 1922. His parents removed to Rochester, N. Y., and there his home remained to the end of his life. He was educated in the public schools, Rochester, Cary Collegiate Seminary, Oakfield, N. Y., and DeGraf Military Institute, Rochester. At his father's death in 1877, he assumed charge of a contracting business, in the conduct of which he built many important edifices in Rochester. His political career began in 1883, when he was elected a member of the Executive Board of Rochester. He served for 11 years. In 1894 he was elected mayor of Rochester. In 1895 he became State Superintendent of Public Works and during his term the capitol at Albany was built. He was a member of the State Railroad Commission, of which he was for a time chairman. In 1888 he was made a member of the Republican State Committee and placed on the executive committee, where he remained the rest of his life. He was a delegate to the Republican national conventions of 1896, 1900, 1904, 1908, 1912, 1916 and 1920, in the last of which he voted persistently for Warren G. Harding. In March, 1921, he was appointed Collector of the Port of New York, a post traditionally belonging to an "up-stater." Mr. Aldridge was a genial man, variously described as "boss," "leader" and "satrap." He was also known as "Uncle George." He was the last of the once invincible "Big Three," the others being Thomas C. Platt and Francis K. Hendricks. In later years he was one of the "Big Four" in Republican state politics, the other members being William L. Ward, Fred Greiner and Wadsworth. As a member of Governor Whitman's "Kitchen Cabinet," Mr. Aldridge had much influence, for he was Governor Whitman's closest adviser. He dropped dead on the golf links of the Westchester-Biltmore Country Club, near Rye, immediately after driving a ball. Mr. Aldridge was a member of the Rochester Historical Society, the Empire State Society, Sons of the American Revolution, the Elks, the Lotus, the Lawyers and the Republican clubs of New York City, one of the board of governors of the Society of Genesee, a member of the Rochester Municipal Act Commission, the Rochester Chamber of Commerce, and many other societies and clubs.

ALFALFA. See HAY.

ALFALFA WEEVIL. See ENTOMOLOGY, UNITED STATES BUREAU OF.

ALFRED UNIVERSITY, a non-sectarian, co-educational institution founded in 1836 and located at Alfred, N. Y. In 1922-23 it had a faculty of 25 members, 302 students, property valued at \$1,107,000 and an income of \$175,000. Boothe Colwell Davis, Ph.D., D.D., LL.D., is president. There is located at Alfred University

a State School of Agriculture of secondary grade (not college) with 14 instructors and 125 students.

ALGERIA, a region of northern Africa which now belongs to France. It has an area of 222,180 square miles and a population of 5,800,974, according to the census of 1921. France has divided the colony into two major divisions: Northern and Southern Algeria. Northern Algeria is further divided into the Territory de Commandement and the Civil Territory. The latter is being gradually extended as the natives are won over and military rule is rendered unnecessary. Thus in time the Territory de Commandement will be extinguished at the expense of the Civil Territory. Northern Algeria is divided into the three departments of Algiers, Oran and Constantine, and these in turn are subdivided into 17 arrondissements and 278 communes and 76 mixed communes. Southern Algeria is divided into four territories: Ain Sefra, Ghardaja, Touggout and the Sahara Oases. These are further divided into 14 communes, of which seven are mixed and seven native.

The census of 1921 gives the population according to departments and territories as follows:

Northern Algeria:	
Algiers.....	1,785,574
Oran.....	1,305,051
Constantine.....	2,162,612
Southern Algeria:	
Ain Sefra.....	163,529
Ghardaja.....	145,029
Touggout.....	202,743
Sahara Oases.....	36,736
	<hr/> 5,800,974 <hr/>

Of this population about 4,800,000 are natives, 500,000 are French, 75,000 are Jews, 25,000 are Moroccans, 135,000 Spaniards, 40,000 Italians and the remainder foreigners of various nationalities. The chief towns and their populations are: Algiers, 206,595; Oran, 141,156; Constantine, 78,220; Tlemcen, 43,090; Bone, 45,171; Sidi-bel-Abbes, 37,752.

Constitution and Government.—The colony is administered under the central authority of the Governor-General who represents the French Republic throughout the colony. There are Ministers of Justice, Treasury, Education and Religion for the non-native population, but all other services are under the Governor-General. He prepares the budget, which is kept distinct from that of France and is then voted upon by the Superior Council and the Financial Delegations. The former is made up mostly of the higher officials and a few elected members and the latter are the delegates of the taxpayers, both French and Moslem. The legislative powers are vested in the French Chambers, to which each department of Algeria sends one senator and two deputies. In addition there is an advisory council to the Governor-General.

Education.—According to the latest reports there were in the colony 1,298 schools of primary grade with a registration of 132,617 pupils. There were three normal schools for women and two for men, with an aggregate registration of 450. In the same year there were about

500 Moslem schools with 36,000 pupils. There are 16 institutions of secondary grade with 9,837 pupils. There are Moslem schools of higher grade in the chief cities, but there are no statistics available concerning these. For higher instruction there is a university at Algiers attended by over 1,400 students. There are also special schools of agriculture, commerce, etc.

Religion.—Mohammedanism is the religion of the native population. The number of adherents of the Jewish faith is given above under the estimates of population. Among the Europeans the Roman Catholic Church has the greatest number of communicants. This church has one archbishop, two suffragan bishops and about 400 clergymen—the majority of the latter being of the celebrated missionary order called the Peres Blancs.

Agriculture.—The regions best adapted to agriculture lie close to the seacoast and are largely in the hands of Europeans. The hilly districts are well adapted to grazing and the forest products are by no means negligible. Lack of adequate communications is the chief handicap to the development of the hinterland. The land is held under several systems—proprietor or owner-occupier, share farmer and the system known as metayage. In 1921, 2,904,811 acres were planted to wheat and there was a yield of 1,028,900 tons; barley was planted to 2,513,943 acres and yielded 1,099,300 tons; oats, 573,885 acres, yield 170,650 tons. Tobacco is grown very successfully. Other crops are Indian corn, potatoes, beans and tomatoes, with flax and silk as lesser crops. The European landholders along the fertile coastal lands grow great quantities of grapes, from which the wine yield in a recent year was 157,136,452 gallons. Dates, oranges, bananas and figs are grown in abundance and the production of olive oil is fast assuming great proportions. The forests are owned mostly by the colony or the communes and yield an annual revenue of about \$1,000,000. The last livestock census enumerated 202,839 horses, 1,092,996 cattle, 9,139,722 sheep, 4,000,000 goats and 108,000 swine.

Industry.—The colony produces iron, lead, copper, mercury and oil. Iron ore to the amount of 1,071,278 tons was extracted in 1920; in the same year 11,633 tons of lead were mined, 456,169 tons of phosphates, 26,422 tons of zinc and about 7,000 tons of coal.

Allaches, anchovies, sardines, sprats and tuna are fished for and captured in great quantity. The fishing industry gives employment to 6,000 persons and there is an annual catch valued at 17,056,897 francs.

Trade and Commerce.—According to the latest available trade returns (those for the year 1921) the foreign trade of the colony in that year was 3,761,000,000 francs. Imports were valued in American dollars at \$139,121,928 and exports at \$100,566,144. Sugar, cotton, and textiles are the chief imports, while the chief exports are sheep, wheat, figs, raw silk, wines and tobacco. As in the case of the other dependencies of France the trade is almost exclusively confined to the latter country.

Communications.—There is a colonial merchant marine totaling about 50,000 tons. The

mileage of the national roads is about 3,330. Railway lines have a mileage of 2,250, of which about 800 miles are privately owned. The colony has 786 telegraph offices connected by over 8,000 miles of wire. There are 6,250 miles of line of urban telephones and 11,000 miles of line of inter-urban telephones.

Banking and Finance.—The bank of issue is the Bank of Algeria which has a capital of 20,000,000 francs and a note circulation limited by law to 1,300,000,000 francs. There are also a number of agricultural banks on the co-operative plan which receive aid in the form of government funds. There are seven savings banks with 5,000,000 francs deposited to the credit of 21,000 depositors.

Since 1901 the Algerian budget has been prepared by a popular body, called the "financial delegations," divided into the four following principal groups: The European population in cities and towns; the French farmers; the Kabylans (one of the native races); and all other native races. The budget so prepared is generally approved with few modifications by the general council in Algeria and subsequently by the French government. The ordinary expenditures provided for by the successive budgets have gradually increased from 60,000,000 francs in 1902 to nearly 400,000,000 in the estimate for 1923.

Until 1913 the public debt of the colony was insignificant, but with the war came unsettled conditions, accompanied by several years of crop failure. Between the years 1914 and 1918 expenditures exceeded revenues by 372,000,000 francs. A loan of 145,000,000 francs has already been floated to cover a portion of this deficit and the balance was to be covered by credits in the budget for 1922.

Figures are not yet available to show whether the annual deficits have been eliminated, but as the actual receipts of the government for 1921 totaled only 304,758,276 francs, as compared with an estimate of 336,345,276 in the 1921 budget, this may be regarded as doubtful. The budget for 1923, submitted by the financial delegations in June 1922, is as follows:

Ordinary:	Francs
Receipts.....	387,830,024
Expenditures.....	387,610,375
Excess of receipts over expenditures..	219,649
Extraordinary:	
Receipts.....	102,118,117
Expenditures.....	102,118,117
Total receipts.....	489,948,141
Total expenditures.....	489,738,492
Total excess of receipts over expenditures.	219,649

An important expense of the Algerian government results from the excess of expenditures over revenues in the operation of the Algerian State Railways. This excess of expenditures amounted to 80,000,000 francs in 1921, but the budget allows for only 50,000,000 francs in 1922, and 14,000,000 in 1923.

In 1921 the total budget deficit, as announced by the Governor-General, amounted to but 81,000,000 francs, or only 1,000,000 francs in excess of that for railway operation, in spite of con-

siderable expense for purchasing cereals, following the crop failure of 1920.

The military taxes and the proceeds of the government monopolies and some miscellaneous revenues are paid to France.

Army.—The Algerian forces constitute the 19th Army Corps of the French service and consist of three divisions. There are 18 regiments of native soldiers but the officers and part of the non-commissioned officer personnel are French.

There are 13 regiments of Europeans. French residents are under the provisions of the French military service laws and the natives are obliged to serve three years with the colors after which they go into the reserve, subject to service in case of mobilization.

Miscellaneous.—The Governor-General in 1922 was Theodore Steeg, who received his appointment 29 July 1921.

ALIEN PROPERTY CUSTODIAN.—

The office of the Alien Property Custodian was established by Congress as a war-time Department under an act adopted 6 Oct. 1917, known as the "Trading with the Enemy Act".

The purpose for which this Department was established was the seizure of the property of enemies of the United States to prevent the use of such property in any way to aid the German or Austro-Hungarian governments, or people, or their allies during the prosecution of the war. Broad powers were given to the President, and such powers were delegated by the President to the Alien Property Custodian, the Attorney-General, the Secretary of State, and other officials of the Federal Government.

The duties of the Alien Property Custodian consisted in taking over, administering and conserving money or other property of any nature whatever belonging to "enemies" as defined by the "Trading with the Enemy Act" and the Executive Orders and Proclamations of the President issued in connection therewith. In general, the word "enemy" covered any person, corporation, partnership or association resident in enemy territory or in territory occupied by the enemy, officers or agents of the enemy governments, persons trading with or aiding or holding communication with the enemy, and persons interned by the United States or its allies. Money or property, however, of enemy nationals resident in the United States was not subject to seizure unless the owners were interned.

In order that the Custodian should be fully advised as to money or property in the United States subject to seizure, the "Trading with the Enemy Act" required that all persons having custody of such property should report the same to the Custodian who, in his discretion, issued demands, took title to the money or other property and then proceeded with the administration thereof, having the powers of a common law trustee. Under these demands, or by a voluntary surrender, almost every conceivable kind of property came into the possession of the Custodian. He seized moneys, bank accounts, stocks, bonds, notes, mortgages, real estate, wharves and docks, interests in partnerships, trust funds and incomes therefrom,—vested,

contingent and remainder interests in estates,—patents, copy-rights and trade-marks,—credits, actions-at-law and in equity, contracts and obligations. By virtue of his stockholdings in American corporations secured by his demands, he became in many instances majority or sole stockholder charged with the responsibility of selecting directors and supervising the conduct of woolen mills, steamship lines, ship yards, banks, mines, chemical companies, lumber mills, real estate corporations, as well as other miscellaneous industrial plants located in every part of the United States and its possessions. The office of the Alien Property Custodian became the greatest trust company in the world and assumed jurisdiction over money and other property of the estimated value of \$550,000,000. The moneys received by the Custodian were deposited with the Treasurer of the United States and the Treasurer was given the authority to invest such moneys in securities of the United States.

For the efficient and economical administration of the property so taken over, the Custodian appointed banks and trust companies of the United States as depositaries or agents, authorizing them to care for the property in their charge, collect the income therefrom and report and deliver the same to the Custodian quarterly. These depositaries have rendered invaluable service to the Custodian; in fact, without their aid the Custodian could not have taken over or administered such properties without a force many times larger than the one employed.

The property so taken is held under a trust designated by the name of the individual or concern whose property it was prior to the seizure. Wherever it has been necessary, whether for the conservation of the property, or to prevent waste, or for reasons of public policy, property has been sold and the proceeds deposited with the Secretary of the Treasury to the credit of that trust. The income collected from property still held is deposited to the credit of the trust, none of these funds being used for the maintenance or expenses of the Alien Property Custodian Department. The expenses of this Department are paid by annual appropriations by Congress.

A. Mitchell Palmer of Stroudsburg, Pennsylvania, was appointed as Custodian by President Wilson and took office 22 Oct. 1917. Under Mr. Palmer the Department was organized and rapidly increased in size until over 600 employees were utilized in the taking over and administering of the property reported and demanded. Mr. Palmer served as Alien Property Custodian until 3 March 1919, when he resigned and was succeeded by Francis P. Garvan of New York, who held this office until 12 March 1921. Thomas W. Miller of Wilmington, Delaware, the present incumbent, was then appointed by President Harding. The Department was reorganized and now consists of about 150 employees in the Washington office.

The total number of reports of enemy property rendered to the custodian during the entire period is about 50,000. The total number of trusts or trust accounts is about 38,000. These figures have been reduced by the cancellation of

erroneous or immaterial reports and by the return of property to proper claimants.

The return of such property is permitted under section nine of the "Trading with the Enemy Act" and the amendments adopted by Congress from time to time. This section permits the return of property seized by the Custodian to non-enemies, neutrals or allies, citizens of the new countries established by the various treaties of peace, and under certain conditions to various classes of enemy subjects, such as consular or diplomatic officers, internes, and women who by marriage with enemy nationals lost their American, neutral or allied citizenship. Claims for the return of these properties are filed with the Custodian and submitted with his recommendation to the Attorney General of the United States for a decision of allowance or disallowance. If allowed, the Custodian returns the property claimed. If disallowed, the claimant may bring suit in equity in the Federal courts to secure a judicial determination of his right of recovery. Property to the value of about \$200,000,000 has been returned to such claimants up to 1 Jan. 1922. On this date the money and other property still held by the custodian amounted to the value of about \$350,000,000.

The disposition of property not permitted to be returned under the provisions of section 9 of the "Trading with the Enemy Act" rests with Congress and further legislation is necessary by Congress before any such disposition can be made. Congress is impowered to confiscate, to return or to continue to hold the same. The Knox-Porter peace resolution, approved 2 July 1921, declaring a state of peace with Germany, states that the property of German nationals in the hands of the Custodian shall be held until Germany makes suitable provision for the satisfaction of claims of American citizens against the German government arising out of the World War. The provisions of this resolution were made part of the Treaty of Berlin with Germany. Similar provisions are found in the resolutions and treaties referring to Austria and Hungary.

THOMAS W. MILLER,
Alien Property Custodian.

ALLEGHENY COLLEGE, a Methodist-Episcopal co-educational institution, founded in 1815 and located at Meadville, Pa. In 1922-23 it had a faculty of 35 members, 543 students, property valued at \$2,500,000 and an income of \$195,000. Fred. W. Hixson, LL.D., is president.

ALLEN, Florence E., Justice of the Ohio Supreme Court: b. Utah. She spent her childhood climbing mountains and roaming in prairies and preparing for college. At 13 she entered Western Reserve College and was graduated there with honors. She played on the athletic teams and also played on the piano. She next spent two years in Berlin studying music and writing criticisms for *The Musical Courier* and returning to this country settled in Cleveland, Ohio. In 1906-08 she was on the editorial staff of the *Cleveland Plain Dealer*, taught at Laurel School and studied for her degree of master of arts at Western Reserve. After a year's study at the

Chicago University Law School she served as a legal investigator for the New York League for the Protection of Immigrants and entered the New York University Law School, where she was graduated in 1913. She lectured during this time for the New York Board of Education and for women's clubs in New York and Philadelphia upon current political history. In 1914 she returned to Cleveland and was admitted to the bar of Ohio in 1914. Two years later she argued before the Supreme Court of Ohio the constitutionality of the suffrage provisions in East Cleveland and Lakewood, Ohio, and won.

After serving as assistant county prosecutor for Cuyahoga County she was elected in 1920 judge of the common pleas court of Cleveland, receiving the largest vote ever given a candidate. She sentenced Frank Motto to the electric chair, the first death sentence in Cleveland for 13 years. In 1922 she was elected to the Supreme Court of Ohio as an independent candidate. She is the first woman to sit in a court of general jurisdiction, legal and equitable, civil and criminal, and the first woman in the world to preside in first degree murder cases. She set a new record for work in the common pleas court of Cuyahoga County disposing of 892 cases from 1 Jan. 1921 to 1 Sept. 1922 which included 579 trials, civil and criminal. Justice Allen is possessed of enormous energy. She arises every morning at five o'clock, does her housework, plays the piano for a time, and walks five and a half miles to court, where she is then ready to try the day's cases. She gave as her reasons for wanting to be a judge as follows: "to stimulate interest among women in the administration of justice and particularly in jury service; to help them realize their partnership with men in the making, application and enforcement of laws for the benefit of mankind."

ALLENTOWN COLLEGE FOR WOMEN, (commonly called—Cedar Crest College), an educational institution founded in 1867 and located at Allentown, Pa. Though controlled by the Reformed Church, it is non-sectarian as to enrollment. In 1922-23 it had a faculty of 22 members, 173 students, property valued at \$350,000, and an income of \$92,000. William F. Curtis, Litt.D., is president.

ALLIANCE FRANCAISE, Federation de l', a society organized in 1902 for the purpose of encouraging in America the study of the language, history and civilization of France. It is similar to the other race group societies, differing from them in its candid efforts to recruit members from among Americans of non-French stock. It consists at present of about 250 affiliated clubs or societies and has extended its activities to Canada. The affiliated societies send delegates to an Assemblée Generale Annuelle. The federation sends lecturers to the various societies, usually French authors of prominence on a visit to America. The federation publishes a *Bulletin Officiel* and *La France*. The honorary president of the federation is the Hon. Jules Jusserand, Ambassador of the French republic to the government of the United States.

ALLIED DEBTS. See EUROPEAN DEBTS; PEACE AND ARBITRATION, INTERNATIONAL.

ALMA COLLEGE, a Presbyterian co-educational institution founded in 1887 and located at Alma, Mich. In 1922-23 it had a faculty of 23 members, 292 students, property valued at \$703,000 and an income of about \$75,000. President, Harry Means Crooks, LL.D.

ALSACE-LORRAINE, the territory ceded to Germany by France after the War of 1870-71, and returned to France under the terms of the Treaty of Versailles of 1919—the return to date from the Armistice of 11 Nov. 1918. The German divisions of the former Reichsland into Lower Alsace, Upper Alsace and Lorraine have under French rule become the Departments of Bas-Rhin, Haut-Rhin and Moselle. The areas and populations of these divisions are as follows:

	Area (sq. miles)	Population
Bas-Rhin (Lower Rhine).....	1,848	651,586
Haut-Rhin (Upper Rhine).....	1,354	468,943
Moselle.....	2,403	589,120
Total.....	5,605	1,709,649

According to the report of Dr. von Dallwitz, the German stadthalter, published in 1914, there was in Alsace-Lorraine a French-speaking population of 204,262, while 1,634,260 were returned as German-speaking. The majority of the population are of the Roman Catholic faith, there being about 400,000 Protestants and 32,000 Jews in the three departments. Since the restoration of the territory to France about 87,000 Germans have been deported to Germany and a very great number have gone thither voluntarily.

In April 1919 the French put into operation a system of local government which was similar to that in France with the exceptions of the religious administration and the financial department. The former had been discontinued in France after the passage of the Separation Law but it was found that at least pending the reconstruction period a religious administration would be necessary in the restored provinces. The financial provisions were aimed at the stabilization of the mark in the provinces and to prevent its depreciation there while it was touching bottom in Germany proper. On 10 April 1919 the French began the task of transforming the administration of justice from the German forms and code to the French form and procedure. This change is still being brought about by a gradual change in the personnel, and a gradual introduction of French laws in place of the German laws and decrees. For an extended discussion of these changes consult Delahache, Georges, 'Les debuts de l'administration française en Alsace et en Lorraine' (Paris 1922).

ALUMINUM. According to the United States Geological Survey, the value of the aluminum produced in the United States in 1921, the last year for which authentic figures are available, was about one-fourth of the production in 1920, while the value of the aluminum consumed was approximately 35 per cent of the value of that consumed in 1920. The depression in all branches of the industry throughout 1921 was extreme. Domestic production of primary metal dropped in value from \$41,375,000 in 1920 to \$10,906,000 in 1921; while the secondary metal produced dropped in value from \$9,489,100 in

1920 to \$3,775,400 in 1921. Imports declined in value from \$13,077,022 in 1920 to \$8,889,791 in 1921; exports dropped in value from \$5,630,781 in 1920 to \$3,108,857 in 1921; while the value of the metal consumed dropped from \$58,310,300 in 1920 to \$20,462,300 in 1921. Apparently there was an over supply of all grades of aluminum in 1921. The quoted price of domestic metal was from 28 to 28.5 cents a pound at the beginning of the year. By July it had dropped to 24.5 to 25 cents a pound. On 1 December, the price was further reduced to 20 cents a pound. Imported aluminum was quoted at two to three cents a pound lower than the domestic product of similar grades. The average price for aluminum in 1921 was given by the American metal market as 21.21 cents a pound.

Abroad the situation in the aluminum industry was not materially different from what it was in the United States. In France, the industry suffered as it did in other countries. The output of aluminum ingots for the first six months of the year was 100 metric tons, as compared with 831 tons during the corresponding period of 1920. The German aluminum works found difficulty, not only in obtaining raw materials, but also in competing with low prices and a very much decreased demand.

Aluminum Products.—During 1921, 87 establishments engaged in the manufacture of aluminum products turned out goods valued at \$45,822,000, compared with \$75,278,000 worth of goods turned out by 83 establishments in 1919. Of the 87 establishments reported for 1921, 22 were located in Ohio, 15 in New York, 12 in Wisconsin, 6 each in Illinois and Pennsylvania, 5 in New Jersey, 4 each in California, Massachusetts and Michigan, 3 in Missouri, 2 each in Connecticut and Rhode Island and 1 each in Nebraska and Tennessee. Wisconsin producing 25.1 per cent of the total value of aluminum products turned out in 1921, was the leading State in the industry that year. The number of persons engaged in the industry in 1921 was 11,018, compared with 13,257 engaged therein in 1919. Salaries and wages paid in 1921 totaled \$13,945,000 compared with \$16,634,000 paid in 1919. Materials used in 1921 cost \$25,974,000, compared with \$49,272,000 in 1919.

Aluminum Chemicals.—The production of aluminum chemicals decreased in 1921, as compared with 1920, although the decrease was not so great as in some of the products made from bauxite. The total quantity of aluminum chemicals made and sold during the year was 184,820 short tons, valued at \$7,546,000. Alum produced in the United States dropped from 16,824 short tons in 1920 to 12,220 short tons in 1921. Aluminum sulphate dropped in production from 234,003 short tons in 1920 to 165,920 short tons in 1921. See METALLURGY.

AMERICAN ACADEMIES, ASSOCIATIONS AND SOCIETIES. Many organizations whose official titles begin with the word *American*, will be found under the important descriptive word of the title.

AMERICAN BANKERS' ASSOCIATION. See BANKERS' ASSOCIATION, AMERICAN.

AMERICAN BAR ASSOCIATION. A national organization of lawyers formed in 1878,

which devotes its influence to advancing the standards of legal education, promoting sound legislation and securing uniformity in State statutes, and regulating matters of general concern, such as commercial paper, sales, warehousing, etc. Beginning with 72 members, its membership now totals about 17,000. Its last meeting was held in San Francisco 9-11 Aug. 1922. At this meeting the Association agreed to petition Congress to create a permanent commission to prepare a system of rules of procedure for adoption by the United States Supreme Court; created a committee on American citizenship and authorized it to establish a bureau to promote actively the education, training and development of a better citizenship; adopted a report of its special committee on law enforcement, urging the establishment of a Federal bureau of records and statistics under the control of the Department of Justice at Washington, and recommended that the statutes in some States which make the jury the final judge of both law and facts be repealed. It further recommended that indeterminate sentence laws and probation be made to apply to first offenders only, and that the manufacture and sale of pistols and cartridges be absolutely prohibited except for official use. Another recommendation was that legislatures adopt the uniform fiduciaries act, the uniform act on status and protection of illegitimate children, the uniform aeronautics act and the uniform declaratory judgments act, which were prepared by the conference of commissions on the uniform state laws. It endorsed the bill prepared by the Patent Section, co-ordinating and codifying the existing trade-mark statutes and requested the Commissioner of Patents to promulgate rules prohibiting the soliciting of business by those registered as patent attorneys. It also provided for the appointment of a committee to investigate by what right laymen described themselves as patent attorneys and income tax attorneys in practice before departments and for other purposes. The Association also expressed the hope that some way might be found by which the United States might participate in the proceedings in the International Court of Justice and instructed the Committee on International Law to present a report at the next meeting suggesting changes in statutes of the present court, making it possible for the United States to become a party without further obligation.

The Association was addressed at this meeting by Chief Justice Taft of the United States Supreme Court; by Lord Shaw of Dunfermline; by Gov. William D. Stevens of California, who delivered the address of welcome; by Senator F. Dumont Smith of Kansas and by Chief Justice Lucien Shaw of the Supreme Court of California.

Considerable interest was manifested in the announcement in the fall of 1922 that a committee of the Bar Association headed by Chief Justice Taft had completed the drafting of a code of conduct for the judges of America. This code, it was stated, is designed to complement and complete similar work undertaken by the Association in 1908 which dealt with lawyers and left the bench untouched. According to reports, the code drafted by Chief Justice Taft and his associates not only prescribed rules

of conduct governing the public and official acts of judges but also lays down definite lines of conduct for them in their private lives.

Officers elected for the year 1922-23 were as follows: President, John W. Davis, New York City, former Ambassador to Great Britain; Secretary, W. Thomas Kemp, Baltimore, Md.; Treasurer, Frederick E. Wadhams, Albany, N. Y.

AMERICAN LABOR PARTY. See FARMER-LABOR PARTY.

AMERICAN LEGION, The, a patriotic, non-partisan, non-political, non-military organization of veterans of the World War incorporated by Act of Congress of 16 Sept. 1919. Its objects are: "To uphold and defend the Constitution of the United States of America; to maintain law and order; to foster and perpetuate a 100 per cent Americanism; to preserve the memories and incidents of our association in the Great War; to inculcate a sense of individual obligation to the community, state and nation; to combat the autocracy of both the classes and the masses; to make right the master of might; to promote peace and good-will on earth; to safeguard and transmit to posterity the principles of justice, freedom and democracy; to consecrate and sanctify our comradeship by our devotion to mutual helpfulness.

"Any person shall be eligible for membership in the American Legion who was regularly enlisted, drafted, inducted or commissioned, and who served in active duty in the naval, military or air forces of any of the governments associated with the United States during the great war: Provided, that no person shall be entitled to membership (a) who, being in the Army, Navy or Marine Corps of the United States during said period, refused, on conscientious, political or other grounds to subject himself to military discipline, or unqualified service, or (b) who, being in such service, was separated therefrom under circumstances amounting to dishonorable discharge and has not subsequently been restored to an honorable status."

The Legion is organized into departments and these in turn into posts. There is one department in each State, in the District of Columbia and in each territory of the United States, including Alaska, the Canal Zone, Hawaii, and Philippine Islands. Other departments outside the United States are Canada, Continental Europe and Mexico. There are Legion posts in the following other countries: Argentine, Brazil, British Isles, Chile, China, Cuba, Guatemala, India, Japan, Korea, New Zealand, Peru, Porto Rico, Portuguese West Africa, Santo Domingo, Spanish Honduras and Venezuela.

The Legion's membership was nearly 1,000,000, distributed in 11,151 posts on 1 Nov. 1922. National headquarters is now in the Chalfant Building, 24 East Michigan Street, Indianapolis, Ind. The *American Legion Weekly*, pub-

lished by the Legion, is located at 627 West 43rd Street, New York.

The national officers 1922-23 are: Commander, Alvin Owsley, Denton, Texas; vice-commanders, Edward J. Barrett, Sheboygan, Wis.; Watson B. Miller, Washington, D. C.; E. Erie Cocke, Dawson, Ga.; Robert O. Blood, Concord, N. H., and Chiles P. Plummer, Casper, Wyo.; adjutant, Lemuel Bolles, Seattle, Wash.; treasurer, Robert H. Tyndall, Indianapolis, Ind.; judge advocate, Robert A. Adams, Indianapolis, Ind.; chaplain, Father William O'Connor, Cincinnati, Ohio; historian, Eben Putnam, Wellesley Farms, Mass.; assistant adjutant, Russell G. Creveston, Marion, Ind.

A group of temporary officers met informally in Paris in February, 1919, and prevailed on general headquarters to permit a meeting of delegates selected from the ranks of officers and enlisted men of all divisions and non-combatant units. At this meeting in Paris, in March nearly 1,000 were present. Milton J. Foreman, of Chicago, presided. The name, American Legion, was determined upon, the aims and objects of organization formulated. An executive committee of 100 was named. This committee sent 15 of its members to the United States in April to spread the organization among the troops and veterans at home. A caucus was called in May at Saint Louis. The overseas delegates met with home delegates representing every State. The Paris plan was adopted and another executive committee named, which shortly consolidated with the American Expeditionary Forces committee under the name of the Joint National Executive Committee of 34. Henry D. Lindsley, Dallas, Texas, was chosen as chairman. Temporary headquarters were opened in New York and the work of organizing was seriously begun.

When the first national convention assembled in Minneapolis in November, 1919 there were nearly 5,000 posts with a total membership of 500,000 in all States. That convention adopted a constitution, elected Franklin D'Olier of Philadelphia, national commander and in a series of resolutions made known to the country the national principles for which the ex-service man stood. Permanent national headquarters were located in Indianapolis. To assure that at all times the Legion should be free from partisan political considerations, it was written in the national constitution that "no candidate for or incumbent of salaried elective public office shall hold any office in the American Legion or any department or post thereof."

After the convention, the Legion began creating the machinery necessary to the proper advocacy of its program. A national legislative committee was established at Washington and various national committees and commissions created to study specific questions. In the States under the authority of the State organizations, similar committees and commissions were formed, to work in conjunction with the public officials of States and the State legislatures. The local posts likewise organized to the extent necessary to discuss Legion policies in their local aspects with the governing bodies of counties and municipalities. This machinery began to function almost immediately and continues to function with increasing effectiveness.

At the second national convention, Frederick W. Galbraith, Jr., of Cincinnati, was elected national commander and became the Legion's great leader. A dynamic, vivid, forceful and absolutely fearless personality, within a few months, he brought the Legion to a commanding position in national affairs. Mr. Galbraith was killed in an automobile accident June 1921, and was succeeded by John G. Emery, of Grand Rapids, Mich.

The Legion has accomplished much toward fulfillment of its program. A few examples will serve to illustrate its activities. It brought about an entire reorganization of the government machinery dealing with disabled veterans.

Congress passed the Sweet Bill entrusting the work of hospitalization and rehabilitation to a newly-created body, the United States Veterans' Bureau (q. v.), which was decentralized into 14 regional offices in all parts of the country.

The Legion has been active in the suppression of radical machinations; has opposed violence. When a body of peaceful Armistice Day paraders were fired upon from ambush by radicals and four veterans killed, at Centralia, Wash., the local Legion post went out, rounded up and captured the radicals, turned them over to the civil authorities, and then guarded the jail against a mob of infuriated citizens.

In the spring of 1921, when the French government wanted to invite a party of representative Americans to revisit the battlefields and cities of France, the American Legion was asked to organize the pilgrimage. That remarkable mission left a deep impression upon the veterans of Europe. It resulted in a movement to amalgamate the 140 odd French veterans' societies into one called Legion Française. The British Veterans' societies now have united into one organization called the British Legion.

The Legion assists in the naturalization of foreign-born citizens. It helps educate these new or prospective citizens; to impress upon them the duties, obligations and benefits of American citizenship; serves veterans in need, and their dependents. Through its national service bureau, the Legion has adjudicated claims aggregating \$13,000,000 in favor of veterans. The Legion maintains a nation-wide employment service. It is working to increase the agricultural resources of the country and induce the veterans to go to the land and avert the concentration of unemployed in the cities. It organized and promotes proper observance of Memorial Day, Armistice Day and other patriotic anniversaries.

At its 1921 national convention in Kansas City, the Legion entertained one of the greatest gatherings of World War heroes in history, including Marshal Foch, General Pershing, Admiral Beatty, General Diaz and Lieut.-Gen. Baron Jacques. Vice-President Calvin Coolidge represented President Harding. The gathering drew a crowd of 125,000 persons.

History of Adjusted Compensation.—The guns had hardly ceased smoking on the Western front when talk arose of an adjustment of the pay of the men and women who had fought. With a two to four years' handicap in point of time, and with \$60 given him by the Government—enough to buy a very ordinary outfit of civilian clothing—the ex-service man was re-

turned to civil life. The Legion figured this man's actual loss in dollars and cents as not below \$840. Based on an average wage of \$100 a month before entering service, or \$1,200 a year, and deducting the \$30 a month or \$360 a year he earned in service; his loss is \$840. If his service covered two years he was out \$1,680. To balance this he received board on an average ration allowance of 50 cents a day, or \$365 in two years, and less than \$100 in clothing at most. Subtracting this from \$1,680, the remainder is \$1,215, the American soldier paid for the privilege of serving America for two years.

In response to suggestions from civilian origin, the Legion discussed compensation at its convention in Minneapolis in November of 1919 and adopted the following resolution: " . . . The American Legion recognizes that our government has an obligation to all service men and women to relieve the financial disadvantages incident to their military service—an obligation second only to that of caring for the disabled and for the widows and orphans of those who sacrificed their lives, and one already acknowledged by our allies, but the American Legion . . . leaves with confidence to Congress the discharge of this obligation."

Congress did nothing. Months passed. In March, 1920, National Commander Franklin D'Olier called a meeting of the national executive committee in Washington. All Legion departments in the United States were represented. Preceding the general meeting a special committee had worked out a bill believed to represent the desires of ex-service men. The executive committee approved the bill and it was introduced by Representative Joseph W. Fordney, of Michigan, virtually without change. This Fordney bill was passed by the House in May, 1920. It then went to the Senate Finance Committee for hearings. The bill, as amended in the House, provided a choice of one of the following provisions: cash payment, service certificates, land settlement, farm or home aid, vocational training. The bill which the national executive committee drafted was supported at the Legion's national convention in Cleveland in October, 1920, when the delegations of only two departments, among the smallest in membership—voted on the first roll call against the cash feature of the bill, only. A favorable report on the bill was made by the Senate Finance Committee just before adjournment of Congress in March, 1921. This adjournment forced the Legion to begin the fight for the bill all over again.

Congress reconvened on 11 April for the first session of the 67th Congress. On that day, the Adjusted Compensation Bill was introduced in the House and in the Senate. Immediately upon the convening of Congress the Legion's national legislative committee took steps to obtain action upon the bill in the Senate.

Hearings opened before the Senate Finance Committee on 2 June, and the National Commander F. W. Galbraith, Jr., and other Legion representatives appeared before that committee. With the exception of striking out the land aid and settlement provisions, the bill remained the same as introduced in the 66th Congress. Hundreds of letters and telegrams poured into the Senate Committee urging a favorable report on the bill.

After this long fight, the Senate Finance Committee reported the bill favorably on 20 June. On 5 July 1921, the Senate made the bill the unfinished business by a vote of 46 to 4.

At this juncture, Secretary of the Treasury Mellon wrote a letter to Senator Frelinghuysen, of New Jersey, strongly urging Congress to postpone consideration of the bill because, in his opinion, the Treasury was unable to meet its costs. This was followed by an address in the same vein by President Harding, who spoke before the Senate on 12 July. At his request, the Senate recommitted the bill to the Senate Finance Committee. No alternative plan of adjusted compensation nor any constructive substitute was suggested by the President.

The Legion's national convention in Kansas City, 1 Nov. 1921, indorsed the compensation measure without a dissenting vote.

The regular session of Congress convened 5 Dec. 1922, and shortly thereafter the Legion's legislative committee began to press for action on the compensation bill. At a caucus of the majority of the House on 26 January, the Ways and Means Committee was instructed to begin hearings on the bill. On 31 Jan. 1922, National Commander Hanford MacNider appeared before this committee arguing for action. Secretary Mellon again opposed the bill in a hearing before the Ways and Means Committee of the House, 2 February and on 9 February, the committee completed its hearings on the bill. At an executive session of Republican members of the committee, sub-committees were appointed to finally perfect the bill and to study the question of providing revenue to carry out its purposes. Leaders of both the Senate and the House then conferred with the President. In a letter made public 17 February, President Harding stated that "it continues to be my best judgment that any compensation legislation enacted at this time ought to carry with it the provisions for raising the needed revenues, and I find myself unable to suggest any commendable plan other than that of a general sales tax." Thereupon the Ways and Means Committee in executive session, after deliberations with the Legion's legislative committee, perfected H. R. 10,874 as an answer to the President's "sales tax" letter. In this bill the cash feature was restricted to men entitled to \$50 and less, and the cost of the bill reduced to a total of \$242,700,000 for the first three-year period.

Following are the general terms in brief of the bill at this period:

Adjusted pay for the veteran at \$1 a day for home service and \$1.25 for service overseas, with limits of \$500 and \$625, respectively. From this is subtracted the \$60 given on discharge. The remainder is called the adjusted service credit. The veteran may apply this to any of the five following options:

(1) Cash, to those whose adjusted service credit is \$50 or less.

(2) Adjusted service certificate in the form of a paid-up 20-year endowment policy of 125 per cent of the cash allowance plus interest at 4½ per cent, compounded annually. The veteran has the immediate privilege of borrowing 50 per cent of the face value of this certificate.

(3) Vocational training aid of \$1.75 a day to 140 per cent of the adjusted service credit.

AMERICAN LEGION

(4) Farm or home aid to extent of 125 per cent of the adjusted service credit.

(5) Land settlement.

After a debate, 23 March, which lasted four hours, the House passed the adjusted compensation measure by a vote of 333 to 70. It was immediately referred in the Senate to the Senate Finance Committee.

A caucus of the majority party on 17 April adopted a resolution of instruction, authorizing the Senate Finance Committee to favorably report the bill, and recommended that it be passed by the Senate at this session.

National Commander MacNider and other Legion officials, 24 April, conferred with the majority members of the finance committee. Leaders of the committee gave assurances that the bill would be favorably reported and acted upon. Following a conference of a number of Senate leaders with President Harding a little later, several senators told the Legion's committee that the President would sign the bill.

On 23 Aug. 1922 the bill came before the Senate for action. Senator McCumber, chairman of the Finance Committee, led the fight for compensation. The Senate Finance Committee amendments had eliminated the land reclamation features of the bill. Accordingly, upon the floor of the Senate the McNary amendment, providing for the reclamation of land through the issuance of and sale of bonds, was discussed and adopted. While the McNary amendment was under discussion, it was freely predicted that the method of land reclamation which it provided would prove of such great immediate cost that its inclusion in the Legion's bill would make certain a veto by the President. The Simmons amendment, providing that all interest payments by the Allies upon their debts to this country should be used to pay the expense of compensation, was then adopted. Voting began on the bill 31 August. The result was 47 for compensation and 22 against. Following a number of conferences between the Senate and House, the compensation bill was formally transmitted to the White House, 16 September. The measure was vetoed by President Harding on 19 September.

The following resolution was adopted unanimously at the fourth annual national convention of the Legion, held in New Orleans, 16-20 Oct. 1922:

"Resolved, That we, the American Legion, at the Fourth National Convention assembled, do reaffirm our belief in the American Legion plan for adjusted compensation, with full confidence of the support of the American Legion, and we do now instruct the newly elected National Commander, the National Executive Committee, and the National Legislative Committee, to continue the fight for this legislation until it has been enacted into law."

STATE AID TO VETERANS

Alabama.—Exemption from payment of license to practice medicine.

Arizona.—Offers assistance in settling on farms and provides help in buying homes.

Arkansas.—No action.

California.—State civil service preference for veterans has been adopted. State legislation enacted and confirmed by referendum, November

1922, to provide educational aid up to \$1,000 and aid in farm and home settling of all in United States service or dependents. Veterans' welfare commissions or boards have been instituted also. Bond issue of \$10,000,000.

Colorado.—Has adopted state civil service preference for veterans, and offers assistance in settling on farms. State legislation enacted appropriating \$200,000 at rate of \$200 each to all in United States service for vocational training.

Connecticut.—Has adopted state civil service preference for veterans and has granted exemption from taxation. Provides relief for needy veterans.

Delaware.—No legislation enacted.

District of Columbia.—No action.

Florida.—A recent law creates a commission to be appointed by the governor for the purpose of investigating the feasibility of State adjusted compensation for ex-service men. The commission is to draw a suitable bill acceptable from the standpoint of the ex-service man, and also acceptable to the people of Florida, and submit the same to a State convention of the American Legion for its indorsement. The plan is to present the bill so drawn and indorsed to the next session of the Florida legislature in April, 1923.

Georgia.—Exemption from payment of road and poll taxes.

Idaho.—The sum of \$100,000 has been appropriated for the purpose of co-operating with the United States Government in carrying on soldier settlement work through reclamation projects. Veterans' welfare commissions or boards have been instituted.

Illinois.—State civil service preference for veterans has been adopted, and offers aid for education of veterans. State legislation confirmed by referendum November, 1922, paying cash bonus of \$15 per month of service (at least two months) at a maximum of \$300, to discharged soldiers and sailors. Bond issue of \$55,000,000.

Indiana.—Bill up for referendum. Provides \$10 a month for each month of service.

Iowa.—Bill approved by referendum November, 1922, providing 75 cents for each day in service. Civil service preference provided. Welfare commissions and boards established.

Kansas.—A bill providing for the payment of \$1 per day to ex-service men, was passed by the legislature and confirmed by popular referendum November, 1922. Civil service preference.

Kentucky.—Scholarships in either State University or eastern or western Kentucky normal schools.

Louisiana.—State legislature appropriated \$25,000 to help defray costs of fourth national convention, American Legion. Law passed permitting New Orleans to turn over to American Legion the home it now occupies in that city.

Maine.—Maine pays a flat bonus of \$100 to soldiers who served in the World War at any time from 6 April 1917, to 11 Nov. 1918, inclusive. Provides relief for needy veterans.

Maryland.—State legislature enacted a bill providing for a bonus to all ex-service men. It was adopted by popular referendum but declared unconstitutional by the courts.

Massachusetts.—Massachusetts pays a flat bonus of \$100 to veterans who were residents of

the State for six months or more. State civil service preference law has been adopted; exemption from taxation granted; veterans aided in finding employment, and relief for needy veterans is provided.

Michigan.—Michigan pays \$15 for each month of service between 6 April 1917, and August, 1919. Civil service preference and partial exemption from taxation.

Minnesota.—A compensation of \$15 for each month in service between 6 April 1917, and 30 July 1921. Civil service preference.

Mississippi.—The State legislature has passed a law providing that all money received by the state from the United States for the care of ex-service men, disabled during the war, shall be paid into the general fund of the treasury and allotted by a State board of control to such institutions in the State as the said board shall deem proper.

Missouri.—A bill authorizing the payment of \$10 per month to each ex-service man who resided in this State one year or more before enlistment, was passed by referendum vote, 2 Aug. 1921, and compensation is now being paid. State civil service preference, aid in employment.

Montana.—Compensation of \$10 per month, not to exceed \$250, to be paid to men who were citizens of Montana at the time of entry into the service and who have been honorably discharged and who did not refuse to do military duty because of conscientious scruples. Approved by popular referendum in November, 1922. State civil service preference; have instituted veterans' welfare commissions or boards, and provide relief for needy veterans.

Nebraska.—State legislation enacted for care and relief of needy, benefiting all in United States service, or widow, dependents, etc. Interest on \$2,000,000 invested in United States, Nebraska State or municipal bonds. Provides aid for education of veterans, and veterans are aided in finding employment.

Nevada.—Civil service preference and aid in finding employment.

New Hampshire.—Compensation of \$100 each, to all in United States service. Exemption from poll taxes. Aid for needy.

New Jersey.—Compensation of \$10 for each month in service between 25 March 1917, and date of discharge. Maximum \$100. In case of deceased persons, payments made to dependents. Preference in employment, State employment bureau and exemption from payment of poll and property taxes.

New Mexico.—Exemption from poll tax and property to amount of \$2,000. Has a functioning State settlement board, which is authorized by law to co-operate with the Federal government in settling ex-service men upon the land.

New York.—A compensation of \$10 for each month or for a major fraction of month in service over two months between 6 April 1917, and 11 Nov. 1918 (minimum \$20—maximum \$250), on condition that applicant resided in State at time of enlistment and date of act, was provided by the Act of 2 Nov. 1920, but the Court of Appeals of the State held that this law was unconstitutional. The compensation can only be authorized through an amendment to the State

constitution. Preferential rights to State employment, aid for sick and disabled.

North Carolina.—A soldiers' settlement board co-operates with ex-service men in the settlement of State lands, and the securing of useful employment and rural homes.

North Dakota.—Compensation of \$25 for each month in service to be used for purpose of buying a home or securing an education within the State of North Dakota, and for no other purposes. Partial exemption from State tax levies.

Ohio.—Ohio paid compensation at the rate of \$10 per month, but not to exceed \$250 for the full period of active service to date of separation.

Oklahoma.—Voters at November, 1922, election defeated proposed constitutional amendment providing for bonus of \$50.

Oregon.—Cash compensation of \$15 per month for each month or major fraction thereof between the dates of 6 April 1917, and 11 Nov. 1919, exclusive of the first 60 days of service, maximum, \$500; or a loan for the purpose of buying a farm or home, in an amount not to exceed \$3,000 to any one person. Welfare commissions and boards, and relief for needy veterans.

Pennsylvania.—Compensation bill passed providing payment of \$10 for each month in service, maximum \$200. Bill must lie over for two years, be passed by next legislature, and then be submitted to referendum at an election.

Rhode Island.—A lump sum bonus of \$100. In case of death, it is payable to dependents or heirs-at-law. Applicant must have been a resident of the State six months prior to entry into service. Any person receiving bonus from another State not eligible. Financial assistance to disabled.

South Carolina.—Ex-service men under certain conditions are exempt from State taxation. Free tuition at State college.

South Dakota.—Pays \$15 for each month in active service between 6 April 1917, and 1 Oct. 1919—maximum, \$400. State civil service preference. Aid for education. Help in buying homes and settling on farms. Relief for needy. Funds out of which loans are made to veterans have been authorized.

Tennessee.—Soldiers' settlement board co-operates with central government in providing useful employment and rural homes for ex-service men. This board may undertake reclamation projects, and acquire land by purchase, gift or otherwise; sell or rent the land acquired or undertake any work of farm improvement.

Texas.—Grants exemption from payment of poll tax.

Utah.—Senate bills 79 and 80, 1919, effective 15 April 1919, provided for a loan of \$2,000,000 to be used in co-operation with the United States in providing rural homes for veterans. This act was repealed owing to the fact that the Federal government had not taken steps to co-operate.

Vermont.—A bonus of \$10 per month for each month while in service, but not to exceed one year, or \$120. Provisions do not apply to commissioned officers.

Virginia.—No legislation enacted.

Washington.—A bonus of \$15 for each month, or major fraction thereof, of service

between the dates of 6 April 1917, and 11 Nov. 1919, is payable to ex-service men and to citizens of the United States serving with any of the Allied governments. State civil service preference. Assistance in settling on farms. Veterans' welfare commissions or boards have been instituted. Aid in finding employment. Relief and loans to ex-service men.

West Virginia.—Relief for needy veterans.

Wisconsin.—Bonus of \$10 per month of service, \$30 per month for education up to \$1,080, and \$30 per month relief for disabled, to all in United States service. State civil service preference. Aid for education of veterans available. Veterans' welfare boards or commissions. Relief for needy veterans.

Wyoming.—Land settlement board co-operation with Federal government. Partial exemption from taxation.

NEW ORLEANS CONVENTION

The fourth annual national convention of the Legion, 16-20 Oct. 1922 at New Orleans entertained Gen. John J. Pershing, Kenesaw Mountain Landis, high commissioner of baseball; Samuel Gompers, president of the American Federation of Labor, and 23 foreign delegates to the conference of the Interallied Veterans' Association, or Fidac, which met at the same time, and a number of other celebrities representing organizations of national importance. Among the important things the Legion did were: Reaffirmed belief in the adjusted compensation bill and instructed the incoming administration to fight for the enactment of this legislation. Demanded the removal of Brigadier-General Sawyer from the post of Chief Co-ordinator of the Federal Board of Hospitalization. Urged enactment of a universal service act providing for the drafting of money, manufacturing facilities and labor as well as fighting men in the event of a national emergency declared by Congress. Urged that a national claim adjustment campaign be started by the United States Veterans' Bureau in co-operation with the Legion on 1 Jan. 1923. Ordered publication in book form of "Who Got the Money?" reproducing the series of articles on war and post-war profiteering in issues of the *American Legion Weekly*. Re-adopted the French poppy as the Legion's official flower. Authorized study of plan to establish a national home for destitute and orphaned children of deceased Legionnaires. Recommended study of plan to establish within the Legion a mutual aid and benefit division, having a loan bureau as a branch. Opposed any general amnesty movement. Demanded that Congress provide a World War archives building. Recommended that the Friday prior to the first day of May of each year be set apart as Americanism Day, on which all Legion posts shall hold patriotic exercises.

AMERICAN RELIEF ADMINISTRATION, The, a private charitable organization, which since 1919 has conducted general relief and child-feeding operations in 23 countries, has during the past year been engaged principally in combating the famine in Russia which affected an area with a population of some 40 millions. The signs of this famine, one of the greatest in the history of the world, began to appear in the summer of 1921 and an appeal to the world for aid was made through Maxim Gorky in behalf of the Russian people and the Soviet government. This appeal was answered by the American Relief Administration, through its chairman, Herbert Hoover, and an agreement similar to the agreements between the Administration and other countries was made with the Soviet government and signed at Riga on 20 Aug. 1921. Relief operations were commenced immediately and by 1 Jan. 1922 the Administration's original program of feeding 1,000,000 children had been realized. From that time forward as rapidly as funds became available the relief program was extended and by the middle of the summer of 1922 approximately 10,500,000 famine sufferers were being supported by American food through the organizations of the American Relief Administration, which were established not only in the Volga Valley from Nijni-Novgorod to Astrakhan and in the cities of Petrograd and Moscow, but also through the Ukraine and Southeastern Russia where famine conditions had developed.

Coincident with its feeding program the American Relief Administration carried out an extensive medical program which included the rehabilitation of hospitals throughout Russia by furnishing hospital equipment, surgical instruments and medicines, the inoculation of hundreds of thousands of persons against typhoid, paratyphoid, smallpox and cholera and a general program of sanitation in the cities in the affected areas.

A food remittance system was set up by which persons anywhere in the world were enabled to purchase from the American Relief Administration standard food packages at \$10 each, which were delivered from American Relief Administration warehouses in Russia to the designated beneficiaries. Up to 31 Dec. 1922 these food packages to the value of over \$11,000,000 had been bought. During the summer of 1922 the American Relief Administration was delivering \$10 food packages to individuals in Russia at the rate of 3,210 per day.

Considerable amounts of clothing have also been distributed in Russia in the course of this operation. Because the need of clothing had become so acute during 1922 the American Relief Administration established a clothing remittance system similar to the food remittance plan already in operation. By this system remittances were sold at \$20, for which a standard package of clothing was delivered to the designated person in Russia. Up to 1 Aug. 1922 the American Relief Administration had shipped into Russia over 750,000 tons of American food, seeds, medical supplies and clothing. For the transportation of these supplies from the ports to internal points in Russia it has used over 40,000 Russian cars.

The funds supporting this operation, which amounted to approximately \$60,000,000, have been derived from the following sources: An appropriation by the Congress of the United States, 24 Dec. 1921, of \$20,000,000; a Congressional authorization for the use of surplus United States Army medical supplies valued at \$4,000,000; an appropriation from the Soviet government for the purchase of seed in the United States of \$11,433,000; an allocation from the American Red Cross for the medical program of \$3,600,000; donations from the American Jewish Joint Distribution Committee for general relief of approximately \$5,000,000; the balance of \$15,967,000 was contributed by co-operating organizations or by individual gifts from the American people. In carrying on its relief program in Russia the following organizations have co-operated with the American Relief Administration under this agreement with the Soviet authorities: The Mennonite Central Committee, the American Friends Service Committee, the National Catholic Welfare Council, Southern Baptists, International Committee of the Y. M. C. A. and Y. W. C. A., Federal Council of Churches of Christ in America, National Lutheran Council, Volga Relief Society. Due to a general improvement in conditions the American Relief Administration had by the beginning of 1922 discontinued its relief work in all Central European countries except Hungary, Poland and Austria. Conditions warranted the withdrawal from Hungary in February, and after the first of June organizations subsidized by the governments of Poland and Austria carried on the child-feeding work in these countries. By means of special funds donated for the purpose, relief was given during all of 1922 to large numbers of intellectuals in Poland and Austria through the American Relief Administration. From similar funds relief was extended by the American Relief Administration to refugees in Constantinople from July 1922.

The Administration's headquarters are located at 42 Broadway, New York City. Herbert Hoover is the chairman.

AMERICAN UNIVERSITY, a Methodist Episcopal co-educational institution, founded in 1893 and located at Washington, D. C. In 1922-23 it had a faculty of 35 members, 230 students, property valued at \$2,500,000 and an income of \$70,000. Lucius C. Clark is chancellor.

AMHERST COLLEGE, a non-sectarian educational institution for men, founded in 1821, and located at Amherst, Mass. In 1922-23 it had a faculty of 51 members, 535 students, property valued at \$7,750,000 and an income of \$460,000. Alexander Meiklejohn, LL.D., is president.

AMMONIA, Manufacture of. See METALLURGY.

AMMUNITION. Perhaps the most interesting feature connected with the manufacture of ammunition during the past year or two was the announcement made late in January 1923 to the effect that experts of the Army of the United States had developed a new bullet for use in rifles and machine guns, which is expected to add enormously to the effectiveness of those weapons. This new bullet is called the "boat-tail" because of a six-degree taper at the tail. The announcement stated that tests at the Army

Infantry School had fixed the range of the new bullet at 4,800 yards, as compared with 3,450 yards, the maximum range of the ammunition which the army had been using. In many other respects, it was stated, this new bullet is superior to the old type. Inasmuch as the Army had on hand at the beginning of the year a large quantity of rifle ammunition left over from the World War, this, it was stated, will be used up before boat-tail bullets are manufactured in large quantities.

In his report for 1922 the Secretary of War stated that the manufacture of an experimental lot of 4,000-pound demolition bombs had been completed, and that tests indicated that this bomb will be as satisfactory as was the 2,000-pound bomb used during 1921. Development tests of modified types of 100, 300, and 600 pound demolition bombs and a new type of 1,100-pound demolition bomb were completed and the types approved by the War Department for issue to the service. Development tests of new types of 100, 300, and 600 pound demolition and of fragmentation bombs were made for the purpose of establishing basic designs for this matériel. Extensive development tests of incendiary and smoke bombs were undertaken in co-operation with the Chemical Warfare Service and the Air Service. In addition to the usual proving-ground tests, tests were conducted, in September 1921, against the battleship *Alabama* using incendiary, smoke, gas, and demolition bombs. The 2,000-pound demolition bomb repeated its success in previous maneuvers by sinking the *Alabama* in less than one minute.

Under date of 3 Oct. 1922, the Department of Commerce issued a report in which it was stated that 26 establishments engaged in the manufacture of ammunition in the United States during the year 1921 turned out products valued at \$32,262,754, as compared with products valued at \$88,038,223 turned out by 42 establishments in 1919, a decrease of \$55,775,469, or 63.4 per cent.

Artillery ammunition manufactured in 1921 was valued at \$1,307,533, as compared with a valuation of \$15,881,490 placed upon the artillery ammunition manufactured in 1919. Small arms ammunition manufactured in 1921 was valued at \$20,716,808, as compared with \$37,649,811, the value of the small arms ammunition manufactured in 1919. The item "small arms ammunition" includes cartridges, paper shells, percussion caps, primers, etc. Blasting and detonating caps manufactured in 1921 were valued at \$2,911,833, compared with \$2,630,365, the value in 1919.

ANGLO-JAPANESE ALLIANCE. See WASHINGTON CONFERENCE.

ANGOLA, or Portuguese West Africa, a colony of Portugal on the west coast of Africa, bounded by the French and Belgian Congos, the Union of South Africa and the former German Southwest Africa. Its boundaries have been settled by several conventions. It has belonged to Portugal since 1575 with the interval of seven years' occupation by Holland in 1641-48.

The area is about 485,000 square miles with a population estimated at 2,124,361. The capital is Sao Paulo de Loando. Other large towns are: Cabinda, Ambriz, Novo Redondo, Benguella, Mossamedes and Port Alexander. There is a military force of about 4,000, mostly native. The colony is administered by a High Commissioner, resident at Loando, and who is vested with large powers. The chief products of the colony are coffee, rubber, wax, sugar, vegetable oils, cocoanuts, ivory, oxen and fish. Tobacco is grown for local consumption. Petroleum and asphalt deposits are operated by a British syndicate. There are large quantities of malachite, copper, iron and salt. Gold has been found. The chief imports are textiles and the chief exports are coffee and rubber, although the supply of the latter is being rapidly exhausted. The external trade of the colony is valued at 30,000,000 escudos, about equally divided between exports and imports. The revenue for 1922 was 53,507,000 escudos and the expenditures 53,537,000 escudos. There are 818 miles of railway. The trade of the colony is mostly with Portugal.

ANGORA, Treaty of. See NEAR EAST.

ANGOUMOIS GRAIN MOTH. See ENTOMOLOGY, UNITED STATES BUREAU OF.

ANHALT, officially Freistaat Anhalt, a free state of Germany, formerly a duchy of the German Empire, bounded by the Prussian provinces of Saxony and Brandenburg. The free state has an area of 888 square miles and a population of 331,258. The capital, Dessau, has a population of 57,658. The population is mostly Protestant, there being but 12,755 Roman Catholics and 1,483 Jews. The state income and expenditures balanced in 1921 at 62,285,300 marks. The public debt amounts to 68,765,266 marks. The executive power of the free state is vested in a State Council of five members, the chairman of which bears the title of President. The Diet members are elected for three-year terms according to the Constitution adopted in 1919.

ANIMAL DISEASES. See ANIMAL INDUSTRY, UNITED STATES BUREAU OF.

ANIMAL HUSBANDRY. See ANIMAL INDUSTRY, UNITED STATES BUREAU OF.

ANIMAL INDUSTRY. See AGRICULTURE IN THE UNITED STATES; ANIMAL INDUSTRY, BUREAU OF.

ANIMAL INDUSTRY, Bureau of. The Bureau of Animal Industry of the United States Department of Agriculture was organized in 1884 for the immediate purpose of suppressing contagious diseases of animals and promoting foreign trade in the same. The control and eradication of animal diseases has continued to be one of the most important functions of the Bureau, although its powers have from time to time been greatly enlarged so that the major activities now include: Administration of the Federal meat inspection; breeding, feeding and management of livestock and poultry; work for the betterment of dairy and allied industries; and numerous lines of laboratory and research investigations, some of which have been epoch making, as the discovery of disease transmission by indirect means (carriers), and the pro-

tective serum against hog cholera. The Bureau had 4,241 employees on 30 June 1922.

Following is a brief outline of the animal-disease situation at the end of the fiscal year 1922: The United States is entirely free from the following contagious animal diseases which exist in various parts of the world: African horse sickness, foot-and-mouth disease, lymphangitis (ulcerative and epizootic), mal de caderas, cattle farcy, nagana, pleuropneumonia, rinderpest and surra. The majority of diseases mentioned have been excluded by quarantine measures; a few, such as foot-and-mouth disease and pleuropneumonia, were formerly present but were eradicated by slaughter and disinfection.

The following contagious animal diseases occur to a limited extent, are not so serious as formerly and may be controlled or prevented by scientific methods: Anthrax, blackleg, dourine and glanders.

The following contagious diseases still exist in the United States and affect livestock to a considerable degree: Hog cholera, tuberculosis, Texas fever, contagious abortion, cattle scab and sheep scab. Hog cholera may be controlled with assurance by the use of the serum treatment. Tuberculosis may be detected with reasonable certainty by the proper application of tuberculin tests; there are several forms of tuberculin tests which may be used alone or in combination. Contagious abortion is controllable by sanitary measures combined with proper herd management. Cattle scab and sheep scab have been eradicated almost entirely from the country at large, but these diseases are still serious in limited areas. Eradication of cattle ticks is effectively brought about by systematic dippings of ticky cattle in arsenical solutions. Each year the tick-infested territory is reduced in extent and the practical completion of the work is probable within a few years.

An outline of the principal activities of the Bureau of Animal Industry during the fiscal year 1922 gives further information on progress in the fields mentioned and describes other work of the Bureau.

Magnitude of the Livestock Industry.—The scope of the Bureau's operations is indicated by the numbers of farm animals in the country, as estimated for 1 Jan. 1923. Horses and mules, 24,359,00; cattle, 66,352,000; sheep, 37,209,000; swine, 63,424,000. These are owned by approximately 6,000,000 farmers. The Bureau's efforts are concerned in the welfare of all these animals and of the owners, as well as of the varied industries connected with the raw products derived from the animals.

The direct work of the Bureau, it may be remarked, is supplemented by educational activities, principally through publications, motion pictures and exhibits.

Tuberculosis Eradication.—The Tuberculosis Eradication Division of the Bureau, in co-operation with the various States, supervises the work of ridding cattle of the scourge of tuberculosis, which is also a menace to the public health. During the year 2,384,236 cattle were tested, of which 82,569, or 3.5 per cent, were condemned as diseased. There were at the end of the year 16,216 accredited tuberculosis-free herds, containing 363,902 cattle, and in addition

161,533 herds, containing 1,548,183 cattle that passed one test preliminary to being accredited.

Hog Cholera.—The Division of Hog Cholera Control co-operated during the year with 32 states in the work of combating cholera. This disease continues to be the most serious menace to the swine industry, there being an estimated loss during the year from this cause of 2,774,000 hogs. A total of 1,401 infected premises were quarantined or carded, 439 places were cleaned and disinfected.

Animal Husbandry Division.—The year's work of the Animal Husbandry Division included investigations in animal genetics; numerous breeding and feeding experiments in co-operation with State institutions; studies of range sheep and wool production; and breeding and feeding investigations with poultry and pigeons. The division certifies to all imported animals that enter the country for breeding purposes. The experiment farm at Beltsville, Md., is used as a practical laboratory and proving ground for solving livestock problems. Beef-cattle work was conducted in 13 different States, and records kept of approximately 20,000 experimental animals. Most of the work with swine is carried on at the Bureau farm, there being about 500 hogs and pigs representing six principal breeds. The work includes slaughter tests and curing experiments. Sheep and goat investigations include about 4,000 sheep of various breeds owned by the Bureau. The work included laboratory studies with various grades of wool. Breeding and feeding of utility horses is in progress in Wyoming (50 animals), and of Morgan horses (56 animals) in Vermont. Poultry breeding and feeding experiments are conducted on a large scale at the Bureau farm and at Glendale, Ariz.

Dairy Division.—The principal activities of the Dairy Division during the year included:

Studies of cow-testing-association records, involving 21,234 cows, for the purpose of determining best dairy-herd methods; educational work in the interest of milk utilization; studies of creamery records and assistance to new creameries in planning and installing equipment. The division has for seven years supervised the operation of the Grove City Creamery, Grove City, Pa., in which large quantities of butter and several kinds of cheese are manufactured.

Studies in the use of milking machines; silage flavors and odors; manufacture of ice cream; utilization of skim milk, buttermilk and whey; and statistics of foreign and domestic dairy products; supervision of manufacture of butter for the navy; inspection of renovated-butter factories; the dairy research laboratories conducted a large amount of work in nutrition of cows and in the bacteriology and chemistry of milk.

Meat Inspection Division.—The slaughter under Federal meat inspection in the fiscal year 1922 totaled 63,196,241 animals. These consisted of 7,871,457 cattle; 3,924,255 calves; 11,968,434 sheep and lambs; 39,416,439 swine; 13,758 goats and 1,898 horses. Of these 240,071 animals or carcasses were condemned, and 867,221 parts of carcasses. The inspection includes all products that are subsequently cured, canned, etc. Imported meat is also closely in-

spected. Total imports for the year were 41,913,496 pounds, of which 12,411 pounds were either condemned or refused entry.

Field Inspection Division.—The Field Inspection Division conducts work for the eradication of scabies of sheep and cattle and dourine of horses. It supervises the interstate movement of livestock to prevent the spread of disease, and inspects and quarantines, when necessary, all imported animals and hides, wool, straw, etc., which may carry infection into the country.

During the year 8,869,386 sheep and 453,708 cattle were dipped for scabies. In interstate transportation 18,475,991 cattle, 20,462,270 sheep, and 10,085 horses and mules were inspected, and 39,044 cars were cleaned and disinfected.

Cattle-tick Eradication.—The division in charge of this work reports territory released from quarantine in the fiscal year 1922, totaling 29,563 square miles. Seventy-two per cent of the total of 729,852 square miles in the South that were originally infested are now free from the tick. During the year 31,148 cattle-dipping vats were in operation.

Pathological Division.—The Pathological Division conducts scientific investigations of animal diseases, the testing of biological products manufactured under Federal control and the study of plants poisonous to livestock.

Research work during the year included: Infectious abortion, botulism, swine erysipelas, diphtheria antitoxin, rat viruses, changes in meats, etc.

Biochemic Division.—A large part of the work of the Biochemic Division is concerned with hog cholera. Considerable study was also given to the so-called "hog flu." Research work on meat products included a study of the composition and nutritive value of the edible viscera and investigations into composition of flesh of emaciated cattle and of rancidity in fats.

Zoological Division.—The year's work of the Zoological Division on parasitic diseases of animals included methods of controlling roundworms of sheep and hogs and treatment of ox warbles, external parasites of hogs, horse mange and sheep scab.

An important discovery was made by this division in the use of carbon tetrachlorid as a remedy against various worms in animals and human beings.

Division of Virus-Serum Control.—The manufacture of veterinary biologics is supervised by the Division of Virus-Serum Control, which issues licenses to manufacturers and inspects the products. The commercial production of hog-cholera serum and virus during the year totaled close upon 1,000,000,000 cubic centimeters.

Miscellaneous Work.—The Experiment Station of the Bureau at Bethesda, Md., performs veterinary research work. Of special importance are the new investigations concerning contagious abortion and tuberculosis. Other work includes tests of tuberculin and dairy products purchased on the open market. Large numbers of small experiment animals are annually raised.

ANSON, Adrian C., American baseball player: b. Marshalltown, Iowa, 17 April 1852; d. Chicago, Ill., 14 April 1922. One of the great figures of baseball history, "Pop" Anson, as he was affectionately known to thousands of the followers of the national game, grew up with baseball, for when he first engaged in it the sport was just emerging from the old game of rounders. The first team he played on was a sort of family affair, his father being a member thereof. He entered Notre Dame University in 1866, and there was considered as good a student as he was ball-player. He made the college team in his first year, and though an active player in any position, did not impress anyone with his chances of becoming one of the immortals of the game. His first important engagement was with the Forest City team of Rockford, Ill., a semi-professional organization. His position at that time was undetermined, for he played both third base and left field. In 1872 Anson obtained his first professional engagement with the Philadelphia Athletics of the National Association, with which organization he remained four years. While with the Athletics, in 1874, he accompanied the team to England and in a cricket match with the All-Ireland eleven had the distinction of making the highest score. At this time he formed a close friendship with the late A. G. Spalding and through the latter's influence he left Philadelphia and signed as regular third baseman with the Chicago team of the newly-founded National League. In that year, 1876, he played third base and was a large factor in bringing the first National pennant to Chicago. Spalding was the leader of that famous aggregation of players, but he soon resigned and Anson took his place. While leader he won five pennants for Chicago, those of 1880, '81, '82, '85 and '86. In those years the name and fame of Anson were at their height. He was soon to learn the fickleness of the followers of the game, for as soon as his playing fell off and the team dropped from its leading position in the league his popularity waned. Some of his friends counseled him to leave the playing field for the bench, but he would not and continued to play for 21 of the 22 years he was with Chicago. In 1897 when his contract expired it was not renewed. He was next signed with the New York Giants by the late Andrew Freedman, but his term as manager there lasted only a few weeks, he being unable to work amicably under Freedman's dictation. His retirement from organized baseball followed, after which he tried several ventures; a billiard hall proved a success, but a "semi-pro" team he organized to tour the country was a flat failure. He was city clerk of Chicago for one term and failed of re-election. He also achieved some success with a vaudeville act. He kept up his athletics

all the time, taking up golf when no longer able to wield a baseball bat. Anson's name stands high on the baseball roll of fame: From 1876 to 1897, his batting average was over the .300-mark, and in 1887 reached the record for that time of .421. He led the league in batting six times, and in several seasons was in second or third place. His fielding average ranged from .974 to .988. In 8,947 times at bat he made 1,665 hits, and out of 22,945 fielding chances accepted, he missed only 596.

ANSTICE, Henry, American Episcopal clergyman: b. New York City, 7 Oct. 1841; d. on train from Montclair, N. J., to New York, 18 Dec. 1922. He was graduated from Williams College with honors in 1862 and from the Philadelphia Divinity School in 1865 and ordained the same year. He was rector of Saint Barnabas', Irvington, N. Y., and then of Saint Luke's, Rochester, for 31 years. His next charge was Saint Matthew's, Philadelphia, where he remained for six years. The connection of Dr. Anstice with the triennial General Convention of the Episcopal Church began in 1865 and lasted for 57 years, ending at the last meeting held in Portland, Ore., in September, 1922. From 1877 to 1904 he was first assistant secretary of the House of Deputies, and from 1904 until September 1922 he was the secretary. He had attended 19 triennial conventions of the Protestant Episcopal Church, and during the 57 years of his association every bishop now living had been consecrated. At the time of his death he was financial secretary and treasurer of the Clergyman's Retiring Fund and vice-president of the American Church Building Fund Commission. He was an overseer of the Philadelphia Divinity School. The degree of D.D. was given to him in 1875 by the University of Rochester.

ANTHRAX. The name of a disease occurring epidemically among herbivora, chiefly cattle and sheep, and occasionally affecting man. It is also called malignant pustule, splenic fever and wool-sorters' disease. It is caused by a rod-shaped bacterium, the *Bacillus anthracis* first seen in 1849 and isolated in 1863.

Within recent years there was formed the International Advisory Committee on the Prevention of Anthrax, made up of members from England, India, Australia, South Africa, Italy, Sweden, Germany, France and Belgium. The object of this committee is to secure the adoption of protective measures in various countries and to find better methods of disinfecting wool, hides, skin and hair, all of which are classed among the so-called anthrax carriers. England has taken steps to protect her wool workers by putting up a large disinfecting plant at Liverpool at a cost of \$750,000. To treat wool by this process costs approximately three cents per pound. So far, no effective method has been devised for disinfecting hides and skins that is not injurious to these articles.

In the United States, according to the Department of Agriculture, the number of deaths of persons from anthrax contracted in places where it might have been prevented by disinfection is comparatively small. During the eight years up to and including 1917, 222 deaths from this disease were reported. Only 25 to 30 per

cent of these were among persons such as wool workers and tannery employees, who might have been protected by treating the raw materials. Farmers and dock workers, who handle wool, hides and hair brought into the country, cannot be protected in this way. About 20 per cent of the deaths referred to occurred among farmers who, in most cases, contracted the disease as the result of skinning animals which had died of an ailment at the time unknown. Farmers are advised by the Department of Agriculture not to attempt to salvage the hides of animals dying from unknown causes.

Occasionally newspaper articles have told of men who contracted anthrax through the medium of the shaving brush. As brushes made of horse hair are said to be the most dangerous, brush manufacturers have voluntarily agreed to use no more horse hair in making shaving brushes.

At a meeting of the International Advisory Committee on the Prevention of Anthrax, held in London late in 1922, it was decided that the English method of disinfecting wool is satisfactory, but that all the countries concerned should endeavor to develop a method of disinfecting hides and hair not injurious to those articles. The Committee also recommended the compilation of a list of countries from which wool, hides, hair and similar products may be imported without the necessity of disinfection. See VETERINARY MEDICINE AND SURGERY.

ANTHROPOLOGY. Interest in man's origin and his early career is universal among the enlightened nations and though there were no such startling discoveries during 1922 as in the preceding year yet steady progress was made, particularly in the New World, where the United States leads in the number of institutions specializing in such research. Systematic explorations were maintained during the year by 19 museums supporting in all 23 separate field projects. The policy of these institutions has been one of co-operation rather than rivalry, each taking special areas as its objective and continuing the work therein year after year. Thus, the American Museum of Natural History in New York City is giving attention to the archaeology of New Mexico, the ethnology of Alaska and the racial anatomy of the Pacific Islands; the Field Museum of Natural History in Chicago is occupied with the ethnology of Borneo and the archaeology of China and Colombia, South America, respectively; the Bureau of American Ethnology, Washington, D. C., is giving attention to the ethnology of Indian tribes in Southwestern United States, the remaining Algonkian tribes of Eastern North America, and to the archaeology of the Mesa Verde area in Colorado; the United States National Museum is working out the ruins in the famous Chaco Canon, New Mexico; the Carnegie Institution of Washington is investigating the remains of Maya culture in Guatemala and in Yucatan; the University of Pennsylvania Museum continues its exploration of the Amazon area in South America; the Bishop Museum in Honolulu, now affiliated with Yale University, specializes in Polynesian problems; while the remaining institutions in the list have for

the most part given attention to localities within the bounds of their respective States.

While, as stated, by far the greater number of institutions engaged in such research are found within the United States, there are, however, a number of institutions in other American countries. Thus, the Dominion of Canada maintains a Division of Anthropology in conjunction with its Geological Survey, confining its attention to the problems within its own territory, three separate field units having been undertaken in 1922. In Mexico the government supports a department for both archaeological and ethnological research and for the protection of important ruins and monuments. During the year 1922 this department carried on important investigations near the City of Mexico. A few other Latin American countries support similar departments.

A general review of all these research enterprises indicates that the emphasis during the year was upon archaeological problems, particularly upon questions of relative age, or time sequence. Yet, the ideal procedure for the final establishment of time-relations is the intensive study of a single ethnographical area applying all three of the traditional methods of the science, namely, racial anatomy, archaeology and ethnology. The single current investigation that approximates this ideal is the Bayard Dominick Expedition of the Bishop Museum in Honolulu, the results of which as reported, establish two anatomical racial types for the Islands of the Pacific, now fused and forming the native population: (a) a tall, rather long-headed, light brown type; and (b) a shorter, rounder-headed, dark-skinned type; in culture, there are also two types: (a) the basic Polynesian culture characterized by stone boiling, bark cloth, tattooing, agriculture, etc., while overlying this is the second culture (b) characterized by organized government, rigid, social distinctions, sacredness of rulers, etc. Finally, such archaeological investigations as have been made by the members of this expedition bear out the above distinctions, thus clearly indicating two separate migrations into the Pacific. The sources from which these two streams of population came are placed within the bounds of the great East Indian archipelago, now occupied by Malay peoples.

Another notable advance in our knowledge of time-relations has been made in Southwestern United States where the American Museum of Natural History, the National Geographic Society of Washington and the Peabody Museum of Harvard University have concertedly dealt with the dating of cliff-houses and other ruins. The most strategic step in this work is the adaptation of the Prof. A. E. Douglas tree-ring method to the dating of such ruins as contain logs. By this method it is now possible to assign satisfactory dates to many of these ruins. Another important step has been taken by the American Museum of Natural History in the dating of archaeological remains found in caves, this investigation being directed particularly to the perfecting of a technique for the dating of stalagmite formations. The new methods used in this work have been devised by Dr. Vernon C. Allison of Pittsburgh, Pa.

Turning now to the Old World we note that in England interest centers in the intensive study of the early remains of man, particularly the Rhodesian skull from South Africa and the long-known Piltdown example from England. From the minute studies of these specimens, chiefly at the hands of Elliot Smith and Smith Woodward, it appears that the most distinctive types of man can be arranged in an ascending scale, beginning with *Pithecanthropus Erectus*, or the man of Java, next the Rhodesian man, then the Piltdown, thus bringing us by successive steps to the Neanderthal, and lastly to living European races. From a study of the brain casts for these types it appears that the lateral portions of the brain, seemingly the most intimately connected with the functions of hearing and speech, represent the initial expansions in the anthropoid brain eventually resulting in the modern type of human brain and head.

In France and other parts of Western Europe the minute study of cave and shelter deposits has been resumed with vigor, but while a number of new sites have come to light, nothing has been reported that tends in any way to modify the accepted chronology of early man in Europe. Plans are maturing, however, for the systematic study of early archaeological remains in Eastern Europe and the adjoining parts of Asia, where it may be assumed lies the key to man's origin.

Returning to a general view of the science of anthropology as a whole it should be noted that attention is focused upon racial problems also. In America, in particular, increasing interest is shown in the biological and cultural problems arising in questions of national aspiration and the migrations of peoples. Consequently, the attention of anthropologists is now centering upon such problems as fall under the heads of heredity, race mixture and mental constitution. Prof. R. B. Dixon of Harvard, is just completing an exhaustive synthetic study of the chief races of the world and by a method of correlation, showing the relative proportions for such characters, as head length, face width, etc., arriving finally at the identification of a few world types of man, which in remote ages, by isolation or otherwise, became sharply differentiated and sufficiently stabilized to form the known living varieties by varying degrees of compounding. How satisfactory or convincing this interpretation of facts may be, remains to be seen, but the publication of these results will mark a distinct step in our comprehension of races. The other line of approach to this problem is through studies of growth and development in children, the most promising investigation being that of Prof. Franz Boas of Columbia University, demonstrating distinct time periods in the development of Jewish children as contrasted with children of old North European stock. Further, a number of States have established child welfare bureaus similar to that conducted by the University of Iowa under the directorship of Prof. Bird T. Baldwin which has during the current year pursued similar investigations upon very young children. Mention should also be made of an intensive survey of the various racial groups, pure and mixed, found in the public schools of Honolulu, the results

of which are now being prepared for publication by Dr. Louis R. Sullivan. To this could be added a long list of minor researches bearing upon the various problems concerned. But we see in these investigations a phase of the increasing recognition of the importance of anthropology in the administration of governmental responsibilities at home as well as abroad. It is notable that an increasing number of students are registering in university courses in anthropology and that efforts are being made to adequately finance new researches in this field. Unfortunately, the personnel of the science suffered a distinct loss during the year by the death of Dr. W. H. R. Rivers in England and James R. Mooney in the United States, both distinguished for their important contributions to ethnology.

CLARK WISSLER,

*Curator-in-Chief, Division of Anthropology,
American Museum of Natural History.*

ANTIGUA. See LEEWARD ISLANDS.

ANTIMONY. Metallic antimony is used chiefly in alloys with other metals, as in type metals, babbitt or bearing metal, Britannia or white metal, and antimonial or hard lead. The antimonial oxides are used for making white enamel and the oxides and sulphides as coloring agents and paint pigments. New uses are gradually being found. The field of use for the compounds, especially the oxides in paint, is rapidly widening.

The United States uses annually about 2,000 tons of white oxides and 1,200 tons of the sulphides, including vermilion and other colors. The world's annual peace-time consumption of antimony from ore produced, not including antimonial lead ores, is said by the United States Geological Survey to be about 22,000 metric tons, while the United States consumes about 10,000 tons. This country also uses annually about 2,100 tons of virgin antimony contained in domestic antimonial lead and 3,500 tons of secondary antimony recovered from alloys, scrap and dross, making a total of 15,600 tons.

Up to the close of 1921, no antimony ore had been produced in the United States since 1918. From 1915-18 inclusive, 10,750 short tons of antimony ore, containing 4,310 tons of metal, were produced in the United States. Metal antimony produced at smelters in 1917 and 1918 was 385 short tons from domestic ores and 4,672 tons from foreign ores. A small quantity was produced in 1919 and 1920, but the Geological Survey stated in its report that it was not at liberty to publish the figures. In 1917, the last year for which complete figures are available the world production of antimony totaled 57,764 metric tons, antimonial lead ores not included. Most of the world's supply of antimony is produced in Mexico, Argentina, Bolivia, Peru, France, Italy, China, Algeria and Australia.

At the beginning of 1921, the average quoted price of antimony was 4.96 cents a pound, compared with 8.49 cents a pound in 1920. For medicinal uses of antimony see MEDICINE AND SURGERY, ADVANCEMENT OF.

ANTIOCH COLLEGE, a non-sectarian co-educational institution, founded in 1853 and

located at Yellow Springs, Ohio. In 1922-23 it had a faculty of 45 members, 375 students, property valued at \$394,561.95 and an income of \$107,000. Arthur E. Morgan, is president.

ANTITOXINS, Use of. See **MEDICINE AND SURGERY, ADVANCEMENT OF.**

APARTMENT HOUSES, Co-operative. See **CO-OPERATIVE MOVEMENT.**

APPLES. In its final report for the year, the United States Department of Agriculture estimated the 1922 apple crop of the United States at 203,628,000 bushels, or 31,090,000 barrels, compared with the 1921 crop of 99,002,000 bushels, or 21,557,000 barrels. No estimates of the value of the crop were given. The average price on 1 December was given as 99 cents per bushel, compared with an average of \$1.68 per bushel on 1 Dec. 1921. It is a fact, however, that in many communities apples could not be sold at a profitable price, and in many instances could not be sold at all. New York led in production with a total yield of 36,000,000 bushels. Washington was second, with a yield of 25,678,000 bushels. Michigan produced 11,850,000 bushels; Missouri, 9,400,000 bushels; Pennsylvania, 11,400,000 bushels; Virginia, 8,360,000 bushels; Illinois, 9,720,000 bushels; California, 7,656,000 bushels; Oregon, 6,300,000 bushels; Idaho, 3,900,000 bushels; Colorado, 4,250,000 bushels; Kentucky, 5,070,000 bushels; Tennessee, 4,250,000 bushels; West Virginia, 5,625,000 bushels; North Carolina, 5,570,000 bushels; Iowa, 4,410,000 bushels; Kansas, 3,280,000 bushels; Georgia, 1,135,000 bushels; Massachusetts, 3,010,000 bushels; Maine, 1,250,000 bushels; Alabama, 1,098,000 bushels; Texas, 2,640,000 bushels; Utah, 1,085,000 bushels; Maryland, 1,800,000 bushels; Connecticut, 1,300,000 bushels; Oklahoma, 1,140,000 bushels; Arkansas, 2,400,000 bushels, and Minnesota, 1,020,000 bushels. New York's crop was more than two and one-half times the size of its 1921 crop. Massachusetts' crop was approximately three times its 1921 crop. Ohio's crop was about double its 1921 crop. Michigan's crop was about three-fourths larger than its 1921 crop, while Maine's crop was less than one-third of its 1921 crop, and Washington's crop was over 3,000,000 bushels under its 1921 crop. According to the records of the Department of Commerce, the exports of apples from the United States during the first 11 months of 1922 totaled 2,642,492 boxes, valued at \$6,312,629, plus 481,319 barrels, valued at \$2,319,105. See also **AGRICULTURE IN THE UNITED STATES.**

ARABIA, the great peninsula of southwestern Asia, stretching from the Red Sea to the Persian Gulf and from Syria and Mesopotamia to the Gulf of Aden. The total area is about 1,200,000 square miles with a population variously estimated at from 5,000,000 to 6,500,000.

Large areas of the peninsula are desert and steppe, occupied by Bedouin tribes and other nomads. There are many tribal communities which enjoy semi-independence. On the oases and coastal regions there are settled communities under eight independent systems of government.

Kingdom of the Hejaz.—The kingdom which attained its independence of Turkey during the war has an area of 170,000 square miles, and a population of 900,000. Its territory

stretches from the Gulf of Akabah to El Lith, about 100 miles south of Mecca, and inland about 100 miles. Within its confines are the holy cities of Mecca and Medina. The former city is the capital of the kingdom. The chief product of the kingdom is dates. Hides, wool and gum are exported but trade has declined since the war. Foodstuffs and building materials are the chief imports of the kingdom. The revenue is derived chiefly from customs dues at the ports and from the British subsidy paid to the king to help maintain his independence.

Nejd and Hasa, Emirate of.—This Arabian principality has its capital at Riyadh. It has a population of about 300,000. Dates, textiles, hides and livestock are exported from Hasa but Nejd produces nothing for export. The reigning Emir, Abd el-Aziz es-Saud, expelled the Turks from Hasa in 1913 and is extending his influence in the region of the Persian Gulf.

Jebel Shammar, Emirate of.—This principality lies to the north of Nejd, in which it was once included, its independence dating from about 1850. Hail is its capital. There is intermittent warfare with its southern neighbor, Nejd. The estimated population is 200,000. The reigning Emir is Abdullah ibn Mitah. The emirate produces nothing for export and everything save the commonest necessities are imported.

Asir, Principate of.—This state is situated on the west coast of the peninsula between Nejaz and Yemen. Sabiyah is the capital. The estimated population is 1,000,000, many of whom do not acknowledge the rule of El Idrisi, the ruler of the principate. Hides and livestock are the chief exports. This trade is largely with Eritrea.

Yemen, Imamate of.—This state has an area of 75,000 square miles and an estimated population of 1,000,000. Sanaa is the capital and Hodeida the chief port. Cereals and coffee are successfully grown. Coffee is the chief article of export, closely followed by hides. The reigning Imam is Yahya Mohammed Hamid ed-Din. Other states of the Arabian Peninsula are the British Protectorate of Aden (q.v.); the Sultanate of Oman (q.v.); the Sultanate of Kuwait, on the northwestern coast of the Persian Gulf, the sultan of which is subsidized by the British government. The estimated population is 50,000; the Emirate of Kerak in Transjordan, ruled by the Emir Abdullah, second son of King Hussein of the Hejaz. The seat of his government is at Amman.

ARBITRATION, Industrial. See **INDUSTRIAL ARBITRATION.**

ARBITRATION, International. See **PEACE AND ARBITRATION, INTERNATIONAL.**

ARBITRATION SOCIETY OF AMERICA, organized 24 April 1922 by Moses H. Grossman, for the education of the people in the use of arbitration in personal matters instead of litigation. It is a fully empowered tribunal of justice, operating in New York City, for the speedy and inexpensive determination by arbitration of all controversies and differences save criminal and divorce cases. It is open alike to the general public and to the trades. Later it is to be extended to all the larger cities throughout the country. It endeavors to have enacted

a uniform arbitration law in all States of the Union, and to encourage the insertion of an arbitration clause in all trade and industrial contracts. It expects to greatly reduce the volume of litigation and to put an end to the seriously congested condition of court calendars, as well as to insure to the people a speedy administration of justice, and a saving of time and money. Disputants applying at this tribunal need but to agree to a settlement of their controversy by one or more arbitrators, selected by themselves or by the Society at their request.

Hearings involve no notoriety, no publicity, beyond the title of the case and the arbitrators award. These will appear upon the formal records of the court which confirms the award and enters judgment thereon.

It is the policy of the Society to encourage acquiescence on the part of the disputants in all the awards of the arbitrators, so as to obviate the necessity of entering a judgment; for only if the judgment is entered must the title of the case in arbitration and nature of the award appear in the formal records of the courts. The operations of the tribunal are marked by a total absence of technicalities. The controversialists are unlimited as to their choice of arbitrators. The procedure is simple and direct. The arbitrator designates a time for the hearing; the disputants then appear before him. Each disputant states his case in his own way, produces his witnesses, if any, and submits whatever documents are material. They are permitted to have the assistance of legal counsel at the hearing, if they so desire. Only a small charge is made by the Society, for the use of the court room and equipment, and for services in securing arbitrators. This money so collected is applied by the Society to the upkeep of the tribunal and to the extension of its work throughout the country. The Society receives no part of the arbitrator's fee.

The Society has its headquarters at 115 Broadway, New York City. At the end of February the office of president was vacant due to the death of Emerson McMillin. The other officers were: Vice-Presidents, Samuel McCune Lindsay, Moses H. Grossman; Treasurer, Jules S. Bache; Executive Secretary, J. W. Slaght; Secretary, J. Noble Braden.

ARCHÆOLOGY. The work of excavation and discovery of monuments of early civilization has not yet recovered from the effects of war. The Central European nations have not been able to give official subsidies to archaeological research, as in the pre-war period. Great Britain and the United States have usually left such undertakings to private initiative, and considerable progress is reported by the British and American societies which have been carrying on excavations in classical and Oriental countries. France and Italy, whose territories include so much of classic soil, also report various official and private archaeological work.

Egypt.—The expedition of the Egypt Exploration Society has continued researches at Tel el-Amarna. The house of the vizier, Nekht, discovered on this site, proved to be one of imposing dimensions. A river temple was discovered, containing reliefs of the period of Akhenaten, but showing evidence of occupation

as late as the 26th dynasty. Maru-Aten, the Precinct of the Disc, was excavated. Around a central artificial lake in this enclosure were once arranged trees and flower-beds and various buildings, some of which were elaborately decorated. The royal kennels contained the bones of greyhounds kept for the king. Prof. Flinders Petrie has conducted excavations at Abydos for the British School of Archaeology in Egypt. Here graves of the 1st dynasty and of later periods were found, and yielded a great variety of interesting small objects. To the 1st dynasty belong ivory tablets of King Zer, ivory figures of lions, used as gaming-pieces; seven inscribed stelæ, four ebony cylinder seals, aragonite vases and copper tools. Thirty inscribed stelæ of the Middle Kingdom and of later date were found. The relics of the New Kingdom include a papyrus of the Book of the Dead with painted vignettes of special interest. At Oxyrhynchus the great theatre and the colonnade were further examined. No Egyptian discovery in recent years has aroused such wide interest as the finding of the tomb of Tutankhamen in the Valley of the Kings, near Thebes, which rewarded a long search conducted by Lord Carnarvon and Howard Carter. A flight of rock-cut steps and a sloping passage led to a chamber which proved to contain tomb furniture of unusual splendor and interest, including an elaborate royal throne, carved and gilded couches, three chariots, pottery and alabaster vases, and stores of clothing and food. A hole in the wall of this room allows a glimpse of an adjoining chamber containing further treasures. At the present writing the excavators are about to open another room in which it is expected the royal sarcophagus will be found. Professor Reisner has continued excavations for the expedition of Harvard University and the Boston Museum of Fine Arts; but the results of the last campaign have not yet been reported.

The expedition of the Metropolitan Museum of Art in New York has continued operations on two important sites. At Lisht the pyramid precinct has been more thoroughly explored, yielding further evidence of burials of the Middle Kingdom, and of the village which later occupied the place. At Deir el Bahri, near Thebes, the area in front of the temple of Mentuhotep III has been cleared, and the elaborate plan of its fore-court, with its symmetrically planted trees, has been revealed. The foundation deposits of the temple were discovered. The excavation of a great tomb in the cliffs facing the avenue of approach to the temple led to the discovery of an interesting series of papyrus documents which had been left here, comprising accounts and letters relating to the property, business, and domestic affairs of Hekanakht, the ka-servant or official keeper of the great tomb.

Palestine and Syria.—Progress has been made in the organization of archaeological work in Palestine under the new Department of Antiquities constituted by the British authorities. A new law governing the excavation and disposal of antiquities has been drafted and has been approved by the Council of the League of Nations. The complete excavation of the ancient City of David on Mount Ophel has been proposed with the hope that archaeological

representatives of the several countries interested in the history of Palestine will take part in this work. It is hoped that the attention of scholars will also be turned to the rich archaeological treasures of the district known as Trans-Jordan. The new Palestine Museum at Jerusalem is now open to the public. By the will of the late Rev. James B. Nies the American school of Archæology at Jerusalem is to be provided with a new building including adequate accommodations for the director, the students, and the library. Doctor Nies died in Jerusalem while engaged in arrangements for the actual construction of the building. The American school made excavations during 1922 at Tel el-Fûl, three miles north of Jerusalem, on the site of ancient Gibeah. Doctor Albright, the director, has reported the discovery of the remains of successive mighdols or fortresses here, the first dating from the early Israelite period, the second from the time of Saul, the third from the royal period and the fourth from the Maccabæan Age. At Beisan the expedition of the University of Pennsylvania, directed by Dr. C. S. Fisher, has continued its systematic investigation of this site, and has reached not only monuments of the Roman period, but remains of an earlier date, showing a special Aegean influence. M. Virolleaud, director of the French Service des Antiquités in Syria, has reported the discovery of a subterranean tomb at Byblos, containing a great sarcophagus with alabaster and terra-cotta vases and objects of gold, silver, and bronze. Of special importance is an obsidian vase with two cartouches of Amenemhat III. An archaeological museum has been opened by the French authorities at Beyrouth.

Asia Minor.—Long interrupted operations at ancient Sardis were resumed in 1922 under the direction of Prof. H. C. Butler of Princeton University. The destruction of apparatus on the site made it impossible to conduct deep excavation on a large scale that year; but a considerable force of men were employed in archaeological prospecting and in bringing to light monuments which lay near the surface. Additions were made to the now considerable collection of Lydian inscriptions. Several tombs were opened, including one of the 4th century B. C., which was found intact, and a tomb of the 2d century of our era, which was decorated with frescoes representing flowers, fruits, and peacocks. A Christian lamp was discovered in this tomb. The most striking discovery of this season was a hoard of 30 gold staters minted in the period of Cræsus (about 540 B. C.), found in a grave which had collapsed and had thus escaped robbery in ancient times. Another interesting excavation was initiated on the site of ancient Colophon, under the joint auspices of Harvard University and the American School at Athens, and directed by Dr. Hetty Goldman. The discovery of many bronze coins of Colophon confirmed the identity of the site, which lies about 25 miles south of Smyrna. Outside the city walls are groups of tombs, some of which are to be dated in the 6th and 4th centuries B. C., while others are as early as the Mycenæan period. One well-built tomb of bee-hive shape was excavated. The upper strata on the acropolis are naturally of late date; but trial trenches have brought to light geometric pottery in the earlier deposits.

In the valley foundations of large structures, probably public buildings of Hellenistic date, were discovered. On the slopes of the acropolis are extensive remains of private houses, which are important as giving clear evidence of the plans of houses of an earlier date than are known on other classical Greek sites. The streets were paved with fitted stones or cobbles, and equipped with drain-pipes of terra-cotta. A bath of at least five rooms was partially excavated. The public square of the Hellenistic city was on the main terrace of the hill-side. Earlier buildings had been levelled to make room for this agora, which was surrounded with colonnades. A sanctuary of Cybele, with a propylon and a high platform for the image or altar, but without any actual temple, was discovered.

Greece.—In February 1922, Sir Arthur Evans again took up the excavation of the prehistoric site of Cnossos in Crete. Investigation of a village on a mountain slope a few miles from Cnossos revealed the fact that a minor residence or "summer palace" of the Cnossian kings was built where the village now stands. A circular well or reservoir, constructed of large and carefully shaped stones was discovered here. It was provided with a flight of steps which descended into the well, and with a drain pipe to carry off surplus water. On the site of the great palace at Cnossos, the southwest entrance, which was the state portal of the palace, was more thoroughly cleared. Operations in this quarter of the palace also showed that a flight of stairs ascended to a second story west of the central court, and it has been possible to draw a restoration of the facade of two stories facing on the court. Southeast of the palace two houses which had been ruined in the destruction of the Middle Minoan palace were excavated. It is clear that this destruction was caused by earthquake. Numerous fine examples of Middle Minoan pottery were discovered here. A curious feature of the palace site at the southeast angle is a pit whose floor is far below the ground level, and communicates with an artificial cave which may have been a den for lions. The existence of such a den, together with the tradition of Minoan bull-fighting, may have contributed to the growth of the legend of the Minotaur. Sir Arthur Evans, who for some years has been the actual owner of the site of the palace of Cnossos, has transferred the title of this property, together with his house, the Villa Ariadne, near the excavations, to the British School of Archaeology at Athens.

At Mycenæ a third campaign of excavation has been conducted by the British School at Athens. A bee-hive tomb, the so-called "Tomb of Aegisthus," was cleared, and proved to be of ruder construction than the famous "Treasury of Atreus" and "Tomb of Clytemnestra," which belong to the latest and most perfect stage of dome tombs. Excavation in the late Helladic cemetery (1500-1300 B. C.) which had been opened the year before yielded numerous small antiquities, including evidence of Mycenæan contact with Hittites and Egyptians, and a great deal of interesting pottery. It was clear that objects of value in these tombs had generally been removed in prehistoric times. On the acropolis further excavation brought to light the

plan of a propylon which showed a single column between antæ, recalling a common Minoan arrangement. At the head of the stairway which led to the official entrance of the palace was found a basement room belonging to an early period of the palace, and containing a square pillar which reminds archaeologists of the pillar rooms at Cnossos. A late Greek inscription found within the acropolis proves that Mycenæ was not completely destroyed in the 5th century B. C., but existed as a small but flourishing city in the 4th century and the Hellenistic period. The American School at Athens not only engaged in the excavations at Colophon described above, but continued its investigation of the prehistoric village at Zygouries, near Mycenæ. Here the potter's shop discovered the year before was more fully cleared. One room contained a large store of pottery, mostly craters of late Helladic date. A cemetery west of the village was discovered, and was found to contain burials of the prehistoric periods known as Middle and Late Helladic, and a number of shaft graves dating from the 4th century of our era.

In excavating for the construction of a garage in Athens two sculptured stones of exceptional historical and artistic interest were brought to light. Originally the bases of grave monuments of about 500 B. C., they had later been built into the wall of Athens in the hasty restoration of the city after the Persian invasion of 480. On one are represented groups of athletes and a unique scene in which a fight between a dog and a cat is supervised by two youths who hold the animals on leashes. The other stone shows two chariot scenes, and a game of hockey played by young athletes.

An event of signal importance not only to American scholars but to archaeological interests in general, has been the generous gift of Mr. Joannes Gennadius, for many years ambassador of the Hellenic government at the Court of Saint James, to the American School of Athens. Mr. Gennadius has presented to the school his unique library of Greek history, literature, and archaeology, illustrating these subjects in all phases and periods from prehistoric to modern times, and including not only many rare first editions, but historical manuscripts and thousands of photographs and engravings. This collection, which is to be accessible to the scholars of all nations, will be installed in a building to be known as the Gennadeion, on land adjacent to the present property of the American school. Funds for the erection of the building have been provided in the United States, and the Greek government has given the necessary land.

Italy.—A number of recent excavations in Italy have been first officially reported during the last year. Tombs have been opened at Vulci, long famous as an Etruscan site. On the northern and western slopes of the Alban hills, remains of several Roman villas have come to light. In a large hall of one of these buildings was a colossal statue of Artemis, whose head was a replica of that of the Hera Farnese. At Ostia the great granary, first built under Claudius, and twice repaired and altered, has been further investigated. A number of statues, including a charming figure of Artemis, of Amazon type, were found in the Forum of Ostia. A

unique and interesting discovery at Antium was that of a calendar of the pre-Julian period, painted in black and red on a plaster wall. It contains a 13th month, Merkedonius, which was inserted in every alternate year to make up the difference between the solar and lunar year. In the ruins of a villa at Gaeta a group of statues was found, including some portrait figures of the Augustan period, and two Nereids of Greek origin. On the Greek site of Caulonia in Southern Italy the remains of a temple built in the 6th century B.C. and repaired in the 5th have been discovered, and include some fine architectural terra-cottas. A Christian catacomb of the 5th century has been explored at Sant' Antoco in Sardinia, and has proved to be on the site of a Punic cemetery.

The following are among the archaeological publications of the past year: (Egypt) G. Auer and C. Siemens, 'König Echnaton in El-Amarna,' Leipzig; J. Capart, 'L'art égyptien, I, Architecture,' Brussels; A. Moret, 'Rois et Dieux d'Égypte,' Paris; W. Wreszinski, 'Atlas zur altägyptischen Kulturgeschichte,' Leipzig; (Asia) E. Chiera, 'Old Babylonian Contracts,' New York; G. Contenau, 'La civilisation assyriobabylonienne,' Paris; A. Stein, 'The Thousand Buddhas,' London; (Greece) L. D. Caskey, 'The Geometry of Greek Vases,' Boston; F. Courby, 'Fouilles de Delphes, II, Topographie et architecture,' Mâcon; G. F. Hill, British Museum, 'Catalogue of Greek Coins of Arabia, Mesopotamia, and Persia,' London; H. Lechat, 'La sculpture grecque,' Paris; W. K. Prentice, 'Greek and Latin Inscriptions in Syria,' Leyden; E. Pottier, 'Corpus Vasorum Antiquorum, I, Recueil général des vases du Louvre,' Paris; W. K. Prentice, 'Greek and Latin Inscriptions in Syria,' Leyden; M. Rostovtzeff, 'Iranians and Greeks in South Russia,' Oxford; E. Schmidt, 'Archaische Kunst in Griechenland und Rom,' Rome; S. Gsell, 'Inscriptions latines de l'Algérie,' Paris; J. Mothersole, 'Hadrian's Wall,' London.

SIDNEY N. DEANE,

Associate Editor, American Journal of Archaeology.

ARCHERY. The forty-second annual championship tournament of the National Archery Association of the United States was held at Cooperstown, N. Y., late in August 1922. Interest centered chiefly in the competition for the men's and women's championship titles, won in 1921 by J. S. Jiles, of Pittsburgh, and Miss D. D. Smith of Newton Centre, Mass., respectively. Miss Smith successfully defended her title at the 1922 tournament, turning in a score of 1,616 which was 234 points better than the score of Miss Norma Price of Boston, her nearest competitor. Fifteen women took part in the contest. Mr. Jiles lost his title to Dr. R. P. Elmer, who held the championship in 1914, 1915, 1916 and 1920. Owing to the World War, no tournaments were held in 1917 and 1918. Doctor Elmer's score was 2,488—296 points above the score of Mr. Jiles.

ARCHITECTURE. The year 1922 was ushered in with hope for a change from the unsteady, unsatisfactory conditions due to the complexities of readjustment after the World War.

In France alone during that period 250,000 buildings, including 1,500 schools, 1,200 churches and 377 public buildings, were destroyed so completely that restoration was impossible.

European nations throughout the war and during the chaotic financial and political situation following the armistice had little thought for architectural progress and throughout the world generally, the activities of the architectural schools were practically suspended. This suspension was a contributing cause for the lower standard in architectural design during the post-war period.

During the war period, prior to the entrance of the United States into the conflict, great activity was manifested in this country in connection with the various trades and industries supplying the needs of the warring nations. The constructions needed were purely utilitarian and scant attention was given to the architectural effect produced. After the entrance of the United States as a belligerent enormous activity was shown in this country in the development of utilitarian industrial plants with housing facilities for the large numbers of employees needed in the manufacture of war supplies. The pressing need of workmen gave to labor a great upward impetus. Great energy was concentrated in the building of ships, the supply on hand at our entrance into the war, being totally inadequate. To meet this need, large quantities of material and labor of every kind were utilized by the government and a ban was placed on all ordinary building operations amounting to more than \$2,500. The temporary buildings erected during this period by the government at the various cantonments were of little importance from the viewpoint of architectural design.

After the armistice, the building loan market was seriously affected by the greater attraction offered to investors by the foreign and domestic bonds. The negotiating of a building loan frequently required a bonus and other additional expenses not included in building finance in normal times. Building loans have been difficult to obtain since the war. As a result of these various contributing causes, architecture in common with other arts and professions had been neglected. At the beginning of 1922, it was on the threshold of a new era of progress.

In the larger cities of the country, the zoning laws had led to the development of skyscrapers along lines hitherto unthought of. To provide light and air, set-backs of the upper stories were necessitated and the height of the building bore a definite relation to the width of the street. It has been often stated and is commonly believed that architectural perfection cannot be attained in the design of these very tall buildings as the architectural styles forming the basis of their design were developed in the one-story temple of the Greek or Roman period or in the comparatively low building of the Renaissance. Nevertheless, as the result of the study of many of the American architects, a happy solution of this difficult problem can be anticipated, in fact has been in great part achieved. This is evidenced by the results obtained in the recent competition for the new Chicago *Tribune* building, which was participated in by American as well as foreign archi-

tecs, including, among others, John Mead Howells, of New York, who was awarded the first prize of \$50,000; Emil Saarnien, of Finland, who was awarded the second prize of \$20,000; Holabim & Roche, who were awarded the third prize of \$10,000, and 10 other architects of note, each of whom received honorable mention and a prize of \$2,000 for excellence of design.

The opportunity to design a building 400 feet high viewable from all sides is of rare occurrence. Mr. Howell's solution is epochal and is an architectural expletive in structural design. The dominant theme is that of a Gothic tower—the soaring, vertical sweep of whose accenting lines presents an aspect of towering uplift and militant strength. Significant of the higher reaches of the profession in America was the presentation to Mr. Thomas Hastings of the medal of the Royal Institute of British Architects. This occurrence prompted the following note: "An important part of our architectural history is founded on records of the two great firms, McKim, Mead and White, and Carrere & Hastings—the former following the influence of the Italian design and the latter French design as taught by Ecole des Beaux Arts—these two merged into an American character."

A chronology of the year's designs and builded products would be uninteresting—the general trend of the nation-wide accomplishment of the year's period is indicated in the characterization of the following: The preliminary study for the Masonic Temple at Detroit by Geo. Mason & Company, is predicative of the continuation of utility, good taste and enormous extent. The competition for the Elks National Memorial Headquarters Building at Chicago, Ill.; and the Telephone and Telegraph Building, New York, W. Bosworth, architect; New Hotel Statler, Buffalo, Geo. B. Post & Sons, architects; Municipal Auditorium, Colorado Springs, McLaren and Hetherington, architects; Standard Oil Building, New York, Carrere and Hastings, architects; great office building for the Aetna Life Insurance Company, Hartford, Conn.; Cadet Hospital, etc., for the Military Academy at West Point, N. Y., Arnold W. Brunner, architect; mammoth Hadley Apartment Hotel at Washington, D. C., Appleton D. Clark, Jr., architect; and redesigning of Number 1 Broadway, New York, W. B. Chambers, architect, with its novel maritime effect expressing the nature of the business conducted in the building.

With a continuation in this country of the progressive rate of building operations the year 1922 will stand as a most important period in the annals of the building industry in the United States. To its credit, 1922 records a total of about three and three-quarter billion dollars, or more than twice the construction expenditure of the year 1916, generally accepted as the prewar normal period.

Combining engineering and architectural activity the vehicular traffic tunnel, connecting New York City and Jersey City, with its under water construction and important approaches is a project of major importance. The tunnel will cost upward of \$30,000,000.

The general effect of war and its attending sentiment was crystallized in many of the monuments conceived and designed since the days of

the Armistice. Monuments large and small of various descriptions in different parts of the country in a measure show the outlet of the great patriotism that gripped the country as well as the gratitude of the American nation to its fallen heroes. The proposed Victory Hall, New York City, H. B. Herts, architect, crystallized the modern ideal in the composition of a World War monument. In a most happy and harmonious manner the essentials of monumental expression and productive utility are combined in this project.

Presenting patriotic imagery in a most successful manner is the Lincoln Memorial, Washington, D. C., Henry Bacon, architect. The design that has been developed for the flag room for the Capitol Building, Albany, N. Y., William de Leftwich Dodge, mural painter, has attracted notable comment. Here the State of New York aims to establish a decorative expression that shall portray the patriotic faith and love of the commonwealth in maintaining the greatness and glory of the American flag. The restoration of the library at Louvain (an Old World masterpiece destroyed during the war) by public subscription of the American people is a recognition of supreme sacrifices made by Belgium during the World War and an evidence of the architectural appreciation of an Allied nation.

Like all periods of readjustment the present era possesses its phase of opportunism. As previously stated there had been a scarcity of dwellings after the war, owing to the ban upon domestic building during that period. In this country, and in most European countries, practically all building material was requisitioned by the governments, and as a consequence, construction costs and rental values soared extravagantly. Labor was as yet not receptive to the hoped for normal wage. Living costs still remained high. The eternal conflict between capital and labor, fanned by the abnormal labor and living costs, has resulted in the present false construction prices.

Expert artisans must be developed—there are not, today, enough workers to supply the necessities of the building trades. Rational costs will not obtain until conditions fulfill the law of supply and demand. Under these housing conditions, however, many new buildings have been erected throughout the country, principally in the larger cities such as Greater New York, where in certain sections dwelling houses of a type to accommodate many families have been recently built. These structures charge an almost prohibitive rental and consequently are available only to the wealthy classes.

The housing situation has been so acute that special State and municipal legislation has been necessary. A measure of relief has been afforded in some sections by exempting new housing projects from tax payments for a period of years. This tax exemption has had an appreciable result in renewed activities in suburban developments. Districts to be served by future transit improvements have felt the effects of the residence building impetus—principally in the form of one and two family detached and semi-detached houses. This spreading of the population is in the line of municipal betterment—for it has forced many people to partake of good light

and air not possible in congested tenement surroundings. In the field of cottage and small house design a spirit of eclecticism has been apparent, due to the many opportunities of individualism in the use of brick and stucco.

Much interest has been shown in the advancement of the extensive Metropolitan Life Insurance Company's housing project in Long Island City, N. Y. In a suburban district this company has designed and undertaken the initial constructive steps for a scheme that has been heralded as the final solution of the "Housing Problem."

The plans provide for a series of apartments so detailed that all of the modern improvements necessary to comfortable housekeeping shall be furnished. The general scheme insures the advantages of the best light, air and sanitation. The entire investment has been studied with the ultimate purpose of charging a rental of \$9 per room. One of the features that has attracted general comment has been the elimination of the separate dining room and its replacement with a "pullman," a space contiguous to the kitchen of sufficient size to permit of a table and benches.

The congested condition of the principal hotels and their almost prohibitive rates led to the development of schemes whereby large hotels have been projected to contain every necessary convenience and comfort compatible with lower construction cost. The reduction in room sizes and the cutting out of expensive public rooms and costly decorations have resulted in structures where a probable profit is figured on a room rental ranging from \$9 to \$14 per week.

During the past year and a half an immense activity has manifested itself in the planning and construction of schools of all grades. The school program of New York City is colossal in its scope. To carry this project to fruition over \$80,000,000 will be spent.

One of the exceptional phases of the hard-set rules established by the Federal government during the war was that which permitted the releasing of building material needed for erecting such institutional projects as State prisons and hospitals; the latter principally for the insane. As a result, this work, at a great expense, has been steadily progressing despite the handicap of the material and labor difficulties, caused by constant strikes throughout the country. Examples of major State hospital constructions are to be found at Morris Plains, N. J., and at Marcy, and Creedmoor, N. Y. The scope of the New York State projects is indicated by the fact that when finished the new hospitals, together at a cost of about \$14,000,000 will take care of an additional insane population of over 7,000.

A constant progress has also been shown in the construction of penal institutions. The most significant work in this field is the fabric designed to house the new classification unit at Sing Sing Prison, New York State.

Agriculture touches the life of man at every point. Seventeen thousand empty farms, in a single State, is an index of the desertion of the agricultural domain. The necessity of re-establishing an interest in farming and its dependencies and of establishing the knowledge of how to productively prosecute the industry has focussed attention upon this problem to a very

marked degree, in many parts of the nation during the past three years. The most intensive and, without doubt, the most extensive project in scientific agricultural development has been undertaken by Cornell University in the New York State College of Agriculture, Ithaca, N. Y. The completed scheme will entail a cost of more than \$6,000,000. The first unit of the project, the dairy industry building, was approaching completion at the beginning of February 1923.

The United States is exhibiting a markedly progressive spirit in all phases of its architectural and engineering projects. Individuality is universally shown and throughout the nation the constructed works successfully present, as true indices, the character of the phase of civilization they house. Nowhere is this more notably evidenced than in the great modern business structures and fine palatial residences in the large cities and the wonderful villas with their beautiful garden and park settings to be seen throughout the country, often times rivaling the great examples of the Renaissance. It is evident that as the result of modern methods and progress the world is entering upon an era of development that will establish a standard of logic and truth in architectural achievement.

LEWIS F. PILCHER,

Formerly State Architect of New York.

ARGENTINA, a republic of South America extending from Paraguay and Bolivia in the north to the extreme of the continent. It has an area of 1,153,119 square miles and a population on 1 Jan. 1921 of 8,698,516. The republic is divided into 14 provinces, 10 territories and a Federal district. These with their areas and populations are as follows:

PROVINCES, ETC.	Area (sq. miles)	Popula- tion 1 Jan. 1921	Capital
Buenos Aires.....	117,777	2,336,507	La Plata
Santa Fe.....	50,713	1,007,512	Santa Fe
Cordoba.....	66,912	805,940	Cordoba
Entre Rios.....	29,241	475,236	Parana
Corrientes.....	33,535	371,815	Corrientes
San Luis.....	29,035	129,655	San Luis
Santiago del Estero.....	55,385	298,110	Santiago
Tucuman.....	10,422	350,681	Tucuman
Mendoza.....	56,502	311,740	Mendoza
San Juan.....	37,865	131,179	San Juan
La Rioja.....	37,839	84,643	La Rioja
Catamarca.....	36,800	108,544	Catamarca
Salta.....	48,302	146,903	Salta
Jujuy.....	14,802	76,506	Jujuy
TERRITORIES			
Misiones.....	11,511	62,159	Posadas
Formosa.....	41,402	21,880	Formosa
Chaco.....	52,741	52,258	Resistencia
La Pampa.....	56,320	124,294	Santa Rosa
Neuquen.....	40,530	33,574	Neuquen
Rio Negro.....	79,805	47,693	Viedma
Chubut.....	93,427	28,813	Rawson
Santa Cruz.....	109,142	11,603	Gallegos
Tierra del Fuego.....	8,299	2,559	Ushuaia
Los Andes.....	34,740	2,671	San Antonio
FEDERAL DISTRICT			
Buenos Aires.....	72	1,676,041	Buenos Aires
Total.....	1,153,119	8,698,516	

persons left the country. Buenos Aires, the capital, has a population of 1,676,041.

Education.—Primary education is free and compulsory for all children between the ages of 6 and 14. The population of school age is 1,756,053 and of these 1,076,045 are attending school. There are 9,268 primary public and secular schools with 36,615 teachers and 1,190,231 pupils. Secondary or high schools are also in the hands of the general government and number 42 with 1,244 teachers and 11,022 students. There are also 33 private secondary schools with 3,000 students and 400 teachers. There are 90 normal schools with 15,000 students and 40 special schools with 12,000 pupils. There are seven universities—the national institutions at Cordoba, Buenos Aires, La Plata and Rosario, and the Provincial institutions at Tucuman, Santa Fe and Cuyo.

The educational expenditures of the republic in 1920 were as follows:

CLASS	Amount expended, 1920
Primary schools.....	\$38,798,656
Secondary schools.....	8,274,720
Technical and commercial.....	5,381,424
Normal.....	10,931,864
University.....	7,464,158
Miscellaneous.....	1,034,512

Religion.—The Roman Catholic religion is supported by the state although there is no state religion. All forms of religion are tolerated. The Roman Catholic Church has an archbishop at Buenos Aires and 10 bishops, one in every chief city of the Republic. There are eight seminaries for the training of the clergy.

Agriculture.—There are 62,550,000 acres under cultivation which is about one-fifth of the total arable area. The chief crops are wheat, Indian corn, flax, oats, cotton, sugar, and tobacco. Wheat was planted to over 15,000,000 acres in 1921 and yielded 5,015,000 metric tons of which about one-third was exported. In 1922, the wheat crop amounted to 215,320,000 bushels from 16,081,000 acres. About 8,000,000 acres were planted to Indian corn in 1921 and yielded 6,000,000 tons, three-fourths of which found its way to the export market. The oat crop of 1922 was 49,600,000 bushels from 2,618,000 acres. The flax crop of 1923 was estimated at 60,270,000 bushels. The sugar crop varies somewhat but in 1920 reached a total of 209,653 metric tons. Wine production is on the increase and in 1920 aggregated 113,028,630 gallons.

Industries.—According to the returns of the last industrial census the manufactories of the republic were as follows:

CLASS OF INDUSTRY	Number of estab- lishments	Capital invested
Foods and kindred products.....	18,983	763,772,611
Clothing and toilet articles.....	13,498	160,326,029
Building and construction.....	8,582	216,182,262
Furniture.....	4,441	62,638,495
Metallurgy and kindred industries.....	3,275	107,620,033

In 1920, 188,688 immigrants were admitted to the country but in the same year 148,907

There are in all 48,779 factories employing 410,201 persons and capitalized at 1,787,662,295 pesos.

Live Stock.—This industry is in a flourishing condition and pure bred stock are now to be found in all the cattle-raising centres. The last stock census reported 27,392,126 head of cattle, 45,303,419 sheep, 9,366,455 horses, 4,670,130 goats, 3,227,346 swine, 565,069 mules, and 260,157 donkeys.

Mining.—Copper, gold and silver are worked to a slight extent especially in Catamarca. Coal and oil properties have undergone considerable development of late years. The output of petroleum in 1921 was 277,807 tons.

Commerce.—Live stock and agricultural products are the chief exports of the country but during 1922 there were a number of depressing factors which were marked by a decline in both export and import trade. In a normal year Argentina sells beyond her shores goods to the value of \$1,000,000,000 and buys goods to the value of \$700,000,000 approximately. Textiles form the heaviest item on the import list followed by foodstuffs, iron, glassware, chemicals, oils and dressed lumber.

In the first 10 months of 1922, Argentina exported 3,352,000 tons of wheat, 1,894,000 tons of corn, 797,000 tons of linseed, 81,000 tons of flour; sheepskins 57,000 bales; salt hides, 3,605,000; dried hides, 1,824,000; wool, 16,728 bales; beef, 3,982,000 quarters; quebracho logs, 94,000 tons; quebracho extract, 123,000 tons. In the 11 months ending 31 Aug. 1922, there were exported 447,000 bales of wool and the first eight months of the same year 3,878,000 cattle hides were sent out of the country. In the same period 22,000 tons of tallow were exported. The exportable surplus of linseed was placed at 55,240,000 bushels.

The customs receipts in 1920 amounted to \$94,600,000. The United Kingdom and the United States are the chief customers for Argentina's products and also furnish most of the imports.

Banking and Finance.—The Banco de la Nacion has a capital of \$50,000,000. It is authorized to make loans to the central government to the extent of 20 per cent of its capital. There are 143 banks in the republic of which only 25 are foreign. On 30 June 1922 there were on deposit in the principal banks 16,050,000 gold pesos and 3,188,198,000 pesos paper currency. At the end of 1921 there were in circulation notes to the value of 1,362,563,974 pesos secured by 480,600,127 pesos gold.

The revenue for 1921 was 495,841,787 paper pesos against an expenditure of 558,950,000 pesos, the deficit being 63,108,213 pesos (\$22,719,000 at current exchange rates). The total debt at the end of 1921 was 1,285,245,991 paper pesos. A new loan of \$200,000,000 was negotiated with New York bankers in the autumn. It was claimed that the institution of an income tax would be necessary to overcome the existing situation which results in a yearly deficit. The total wealth of the country is placed at \$20,000,000,000.

Army and Navy.—There is a compulsory military service law for all citizens from their 20th to 45th year, with one year of intensive training. The total peace footing of the army is about 20,000 officers and men.

The Republic has two battleships of the dreadnought class, two pre-dreadnoughts, four

armored cruisers, a light cruiser, seven destroyers, eight torpedo boats and several lesser craft. The navy personnel numbers 9,000 men and 500 officers.

The military budget for 1921 was \$14,000,000 and the naval budget \$11,700,000.

Constitution and Government.—The executive power is vested in a President elected for a term of six years by electors chosen by the provinces after the manner of the United States. The legislative power is vested in a National Congress of two chambers, the Upper or Senate having 30 members elected for nine years by the provincial legislatures and in the capital by electors. The Lower House or House of Deputies is the popular chamber having one deputy for every 49,000 inhabitants. Deputies are elected for four years, one-half of the house retiring every two years.

Senor Hipolito Irigoyen completed his term of service in the Presidency on 12 October 1922, when Senor Marcello de Alvear assumed the office.

Recent History.—An effort was made at the beginning of the year to expropriate the foreign packing houses in order to protect the national meat interests. It was not successful because of the organized opposition of the former and also because of the report of the Argentine Rural Society, sent to the House of Representatives, in which it declared that the depression in the meat industry was due to the world-wide depression after the boom period of the war. The demoralization in the wool market was the cause of an uprising in the Santa Cruz district which was quickly suppressed by the military. Under the budget as passed for the year, woolen cloth made in foreign countries from raw material imported from Argentina is declared free of duty for the period of three years. Such cloth, however, must be made to the order of Argentine firms and the latter must within the three-year period erect plants for the weaving of at least 500,000 pounds of wool annually.

Early in the year a national insurance law was enacted, by the terms of which, insurance is made compulsory for all citizens earning more than 6,000 nacionales a year. This insurance comprises as minimum benefits the age pension, pension for the disabled, illness and maternity insurance. The quotas of the employer and of the employee are fixed according to the amount earned.

The national legislature also regulated the consumption of intoxicating liquors. It is now forbidden to sell liquor from Saturday at midnight until early on Monday, and from 1 Jan. 1923, no alcoholic beverage containing any ingredient other than the product of fermented grapes, apples and pears may be manufactured or sold in Argentina.

Immigration continued on the increase throughout the year, being especially heavy from Germany and Spain. The Japanese government negotiated an agreement with the Argentine for an increase in Japanese immigration.

In the general elections held 2 April the Radical party was returned to power, greatly to the surprise of those who thought the noisy criticism of President Irigoyen indicated dis-

satisfaction with the administration. There was projected during the year a scheme for the industrial exploitation of the Falls of the Iguazu, one of the greatest falls in the world. This project may be the joint enterprise of Brazil and Argentina, the cataract being on the boundary line of the two countries. During the year it was announced that the new census showed Buenos Aires with a population of 1,700,000, thereby making it the second Latin city of the world, Paris being the first. The depression noted in farm products early in the Argentine spring caused a committee of farmers to importune the government for assistance. One of the measures recommended was a limited moratorium in the payment of their debts. The Argentine government in August consented to the renunciation of cable monopolies, thereby removing the last difficulty in the way of a free competition of cable companies in South America. An agreement was effected with Chile for a joint management of the Trans-andean Railroad and 2,500,000 gold pesos were set aside for its electrification. The appointment by Spain of Count Romanones, former Premier, as Ambassador to Argentina gave the greatest satisfaction. It was said that it pre-saged the visit of his sovereign in 1923.

ARICA-TACNA DISPUTE. See PEACE AND ARBITRATION, INTERNATIONAL.

ARIZONA, a southwestern State of the United States, lying to the north of Mexico between New Mexico and California. The State has an area of 113,956 square miles and a population of 334,162 in 1920. The State ranks fifth in size and 46th in population among the States of the Union. The capital is Phoenix, with a population of 29,053. The State has 14 counties. Of the entire population in 1920, 291,449 were whites, 8,005 negroes, 1,719 Asiatics, and 32,989 were Indians. Again there were in the State 78,099 foreign born, of whom 2,882 were English, 60,325 Mexicans, 1,962 Canadians and 1,516 Germans. The chief cities, with their populations, are: Phoenix, the capital (29,053); Tucson (20,292); Bisbee (9,205); Douglas (9,916), and Globe (7,044).

Education.—There is a compulsory attendance school law for children between the ages of eight to 16 years. Instruction is free for children from six to 21 years of age. There are 73,546 pupils in primary and secondary schools; 685 students in normal schools and 860 students in the State University. The appropriations for education were \$2,523,480 in 1921-22 and \$2,275,994 in 1922-23.

Religion.—In the order of their numerical strength the denominations are: Roman Catholic, Latter-Day Saints, Presbyterian, Methodist and Congregational.

Production and Industry.—Mining, stock-raising and agriculture are the chief industries of the State. Mining is most important. The copper mines are among the largest in the world, the best known being the United Verde. Copper, gold, silver and lead are the principal metals mined in the State.

The value of the gold, silver, copper, lead and zinc produced by mines in Arizona in 1922,

according to the estimate of the United States Geological Survey, Department of the Interior, was \$65,219,000; the value in 1921 was \$29,563,472. A marked increase was made in the production of all metals as a result of the resumption of activities early in the year at the large mines and smelting plants. The total, however, was not unusually large and did not approach the average of the last 10 years. The gold produced increased from \$2,930,303 in 1921 to \$3,618,000 in 1922 as a result of the increase in gold from the smelting and refining of copper ore. The largest output of gold came, as in past years, from the United Eastern mine, at Oatman, but the output of the San Francisco (Oatman) district decreased from \$2,310,885 in 1921 to about \$1,879,500 in 1922.

The mine output of silver increased from 2,469,394 ounces in 1921 to about 4,760,000 ounces in 1922. Most of the silver was produced from copper ore mined in Cochise and Yavapai counties. Little silver comes from mines near Miami, Ajo or Ray. The largest producers of silver from copper ore were the Copper Queen, Calumet & Arizona, United Verde and United Verde Extension mines.

The mine output of copper increased from 185,034,194 pounds in 1921 to 418,000,000 pounds in 1922. The value of the output increased from \$23,869,411 in 1921 to \$56,029,000 in 1922. By May all the large smelting plants except the one at Clifton were active, and most of the copper mines except the Magma had resumed operations. The largest producers of copper in 1922 were the Inspiration, Miami, and Copper Queen mines, followed by the United Verde, Calumet & Arizona, United Verde Extension, New Cornelia, Ray Consolidated, Old Dominion, Arizona Commercial, Iron Cap, Swansea and Superior & Boston.

The mine production of lead in Arizona increased from 6,541,433 pounds in 1921 to 14,080,000 pounds in 1922. The value of the output increased from \$294,364 to \$802,500. The Copper Queen mine, at Bisbee, the largest producer of lead in Arizona, greatly increased its shipments of silver-lead ore, which is smelted at El Paso, Tex.

The Copper Queen mine was the only producer of zinc in Arizona in 1922 and shipped several hundred tons of zinc ore to an Eastern smelter. The Hillside mine, in Yavapai County, was idle, but work was resumed at the Tennessee mine, in Mohave County.

The dividends paid by Arizona mining companies (New Cornelia, Miami, United Verde Extension, Calumet & Arizona, United Eastern, United Verde and Arizona Copper) during the first 11 months of 1922 amounted to \$6,630,815, exclusive of \$1,800,000 paid by the Phelps Dodge Corporation, which operates the Copper Queen and Morenci properties in Arizona and other mines in Mexico and New Mexico.

Manufacturing is of small proportions aside from the large smelting establishments. Live-stock thrive on the mountain slopes and agriculture is being promoted by vast systems of irrigation. The railroad mileage of the State was 2,478 in 1922. Cotton of the long staple variety has been introduced. The value of all farm crops

ARIZONA — ARKANSAS

in 1922 was estimated at \$26,986,000. The chief crops in 1922 were:

Crop	Acreage	Yield	Value
Corn.....	39,000	1,170,000 bu.	\$1,346,000
Wheat.....	49,000	1,274,000 "	1,465,000
Barley.....	25,000	825,000 "	701,000
Oats.....	20,000	620,000 "	422,000
Hay (tame).....	165,000	578,000 tons	5,850,000
Hay (wild).....	10,000	5,000 "	60,000
Beans.....	7,000	24,000 bu.	108,000
Potatoes.....	6,000	510,000 "	459,000
Sweet potatoes.....	2,000	300,000 "	525,000
Cotton.....	100,000	42,000 bales	6,300,000
Grain sorghums.....	30,000	900,000 bu.	720,000
Apples.....		77,000 "	
Peaches.....		128,000 "	
Pears.....		18,000 "	

Government.—The State was admitted to the Union on 14 Feb. 1912 as a sovereign State. The initiative, referendum and the recall are part of the legislative machinery of the State, which has also the right to engage in industrial pursuits. There is a Senate of 19 members and a House of Representatives of 35 members. The State sends one member to the Federal Congress and two senators. The Legislature meets annually on the second Monday of January.

Officers.—The Governor in 1922 was Hon. Thomas E. Campbell, whose term expired January 1923, when he was succeeded by the Hon. G. W. P. Hunt. Other State officers entering on their duties in January 1923 were Secretary of State, James H. Kerby; Attorney-General, John W. Murphy; Treasurer, Wayne Hubbs; Auditor, R. H. Ramsey; Superintendent of Education, C. O. Case; members of Supreme Court, H. D. Ross, A. G. McAllister and E. T. Flanagan.

Finances.—The authorized expenditures of the State in 1921–22 amounted to \$3,923,468 and to \$4,244,001 in 1922–23. The bonded debt of the State on 1 July 1922 was \$5,413,275.29. On that date there was \$2,988,948.42 in the Redemption Fund, leaving a total net debt of \$2,424,326.87. The assessed value of real and personal property in the State was \$732,021,286 in 1922. The following table shows the condition of the State Treasury as of 1 July 1922:

Balance on hand 1 July 1921.....	\$2,864,243 19
Receipts during fiscal year 1921–22.....	6,226,163 49
Tax apportionment.....	5,635,955 28
Total receipts.....	\$14,726,361 96
Disbursements during fiscal year 1921–22.....	9,485,851 74
Balance at beginning current fiscal year, 1922–23.....	\$5,240,510 22

Legal Holidays.—New Years Day; Friday following 1 February (Arbor Day) in southern Arizona; Friday following 1 April (Arbor Day) in northern Arizona; 14 February (Admission Day); 22 February (Washington's Birthday); 30 May (Memorial Day); 4 July (Independence Day); first Monday in September (Labor Day); 12 October (Columbus Day); first Tuesday after first Monday in November (Election Day); 11 November (Armistice Day); Thanksgiving Day; 25 December (Christmas Day).

ARIZONA, University of, a State co-educational institution, founded in 1885 and located at Tucson, Ariz. In 1922–23 it had a faculty of 108 members, 2,392 students, property valued at \$1,460,000, including land, buildings, equipment, books, etc., and an income of \$1,018,563.05. Cloyd Heck Marvin is president.

ARKANSAS, a south central State of the United States, bounded by Missouri, Tennessee, Mississippi, Louisiana and Oklahoma. It has an area of 53,335 square miles and a population of 1,752,204 in 1920. The State's geographic centre is in Pulaski County, 12 miles northwest of Little Rock. Of this population, 1,265,782 were native whites, 13,975 foreign-born whites, 472,220 negroes, 121 Asiatics and 106 Indians. The chief cities are: Little Rock, the capital, 65,030; Fort Smith, Pine Bluff and Hot Springs.

Religion.—The chief religious denominations in the order of their numerical strength are: Baptist, Methodist, Roman Catholic, Disciples of Christ and Presbyterian.

Education.—There are provided separate schools for white and colored children. There are 461,591 children in the primary schools with 12,008 teachers; two public normal schools with 42 teachers and 922 students and 110 in the faculty and 1,300 students in the State University at Fayetteville. Other large institutions are Ouachita College, Arkansas College, Hendria College, and Philander Smith College.

Finance.—Receipts for the year 1922 amounted to \$6,937,592.96; expenditures, \$6,645,851.61, leaving a balance of \$291,741.35 to be added to the balance in hand at the beginning of the year \$638,448.76. The State debt amounted to \$2,488,166.67, but according to the Council of the Corporation of Foreign Bondholders the State has a defaulted debt of \$8,700,000. The assessed value of real property in 1922 was \$396,089,491; of personal property, \$193,662,201.

Agriculture.—The acreage, yield and value of the chief crops in the State in 1922 are as follows:

CROP	Acreage	Production	Value
Corn.....	2,350,000	45,825,000 bu.	\$38,951,000
Winter wheat.....	86,000	1,118,000 "	1,185,000
Oats.....	264,000	6,336,000 "	3,612,000
Rye.....	1,000	12,000 "	12,000
Hay (tame).....	585,000	731,000 tons	9,942,000
Sorghum syrup.....	28,000	1,792,000 gals.	1,680,000
Hay (wild).....	133,000	140,000 tons	1,344,000
Rice.....	154,000	7,392,000 bu.	5,766,000
Potatoes.....	35,000	2,380,000 "	3,094,000
Sweet potatoes.....	47,000	3,760,000 "	3,346,000
Cotton.....	2,844,000	1,040,000 bales	122,720,000
Peanuts.....	17,000	10,540,000 lbs.	401,000
Apples.....	16,000	2,400,000 bu.	
Peaches.....		2,040,000 "	
Pears.....		100,000 "	

Agriculture is the chief source of wealth and employment, the total value of all agricultural products in 1922 being over \$200,000,000. Lumber is also a great asset, the annual output being valued at about \$75,000,000.

According to the last census there were in the State 232,604 farms, 9,210,556 acres of improved land in farms, 7,396,028 acres of woodland in farms and 850,166 acres of other unimproved

land in farms, making a total of 17,456,750 acres in farms. The value of all farm property was \$924,395,483. Land represented a value of \$607,773,440 and buildings \$145,337,226. Implements and machinery were valued at \$43,432,237 and livestock at \$127,852,580.

Mining.—According to the last census Arkansas ranked 34th in value of its mineral products and 30th in the total number of persons engaged in the mining industries. Classified by principal products and listed in order of value of products are bituminous coal, bauxite, natural gas, sandstone, limestone, lead and zinc, granite, abrasive materials, manganese ore and iron ore. In 1921, the coal output was 1,400,000 tons as against 2,103,596 tons in 1920. Phosphate deposits are extensive and are in course of development for fertilizers.

Judiciary.—Members of the Supreme Court: E. A. McCulloch, Chief Justice; C. D. Wood, Frank Smith, T. H. Humphreys and J. C. Hart.

ARKANSAS COLLEGE, a Presbyterian co-educational institution, founded in 1872 and located at Batesville, Ark. In 1922-23 it had a faculty of 14 members, 174 students, property valued at \$338,827 and an income of \$32,451 exclusive of revenue from board. William S. Lacy, D.D., is president.

ARKANSAS, University of, a State coeducational institution, founded in 1871, opened 1872 and located at Fayetteville, Ark. In 1922-23 it had a faculty of 110 members, 1,300 students, property valued at \$1,000,000 and an income of \$519,128. John Clinton Futrall, A.M., LL.D., is president.

ARMAMENTS, Conference on the Limitation of. See PEACE AND ARBITRATION, INTERNATIONAL; WASHINGTON CONFERENCE.

ARMAMENTS, National Council for Reduction of. See PEACE AND ARBITRATION, INTERNATIONAL.

ARMENIA, the name given to a mountainous region of western Asia with an area of 140,000 square miles and in which Armenians are the dominant race numerically. Prior to the Great World War this region was divided politically between Turkey, Persia and Russia. Specifically the name is now applied to the territory of the Socialist Soviet Republic of Armenia situated in Transcaucasia, which territory was formerly included in Russian Transcaucasia. The area of this republic is 15,240 square miles and has a population of 1,214,399. The Chief Commissar is Doctor Miasnikoy.

The recent history of Armenia has been of the most tragic in the world. The Republic of Erivan was set up in 1918 after the Turks and the Central Powers had been persuaded to grant autonomy to the Georgians, Tatars and Armenians. This new state was recognized by the Allied nations in January 1920 and its de jure recognition resulted from the Treaty of Sevres which was concluded in August 1920 between Turkey and the Allied nations. Soviet influence soon made itself felt and on 2 April 1921 Armenia was proclaimed a Soviet state. By agreement with its neighbor Caucasian states Armenia has access to Batumi, which they have made a free port. While the other republics of the Caucasus absorbed by

the Soviets were loud in their protestations, Armenia remained silent and apparently felt safer under the ægis of the Soviet than facing alone the armed forces of Turkey.

ARMOUR INSTITUTE OF TECHNOLOGY, a non-sectarian educational institution for men, founded in 1892 and located at Chicago, Ill. In 1922-23 it had a faculty of 72 members, 724 students, and property valued at \$1,000,000. Income figures not given. Howard Monroe Raymond, E.E., is president.

ARMY OF THE UNITED STATES. The Army was so radically affected by the participation of the United States in the European war that no study of its subsequent history can be undertaken without some consideration of the military developments in the country in the later years of the great conflict.

The United States entered the World War on 6 April 1917 with an army of 200,000 men composed of 133,000 regulars and 67,000 National Guardsmen. When the Armistice on 11 Nov. 1918 concluded hostilities the army had been increased to an aggregate of 3,757,624, of whom 2,057,675 (including marines) were transported to France. During the last six months of the war about a million and a half American soldiers landed in France.

One million seven hundred thousand soldiers were in camps in the United States and 23,700,000 men, 18 to 45 years of age, had been registered and classified under the selective service law. The country had accepted the principle of compulsory military service for all able-bodied men of military age and the drafting of millions for service in a war whose terrors had been thoroughly exploited for more than three years was accomplished without any serious opposition. A small fractional minority opposed to all organized government was locked up whenever it attempted to impede the drafting of troops. Great efforts were made to be fair to honest "conscientious objectors" and, although, in the hurry and excitement of the time, some of these suffered temporary imprisonment their personal convictions were generally granted every consideration when not suspected of participation in obstructionist propaganda.

The practical unity of our vast and varied civilian population in supporting the draft for a foreign war was a remarkable demonstration of national solidarity. There can be no doubt that down to the end of 1916 there had been a nation-wide desire to keep out of the European War and yet, when once the country had become involved in the foreign struggle, an overwhelming reversal occurred and the people as a whole were eager to share as fairly as might be possible the risks and the costs.

In considering the military problems of the United States it is important to realize that although our participation in a European War violated our most cherished national tradition that we should keep clear of all such entanglements, nevertheless our hundred million people were as one in support of our military forces once the die had been cast. That they had not undergone any such complete conversion of ideas in international politics became evident when after the war they refused the demand of the President who urged joining the League of Nations. The

significant fact established was that the vast heterogeneous population of the country has been sufficiently welded into a composite nation to be counted upon for combined bearing of all burdens in time of national necessity. A second fact of military importance is the greatly broadened interest in military affairs and quite general realization of the necessity for adequate preparedness. The vast armies did nothing to warrant any fear of "militaristic" dangers in this republic. They returned quickly and gladly to civil life and the era of retrenchment which ensued as the country counted the cost of the war gave no evidence of a willingness to be found unprepared for any future emergency which may arise. Economic conditions have compelled a paring down of expenditures to an extent which has curtailed our military establishment to an almost dangerous degree but the economies have been sane and necessary. Unexpected reduction of personnel among both commissioned and non-commissioned officers shook the morale temporarily in 1922 but all branches of the military family are co-operating with a spirit of mutual faith in each other and the eventual fairness of the country they serve. The century-long lack of harmony between National and State troops has been vanquished and the provisions of a wise new law recognize both as part of the nation's military force.

Maj.-Gen. James G. Harboard, who was the able chief of staff in the American Expeditionary Forces, summed up the habitual tendency of the country in the widely appreciated phrase, "After each war the size of our debt incurred through unpreparedness brings the debt, and the debt continues the unpreparedness, the whole forming a vicious and expensive circle." After 33 years of devoted and brilliant service to the country General Harboard applied for retirement when an opportunity offered to return to civil life and a business career. In January 1923 the House of Representatives passed an amendment to the army appropriation bill stopping General Harboard's retired pay because he had become an officer of a corporation which might seek government contracts. There was widespread newspaper criticism of this action expressing the hope that the legislators in Washington would recall this affront to a distinguished officer entitled under the law to retirement pay. The military committee of the Senate subsequently struck out from the Army bill this item.

In the summer of 1918, when no one anticipated the end of the war in that year, the military program for American participation on the battle front was being increased from the original plan for 80 combat divisions to a total of 100 combat divisions. As a matter of fact at the time of the Armistice the ration strength of the British, French and American armies showed British 28 per cent, Americans 31 per cent, French 41 per cent. Of the western front the British held 19 per cent, the Americans 22 per cent and the French 59 per cent.

The unexpectedly early dawn of peace created immediately a series of new problems connected with the demobilization of the armies. The plan adopted was to transfer all of the men prior to their discharge to the camp in or nearest to the State from which they had entered the service and to discharge them there—33 camps scat-

tered throughout the country were designated and the following table indicates the speed and efficiency of the demobilization:

	Officers discharged		Enlisted men discharged	
	Number	Cumulative	Number	Cumulative
1918				
Nov. 11-30.....	593	593	43,000	43,000
Dec.....	37,043	37,636	609,000	652,000
1919

The following estimates of our wartime population and its related occupations will be of value to the military student. Of the estimated population of 105,000,000 at the time of the war we had about 30,000,000 males of producing age and the following table indicates the occupations of these Americans:

		Per 1,000
Men in France fighting.....	1,400,000	13
Men in France behind lines.....	600,000	6
Men in army in United States.....	1,700,000	16
Men in navy.....	550,000	5
Men in war work in United States....	7,150,000	68
Men in non-war work in United States	18,600,000	178
	30,000,000	286
Old men and boys.....	24,000,000	229
Total males.....	54,000,000	515
Women in war work.....	2,250,000	21
Women in non-war work.....	25,750,000	245
Total women of producing age....	28,000,000	266
Old women and girls.....	23,000,000	219
Total females.....	51,000,000	485
Grand total.....	105,000,000	1,000

Under the terms of the Armistice the Coblenz bridgehead on the Rhine was designated for American occupation and that German sector was occupied by United States troops from December 1918 until January 1923. When President Harding ordered the return of this last detachment of the American Expeditionary Forces it had been greatly reduced so that when recalled the troops commanded by Maj.-Gen. Henry T. Allen numbered in all only 1,188 officers and men.

The record of more than four years occupation of Coblenz and the surroundings is entirely creditable to the American soldier. His final departure brought sincere expressions of regret from the German officials and population who had grown to regard him as much more friend than enemy.

The United States flag which had become the local symbol for post-war justice, fairness and military excellence was finally lowered on the battlements of Ehrenbreitstein at noon 24 Jan. 1923.

During the summer of 1918 an American force was mobilized at Aldershot in England for service at Archangel, Russia, to prevent the use of that port as a base for German submarines. These troops commanded by Col. Geo. E. Stewart, 339th infantry included the 1st battalion, 310th engineers with auxiliaries and reported for duty to the British commanding officer, General Poole, at Archangel on 4 Sept. 1918. The purpose of this force was stated to be to guard military stores and to render such aid as might be acceptable to Russians in the organization of their own self-defense. This American force remained in North Russia from September 1918, to June 1919, during which time it occupied various positions along the Vologda railroad and the Onega, Dvina and Vaga rivers and was engaged in many minor operations against enemy forces with the following casualties:

Killed in action.....	109
Died of wounds.....	35
Died of disease.....	81
Died of accident and other causes.....	P. 19
Total deaths.....	244
Wounded.....	305
Taken prisoner (all released).....	4
Total casualties.....	553

In the summer of 1918 an American expeditionary force was sent to Siberia. It consisted of two infantry regiments with auxiliary troops, making an aggregate strength of about 5,000, from the 8th division commanded by Maj.-Gen. William S. Graves. These troops from San Francisco and Manila assembled at Vladivostok, Siberia, by the end of September 1918, and fought several minor engagements with Bolshevik forces at Uspanka and with partisan bands and anti-Kolchak forces at various places in Siberia. The casualties were:

Killed in action.....	28
Died of wounds.....	8
Died of disease.....	41
Died of accident and other causes.....	27
Suicide.....	5
Total deaths.....	109

Since 1918 Federal troops and national guard units have been called upon to suppress disorders and protect property at various places throughout the United States — without exception the arrival of troops in disturbed areas has been followed by a prompt return to law and order but in a few instances prolonged industrial struggles have necessitated the retention of Federal troops for considerable periods.

National Defense Act.—It is an extraordinary historic phenomenon that the United States of America succeeded in weathering the international storms of nearly a century and a half although totally lacking any practical program for national defense. The wide seas which separated us from foreign nations, coupled with the policy of political isolation enunciated by President Monroe, were largely responsible for our immunity from attacks against which we would have been well nigh defenseless.

Eventually the ocean barriers were narrowed

by marine development and political isolation was made impossible by the inevitable involvements of international commerce and finance. What our fathers believed could never happen came to pass when vast armies of American soldiers fought in a great war thousands of miles over seas. One of the earliest and most significant results of that war was the adoption of a definite military policy by the Act of Congress of 4 June 1920 called the National Defense Act.

The nation realized how great would have been the catastrophe had the United States been called upon to face alone in a sudden outbreak of war any great military power. Even as was the case with great veteran armies of our Allies holding the enemy in check, it was more than a year after we entered the war before we began to do any effective fighting. Seventeen months after we cast in our lot with the Allies we were sending green troops into the Meuse-Argonne battle where their courage and determination won a great victory but where inexperience took a heavy toll of precious lives. Providentially our allies were able to lend the artillery which we so sorely needed. On Armistice Day with the exception of 24 eight-inch howitzers manufactured upon plans which had been used by the Midvale Steel Company in the construction of howitzers for the British government there was not in the firing line a single field or heavy artillery gun manufactured for us in the United States after our entrance into the war, a period of 19 months. Had it not been for the material furnished us by the French and British there is every probability that the war would have been lost.

Never before had Americans, as a whole, realized the need for trained armies and the technical preparation for war which can be furnished only by professional soldiers adequately provided with the necessary means. The extremely democratic character of the great armies which we raised disabused the public mind of any fear that such armies, representing every element of our national life, could ever be a menace to our institutions. A clearer knowledge of modern history destroyed the old prejudice that armies are the cause of war. The people as a whole began to perceive that preparation for adequate national defense is an utterly different thing from promotion of war. The soldier who fights is far more innocent as a cause of war than his "peaceful" compatriot whose commercial interests with their world wide complications, lie at the root of most international disputes. From the first settlement of Europeans along the Atlantic seaboard the American people have been contributing not only to the promotion of world-wide liberty but also to the development of those conditions which make for the greater comfort, security and happiness of humanity. Life, liberty and the pursuit of happiness have been the goals of American ambition not only for ourselves but also for our fellow man all the wide world over. This broad humanitarianism grew and persisted from the days when in the early settlements every able bodied man bore arms. The liberty of those colonies was won in war. The rights of American ships and sailors on the high seas were secured through war. The abolition of slavery was won by soldiers when the arguments of philanthropists and philosophers had failed.

ARMY OF THE UNITED STATES

Soldiers made possible the settlement of the vast western prairies. The Army set free the oppressed Cuban nation when diplomacy had tried and failed for generations. The Army, though ill prepared, finally ended the bloody struggle in the Great War. The Army has been the strong right hand of government which with unimpeached motives has ever upheld law and order when threatened by internal dangers. No finger of historian can be pointed in accusation at the armies of the United States which have ever been ready to obey and, if necessary, enforce the just law of the land.

George Washington begged the Congress to provide an adequate regular army and his pleading was repeated by many a soldier, president and statesman. The Congress turned a deaf ear to all these pleas through the long years of the nation's growth until the lessons of the Great War finally compelled the adoption of an adequate program, legally supported, for the raising, support and regulation of a coherent and sufficient force for the nation's defense.

The National Defense Act of 1920 provides that the Army of the United States shall consist of the Regular Army, the National Guard, while in the service of the United States, and the Organized Reserves, including officers and enlisted Reserve Corps. The functions of the Regular Army as the first line of defense are, in general, as follows:

1. To provide adequate personnel for the development and training of the National Guard and the Organized Reserves.
2. To provide the necessary personnel for the overhead of the Army of the United States, wherein the duties are of a continuing nature.
3. To provide an adequate, organized, balanced, and effective domestic force, which can be available for emergencies within the continental limits of the United States or elsewhere, and which will serve as a model for the organization, discipline, and training of the National Guard and the Organized Reserves.
4. To provide adequate peace garrisons for the coast defenses within the continental limits of the United States.
5. To provide adequate garrisons in peace and war for our overseas possessions.

The difficulty which confronts both the Congress and the War Department is to form a sound and sane estimate of the requisite strength for the fulfillment of the above essential duties. While the National Defense Act was being planned an estimate of regular army strength was agreed upon as certainly adequate. This was provided for a regular army of 280,000 men and 17,726 officers with a proportionate strength of National Guard and reserves. These were doubtless maximum peace time figures which it would be safe to curtail. The economic necessities of post-war national finance has led to various reductions from the original strength contemplated under the Defense Act until it is now belied by the best military and civilian authorities that the force has been reduced below a safe minimum. The safe medium undoubtedly lies somewhere between the ample strength of 1920 and the attenuated remainder after the drastic and well-nigh disastrous reductions of 1922

which resulted by the end of the latter year in an authorized army of 125,000 enlisted men and 12,000 officers. At the beginning of the fiscal year 1 July 1921, the enlisted strength of the regular army was 206,365 and by October 1921, this was cut to 150,000; still further Congressional action caused the cut of 1922 to 125,000 enlisted men. In connection with these reductions of the regular military establishment a situation developed which threatened the morale of the army more seriously than any other event in our history. From the establishment of the Military Academy at West Point the career of an army officer had been regarded as one of the few safeguarded life professions under the Republic. The pay never attracted the exceptionally fine type of youth, mentally and physically, who entered the Point. The honorable nature of the service attracted our most patriotic youth with the assurance that a lifetime of honest devotion to the service of the country would secure him in old age the retired pay of such grade as he might have attained if he survived until the age of retirement. The Congressional action of 1922 compelled the separation of a large number of middle aged officers from that profession to which they had devoted their youth and their lives. In addition to the compulsory discharge of officers many who could be retained among the 12,000 allowed were compelled to accept a demotion of a grade. Those discharged were granted a year's pay with which to tide over the period of readjustment into the civil world of business. Such an unforeseen catastrophe in the careers of men with families and severely handicapped by lack of commercial experience shook seriously the morale of the entire corps of officers for it became evident that the career of a faithful officer devoted for years to his country's service might be ended at any time by adverse political action.

The economies of 1922 were an absolute necessity but ought not to have been permitted to establish so serious a precedent threatening at any time the still further depreciation of the value of a commission in the army. The elimination of army officers between 30 June 1922 and 31 Dec. 1922 resulted in a total reduction of the strength of commissioned personnel from 12,880 to 11,385 showing a net loss of 1,495 officers in six months. At the end of 1922 there were 610 vacancies existing in the grade of second lieutenant—all of the higher grades were practically complete in conformity with the act of 30 June 1922, authorizing 12,000 officers. The demotions were as follows: majors to captains, 274; captains to first lieutenants, 765; first lieutenants to second lieutenants, 855. The number of officers on the retired list has shown the following growth: 31 Dec. 1921, 1,659; 30 June 1922, 1,708; 1 Jan. 1923, 2,219.

The following table indicates the extent to which the reduction of officer personnel must curtail duties imposed under the National Defense Act which was universally acclaimed to be the first effective law in our history creating a safe and sane military program. The table gives the number of officers necessary for the full performance of required duties and indicates the numbers that will be available with an officer corps numbering 12,000:

BRANCH OR ACTIVITY	Full provision	Reduced provision
General officers.....	68	68
Infantry.....	2,964	2,414

The National Guard.—The new defense act gave the National Guard an excellent program of development. The officers when federally recognized, although appointed by the Governors of the States, are a part of the Army of the United States. They are subject to Federal duty and receive pay from the Federal government. The century-long quibbling as to whether the Guard would serve the country in time of war beyond the frontiers has been finally ended. The units which had been Federally recognized previous to 5 Aug. 1917 were absorbed into the United States Army for war service and performed every duty at the front with great fidelity and marked credit. Like its associate component in the national scheme of defense, the Regular Army, the Guard has been hindered by the need for retrenchment in State as well as national policies. Allowances for equipment and training have been restricted and there has been, of course, a severe shortage of regular officers available and suitable for duty as instructors. The projected strength of the National Guard for the fiscal year which ended 30 June 1922 was placed at 238,950. As a matter of fact its actual strength was 159,658, a shortage of about 33 per cent. In January 1923 the War Department announced that Secretary Weeks had approved the recommendations of a special committee of Regular Army and National Guard officers for the further development of the National Guard predicated on a minimum peace strength of 250,000 men. The plan contemplates the organization of 18 infantry divisions, 4 cavalry divisions, 130 companies of harbor defense troops and 12 specially allotted infantry regiments. The spirit of the guard is excellent and the States are proving to be eager to do their share in its development. The spirit of real co-operation and mutual respect between the Regular Army, the National Guard and the Officers' Reserve Corps has been good and the country is assured of "one army." The recruiting difficulties which were natural immediately after the war have largely disappeared. The professional fitness of the officers and the physical and mental suitability of the enlisted men are producing a National Guard far superior as a

ARMY OF THE UNITED STATES

military asset to any State forces heretofore in existence.

The Militia Bureau is especially charged with the duty of developing a high state of uniform efficiency in the National Guard throughout all of the States. Department and corps area commanders are directed to give their personal attention and co-operation in the efforts of the Militia Bureau and will lend all assistance within their power to the local authorities in developing the uniformity of organization and training. The potential strength of the Guard has been based on an estimate of 800 per Congressman but evidently required revision as the total so figured would reach about 435,000 in all. The actual post-war strength at the end of each fiscal year has been: 1920, 56,580; 1921, 113,630; 1922, 159,658. The appropriations by Congress for the National Guard in these years have been: 1920, \$13,177,750; 1921, \$28,000,000; 1922, \$25,554,000.

Organized Reserves.—The third line of defense consists of the Organized Reserves and the units comprising this force have been allocated to definite geographical districts throughout the United States with a view to associating each unit with a particular community.

Forty-two groups of regular officers and non-commissioned officers were sent out in the last fiscal year to commence the organization of the reserve divisions and other units. Some progress in organization has been accomplished but it is admitted that there will be little gained in the creation of "paper divisions" unless funds are available for training camps in which the officers, non-commissioned officers and specialists who constitute the peace time frame work of these organizations can be enabled to revive the already fading lessons of the war.

While a mere skeleton in times of peace, the Organized Reserves should be capable at the outbreak of war of rapidly forming 27 infantry divisions recruited from the communities where the officer and non-commissioned personnel has become familiar with local conditions.

The emergency mobilization strength contemplated for the three echelons of the Army is apportioned: Regular Army, 9 infantry divisions; National Guard, 18 infantry divisions; Organized Reserves, 27 infantry divisions. Each of the above to furnish a proportional strength in corps, army and general headquarter units. In addition to the 27 infantry divisions the Organized Reserves are to furnish six cavalry divisions beside the additional troops above referred to.

During the fiscal year in the Officers Reserve Corps there were 7,801 gains and 7,316 losses—the latter as follows: 968 resigned; 936 discharged; 570 died; 257 accepted appointment in Regular Army; 15 expiration of five-year commission; 4,570 appointments were either declined or canceled.

The Enlisted Reserve Corps on 30 June 1922 numbered a total of 480 men.

In the summer of 1922, \$1,800,000 was available by Congressional appropriation for citizens' military training camps of 30 day duration at 27 places throughout the United States and about 30,000 applications were received. The Military Committee of the Senate in January 1923 recommended an increased appropriation for these camps to \$2,200,000.

The courses of instruction provided are: Red, for those who have never had military training. White, for men possessing qualifications equivalent to those of a graduate from the red course. Blue, intended to train non-commissioned officers and specialists of the Regular Army, National Guard and Organized Reserves with a view to qualifying them for service as officers.

The report of the Secretary of War for the fiscal year ending 30 June 1922 showed the following expenditures:

Civil establishment	\$26,297,951 69
Military establishment	341,675,717 33
Rivers and harbors.....	40,123,446 66

The House of Representatives on 19 Jan. 1923 passed the Army Bill carrying the budget for the fiscal year ending 30 June 1924 and amounting in all to \$333,000,000. This provides for the present Regular Army of 125,000 men and 12,000 officers and includes an amendment which increased the appropriation for river and harbor work (popularly known as "The Pork Barrel") from \$37,000,000 to \$56,589,910. The chairman of the Appropriations Committee in protesting against this increase declared "This is a waste of money on creeks over which not one pound of commerce will ever be carried."

On the same day a motion to reduce the Army to 100,000 men offered by Representative Sisson of Mississippi was rejected by a vote of 167 to 43. The Senate, 10 days later, increased the total amount of the army appropriations to \$340,341,396. No change was made in the Rivers and Harbors provision of \$56,000,000.

Of the money appropriated in the Army Bill the estimates for actual military purposes including the support of Regular Army, National Guard, Organized Reserves, fortifications, camps, rifle practice, etc., amounts to \$264,115,367.

An interesting comparison is afforded by the current budget for the French army of 630,000 men amounting to about \$261,514,300. In 1914 the French army budgeted for numbered 834,000 men. Since 1914 the increase in the cost of army material and payments in France has been in the proportion of 1 to 3.5.

EDWIN WINTHROP DAYTON,
Lieutenant-Colonel, Staff Specialist, Officers' Reserve Corps, United States Army.

ARSENIC. Because of its increasing use as an insecticide and because in the efforts to exterminate the cotton boll weevil, the compound calcium arsenate has been found to be the most effective agency known, unusual interest has developed in the production of white arsenic, generally known simply as arsenic. A report of the United States Geological Survey states that the largest users of refined arsenic are the manufacturers of insecticides, who use the greater part of their purchased domestic and refined arsenic in making lead arsenate. It was stated that in 1922 the lead arsenate manufactured was about five times more than the combined output of all other arsenic compounds including calcium arsenate, paris green and Bordeaux mixture. Six western smelting plants handling copper and lead ores are equipped with arsenic refineries and made white arsenic, crude and refined, in 1922. The price of white arsenic in New York in 1922 ranged from six cents a pound in January to 15½ cents a pound in December. Lead arsenate, as paste, was quoted at 8 to 14 cents a pound; red arsenic at 12 to 13 cents a pound and calcium arsenate at 11 to 20 cents a pound. Production of refined and crude arsenic in the United States in 1922, according to the Geological Survey's estimates, amounted to 10,947 short tons; sales of crude arsenic to 1,366 tons. All crude arsenic sold was used in making sodium arsenate. Production of refined white arsenic, having a purity of 99.5 per cent or more, amounted to 9,581 tons, valued at \$1,486,000, or 7¼ cents a pound. Stocks of domestic arsenic on hand 1 October were reported as 1,230 tons and the quantity to be made between 1 Oct.

1922 and 1 May 1923 was estimated at 3,400 tons. The Department of Agriculture estimated that in 1923 approximately 50,000 tons of calcium arsenate will be required in those parts of the cotton growing States where the boll weevil is most prevalent. The compound calcium arsenate contains about 40 per cent of white arsenic.

ART. See ARCHITECTURE, MUSIC, PAINTING AND SCULPTURE.

ARTS AND LETTERS, American Academy of. This organization was founded in 1898. The membership is limited to 50 and only those are eligible who have achieved distinction in art, music or literature. One member, Dr. Thomas Nelson Page (q.v.) died during 1922. The living members at the close of that year were: John Singer Sargent, Daniel Chester French, James Ford Rhodes, William Milligan Sloane, Robert Underwood Johnson, George Washington Cable, Henry van Dyke, William Crary Brownell, Basil Lanneau Gildersleeve, Woodrow Wilson, Arthur Twining Hadley, Henry Cabot Lodge, Edwin Howland Blashfield, Thomas Hastings, Brander Matthews, Elihu Vedder, George Edward Woodberry, George Whitefield Chadwick, George deForest Brush, William Rutherford Mead, Bliss Perry, Abbott Lawrence Lowell, Nicholas Murray Butler, Paul Wayland Bartlett, Owen Wister, Herbert Adams, Augustus Thomas, Timothy Cole, Cass Gilbert, William Roscoe Thayer, Robert Grant, Frederick MacMonnies, William Gillette, Paul Elmer Moore, Gari Melchers, Elihu Root, Brand Whitlock, Hamlin Garland, Paul Shorey, Charles Adams Platt, Maurice Francis Egan, Archer M. Huntington, Childe Hassam, David Jayne Hill, Lorado Taft, Booth Tarkington, Henry Bacon, Charles Dana Gibson, Joseph Pennell. The officers of the Academy are: William Milligan Sloane, president; Robert Underwood Johnson, secretary; Thomas Hastings, treasurer; Brander Matthews, chancellor. Mr. Vedder died 29 Jan. 1923. On 22 Feb. 1923 the Academy opened its new building at Broadway and 157th Street, New York City.

ASBESTOS. Asbestos mining in the United States, which was pushed with unprecedented vigor in 1920, showed a great falling off in 1921, according to a report of the United States Geological Survey issued 19 Sept. 1922. The extreme peak of prices for crude asbestos was touched at the beginning of the year. By the time weather conditions were most favorable for active mining in the Arizona field, prices had begun to fall; by the end of summer, production had been much curtailed and by the end of the year, it had almost ceased. The asbestos sold in 1921 declined about 50 per cent in both quantity and value, compared with that marketed in 1920. Domestic asbestos marketed in the United States in 1921 totaled 438 short tons of chrysotile, valued at \$313,268, and 393 short tons of amphibole, valued at \$23,700, making a total of both kinds of 831 short tons, valued at \$336,968. These figures compare with 1,245 short tons of chrysotile, valued at \$661,907, and 403 tons of amphibole, valued at \$16,324 (total 1,648 short tons, valued at \$678,231) in

1920. In 1921, Arizona produced 413 short tons, California 25 short tons, Georgia and Idaho together 390 tons and Maryland three short tons. All the asbestos produced in Arizona and California was chrysotile, and all of that produced in the other States was amphibole.

Imports of asbestos in 1921 totaled 72,463 short tons, valued at \$2,948,302, compared with 167,558 tons, valued at \$9,120,253 in 1920. Of the 1921 importations, 71,412 tons came from Canada, which in 1920 supplied 162,717 tons.

The world's production of asbestos in 1921 was estimated at 106,500 metric tons, compared with 190,821 metric tons in 1920.

ASBURY COLLEGE, a non-sectarian co-educational institution, founded 2 Sept. 1890 and located at Wilmore, Jessamine County, Ky. In 1922-23 it had a faculty of 40 members, 567 students, property valued at \$650,000, and an income of approximately \$150,000. H. C. Morrison, D.D., LL.D., is president.

ASHLAND COLLEGE, a co-educational institution belonging to the Brethren Church, founded in 1878 and located at Ashland, Ohio. In 1922-23 it had a faculty of 14 members, 208 students, property valued at \$68,000 and an income of \$45,000. Edwin Elmore Jacobs, Ph.D., is president.

ASPHALT. Among the paving materials, asphalt still retains its popularity. The latest official figures relative to the sale of asphalt in the United States are those for the year 1921. These show 44 concerns engaged in the production of asphalt and related bitumens during that year. Of the whole number, 15 produced native asphaltic materials, 16 manufactured asphalt from petroleum of domestic origin exclusively, 10 from petroleum of Mexican origin and three from both domestic and Mexican petroleum. The output of bituminous rock in 1921 increased 115 per cent in quantity and 237 per cent in value over 1920. In the production of asphalt from domestic petroleum, California with eight operators ranked first and Texas and Illinois each with four operators ranked second and third respectively in both quantity and value. The sales of native asphalt and related bitumens in the United States in 1921 increased 49 per cent in quantity and 64 per cent in value over the sales of 1920. The sales of asphalt manufactured from domestic petroleum, however, decreased 11 per cent in quantity and 25 per cent in value, while the sales of asphalt manufactured in the United States from Mexican petroleum decreased 13 per cent in quantity and 18 per cent in value. According to the United States Geological Survey, it is impossible to arrive at an exact statement of the asphaltic material consumed in the

United States, but the consumption in 1921 was estimated at 1,916,205 short tons compared with 2,023,665 short tons in 1920 and 1,445,178 short tons in 1919. Native asphalt and related bitumens sold in the United States in 1921 amounted to 296,412 short tons, valued at \$1,985,583 as compared with 198,497 short tons, valued at \$1,213,908 in 1920. Asphalt manufactured in the United States from petroleum and sold at refineries in 1921 was as follows: from domestic petroleum 624,220 short tons, valued at \$9,048,221, as compared with 700,496 short tons, valued at \$11,985,457 in 1920; from Mexican petroleum 908,093 short tons, valued at \$11,761,358 in 1921, as compared with 1,045,779 short tons, valued at \$14,272,862 in 1920. Asphalt and bituminous rock imported into the United States in 1921 totaled 128,535 short tons, valued at \$1,129,290 as compared with imports of 128,414 short tons, valued at \$1,067,616 in 1920. More than one-half of this came from Trinidad and Tobago. Asphalt and bitumen exported from the United States in 1921 amounted to 40,506 tons, valued at \$1,178,038 as compared with 51,216 tons valued at \$1,344,440 exported in 1922.

ASTOR, Nancy Witcher Langhorne (VISCOUNTESS), member of British Parliament: b. in Virginia. She is the daughter of the late Chiswell Dabney Langhorne of "Mirador," Greenwood, Va., and was married in 1897 to Robert Gould Shaw of Boston, Mass., from whom she was divorced in 1903. In 1906 she was married to Waldorf Astor (now Viscount Astor), son of William Waldorf, the first Viscount Astor. She is the second woman to be elected to Parliament, but the first to take her seat, the first woman being the Countess Markievicz elected on the Sinn Fein ticket. When Maj. Waldorf Astor succeeded to the title and had a seat in the House of Lords, his seat in the House of Commons was vacant; and his wife announced her determination to try for it herself. She, therefore, stood for Plymouth on the Unionist ticket, and, after an exciting contest, won over her Labor and Liberal opponents on 15 Nov. 1919. She took her seat on 1 Dec. 1919, introduced by the Premier and Mr. Balfour. Her appearance created the deepest interest. For the first time in history two women were admitted to the press gallery. Lady Astor wore a dark blue tailor-made suit with large white collar and velvet toque. She advanced up the floor of the House with Mr. Balfour on her right and Mr. Lloyd George on her left. The only point differing from ordinary procedure was that she did not remove her hat. Her entrance was greeted with hearty cheers and later she received many congratulations. After taking the oath and signing the roll, she shook hands with the Speaker and passed out of the House behind his chair. Presently she returned and took her seat at the corner of the second bench below the gangway on the opposition side (to the Speaker's left). In the spring of 1922 she came to the United States to attend the Convention of the National League of Women Voters in Baltimore and also visited her old home in Virginia. On arriving in New York she gave an address at the Town Hall, to the League of Women Voters in which she voiced the following ideas: "I can conceive of nothing worse than a man-governed world

except a woman-governed world—but I see the combination of the two going forward and making civilization more worthy of the name of civilization based on Christianity, not force—a civilization based on justice and mercy. I feel men have a greater sense of justice and we of mercy. They must borrow our mercy and we must use their justice. We are new brooms: let us see that we sweep the right rooms." She was again elected to Parliament for the Sutton Division of Plymouth on 15 Nov. 1922. Lady Astor has achieved fame for her audacious speeches and witty repartee. She has five children: Robert Gould Shaw; the Hon. Phyllis Nancy Astor; the Hon. Francis David Langhorne Astor; the Hon. Michael Langhorne Astor; and the Hon. John Jacob Astor. She is a sister of Mrs. Charles Dana Gibson of New York.

ASTRONOMY. On 21 Sept. 1922 the path of a total eclipse of the sun of more than average duration extended across the Indian Ocean, the northern part of Australia, and neighboring islands. It attracted unusual interest because it afforded an exceptional opportunity for testing Einstein's Theory of Relativity. If the theory of relativity is correct, rays of light from a distant star will be bent a little as they pass by a large mass such as the sun. Since the bright rays of the sun blot out the stars apparently in its neighborhood, the question can be put to the test only at the time of a total eclipse. Six well-equipped expeditions occupied stations at various places along the path of totality. Some failed because of unfavorable weather. The Lick Observatory party, under Professor Campbell, was successful in getting all the desired plates and on 11 April 1923 it was announced that the results were in exact accord with the requirements of the Einstein Theory.

Mars was exceptionally near the earth and favorably situated for observation during the middle and late summer months. The outstanding new feature observed was a white oblong patch, about 400 miles by 800 miles, that appeared suddenly on 9 July near the planet's equator. It was gray on the 10th and had vanished by the 13th. It was observed and photographed by E. C. Slipher at the Lowell Observatory.

Of all the planets, Venus is nearest like the earth in size, density, surface gravity, and period of revolution. It has a considerable atmospheric envelope which seems to be cloud filled, and astronomers have generally believed that its atmosphere, like that of the earth, contains free oxygen and water vapor. If so, the conditions on its surface would apparently be favorable for life. But Drs. Charles E. St. John and Seth B. Nicholson, of the Mount Wilson Solar Observatory, have made a spectroscopic examination of Venus with an excellence of instrumental equipment not heretofore equaled, and they have been wholly unable to find any evidence of either oxygen or water vapor in the atmosphere of this planet. While it is barely possible that these gases are present and were not detected because the light received from it penetrates only a little distance into the planet's atmosphere, it is probable that astronomers will be compelled to revise their ideas respecting the habitability of our nearest planetary neighbor.

The cause of the luminosity of extended diffuse nebulae has given rise to much speculation. An extended investigation by Dr. E. P. Hubble, of the Mount Wilson Solar Observatory, furnishes strong support for the simple theory that usually they shine by reflected light that they receive from neighboring stars.

Great progress has been made in measuring the diameters of the stars at the Mount Wilson Solar Observatory by Professor Michelson's interferometer method. It had been shown about two years ago that Betelgeuse, the brightest star in the constellation Orion, has a diameter of about 250,000,000 miles, or a volume about 27,000,000 times that of the sun. This red star is a variable, and the astonishing result now seems to be shown that its diameter changes appreciably with its brightness. The diameter of deep red Antares, in the constellation Scorpius, was found to be still greater, or 375,000,000 miles. On the other hand Aldebaran, in the constellation Taurus, is only 33,000,000 miles in diameter, while Sirius, the brightest star in the sky is less than twice the diameter of the sun, or 1,430,000 miles. It has been established that the apparent diameters of most of even the brightest stars are too small to be determined with existing means, and consequently a new interferometer with a possible extreme separation of its mirrors of 75 feet, or about five times the greatest separation in the present one, is being constructed. Presently a large amount of reliable information will be available in a domain that was considered inaccessible only a few years ago.

There has been recently a very rapid increase in knowledge of the dimensions of the space occupied by the several hundreds of millions of stars that constitute the visible universe, or galaxy of stars. Almost every new fact has shown that it is larger than it had previously been supposed to be. Dr. Harlow Shapley, of the Harvard College Observatory, has concluded from a study of the great globular star clusters that the equatorial diameter of the galaxy is of the order of 100,000 light years (a light year is the distance light travels in one year at the rate of 186,330 miles per second), and that its shortest diameter is one-twentieth or one-thirtieth as great. The data are admittedly subject to considerable uncertainty and other astronomers incline to more moderate estimates. Professors Kapteyn and van Rhijn, of Holland, by a somewhat different line of attack, reach results a little less than one-seventh of those of Dr. Shapley.

While there is yet much uncertainty respecting the dimensions of the space occupied by the galaxy, knowledge respecting the distances to the nearer stars is rapidly increasing. Many observatories are engaged in determining the apparent positions of a relatively near star with respect to more distant ones as seen from two parts of the earth's orbit, and from the differences in apparent positions the distances of the near star. The fact has been established that in the region of space where the sun now is the average distance between adjacent stars is from five to 10 light years. Many of the relatively near stars are very faint, while most of the bright stars are very remote. It follows from

these facts that the stars differ greatly, in fact many thousand-fold, in intrinsic luminosity. Dr. Walter Adams, of the Mount Wilson Solar Observatory, has developed a method of determining stellar distances based on the apparent brightness of the stars and their spectral types, which is rapidly giving a large amount of precious information.

It has been a noteworthy fact that although the intrinsic luminosities of the stars differ greatly, their masses vary much less widely. In no really well determined case has the mass been found heretofore to be more than about 16 times that of the sun, or less than one-tenth that of the sun. Now Dr. J. S. Plaskett, of the Dominion Observatory at Victoria, British Columbia, has found by spectroscopic means a star whose mass is at least 140 times that of the sun. The star would be very bright if it were not so far away, but its distance of 10,000 light years reduces it to the limits of visibility to the unaided eye.

One of the most interesting questions now before astronomers is whether there are galaxies of stars beyond our own. The suggestion has repeatedly been made that the spiral nebulae, which exist in great numbers, are such distant galaxies. Evidence bearing on the question is rapidly being accumulated. Dr. van Maanen, of the Mount Wilson Solar Observatory, finds relative internal motions in the larger spirals that point very strongly to the conclusion that these objects are in and a part of our galaxy. On the other hand, Dr. V. M. Slipher, of the Lowell Observatory, finds such very great velocities along the line of sight (from 200 to 1,000 miles per second) that they can scarcely belong to our system. Lundmark, of the Mount Wilson Solar Observatory, concludes that they are exterior to our galaxy, that some of those observed near the poles of the Milky Way are distant 2,000,000 light years, and that their masses are of the order of 100,000,000,000 times that of the sun.

Research Associate of the Carnegie Institution
of Washington.*

ATHLETICS. See SPORTS.

ATLANTA UNIVERSITY, a non-sectarian co-educational institution for colored students, chartered in 1867; opened in 1869 and located at Atlanta, Ga. In 1922-23 it had a faculty of 37 members, 600 students, property valued at \$292,191.48; endowment of \$172,208.35 and an income of about \$68,000. Myron W. Adams was acting president in January 1923.

ATLANTIC CHRISTIAN COLLEGE, a co-educational institution, founded in 1902 and located at Wilson, N. C. Though non-sectarian, it is controlled by the Disciples of Christ. In 1922-23 it had a faculty of 10 members, 92 students (college grade), property valued at \$125,000, and an income of \$40,000. H. S. Hilley, A.B., is president.

AUDITION, Advances in. See PHYSICS.

AUGSBURG SEMINARY, a Lutheran Free Church institution, co-educational in college department, founded in 1869 and located at Minneapolis, Minn. In 1922-23 it had a faculty of 19 members, 163 students, property valued at \$125,000 and an income of \$50,000. George Sverdrup, M.A., is president.

AUGUSTANA COLLEGE AND THEOLOGICAL SEMINARY, a Lutheran, co-educational institution founded in 1860 and located at Rock Island, Ill. In 1922-23 it had a faculty of 33 members, 1,000 students, property valued at \$522,503.19 and an income of \$190,669.38. Dr. Gustav A. Andreen, D.D., is president.

AURORA COLLEGE, an Advent Christian co-educational institution, located at Aurora, Ill. It was founded 3 Jan. 1893 at Mendota, Ill., and was moved to Aurora 3 April 1912. In 1922-23 it had a faculty of 17 members, 76 students in the college and 26 in the academy. On 31 July 1922 its property was valued at \$451,552 and the income for the year ending that date totaled \$50,334.81. Orrin Roe Jenks, D.D., is president.

AUSTIN COLLEGE, a Presbyterian co-educational institution, founded in 1849 and located at Sherman, Texas. In 1922-23 it had a faculty of 19 members, 433 students, property valued at \$650,000, and an income of \$50,000. Thomas S. Clyce, LL.D., is president.

AUSTRALIA, Commonwealth of, a self-governing Dominion of the British Empire, comprising the continent of Australia and its dependencies. The Commonwealth consists of the six colonies (now called Original States) of New South Wales, Victoria, Queensland, South Australia, Western Australia, and Tasmania. On 1 Jan. 1911, the Northern Territory was transferred by South Australia to the Commonwealth and the same day a part of New South Wales of about 940 square miles was vested in the Commonwealth for the purpose of forming a Federal Territory within the confines of which at Canberra a federal capital is to be built.

Area and Population.—The following table gives the area and population of each of the states and territories (population figures are those from the census of 4 April 1921):

STATES AND TERRITORIES	Area in sq. miles	Population 1921
New South Wales.....	309,432	2,099,763
Victoria.....	87,884	1,531,529
Queensland.....	670,500	757,634
South Australia.....	380,070	495,336
West Australia.....	975,920	332,213
Tasmania.....	26,215	213,877
North Territory.....	523,620	3,870
Federal Territory.....	940	2,572
Commonwealth.....	2,974,581	5,436,794

In 1906 the administration of Papua or British New Guinea was transferred to the Commonwealth and to this German New Guinea has been added. In 1920 there were in the Commonwealth 51,552 marriages, 136,406 births and

56,289 deaths. In the same year there were 109,109 immigrants and 81,330 emigrants, an excess of 27,779. The above figures are of the white population only; there are in addition about 100,000 aborigines. The chief cities are: Sydney (pop. 828,700); Melbourne (743,000); Brisbane (289,000); Adelaide (257,000); Perth (144,000); and Hobart, Tasmania (51,000).

Education.—Education is a state matter and consequently there are no statistics for the Commonwealth as a whole. In New South Wales instruction is compulsory between the ages of seven and 14. Instruction is free in the state primary and superior public schools and in the high schools. In 1920 there were 3,393 government schools, including 27 high schools, 2,059 public primary schools, 504 provisional schools, 144 half-time schools, 41 evening continuation schools and a number of miscellaneous schools. These schools have a registration of 304,373 pupils, 9,204 teachers and an average attendance of 234,657. Expenditure on the public school system of the state in 1920 amounted to \$15,000,000. In the same year there were 678 private

Tasmania was established in 1890 and has about 250 students.

In Victoria education is strictly secular and compulsory between the ages of six and 14. For the ordinary subjects it is free. There are 2,280 state schools with 6,518 teachers and a total enrollment of 235,292 pupils. Secondary education is for the most part under private control or under proprietary bodies usually connected with some religious denomination. There are 486 registered schools with 1,991 teachers and an enrollment of 56,684 pupils. There are 24 technical schools, 20 junior technical schools, 30 high schools, 39 higher elementary schools and five schools of domestic arts. There are 14,173 students in technical schools.

Education is compulsory and free in Western Australia. There are 695 state schools with 48,102 pupils and 128 private schools with 12,151 pupils. There is a university at Perth. The total amount annually spent on education is about \$2,500,000.

Religion.—The chief religious denominations are shown in the following table:

DENOMINATION	New South Wales	Queensland	South Australia	Tasmania	Victoria	West Australia
Church of England.....	734,000	212,702	113,781	88,158	475,203	109,435
Roman Catholic.....	412,013	137,086	50,964	28,581	286,433	56,616
Presbyterian.....	182,911	75,560	22,567	15,735	234,553	26,678
Methodist.....	151,274	59,920	100,402	24,975	176,662	34,348
Congregational.....	22,655	13,357	6,203
Baptist.....	20,679	13,715	21,863	4,757	4,801
Lutherans.....	7,087	24,235	26,681
Jews.....	7,660	672	765	6,270	1,790

schools with 73,749 pupils and 3,780 teachers, including 458 Roman Catholic denominational schools with 2,471 teachers and 60,196 pupils. There is a university at Sydney with 3,397 students. There are four denominational colleges affiliated to the university. There is also a technical college with several branch schools.

In Queensland education is also free and compulsory. There are 1,638 state schools, including 12 high schools, with 4,349 teachers and an average attendance of 94,602 pupils. There are ten secondary schools with 110 teachers and 1,595 pupils and 12 high schools with 1,270 pupils. In addition there are 157 private schools with 928 teachers and 20,006 students. There are 17 technical schools with 11,863 students. Queensland University was opened in 1911 at Brisbane. It has now 406 students and 28 members of the faculty. In South Australia education is secular, free and compulsory. There are 998 schools, including 21 high schools, 12 domestic art and six woodwork centres. The number of children under instruction during 1920 was 75,991. In 1874 a university was established at Adelaide. There are 172 private schools with 14,141 pupils and a number of special schools.

Tasmania has a compulsory attendance law between the ages of seven and 14. About 90 per cent of primary teaching is in state schools while secondary schools are about one-half endowed and half state. There are four technical schools and four junior technical schools with a total enrollment of 1,470. The University of

Finance.—In his annual address to the House of Representatives, Mr. Bruce, then Federal Treasurer of Australia, stated as follows: "The estimated revenue for 1922-23, totaling \$312,591,250, includes \$140,000,000 customs and excise, \$76,250,000 income tax, and \$48,250,000 post office, telegraph and telephone receipts. The estimated expenditure is \$310,118,405, showing an estimated surplus of \$2,472,785. Of the accumulated surplus, estimated at \$34,514,935, \$16,000,000 is to be used in reduction of taxation and the encouragement of agriculture and manufactures. The proposed remission of taxation includes the increase of the general exemption from \$520 to \$1000 for all taxpayers." Speaking of the national debts the Treasurer said: "The gross Commonwealth debt, totaling \$2,080,352,545, shows an increase in the year ended 30 June 1922 amounting to \$71,752,420. The total national debt of Australia, including the Commonwealth and the States, is \$4,210,000,000, compared with the pre-war debt of only \$1,695,000,000."

Economic Situation.—The financial data in the table following show the fundamental structure upon which the economic structure of Australia depends. In the comparison of years the last normal pre-war year, 1913-14, and the years since the termination of the war were chosen to illustrate the gradual return to normal. However, high wages and the new standard of living brought about by the war have so permeated Australian economic life that it is hardly pos-

1914-15.

Not available.

Average, August to December.

sible that a pre-war level will ever be reached again.

The total Australian war expenditure for the six years ending 30 June 1921 was \$2,192,918,765. Of this amount \$1,672,906,680 is charged against loans and \$520,017,085 against revenue.

Production and Industry.—Wheat is the principal agricultural product of Australia and ranks next to wool as an export commodity. It is produced in all the Australian states, but is grown chiefly in the moist coastal belt of the states of New South Wales, Victoria and South Australia. The actual area sown in wheat in Australia in 1921 and 1922 averaged between 9,000,000 and 10,000,000 acres, but the potential area adapted to wheat-raising is much larger. The total acreage of the wheat belt between regions having an average rainfall of 7½ to 16 inches during the growing season, from April to October, comprises approximately 124,000,000 acres. The latest official statistics of the wheat yield of 1921 and 1922 are as follows:

acres were planted in oats and yielded 13,106,500 bushels; 283,000 acres were planted in barley, the yield from which was 4,193,600 bushels; 275,000 acres were planted in Indian corn and yielded 7,100,000 bushels. Hay yield for 1922 amounted to 3,125,000 tons and potatoes to 325,100 tons. The yield from the sugarcane crop was 1,360,000 tons. The condensed and preserved milk industries has assumed considerable importance. Australia has assumed considerable importance. Australian factories have a capacity to produce fully six times the quantity of this product consumed locally; consequently a considerable overseas trade has been worked up chiefly with Eastern markets. The latest live stock census showed 12,700,000 head of cattle, 75,500,000 sheep, 696,000 swine, and 2,421,000 horses. Wool production in 1921-22 amounted to 648,466,000 pounds, valued at £38,972,547 for greasy wool and £9,002,752 for scoured and tops. The value of the mutton and lamb produced the same year was £2,139,615. The mineral output is mainly dependent upon the settlement of the labor troubles prevailing

Other crops of importance are: Oats, barley, Indian corn, hay, potatoes, sugarcane, beet sugar, wine grapes and fruits. In 1922, over 1,000,000 during the post-war period. The chief mining products in the order of importance are coal, gold, silver, lead, copper, and tin. Coal produc-

tion in 1921 amounted to 11,211,000 tons. The output of gold was valued at \$21,110,000 the same year.

There are 17,113 manufacturing establishments, the chief of which are those connected with the refining of the agricultural products of the country, such as meat packing, wool carding and spinning, preserved milk, knit goods, etc.

VALUE OF THE MANUFACTURING INDUSTRIES OF THE COMMONWEALTH.

	No. of establishments	Hands employed	Value of output
1915.....	15,092	321,071	£169,086,700
1916.....	15,010	316,752	172,574,845
1917.....	15,179	321,670	206,376,646
1918.....	15,421	328,049	225,753,611
1918-19.....	15,588	340,475	249,056,888
1919-20.....	16,291	376,734	292,536,608
1920-21.....	17,113	386,639	324,586,519

The growth of manufacturing in New South Wales since the enactment of the federal tariff is shown by a return issued by the government statist. Up to 1 Jan. 1922 nearly £60,000,000 had been invested in the state's secondary industries, which give employment to 145,000 people. The number of establishments increased from 3,367 to 5,837 between 1901 and 1921; the number of employees from 66,000 to 145,000; salaries and wages from £4,900,000 to £25,600,000; the value of plant and machinery from £5,800,000 to £31,000,000, and the total value of output from £25,600,000 to £137,800,000. The value added to raw materials was £43,128,000.

Commerce and Trade.—Australian trade returns for the fiscal year ended 30 June 1922, received by the United States Department of Commerce, show a favorable balance of £26,-

885,794, compared with an unfavorable balance of £32,416,049 in 1921. Total imports for the year 1921-22 were £101,063,661—a decrease of £62,267,479 from 1920-21; and exports were £127,949,455, compared with £131,925,091 for the preceding year.

Not only was the volume of imports substantially reduced, but the values also shrunk considerably since the fiscal year ended 30 June 1921. The reasons given for this condition were the unprecedented value of importations in the previous year and the high customs duties imposed under the tariff which became operative on 25 March 1921. Concurrently, the valuation of goods and products in the world's markets showed such a marked decline that reduced costs had an important bearing on trade figures.

All of the states had increased import values in 1920-21 when contrasted with 1919-20, but all except Queensland had smaller export values. The Northern Territory experienced a sharp falling off in both imports and exports, particularly the latter. The distribution of the trade among the various Australian political divisions in 1920-21 is shown in table above.

The shares of the principal countries in Australia's foreign trade during 1919-20 and 1920-21 were:

Communications.—The results of the financial operations of the merchant fleet of the government of the Commonwealth of Australia are not set forth in detail in annual reports. As the commonwealth fleet is in competition with private steamship lines the Australian government takes the view, similar to that held for some time by the United States Shipping Board, that the full publication of the financial operations of the government fleet would disclose information valuable to competing steamship lines under the British and other flags. Up to September 1922 the only information available to the public as to the financial operations of the commonwealth fleet was that presented to the Australian Parliament in an address on 16 Nov. 1921 by Mr. Hughes. This statement covered the operations of the fleet up to 30 June 1921, or for nearly five full years of the ships bought in England and of the seized German ships. The first two of the Australian-built ships were not delivered until the last half of 1919 and the next four during the year 1920; the remaining seven Australian-built ships and the five 15-knot ships built in England were not delivered until the last half of 1921 or in 1922.

The broad features of the financial condition of the Australian fleet, as shown by the Premier's speech, may be concisely summarized in the following table:

ORIGIN OF STEAMERS	No.	Gross tons	First cost	Net earnings
Bought in England in 1916.....	11	47,937	£1,621,578	£2,993,245
Ex-enemy ships.....	18	83,021	909,315	4,066,266
Built in Australia (1919-21).....	10	33,447	1,822,472	84,588
Building in Australia (1921-22).....	7	23,414	1,353,611
Building in England (1921-22).....	5	69,226	5,000,000
Total.....	51	257,045	10,706,976	7,144,099

To the net earnings for the five years are to be added for brokerage and commissions £181,995, for the net earnings of sail vessels £41,382, and for the net gain on the sale of ships £74,343, in all £297,720, making the total net earnings £7,441,819. The government, of course, has not paid itself interest on the first cost of the ships, and it has made no allowance for depreciation. A report stated that for the year which ended 30 June 1922 operating expenditures were £2,722,474, operating receipts £2,718,837, a deficit of £4,317, while capital expenditures were £3,811,813. The capital investment seems to have been made out of the £7,441,819 net profits of the war-time and armistice period.

Some of the Victoria railways are being electrified. The great trouble with the Australian lines is the different gauges varying from 2 feet 6 inches to 5 feet 3 inches. There are in addition 968 miles of private railways open for general traffic and 1,841 miles of private lines not open for general traffic. There are 8,292 postoffices in the Commonwealth and several wireless stations.

The table below from 'The Statesman's Year Book' for 1922 furnishes statistics of the Australian state railways.

Defense.—The defense policy of Australia comprises the principle of universal training of a citizen army. The war experiences have led to some modifications of the old defense organization but this principle of universal training remains. In 1922 the peace strength was reduced from 118,000 to 30,000 all ranks, which was believed would still insure an organized force for the national defense, provided there was time after the outbreak of war to train the rank and file. The army reserve consists of 48,000 men of war service.

Sydney is a first class naval station and the headquarters of the British Australian fleet, which by agreement must be maintained at a strength not less than one armored cruiser, first class, two second class cruisers, four third class cruisers, four sloops and a naval reserve of 25 officers and 700 seamen. The Royal Australian Navy consists of the battle cruiser *Australia* (to be scrapped under the Disarmament Treaty), the light cruisers, *Adelaide*, *Melbourne*, *Sydney*, *Brisbane*, *Pioneer* and *Encounter*; the flotilla leader, *Anzac*, the river class destroyers, *Huon*, *Parramatta*, *Swan*, *Torrens*, *Warrego* and *Yarra*; five "S" class destroyers; seven submarines; four sloops and a few old vessels now of little value.

There is a combined naval and military air corps which facilitates the all-round training of personnel in naval and military flying. The permanent units are destined for service with the fleet. The organization of the corps is proceeding but is yet far from complete.

As nearly as may be the number of representatives is twice that of the Senate. The legislative powers of the Federal Parliament comprise shipping, commerce, finance, banking and currency, defense, posts, telegraphs, census and statistics, copyright and arbitration in interstate disputes, external affairs, etc. Money bills must originate in the Lower House and may not be amended by the Senate. No religion may be established. The state parliaments have legislative power in all matters not specifically referred to the Federal Parliament, but a state law inconsistent with a Federal law yields to the latter. The executive power is exercised in the name of the King by a Governor-General, assisted by an Executive Council not exceeding nine ministers of state, who must be members of the Federal Parliament.

In 1922 the Governor-General was the Right Honorable Henry William, Baron Forster of Lepe. The Prime Minister and Minister of External Affairs was Right Hon. William M. Hughes. The High Commissioner of Australia in London was Sir Joseph Cook.

History.—The beginning of 1922 saw a remarkable return to normal economic conditions in Australia. The wool market had largely recovered from the depression that marked the previous year. As a result of the Washington Conference the battle cruiser, *Australia*, was placed in reserve in Sydney harbor on February 9 and 450 of her men dismissed. The bubonic plague spread in Queensland during the summer and a plague of grasshoppers and ants descended on South Australia. The much mooted project for the unification of railway gauges was dropped after a conference of the state pre-

STATISTICS OF AUSTRALIAN RAILWAYS, STATE AND FEDERAL, FOR THE YEAR ENDED 30 JUNE 1921.

Constitution and Government.—Legislative power is vested in a Federal Parliament consisting of the King's representative, a Senate and a House of Representatives. The Parliament must meet at least once every year. There must be at least six senators for each of the six original states. The Senate is renewed by one-half every three years, but in case of a deadlock with the Lower House it may be dissolved and a new Senate elected in its entirety. Members of the Lower House are elected for three years unless the House is sooner dissolved.

miers with the Federal Prime Minister. The cost, estimated at \$26,000,000, was considered prohibitive for the present. The chief concern of the country was the immigration problem. To offset the growing pressure of Chinese and Japanese labor the Federal Premier, Mr. Hughes, sanctioned an agreement between the British and Italian governments for an extensive immigration of Italian farmers to take up unsettled lands in Australia. King George gave his assent in March to the bill for the abolition of the Queensland Upper House, which the

Prime Minister called "the home of the reactionary interests." In New South Wales a bill was introduced to break up the large estates, of which there were 72 in 1919 exceeding 50,000 acres each. The bill limits the valuation to £20,000 and empowers the state to acquire the excess by eminent domain. A bill for the protection of the New Guinea natives passed the Federal House in March. It abolishes forced labor and provides new schedules of import and export duties. The Federal Government decided to assist the farmers by a subsidy of one-fourth of a penny a pound on beef. The compulsory government pool of wheat imposed in wartime was succeeded by voluntary pools in South Australia and in New South Wales. There is a compulsory pool in West Australia. On 21 July the Federal Government refused to agree to the appointment of German consuls in Australia. Trade with Germany was resumed on 1 August but the Australian Tariff Board proposed a duty of 75 per cent to prevent the flooding of the country with German goods. The Washington treaties were ratified by the Senate on 27 July. The compulsory arbitration law in South Australia was attacked by the workers who regarded it as a government scheme to lower wages and the standard of living. The events in the Near East aroused interest in Australia because thousands of Commonwealth troops fought in that area during the war. The Premier offered to send troops if necessary but his action was denounced by the Labor Council, which threatened a general strike in the event of war. Efforts were made by the Federal Government for co-operation with the states to increase the volume of immigration and to try to make the inflow of population reach 100,000 yearly. A coal crisis developed in October due to labor disputes. A British cotton delegation visited Australia and finished its survey on 31 October. The greatest satisfaction was expressed over the prospect of Australia as a cotton producer. Soil had been seen capable of growing the world's best cotton. Dissatisfaction became general with the Premier, Mr. Hughes. It was alleged that he held on to the quasi-autocratic powers conferred upon him during the war years and at times his treatment of the Opposition was said to savor of the dictatorial. The elections, held 16 December, resulted in his re-election by a majority of 5,000, but most of his colleagues were beaten. The allotment of preference votes for members of the Federal House of Representatives showed that the party of the Premier, the Nationalist, second in standing. Labor secured 30 seats; the Nationalists, 28 seats; Country Party and Liberals, 17 seats. The results in the Senate returns indicated an increase in strength of the Labor representation. Mr. Hughes was succeeded in the Premiership by Stanley Bruce.

AUSTRIA, a republic of Central Europe, bounded north by Germany and Czechoslovakia, south by Italy and Yugoslavia, east by Hungary and west by Switzerland. The present area of the Republic, as defined by the Treaty of Saint Germain at the close of the Great War, is 30,766 square miles and the population numbers 6,131,445. The pre-war area of Imperial Austria was 115,903 square miles with a popu-

lation of 28,571,934. Of its former provinces there remain Upper and Lower Austria, Salzburg, Styria, Carinthia, and about one-half of Tyrol and Vorarlberg. The other provinces were lost as a result of the war and are now incorporated in Czechoslovakia, Yugoslavia, Italy, or Poland. Part of the Burgenland was ceded to Austria by Hungary early in 1922. The President of the Republic is Dr. Michael Hainisch, who was elected 9 Dec. 1920 for a term of four years. Vienna is the capital.

Under the new constitution adopted 1 Oct. 1920 all special privileges have been abolished and all citizens are granted equal rights. There is an Assembly or Second Chamber the members of which are elected by popular suffrage for a four-year term. The Second Chamber or Bundesrat is chosen by the Provincial Diets in proportion to population, but its powers are largely advisory.

The Austrian flag is made of three horizontal bars of which the central bar is white and the top and bottom bars are red.

According to the latest enumeration the population of the chief cities of Austria is as follows:

Baden.....	14,000
Graz.....	157,644
Innsbruck.....	55,650
Klagenfurt.....	26,147
Linz.....	94,070
Salzburg.....	36,749
Vienna.....	1,841,326
Wiener-Neustadt.....	35,360

Education.—Elementary education is compulsory in Austria from the age of 6 to 14, but there are numerous exemptions after the age of 12 is reached. The latest statistics give 4,750 elementary schools with 27,000 teachers and 903,000 pupils. There is an excellent system of secondary schools, maintained by the provinces, towns, or by private individuals. These number 138 with a total registration of 40,200 pupils. There are three state universities: Vienna with 11,000 students; Graz with 2,000 students and Innsbruck with 1,500 students. In addition there are technical schools with a total of 5,000 students, normal schools with about an equal number of students, and theological schools and colleges.

Religion.—Over 94 per cent of the population are of the Roman Catholic faith. About 2½ per cent are Protestants and about 3 per cent are Jews. Religious liberty is guaranteed by the constitution.

Courts.—There are numerous district courts, county courts and jury courts. In addition there are 17 provincial and three higher provincial courts. The highest or supreme court of the land is the Oberster Gerichtshof located in the capital.

Agriculture.—This industry is well developed and forms the main occupation of the people. In the last year for which returns are available 378,000 acres were planted to wheat; 758,000 acres to rye and 267,000 acres to barley. The yield was 211,000 metric tons of wheat, 398,000 tons of rye and 143,000 tons of barley. Oats, potatoes and turnips are grown in large quantities. The foodstuffs grown are not sufficient for the inhabitants and in consequence the importation of food is imperative. There

are great timber tracts in Austria and these add considerably to the national wealth. In 1922 there were about 250,000 horses, 915,000 cows, and 600,000 other cattle.

Mineral Products.—Coal is produced in several localities. About 150,000 tons of anthracite were mined last year and approximately 2,500,000 tons of lignite. One-half million tons of iron ore were produced in the same period. Copper, lead, salt and zinc are mined in lesser quantities.

Industries.—Automobiles, pianos and textiles still remain the important industries of the country but as to the quantities produced no reliable statistics are available.

Commerce and Trade.—In the years following the war Austria has imported great quantities of coal, flour, rice, grain and building materials. Rubber, textiles and glass are among the lesser imports. For the last year for which figures are available (1920) the total volume of imports was 6,100,000 tons. The exports included in the same year 360,000 tons of lumber, 125,000 tons of various ores, 45,500 tons of chemicals, and 24,500 tons of furniture. The most of the trade is with Czechoslovakia, Germany and Great Britain. In 1922 Austrian exports were valued at 1,047,000,000 gold kronen and imports at 1,591,000,000 gold kronen. Quantity figures were not available 1 April 1923.

Banking and Finance.—According to the latest returns the notes in circulation of the Austro-Hungarian Bank amounted to 61,300,000,000 kronen secured by about 12,000,000 kronen in gold bullion. The new budget for the calendar year 1923, estimated the total expenses at 8,500 billion crowns and total receipts at 6,100 billion crowns, leaving a deficit of 2,400 billion crowns. The budget places expenses of the administration at 6,300 billion crowns. These calculations were based on salaries according to the cost of living index at the middle of November, when the dollar exchange was 72,000 crowns. The rate of 1 March 1923, was approximately the same. Other items included in the new budget are. Revenues, 4,700 billion crowns, net losses from business enterprises (chiefly railways), 2,000 billion crowns; profits from monopolies, 1,300 billion crowns. The national debt is 15,500 billion crowns, including 1,500 billion crowns for Austria's share in the debt of the old monarchy.

Army.—Under the terms of the Treaty of Saint Germain, Austria has organized an army of six infantry regiments, for the capital district, six regiments of the Alpenjager for Upper Austria, the Tyrol, and adjoining provinces and two battalions for the Burgenland. There are complementary forces of six cycle battalions, six squadrons of cavalry and some artillery and technical units.

Navy.—The navy has gone out of existence since the war as the country now has no sea coast.

History.—Under a decree passed in the last month of 1921 all owners of foreign currency, checks or credits abroad were obliged to deposit such property with the government in exchange for bonds bearing 5 per cent interest. The object of the measure was to raise the exchange of the Austrian krone. Foreigners resident in Austria were not exempted from the operation

of the law, which imposed severe penalties on all recusants. The government also made plans to pledge the famous imperial art treasures, valued at \$50,000,000, with an American syndicate, the money thus raised to be used for the purchase of foodstuffs. In January there was a new issue of currency totalling 17,000,000,000 kronen, making a total of all issues of 160,000,000,000 kronen. There was considerable discussion relative to the Austrian Crown jewels, of which the greater part were held by various Swiss banks. It was expected that the Austrian government would lay claim to the jewels on the ground that they were the property of the state and not the private property of the Hapsburgs. The National Council ratified the treaty made with Czechoslovakia in December 1921, the chief provisions of which were that the two signatory states bound themselves to carry out fully the provisions and terms of the treaties of Saint Germain and the Trianon and undertook not to allow upon their territory any political or military organization hostile to the integrity or security of the other party. On 15 March the Senate of the United States passed a resolution for the release of America's lien of \$25,000,000 upon Austrian state assets in order to enable the latter to raise a new foreign loan for the relief of famine sufferers. In the opening month of spring the government was obliged to reinforce by 2,000 men the frontier troops because of the incursions of Hungarian bandits, believed to be government troops in disguise, into the border district of the Burgenland. Hungary had previously sent a demand to the Interallied Boundary Commission in charge of this frontier for the restoration of more than one-fourth of the disputed territory. There was a resultant flare of indignation and protest in Austria. As a result of the stipulations by Great Britain and France as a condition of credits to be extended to the Austrian government the assembly passed a reform bill which provided for sweeping measures of taxation and economy. In May the police nipped a monarchist plot fomented by the Austrian branch of the Pan-Germans. Permanent child-feeding in Austria was established by a bill passed by the Parliament on 22 May for the continuance under state control of the program of the American relief administration. This bill provided for the feeding by the state of 5,000 public school children. In this connection it was reported that the American Relief Administration up to 20 March had fed 200,000,000 meals to Austrian children. At that date it was feeding 175,000 children, 900 professors, 10,000 students and 17,000 others. On 24 May the Schober cabinet resigned. The new chancellor was Ignatius Seipl, the leader of the Christian Socialists and a Roman Catholic priest. In June the Austrian crown became practically valueless, the quotation being 10,000 crowns to the dollar. On 13 July the quotation was 21,000 crowns to the dollar. During the summer months the country became more and more disorganized and embarrassed because of the currency depreciation and the rise in the cost of living. The Seipl government undertook measures for the economic restoration of the country by establishing a bank of issue to remedy the depreciation of the currency, by inaugurating

economy in the various government projects, insisting on abandoning to private enterprise all undertakings that could not be made to pay their way and by cutting down government staffs. On 21 July the Reparations Commission agreed to the release of the revenues from the forests, salt mines and state demesnes for 20 years to be used as security for the new bank of issue. The revenues from the customs and from the tobacco monopoly were released as security for a foreign loan. On 4 August exchange stood at 52,000 crowns to the dollar. The Chancellor tried to effect a rapprochement with the Little Entente but was not successful; his efforts in Berlin met with a similar fate after which he proposed a form of agreement with Italy. The latter, fearing complications with the Little Entente and probably with France declared such an agreement impossible. On 27 September the League of Nations formulated a plan for the rehabilitation of Austria, which it felt would obviate the union of that nation with any of the conflicting groups in eastern Europe. Briefly the plan provided for a loan to Austria of 650,000,000 gold crowns (\$135,000,000), guaranteed by Great Britain, France, Czechoslovakia and Italy. A finance court commissioner was to be stationed at Vienna to oversee the expenditures under the loan. The sovereignty of Austria and its frontiers are guaranteed, while Austria bound herself not to alienate her independence. The plan was set in motion on 3 November by the passage of a law in the Austrian Parliament authorizing the issue of bonds for 130,000,000 gold crowns to cover budget deficits and stop the printing of paper money. These bonds were secured by the customs and tobacco receipts and are to be retired in 1923 or as soon as a long term loan can be negotiated under the plan. See also LEAGUE OF NATIONS.

AUTHORS' LEAGUE OF AMERICA, an organization founded in 1912 in New York to render assistance to authors in the marketing of their MSS. Its members receive information regarding editors, managers, producers and others with whom authors come in contact in publishing their works. To simplify its operations the League is now divided into the guild of American Dramatists, the guild of Free Lance Artists, the Authors' Guild and the guild of the Screen Writers. These guilds operate separately but each is subject to the Authors' League. The membership in 1922-23 was 1,400. Its president was J. L. Williams, and secretary, E. Schuler. Its headquarters is at 22 E. 17th Street, New York City.

AUTOMOBILE CHAMBER OF COMMERCE, National, the trade association of motor car and motor truck manufacturers, and the successor of the National Association of Automobile Manufacturers, organized in November 1900, and of the Automobile Board of Trade. Its purpose is to undertake all those tasks which properly interest motor transportation in its entirety. For instance, it acts as a medium through which its members exchange without charge over 500 patents. In this way useless litigations and unimportant differences in design are eliminated, with resulting lower costs of production and lower prices of motor vehicles

to the public. The association campaigns for better highways, not merely by asking for appropriations, but by urging the view that all highways should be located where they will be most serviceable to the public and that funds should be set aside for maintaining the roads after being built. The Chamber endows campaigns for safety education in the schools, stricter traffic law enforcement and scientific study of traffic conditions. It aims to secure equitable railroad rates, recommends constructive legislation, encourages the extension of foreign trade, manages the two annual automobile shows at New York and Chicago, makes researches of market conditions here and abroad, outlines definite and equitable programs for taxation, furthers standardization in engineering, develops improved methods of servicing cars and trucks and strives to secure the adoption of policies which will make motor transportation of maximum service to the public. The headquarters of the Chamber is in the Marlin-Rockwell Building, 366 Madison Avenue, New York City. There are branches in Washington, D. C., Albee Building; Detroit, Mich., Ford Building. The officers are Charles Clifton, president; R. D. Chapin, vice-president; C. C. Hanch, second vice-president, passenger car division; Windsor T. White, second vice-president, motor truck division; A. J. Brosseau, secretary; H. H. Rice, treasurer. Executive officers, Alfred Reeves, general manager; J. S. Marvin, assistant general manager; S. A. Miles, show manager.

AUTOMOBILE RACING. See SPORTS (Sub-section Miscellaneous).

AUTOMOBILES. The outstanding features of the automobile industry during 1922 were the record production, according to figures supplied by the United States Department of Commerce, of 2,577,765 cars and trucks (2,334,790 cars—242,975 trucks), the continuation until late in the year of the price reductions which were started in the late summer of 1920 by Henry Ford, and further achievements in the standardization of materials and parts. Prior to 1922 the greatest number of cars produced in a single year was 2,205,000 in 1920. In 1921, 1,585,395 cars were produced, while in 1919 production totaled 1,868,310 cars. Production in January 1923 was: 221,697 passenger cars and 19,206 trucks.

The wholesale value of the cars and trucks manufactured in 1922, as determined by the National Automobile Chamber of Commerce, was \$1,558,567,000, of which \$1,374,487,000 represented the value of passenger cars and \$184,080,000 represented the value of trucks. The estimated average retail price of the passenger automobiles manufactured in 1922 was \$770 per car, compared with an estimated average retail price of \$900 per car in 1921. The estimated average retail price of the motor trucks manufactured in 1922 was \$1,050 per truck, compared with an estimated average price of \$1,326 per truck for the trucks manufactured in 1921. The average reduction in the retail price of pleasure cars in 1922 amounted to 14 per cent, while the average reduction in the retail price of trucks during the same year amounted to 21 per cent.

Closed cars manufactured during the year represented 35 per cent of the total number of

AUTOMOBILES

1. Automobile traffic, Fifth Avenue, New York

2. A few of the nearly 12,000,000 automobiles in the United States

Copyright, Ewing Galloway, N. Y.

passenger automobiles manufactured or approximately 885,000 cars. In 1921 the number of closed cars manufactured was 302,528; in 1919, 154,255. Thus do the 1922 figures show the increasing popularity of that type of vehicle. Generally speaking, the year was regarded as the best in the history of the industry. It undoubtedly was for a number of companies manufacturing low and medium priced cars. However, certain concerns experienced financial difficulties.

Complete statistics for 1922 showing the number of establishments engaged in the manufacture of automobiles, the number of persons employed thereby, the costs of materials, etc., were not available at the time this was written. Compilations of comparative figures for the years 1921 and 1919 have been made by the United States Bureau of Census and will be found interesting. In 1921, according to the Census Bureau, there were in the United States 368 concerns engaged in the manufacture of automobiles, compared with 315 engaged in the same industry in 1919. The number of automobiles turned out in 1921 was 1,585,395, valued at \$1,320,175,169, compared with 1,868,310 machines valued at \$1,722,626,704 turned out in 1919. Of the 368 establishments operating in 1921, 64 were located in Michigan, 50 in Ohio, 39 in Illinois, 30 in Pennsylvania, 28 in Indiana, 26 in New York, 25 in California, 19 in Wisconsin, 12 each in Massachusetts and Missouri, eight in New Jersey, six each in Iowa and Texas, five each in Kentucky, Minnesota and Washington, three each in Connecticut, Georgia and Oklahoma, two each in Colorado, Nebraska, North Carolina, South Carolina and Virginia, one each in Alabama, Arkansas, the District of Columbia, Louisiana, Maryland, New Hampshire, Oregon, Tennessee and West Virginia.

The number of persons engaged in the industry in 1921 was 164,999, compared with 242,922 in 1919. The average number of wage earners employed in 1921 was 142,903, compared with 210,559 in 1919. Salaries and wages paid in 1921 totaled \$278,912,691, compared with \$379,381,674 disbursed in 1919. Materials used in 1921 cost \$1,104,497,012, while the cost of those used in 1919 was \$1,578,651,574.

The number of touring cars manufactured in 1921 was 898,150, compared with 1,224,347 manufactured in 1919; the number of roadsters and runabouts manufactured in 1921 was 195,545, compared with 171,458 manufactured in 1919; the number of business vehicles manufactured in 1921 was 147,009, compared with 312,379 manufactured in 1919; the number of delivery wagons manufactured in 1921 was 15,060, compared with 17,272 manufactured in 1919; the number of trucks manufactured in 1921 was 91,236, compared with 101,734 manufactured in 1919.

These statistics, it was asserted in the Census Bureau's report, relate to manufacturers whose chief product was assembled automobiles and do not include establishments engaged primarily in making bodies, parts and accessories for automobiles.

Automobile Registration.—According to the United States Bureau of Public Roads, the total number of automobiles of all kinds

registered in the United States in 1922 was 12,238,375, an increase of 1,815,716, or 17.6 per cent over the number registered in 1921. These figures mean that there is in the United States a car of some sort for every 8.7 persons. New York is the only State wherein the motor cars registered exceed 1,000,000 in number. Its total for the year was given as 1,002,293. California was second with 861,807 cars. Ohio was third with 858,716 cars and Pennsylvania was fourth with 829,737 cars.

Automobile registration fees collected by the various States during the year exceeded \$150,000,000, an increase of approximately \$30,000,000 over similar collections in 1921. Every State in the Union showed an increase over the 1921 figures in the number of cars registered. In 1921, four States—Georgia, South Carolina, Montana and South Dakota—showed combined decreases totaling 17,734 cars as compared with their 1920 figures. However, in 1922, as compared with 1921, they showed a combined gain of 27,539 cars; thus giving them a net increase over their 1921 registration of 9,805 cars.

It is estimated that there are 3,500,000 motor vehicles (3,300,000 passenger cars and 200,000 trucks) on farms in the United States, and that the number of motor cars serving suburban communities is 780,000. According to the National Automobile Chamber of Commerce, 7,500,000,000 passengers are carried annually in motor cars. There was a marked increase during the year in the number of motor buses used for the transportation of passengers, indicating the increasing popularity of this method of travel. Motor-bus lines were operated in 108 cities of the United States during 1922, while the number of motor buses in use throughout the country was estimated at 40,000. A total of 12,000 schools use motor buses to transport pupils to and from the schools. Fifty-six street railway companies operate motor-bus lines, while 40 railroads use motor vehicles on short lines. There were 1,500 motor express lines in the United States in 1922. The estimated amount of farm products annually transported in motor vehicles is 134,400,000 tons, while the annual haulage of freight of all classes by motor trucks is estimated at 1,430,000,000 tons.

According to Alfred Reeves, general manager of the National Automobile Chamber of Commerce, the number of persons employed in the motor vehicle and allied lines in 1922 was 2,431,400. Passenger car dealers number 38,000; motor truck dealers, 25,000; public garages, 48,000; service stations and repair shops, 63,000, and supply stores, 63,700.

It was estimated that 819,169 motor vehicles of various descriptions were discarded during 1922. Most of them were said to have been produced six or seven years before; and had therefore outlived their usefulness. The number of new cars needed for replacement in 1923 has been estimated at 1,800,000.

The table on the following page, compiled by the Bureau of Public Roads, United States Department of Agriculture, shows the motor vehicle registrations, licenses, revenues and gasoline tax of Continental United States by States for the year 1922.

NOTES TO TABLE OPPOSITE

¹ Does not include 19,926 non-resident cars nor 1,836 non-resident trucks.

² Approximate.

³ Devoted to road work in accordance with legislative appropriations.

⁴ A total of 65,141 re-registrations deducted pro rata from cars, trucks and motorcycles.

⁵ Includes \$28,707.62 of delinquent gasoline taxes.

⁶ Includes 4,763 commercial cars of less than one ton capacity.

⁷ For the first eleven months of 1922.

⁸ Of this amount \$414,330.00 was devoted to payment of interest and principal on State Highway Bonds and \$197,813.50 to administration of Highway Department, Auto Registration and Motor Enforcement Department.

⁹ For first six months of registration year July to December 1, 1922 inclusive.

¹⁰ Includes approximately 12,000 non-resident cars and 2,000 non-resident trucks.

¹¹ For seven months, June 1 to December 31 inclusive.

¹² For ten months, March 1 to December 31 inclusive.

¹³ For nine months, April 1 to December 31 inclusive.

¹⁴ Where no data are given these vehicles are included with private passenger cars.

¹⁵ No separate record, included with passenger cars.

¹⁶ For fiscal year ending June 30, 1922, data for calendar year not available.

¹⁷ State tax of one-fourth to one-half cent per gallon on all petroleum products except lubricating oils amounting to \$128,165.00 during 1922. Proceeds to general State Funds.

¹⁸ State Fees, toll oil inspectors, amounted to approximately \$360,000. Proceeds to State General Fund.

¹⁹ State inspection fee on gasoline of one-half mill per gallon.

²⁰ Devoted to financing of State highway bonds and remainder to road work.

²¹ Where blanks occur no data could be secured as to the number of trailers in the State.

Relative to the number of automobiles in the world the following returns covering the year 1921, except where otherwise specified, include the latest available data furnished by officials of the Departments of Commerce and State stationed in the countries named:

WORLD CENSUS OF AUTOMOTIVE VEHICLES.

¹ Incomplete returns from countries furnishing 1920 registration as latest.

² In addition, there are 13,358 cycle cars in France.

³ Passenger-car statistics for the United States include trucks for five States not publishing separate returns of passenger cars and trucks.

NOTE.—The above figures were furnished during 1922 and generally cover 1921, except as indicated otherwise.

Automobile Exports.—Automobiles of all kinds, including chassis, exported from the United States during the calendar year 1922 totaled 78,235, valued at \$59,320,524, compared with 38,430, valued at \$42,869,618, exported during the calendar year 1921. The number of passenger cars exported during the calendar year 1922 aggregated 66,790, valued at \$51,049,616, compared with 30,950 such cars, valued at \$32,533,725, exported during the calendar year 1921. Motor trucks and buses, exclusive of electric vehicles, exported during the calendar year 1922 totaled 11,445, valued at \$8,270,908, compared

AUTOMOBILES

with 7,480 motor trucks and buses valued at \$10,335,893 exported during the calendar year 1921. A total of 276 electric trucks and passenger cars, valued at \$387,589, were exported during the first 11 months of 1922. No exports of such vehicles appear in the records of the Department of Commerce for 1921. From the standpoint of the number of cars exported, Australia was the United States' best customer, shipments thereto numbering for the calendar year 1922 11,236 cars, valued at \$8,716,930. During the calendar year 1921 shipments to Australia totaled 3,020 cars, valued at \$3,065,909. From the standpoint of value, Canada was the United States' best customer, shipments thereto numbering, for the calendar year 1922, 10,214 passenger cars, valued at \$10,569,481, compared with 5,243 cars, valued at \$7,187,865, shipped to Canada during the calendar year 1921. Shipments to Mexico during the calendar year referred to totaled 7,279 cars, valued at \$4,640,801, compared with 6,750 cars, valued at \$5,183,791, shipped to that country in 1921. Shipments to the United Kingdom were 4,315 cars, valued at \$3,345,706, in the calendar year 1922, compared with 888 cars, valued at \$830,018, shipped thereto during the calendar year 1921. Shipments to Belgium during the calendar year 1922 were 4,785 cars, valued at \$1,836,284, compared with 533 cars, valued at \$379,193, shipped thereto during 1921. Shipments of motor trucks and buses to Belgium in 1922 totaled 2,824, valued at \$735,650, compared with 169 trucks, valued at \$77,756, shipped thereto during 1921. Truck shipments to Canada during the calendar year 1922 were 1,259, valued at \$1,870,929, compared with 1,146, valued at \$1,798,855, for the calendar year 1921. During 1922, 1,059 trucks, valued at \$1,211,199, were shipped to Australia compared with 720 trucks, valued at \$1,194,900, shipped during 1921. Japan took 1,001 trucks valued at \$911,296, during 1922, compared with 756 trucks, valued at \$634,867, taken by her during the calendar year 1921.

Automobile Tires and Tubes.—The National Automobile Chamber of Commerce estimated that 36,340,000 automobile tires were manufactured in the United States during 1922, while the inner tubes manufactured during the first 10 months of the year numbered approximately 31,000,000. Peak production was attained in August, when 63 companies reported a total output of 2,905,200 tires and 3,803,224 inner tubes. There are approximately 155 companies engaged in the manufacture of automobile tires and inner tubes in the United States. Consumption of crude rubber used by these concerns during the first six months of 1922 totaled approximately 210,018,457 pounds, while the products turned out had an estimated sales value of \$239,458,658. Complete statistics showing the number of automobile tires and inner tubes manufactured during 1922 were not available but compilations by the United States Bureau of Census for the years 1921 and 1919 show a total of 27,267,400 pneumatic automobile casings, valued at \$376,940,000, manufactured in 1921, compared with 32,813,430, valued at \$603,361,000, manufactured in 1919. The number of inner tubes manufactured in 1921 was 32,023,400, valued at \$52,745,000, compared with 33,233,150 tubes, valued at \$81,247,000, manufactured in 1919. Solid tires for use on trucks manufac-

tured in 1921 numbered 401,380, valued at \$14,736,000, compared with 1,454,800 such tires, valued at \$43,917,000, manufactured in 1919.

During the first 11 months of 1922 there were exported from the United States 1,215,440 pneumatic casings for automobiles, valued at \$15,412,545. The United Kingdom took 317,714; Cuba, 86,078; Argentina, 81,688; Canada, 51,946; Mexico, 71,952; New Zealand, 44,595; Australia, 36,887. Pneumatic tubes for use in automobiles exported during the 11-month period referred to numbered 857,216, valued at \$1,649,525. Solid tires exported for automobiles and motor trucks during the same period numbered 49,803, valued at \$1,367,882.

Automobile Parts.—Automobile parts manufactured in the United States during 1922 had an estimated value of approximately \$400,000,000. The aggregate value of such products turned out during the first 11 months of the year was \$384,226,070. In 1921, according to the Federal Bureau of Census, there were 1,974 establishments operating which turned out products valued at \$407,917,000. These figures compare with products valued at \$692,171,000 turned out by 2,123 establishments in 1919 and products valued at \$129,601,000 turned out by 764 establishments in 1914. The number of persons engaged in the industry was 79,607 in 1921. Salaries and wages paid totaled \$125,952,000 in 1921.

Automobile parts exported during the first 11 months of 1922 totaled 146,987,047 pounds, valued at \$34,880,851.

Automobile Fuels.—Gasoline consumed in the operation of motor vehicles in the United States during 1922 was estimated at 5,300,000,000 gallons, compared with 4,506,706,000 gallons used in 1921. Considerable interest was aroused during the year by the announcement that a new motor spirit made from prickly pear juice mixed with other chemicals had proved so successful in tests in South Africa that a company with £100,000 capital had been organized to exploit it. This new production is called "Springbok" Motor Spirit. It was invented by A. C. de Villiers, an attorney of Edenburg in the Orange Free State, and the formula is a secret. According to press reports the spirit had been severely tested on various makes of cars and was highly recommended, being non-corrosive, odorless and equal to or better than gasoline in power and flexibility. A mileage of 22.4 was obtained in a six-cylinder car. Unlike some of the other substitutes, cars using it can be started easily in cold weather. In South America a considerable amount of alcohol in either its natural state or combined with other materials was used by motorists.

Automobile Accidents.—Statistics showing the number of deaths resulting from automobile accidents in 1922 were not available at the time this article was written. The latest authentic figures are those for the year 1921 supplied by the United States Bureau of Census. These, including only the fatal accidents which occurred in the 34 States constituting what is known as the "Registration Area" numbered 10,168, an increase of 1,065 over the number of similar accidents that occurred in the same territory in 1920. New York State registered the largest number of actual deaths with 1,632, an increase of 222 over the 1920 record. Among the municipalities, New York City led in the

number of deaths caused by automobiles with a total of 885, an increase of 112 over the 1920 record. Chicago was second with 569 deaths. The death list of 1921 by States in the Registration Area, as reported by the Census Bureau, was as follows: California, 876; Colorado, 121; Connecticut, 220; Delaware, 17; Florida, 104; Illinois, 887; Indiana, 266; Kansas, 166; Kentucky, 105; Louisiana, 97; Maine, 56; Maryland, 177; Massachusetts, 523; Michigan, 441; Minnesota, 216; Mississippi, 46; Missouri, 276; Montana, 48; Nebraska, 104; New Hampshire, 98; New Jersey, 484; New York, 1,632; North Carolina, 139; Ohio, 734; Oregon, 103; Pennsylvania, 1,060; Rhode Island, 83; South Carolina, 74; Tennessee, 134; Utah, 53; Vermont, 23; Virginia, 140; Washington, 202, and Wisconsin, 205. In the largest cities in the Registration Area the automobile fatalities were as follows: Baltimore, 100; Boston, 103; Chicago, 569; Cleveland, 148; Detroit, 133; Los Angeles, 165; New York, 885; Philadelphia, 190; Pittsburgh, 107; St. Louis, 119; San Francisco, 94, and Washington, 53.

Automobile Construction.—From the technical standpoint the year 1922 showed comparatively few, if any, radical innovations in the construction of automobiles, although numerous improvements and refinements were made. Practically all of the chassis showed mechanical betterments of one form or another. It was announced just before the close of the year that the General Motors Company was preparing to put on the market an air-cooled engine, which would be more or less of an innovation. It was also asserted that a number of concerns will adopt the four-wheel brake system, which has attained a certain degree of popularity in Europe, during 1923. Six-cylinder engines continued to be the favorites with the automobile users, and six-cylinder cars were to be had at the close of the year at prices ranging from less than \$1,000 to over \$10,000.

Much interest was manifested in a combination motor truck and power boat which was exhibited in New York City on 5 December. The machine was invented by Walter Christie, a former driver of racing automobiles. This combination truck and power boat carried a 3-inch regulation field gun mounted forward and travelled on land at the rate of 25 miles an hour. It had six sets of double wheels, the rear set so arranged as to not touch the ground when the machine was operated over smooth highways. In order to convert the machine into a motor boat propellers had to be affixed, the operation requiring only five minutes. After the exhibition on land, the truck, having been converted into a power boat, crossed the Hudson River in about 45 minutes. For use over rough roads the truck was equipped with an adjustable caterpillar tread, making it with this tread in place to all intents and purposes a tractor.

During the year the Ministry of Communications of Egypt sent six representatives to the United States to study automotive industry methods under the auspices of the Department of Commerce.

The relation of the automobile to other businesses is set forth in the following table com-

piled by Arthur Reeves, General Manager of the National Automobile Chamber of Commerce:

AUTOMOBILE'S RELATION TO OTHER BUSINESSES

Number of carloads of automobile freight shipped by railroad	400,000
Per cent of rubber supply used by automobile industry.....	83
Per cent of plate glass supply used by automobile industry....	30
Per cent of aluminum supply used by automobile industry.....	20

AVIATION. See AERONAUTICS.

AZERBAIJAN, a republic of Transcaucasia, the official name of which is the Azerbaijan Socialist Soviet Republic. It declared its independence of the Transcaucasian Federation in May 1918 and was soon after formally recognized by the Allied nations. The Bolshevik party secured control in April 1920 and broke off all relations with the allied nations because of the enmity of the latter to the doctrines and practices of Soviet Russia. In the month of September following a treaty was concluded with Russia. Azerbaijan consists mainly of the former Russian districts of Baku and Elizavetpol and claims all territory bounded on the north by Daghestan, Georgia and the northern Caucasus, south by Persia, east by the Caspian Sea and west by Armenia. It has an area of 34,000 square miles and a population somewhat in excess of 2,000,000 of whom about 1,400,000 are Moslems. Cotton, cereals, silk, viticulture and cattle-breeding are the chief industries together with the great oil industry centering about Baku. Baku, the capital and the centre of the oil industry has a population of 250,000. The chairman of the Soviet government is Mr. Narimanoff. There were armed uprisings against the Soviet regime during 1922. Representatives of the former republican government attended the Genoa Economic Conference and there made formal protest against Soviet rule. They especially took umbrage at the reported negotiations of the Soviet with oil interests regarding concessions in the Baku region. The Azerbaijan note was published 30 April and declared that the Soviets were in that country by force of arms and had no right to dispose of its natural resources; that all concessions would be annulled by the legal government. In May it was announced that Abilov, the Azerbaijan Soviet representative at Angora, had been withdrawn and his functions taken over by the Soviet minister. This was regarded as the final chapter in the absorption of the country by the Soviets.

B

BABCOCK, James W., American physician: b. Chester, S. C., 11 Aug. 1856; d. Columbia, S. C., 3 March 1922. He was graduated A.B. from Harvard University in 1882 and M.D. in 1886. In 1905 South Carolina College conferred upon him the degree of LL.D. Doctor Babcock was one of the first physicians in the South to identify pellagra, and in 1910, with Dr. Claude H. Lavinder of the United States Public Health Service, edited the first treatise on pellagra published in the English language. He was assistant physician of McLean Hospital, Somerville, Mass., 1885-91; physician and superintendent, State Hospital for Insane, Columbia, S. C., 1891-1914; president, National Association for the Study of Pellagra, 1909-12, secretary after 1912; chairman, South Carolina State Hospital Commissions, 1910-13; member, Columbia Board of Health, 1898-1901; chairman, Columbia Sewerage Commission, 1901-03; Columbia Commission on Water and Waterworks, 1903-07; professor of psychiatry, Medical College of South Carolina after 1915. He was a member also of numerous medical and other societies. He published numerous monographs on insanity, tuberculosis among the insane, pellagra, and other medical subjects.

BACON, Frank, American actor: b. Marysville, Calif., about 1868; d. Chicago, Ill., 19 Nov. 1922. His early education was received in the San José public schools, and at the age of 14 he went to work on a sheep-ranch. Three years later he became apprentice to a San José photographer and for a time had a studio of his own. At the age of 21 he went into newspaper work on the *San José Mercury*. Subsequently he bought the *Napa Reporter*, of Napa City, and also established *The Mountain View Register*. He tried politics and ran unsuccessfully for the State Assembly. Then, in his own words, he "turned respectable and became an actor," joining a stock-company in San José. Among other theatrical work he was for 17 years at the Alcazar Theatre, San Francisco. After the earthquake he came East and played for 14 years in vaudeville with his wife, formerly Jessie Weidman, whom he married in 1885. Although the name of Frank Bacon was comparatively unknown until his play 'Lightnin' broke all records, he had had a long career and had played more parts than any other actor of his day. He played more than 700 parts in 17 years in San Francisco alone and probably altogether had played 1,000 characters. In New York he played in 'The Fortune Hunter,' 'Stop Thief,' 'The Miracle Man,' and 'The Cinderella Man'; and it was in the last-named play that he made his first success in the East. Then he wrote a play called 'The House Divided,' which Winchell Smith revised and worked over for two years. This was produced in Washington in February, 1918, and was highly commended by President Wilson. The play was revised again and produced at Atlantic City. In

its final shape it appeared as 'Lightnin' in September 1918. According to Bacon, it had taken 30 years to write. The play "made a hit" and so did Frank Bacon in the character of Bill Jones. Bacon played this part 2,000 times at the least. 'Lightnin' ran in New York for three years and a day (1,291 consecutive performances). It had the same success in Chicago and two road companies were playing 'Lightnin' throughout the country at the time of his death. Mr. Bacon was a member of the Players, Friars and Green Room clubs, and was second vice-president of the Actors Equity Association. Bacon was considered "America's greatest character actor." He explained his theory of acting in an address to the American Academy of Dramatic Art last year, in which he said: "If you were to ask me what I know about acting, I would say I don't know anything. My advice to young actors would be to learn all about acting and then forget it. I believe absolutely in naturalness—believing in yourself."

BACTERIOPHAGE. See MEDICINE AND SURGERY, ADVANCEMENT OF.

BADEN, officially "Republik Baden," a constituent republic of the German Empire (Deutsches Reich), formerly a grand duchy. It has an area of 5,819 square miles and a population of 2,208,503. The chief cities are: Mannheim (229,576); Karlsruhe (135,952); Freiburg (87,946); Pforzheim (73,839); Heidelberg (69,806). Karlsruhe is the capital. Baden was proclaimed a republic 22 Nov. 1918 and a constitution was drafted by a National Assembly the year following. All privileges are abolished and there is universal suffrage. The legislature consists of one chamber—the Landtag, which at present has 86 members. The chamber nominates the president of the cabinet, whose official title is State President.

There are 1,478,934 Roman Catholics, 945,975 Protestants and 26,541 Jews. There is complete separation of church and state but religion is taught in all schools and is provided by each denomination. There are two universities—Heidelberg and Freiburg, several technical schools, 17 gymnasias, 52 real schools, 14 normal schools and some special schools. Primary education is free and compulsory. The revenue in 1919 was \$63,000,000 and the expenditure was very close to this amount. For production and commerce see GERMANY.

BAHAMAS, an island group off the southeast coast of Florida and forming an administrative unit of Great Britain's possessions in the West Indies. There are 20 of these islands inhabited and many more uninhabited islets and rocks. The area is 4,404 square miles and the population in 1921, the year of the last census, was 53,031. The capital, Nassau, is on the island of New Providence. This island had a population of 12,975 in 1921. Other islands of the group, with their populations, are: Abaco, 3,993; Grand Bahama, 1,695; Harbour Island, 917;

Fleuthera, 6,048; Exuma, 3,730; Acklin Island, 1,811; Andros, 6,976; Crooked Island, 1,481; Great Inagua, 937; Long Island, 4,659; Mayagüana, 432; San Salvador, 4,273; and Watling Island, 686.

The birth rate in the same year was 34.4 per thousand of the population and the death rate was 21.6 per thousand.

There are 49 government schools with 7,500 pupils and 29 aided schools which in 1920 received \$28,000 from the government. In the same year there were 25 schools maintained by the Church of England in which the enrollment was 1,102 pupils and three Roman Catholic schools with 400 pupils. In three private schools there were 86 pupils. Secondary education is in denominational hands, there being four schools of this type with 255 pupils.

Sponge fishing and sisal hemp are the chief industries of the colony. The turtle fishery is assuming large proportions also and fruits, pineapples and tomatoes are exported.

The exports in 1922 were valued at \$1,387,434 and the imports at \$1,983,700. Cotton, linen and woollens, hardware, foodstuffs, furniture, tobacco, building material and oil are the principal imports. The United States, the United Kingdom, Canada and France are the chief takers of the exports and also supply the great bulk of the imports.

Nassau is a busy winter port, being visited by thousands of tourists from the United States and Canada in the season. There is a branch of the Royal Bank of Canada at Nassau.

The group is administered by a Governor and Commander-in-Chief, who is assisted by an Executive Council of nine members, a Legislative Council of nine and an Assembly of 29 members who are chosen by electors with a slight property qualification.

The Governor in 1922 was Maj. Sir. H. E. Cordeaux.

BAILEY, Pearce, American neurologist: b. New York City, 12 July 1865; d. there, 11 Feb. 1922. He was graduated from Princeton University in 1886 and thereafter studied medicine at Columbia University and abroad. Soon after the United States entered the World War, Doctor Bailey, then one of the most widely known neurologists in America, was called to Washington by Surgeon-General Gorgas and placed in charge of the army neuro-psychiatric service in which position he served throughout the war with the rank of colonel. He arranged the psychiatric tests used in the draft armies to weed out the unfit and in recognition of his services was awarded the Distinguished Service Medal. After the war he devoted much of his time to the work of the New York State Commission for Mental Defectives of which he was chairman. One of his latest achievements was the establishment of the classification clinic where tests are made for the purpose of determining the efficiency of young people with the view of ascertaining their aptitude for vocational training and the advisability of their entering college. He was one of the founders of the New York Neurological Institute and from 1906-10 was professor of neurology at Columbia University. He was consulting neurologist at Saint Luke's, Roosevelt, New York, Orthopedic,

Manhattan State, and Saint John's hospitals. He was a member of the American Medical Association, ex-president of the American Neurological Association, the New York Neurological Society, the Pathological Society, and the Academy of Medicine. He wrote 'Accident and Injury, Their Relations to Disease of the Nervous System' (1898).

BAKER UNIVERSITY, a co-educational institution under the auspices of the Methodist-Episcopal Church, founded in 1858 and located at Baldwin City, Kan. In 1922-23 it had a faculty of 36 members, 54 students (478—9 months term, and 66—summer school), property valued at \$1,194,598.53 and an income of \$114,920.57. Wallace B. Fleming, D.D., is president.

BALATA, the dried juice or gum of the bullet-tree, or bully-tree, used extensively in the arts and sometimes confused with gum chicle. The exploitation of balata began in 1896, when the article was exported in small quantities, the State of Monagas, Venezuela, where the tree existed in great quantities, being the first to exploit it. From that time to the end of 1921 there were exported from Ciudad Bolivar 29,873,433 kilos of balata. From 1896 to 1912 the exportation was 19,822,084 kilos, the highest exportation for this period being 2,179,631 kilos in 1911 and the lowest 75,000 kilos in 1896. In 1921 the production was 805,645 kilos. A kilo (abbreviation of kilogram) equals 2.2046 pounds avoirdupois.

BALDWIN-WALLACE COLLEGE, a Methodist Episcopal co-educational institution, founded in 1845 and located at Berea, Ohio. In 1922-23 it had a faculty of 35 members, 377 students, property valued at \$1,143,968.88 and an income of \$105,000. Albert Boynton Storms, LL.D., is president.

BALFOUR'S NOTE. See PEACE AND ARBITRATION, INTERNATIONAL.

BALKAN STATES. See ALBANIA; BULGARIA; GREECE; JUGOSLAVIA; RUMANIA; TURKEY.

BALLINGER, Richard Achilles, American lawyer and public official: b. Boonesborough, Iowa, 9 July 1858; d. Seattle, Wash., 6 June 1922. His father was Col. Richard H. Ballinger, a distinguished soldier of the Civil War. Young Ballinger was educated at the University of Kansas and Washburn College, Topeka, and in 1884 was graduated from Williams College with the degree of A.B. The last mentioned institution conferred the honorary degree of LL.D. upon him in 1909. After completing his collegiate course, Mr. Ballinger studied law and in 1886 was admitted to the bar. He opened an office in Kankakee, Ill., and soon became city attorney of that place. Later he moved to New Decatur, Ala., and from there removed to Port Townsend, Wash., where he practiced from 1889-97 when he moved to Seattle which continued to be his home until his death. Mr. Ballinger served as United States Court Commissioner, 1890-92, and as judge of the superior court of Jefferson County, Wash., from 1894-97. He was elected mayor of Seattle in 1904 and served until 1906. In 1907, upon the recommendation of James R. Garfield, Secretary of the Interior in the Cabinet of President Roosevelt, and one of Mr. Ballinger's classmates at

Williams College, the latter was appointed Commissioner of the General Land Office in Washington. This office he held until 4 March 1909 when President Taft took him into the Cabinet as Secretary of the Interior. While holding the latter office Mr. Ballinger became the central figure in a bitter controversy over the development of the Alaskan coal fields. Louis R. Glavis, then chief of the Alaskan field division of the General Land Office, after an investigation as to their validity, recommended the cancellation of the claims of the so-called Cunningham group in the Bering River district. When his recommendation was not immediately acted upon, Mr. Glavis accused the Secretary of the Interior of being unduly friendly to the Cunningham interests. Glavis was dismissed from office and then Gifford Pinchot, at that time Chief of the Forestry Service of the United States Department of Agriculture, took up the fight. President Taft supported Mr. Ballinger and Mr. Pinchot was removed from office. Mr. Pinchot, however, refused to be silenced and, though President Taft never wavered in his loyalty to Mr. Ballinger, the latter relieved his chief of further embarrassment by resigning 6 March 1911. A Congressional investigation was made of Mr. Ballinger's administration of his office and he was completely exonerated. It is proper also to state that during Mr. Ballinger's administration and that of his successor all but a few of the 1,100 claims of the Cunningham group were cancelled. After resigning Mr. Ballinger returned to Seattle and resumed the practice of law. He published 'Ballinger on Community Property' (1895), and 'Ballinger's Annotated Codes and Statutes of Washington' (1897).

BALLOONS. See AERONAUTICS.

BALTIC PROVINCES, the name given to three provinces of the former Russian Empire which bordered on the Baltic Sea. These provinces were Courland, Esthonia and Livonia and as a result of the Great War have become the autonomous states of Esthonia, Latvia and Lithuania (qq.v.).

BALUCHISTAN, a country in the western corner of the Empire of India, bounded on the north by Afghanistan, south by the Arabian Sea, east by Sindh, the Punjab and the Frontier Province and west by Persia. Its area is 134,638 square miles and its population 834,703 at the last census. The country is divided into British Baluchistan proper, area 9,096 square miles; British agency territories, area 45,132 square miles; and the native states or Khans of Kalat and Las Bela, area of Kalat, 73,278 square miles; of Las Bela, 7,132 square miles. The religion is Moslem and Hindu, the former predominating. The country exports dates, dried fish, and matting and imports fruits, wool, horses, etc. There are railways and postal services in the territories administered and controlled by the British.

The chief of Kanat in 1922 was Sir Mir Mahmud Khan. The chief of Las Bela in 1922 was Mir Ghulam Muhammad Khan. See article on INDIA.

BANGS, John Kendrick, American author: b. Yonkers, N. Y., 27 May 1862; d. Atlantic City, N. J., 21 Jan. 1922. He was graduated

from Columbia University with the degree of Ph.B. in 1883 and thereafter studied law for one year at the end of which time he accepted a position as associate editor of *Life* which he held until 1888. From that year until 1900 he was connected with *Harper's Magazine* and *Harper's Weekly* as editor of literary notes, etc. He joined the staff of the *Metropolitan Magazine* in December 1902 and remained with that publication until June 1903. The following year he became associated with *Puck* and maintained this connection until 1905. Notwithstanding his literary activities, Mr. Bangs found time to take an interest in politics and civic improvement. In 1894 he was the Democratic candidate for mayor of Yonkers but was defeated. In 1897 he was chosen vice-president of the Yonkers Board of Education and he also served as president of Halsted School, Yonkers, from 1896 to 1904. Back in 1891 he was a primary candidate to succeed Louis B. Goodall as a member of Congress from the Portland, Maine, district. Mr. Bangs was ranked as one of the leading humorists of his time. He published: 'Roger Camerden' (1886); 'Katharine,' 'The Lorgnette' (1887); 'Mephistopheles,' 'New Waggings of Old Tales' (1888); 'Tiddledywinks Tales,' 'The Tiddledywinks Poetry Book' (1890); 'In Camp with a Tin Soldier' (1891); 'Half Hours with Jimmieboy' (1892); 'Coffee and Repartee' (1893, 1899); 'The Water Ghost' (1893); 'Three Weeks in Politics' (1894); 'The Idiot' (1895, 1899); 'Mr. Bonaparte of Corsica,' 'A House Boat on the Styx' (1895); 'The Bicyclers and 'Other Farces,' 'A Rebellious Heroine' (1896); 'The Pursuit of the House Boat,' 'Paste Jewels,' 'A Prophecy and a Plea,' 'The Mantel Piece Minstrels' (1897); 'Ghosts I Have Met,' 'Peeps at People,' 'The Dreamers' (1898); 'The Enchanted Type Writer,' 'Cobwebs from a Library Corner' (1899); 'The Booming of Acre Hill' (1900); 'Toppleton's Client' (1891); 'The Idiot at Home' (1900); 'Mr. Munchausen' (1901); 'Olympian Nights,' 'Uncle Sam, Trustee,' 'Bikey, the Skicycle,' 'Over the Plum Pudding' (1902); 'Emblem-land' (1906); 'Mollie and the Unwise Man' (1902); 'Proposal Under Difficulties' (farce), 'Worsted Man' (musical play), 'Mrs. Raffles' (1905); 'R. Holmes & Co.' (1906); 'Alice in Municipaland,' 'The Inventions of the Idiot' (1907); 'Potted Fiction,' 'Andiron Tales,' 'The Genial Idiot' (1908); 'Autobiography of Methuselah,' 'The Real Thing' (1909); 'Mollie and the Unwise Man Abroad,' 'Songs of Cheer' (1910); 'Jack and the Check-Book' (1911); 'Echoes of Cheer,' 'Little Book of Christmas' (1912); 'Line o' Cheer for Each Day o' the Year' (1913); 'The Foothills of Parnassus' (1914); 'A Quest for Song' (1915); 'From Pillar to Post' (1916); 'Half-Hours with the Idiot' (1917); 'The Cheery Way' (1919). He also wrote 'Lady Teazle,' a musical comedy version of 'The School for Scandal,' and 'Tomorrowland,' a musical fantasy. In addition, he was a frequent contributor to magazines and syndicates. In 1918 Mr. Bangs went to France for the Young Men's Christian Association and the American Committee for Devastated France. On this trip he lectured to thousands of soldiers belonging to the American Expedi-

tionary Forces. One of his lectures was interrupted by an air raid.

BANKERS ASSOCIATION, American.

The American Bankers Association definitely set for itself the task during the year 1923 of bringing about better economic acquaintanceship between the banker and the general public. It strives to develop a better understanding of the fundamental principles on which the work of the banker is based in serving the personal and business interests of every man, woman and child in the nation, either directly or indirectly. The association in its annual convention in New York in October 1922 definitely formulated this as its policy in the following paragraph in its resolutions: "We pledge our support to the incoming President of the American Bankers Association in the campaign to teach sound thinking along economic lines. We regard such education as necessary for the safety of our great democracy. We believe that the universities, colleges and other educational institutions of this country should co-operate to further this work. We recognize the splendid educational accomplishments of the American Institute of Banking, and we recommend its future possibilities to the active and intelligent interest of the members of this Association."

Other phases of the work during the year will be an extension of the activities conducted during 1922. The organization is constructed with a number of specialized units devised for giving intensified study and taking formal action on many of the outstanding national problems of the day.

In the banking field itself the National Bank Division, the Savings Bank Division, the State Bank Division and the Trust Company Division function in giving detailed treatment to matters involving the various classes of banking institutions indicated in the names of these major subdivisions of the Association. The Clearing House Section handles the interests of banking as a whole in perfecting the machinery for the transference of funds and other inter-banking operations. The American Institute of Banking Section serves the interests of banking in developing among the younger bank employees better qualified personnel for conducting bank operations more efficiently and rendering better economic banking service to the nation. The State Secretaries Section promotes the common interests of the many State Bankers' associations. The State and Federal legislative committees and councils, and the Committee on Taxation cover developments in those fields affecting banking, while the Protective Department renders effective protection to banks against the operations of criminals.

Outside the specific banking field, questions of general public moment are handled by the permanent commissions and committees of the association. Reinforced by the resolutions referred to above, the Committee on Public Education is continuing its campaign of lectures by bankers on banking in the public schools, aimed to add to the general education of the youth of the land a better understanding of just what part banking plays in the nation's business life. The agricultural Commission gives attention to the financial needs of the farmer and strives to bring about a growth of mutual understand-

ing between agriculture and finance. The foreign situation and America's world economic position engage the attention of the Commerce and Marine Commission, while the subject of the internal economic policies of the nation, such as sound currency, Federal Reserve Banking, labor and many other topics are in the hands of the Economic Policy Commission.

As stated in the association's manual describing its activities: "The American Bankers Association is conducted on the broad principle that what is best for the nation is best for banking. The welfare of the two is indivisible. The Association seeks to give practical effect to its recognition of this principle by co-operation with banks and banking in the United States in their endeavor to render the highest type of public service. It goes far beyond merely offering to banks advantages of membership that are desirable from the view point of their individual gain, many and varied as these benefits are. It enables them also to discharge the broader functions and duties of their corporate citizenship both in respect to their local communities and in respect to the nation, more adequately than they could perform them if standing alone. A very large measure of the element of public responsibility is inherent in banking. More than any other business activity its welfare is based squarely on the welfare of the public. Its earnings are the reward not merely of handling money. They are the reward above all of promoting the prosperity of others. Because of these considerations, and because of the many ways in which the American Bankers Association facilitates the work of banks, both as public-spirited units in the nation's financial system and as private institutions conducted for profit, membership in the Association is both an opportunity and a duty."

Among major items of general interest covered in the resolutions of the 1922 convention was a declaration calling for the elimination of unnecessary government expenditure with a view to reducing the burden of taxation. Another directed attention to the seriousness of the foreign situation and stated the belief that the time had come for the government to formulate the principles upon which it will be able to co-operate with other nations to bring about the rehabilitation of European countries and peace to the world; it was recommended that further powers be granted to the Debt Funding Commission to enable it to negotiate more effectively with foreign nations indebted to the United States.

In regard to strikes, the resolutions expressed the hope that careful investigations of industrial relations as a basis for permanent adjustments would be made; the belief was declared that organized strikes in industries whose continued operation is essential to the well-being of the whole people should be regarded as action against the welfare of the state. Another resolution urged the support of measures tending to improve our transportation systems, both on land and sea, under individual initiative, particularly recommending the modification of the shipping laws insofar as they make it possible for ship-owners to compete on an even basis with ship-owners of other countries. In regard to agri-

cultural credits, assurance was given in the resolutions that the bankers would continue to render their best aid in the solution of the manifold problems presented, and approval was expressed of various endeavors being made by the farmers to increase their facilities for the orderly marketing of their products.

Other resolutions disapproved attacks made upon the Federal Reserve System and members of the Federal Reserve Board; and regret was expressed in regard to the agitation that has arisen for unsound money. In this latter connection a subcommittee of the Economic Policy Commission is engaged in a particular study of ways to defend the soundness of the nation's currency.

The chief officials for the year 1922-23 are as follows. President, J. H. Puelicher, president, Marshall and Ilsley Bank, Milwaukee, Wis.; First Vice-President, Walter W. Head, president, Omaha National Bank, Omaha, Nebr.; Second Vice-President, William E. Knox, president, Bowery Savings Bank, New York, N. Y.; Ex-

man of the Public Relations Commission, Francis H. Sisson, vice-president, Guaranty Trust Company, New York, N. Y.; Chairman of the Agricultural Commission, Burton M. Smith, president, Bank of North Lake, North Lake, Wis.; Chairman of the Committee on Public Education, R. S. Hecht, president, Hibernia Bank and Trust Company, New Orleans, La.

JOHN H. PUELICHER,

President, American Bankers Association.

BANKING. The banking power of the United States on 30 June 1922, measured by the capital, surplus and profits, deposits and circulation of all reporting banks, including national banks and Federal Reserve banks, and estimated figures for non-reporting private banks, aggregated \$50,175,300,000, which was \$1,955,400,000 greater than the total banking power on 30 June 1921. The number of banks and the proportion of the aggregate banking power contributed by each class of institutions is shown in the following statement as of 30 June 1922:

Money columns in millions.

	Number of banks	Capital paid in	Surplus and profits	Deposits*	National bank circulation Federal reserve notes	Total June, 1922
National banks.....	8,249	\$1,307.2	\$1,541.2	\$13,818.5	\$725.7	\$17,392.6
Reporting State banks, savings banks, trust companies and private banks.....	22,140	1,636.7	2,090.0	24,057.2	27,783.9
Non-reporting private banks.....	445	6.8	11.6	96.3	114.7
Total.....	30,834	\$2,950.7	\$3,642.8	\$37,972.0	\$725.7	\$45,291.2
Federal reserve banks.....	12	105.1	217.7	2,369.6	2,191.7	4,884.1
Grand total.....	30,846	\$3,055.8	\$3,860.5	\$40,341.6	\$2,917.4	\$50,175.3

* Includes dividends unpaid, postal savings and United States deposits, certified checks and cashiers' checks outstanding, but not amounts due to other banks, except deposits of Federal Reserve banks, which are reported gross.

ecutive Manager, F. N. Shepherd, New York, N. Y.; Treasurer, F. A. Irish, vice-president, First National Bank, Fargo, N. D.; General Counsel, Thomas B. Paton, New York, N. Y.; Secretary and Assistant Treasurer, William G. Fitzwilson, New York, N. Y.; President of the Trust Company Division, Theodore G. Smith, vice-president, Central Union Trust Company, New York, N. Y.; President of the Savings Bank Division, Samuel H. Beach, president, Rome Savings Bank, Rome, N. Y.; President of the National Bank Division, Waldo Newcomer, president, National Exchange Bank, Baltimore, Md.; President of the State Bank Division, H. A. McCauley, president, Sapulpa State Bank, Sapulpa, Okla.; President of the Clearing House Section, James Ringold, vice-president, United States National Bank, Denver, Colo.; President of the State Secretaries Section, W. B. Hughes, secretary, Nebraska Bankers Association, Omaha, Nebr.; President of the American Institute of Banking, Carter E. Talman, American National Bank, Richmond, Va.; Chairman of the Commerce and Marine Commission, Fred I. Kent, vice-president, Bankers Trust Company, New York, N. Y.; Chairman of the Economic Policy Commission, M. A. T aylor, president, First Trust and Savings Bank, Chicago, Ill.; Chair-

On 1 July 1922, the amount in circulation per capita was \$39.86 and the stock of money \$8,177,000,000. The returns from 8,225 reporting national banks, 29 Dec. 1922, indicated greater activity in commercial pursuits in so far as the influence of the national banking system is concerned. Judging from an analysis of the returns completed by the Comptroller of the Currency, in February 1923, it may be said that our national banks occupied a more commanding position at this time than had been shown by the returns from any call for reports of conditions since 29 Dec. 1920. The aggregate resources of these banks 29 Dec. 1922, amounted to \$21,974,957,000 and showed an increase in the interim between 15 Sept. 1922, the date of the prior call, of \$1,048,858,000, and an increase in the year, or since 31 Dec. 1921, of \$2,031,215,000. While the increase in the resources of central reserve city banks (New York and Chicago), between 15 September and 29 Dec. 1922, amounted to \$432,519,000, it is gratifying to note that banks in only 12 of the 65 other reserve cities showed a reduction in resources in this period. The net increase in resources of these reserve city banks since 15 Sept. 1922, being \$267,424,000, and country national banks or banks situated elsewhere than in central reserve or reserve

cities, with but two exceptions, South Dakota and New Mexico, which show \$675,000 and \$717,000 reductions respectively, show a net increase in resources of \$348,915,000. The resources of national banks in each of the 12 Federal Reserve districts, were increased between 15 September and 29 Dec. 1922. The increase in the second Federal Reserve or New York district, was \$439,823,000; the next largest increase, \$86,411,000 was in the eighth or Saint Louis district while banks in the third or Philadelphia district showed an increase of \$78,156,000 and in the fourth or Cleveland district, the increase was \$73,381,000. Increases in the other districts ranged from \$17,324,000 to \$72,100,000. Loans and discounts of national banks 29 Dec. 1922, including rediscounts of \$262,421,000, amounted to \$11,599,668,000 and showed an increase in the year of \$94,279,000. The percentage of total deposits to loans and discounts, 29 Dec. 1922 was 66.59 compared with 76.32 on 31 Dec. 1921. National bank holdings of United States government securities, 29 Dec. 1922, amounted to \$2,656,560,000, an increase over the amount reported 31 Dec. 1921 of \$680,662,000. The holdings of other bonds, stocks and securities, etc., amounted to \$2,347,479,000, 29 Dec. 1922, compared with \$2,081,442,000 on 31 Dec. 1921. The amount due national banks, 29 Dec. 1922, including lawful reserve and items in process of collection with Federal Reserve banks of \$1,676,639,000, aggregated \$3,059,425,000. The increase over the amount reported 31 Dec. 1921, was \$473,945,000. Total cash on hand, 29 Dec. 1922, \$391,840,000 was \$50,029,000 greater than reported 31 Dec. 1921.

The capital stock of national banks, 29 Dec. 1922, amounted to \$1,317,010,000 and showed an increase of \$34,578,000 during the year, while surplus and undivided profits amounting to \$1,604,469,000 showed an increase since the date of prior call of \$2,225,000, and an increase since 31 Dec. 1921, of \$106,281,000. The liability of national banks on account of circulating notes outstanding, 29 Dec. 1922, was \$723,819,000, a reduction since the date of previous call, of \$2,970,000 and an increase in the year of \$6,346,000. The total deposit liability of national banks, 29 Dec. 1922, was \$17,420,481,000 or \$821,719,000 greater than on 15 Sept. 1922, and an increase since 31 Dec. 1921, of \$2,345,379,000. Of the total deposits, balances due to other banks and bankers were \$3,261,574,000, or \$730,832,000 more than on 31 Dec. 1921; demand deposits, including United States deposits to the amount of \$304,176,000, amounted to \$9,840,171,000, an increase over the amount 31 Dec. 1921 of \$1,045,139,000, while time deposits, including postal savings deposits, of \$4,318,836,000 showed an increase of \$569,408,000 from 31 Dec. 1921. The increase in individual deposits from 31 Dec. 1921, was \$1,498,460,000. Obligations of national banks on account of borrowed money represented by bills payable and rediscounts, totaled \$573,202,000, 29 Dec. 1922, of which amount \$310,781,000 was on account of bills payable, and the balance on account of rediscounted paper. Comparison with the figures for 31 Dec. 1921 showed a reduction during the year of \$446,727,000, and it is evident from the returns that national banks are being conservatively managed

and are not resorting to unnecessary borrowings. The fact that Federal Reserve banks are utilized to some extent as reservoirs for excess cash holdings of national banks, is indicated from the returns for 29 Dec. 1922, which show that the amount of lawful reserve required to be held with Federal Reserve banks against deposits, in accordance with section 19 of the Federal Reserve Act, was \$1,161,292,000 and the amount actually held was \$1,222,464,000 or \$61,172,000 in excess of the amount required.

National banks in each of the 12 Federal Reserve districts reported reserve with Federal Reserve banks in excess of the legal requirements. The largest amount of excess, \$12,633,000 was reported by banks in the second Federal Reserve district; banks in the seventh district reported excess reserve of \$8,563,000 and banks in the third and 12th districts reported excess reserves of \$7,949,000 and \$6,096,000 respectively. In none of the other Federal Reserve districts was the excess reserve of banks below \$2,000,000. Thirty-one national banks, with aggregate capital of \$2,015,000, were placed in charge of receivers during the year ended 31 Oct. 1922. Of these eight were closed on account of inability to realize on loans; two owing to defalcation of officers; one, fraudulent management and injudicious banking; seven because of deficient reserve and inability to realize on loans; seven, injudicious banking; two inability to meet demands; three by reason of "runs"; and one on account of injudicious banking and depreciation of securities. Applications for charters for 272 national banking associations, with capital aggregating \$25,490,800, were made during the year ended 31 Oct. 1922, as compared with 206 applications and capital of \$25,370,000 during the year previous. Of the applications received, 210, with capital of \$23,700,800, were approved, as against 153 and capital of \$17,595,000 in 1921. On 30 Sept. 1922, there were in the United States 204 clearing-house associations. The aggregate clearings during the year ended 30 Sept. 1922 were \$380,492,992,000, an increase of \$5,667,611,000 over the clearings for the year ended 30 Sept. 1921.

The total resources of the 18,232 State (commercial) banks in the United States and its insular possessions at the close of business on 30 June 1922 amounted to \$13,064,406,000, as compared with \$14,199,099,000 on 30 June 1921. The capital stock of these banks was \$1,014,248,000 and showed a reduction since 1921 of \$48,497,000. Surplus was likewise reduced to the extent of \$18,699,000 and amounted to \$561,131,000. Undivided profits were reported at \$210,536,000, compared with \$211,882,000 in 1921. The deposit liability of State banks to other banks and bankers was \$387,657,000, compared with \$337,373,000 the previous year. Individual deposits declined to \$10,107,597,000 and were \$567,870,000 less than in 1921. United States deposits amounted only to \$7,734,000 and showed a reduction during the year of \$32,285,000. Notes and bills rediscounted were reported at \$111,651,000, compared with \$257,450,000 in 1921, and bills payable were reduced from \$560,839,000 to \$311,149,000. Other liabilities amounted to \$282,900,000. The reports from loan and trust companies showed total resources amounting to \$8,-

533,850,000 in 1,550 companies. The capital stock of these companies amounted to \$532,316,000. Individual deposits amounted to \$6,495,928,000. See TRUST COMPANIES.

Stock savings banks reported total resources of \$1,583,922,000 for 1,066 banks as of 30 June 1922. Paid in capital stock amounted to \$79,850,000; surplus, \$41,180,000; undivided profits, \$18,995,000; and individual deposits, \$1,401,742,000. See SAVINGS BANKS. Returns were received from 619 mutual savings banks 30 June 1922, with resources of \$6,351,648,000. The aggregate deposits of these banks, consisting principally of savings deposits, were \$5,779,795,000. See SAVINGS BANKS. Information received by the Comptroller of the Currency as of 30 June 1922 showed the condition of 673 private banks with aggregate resources of \$185,331,000. There are about 1,200 private banks in the United States but returns are incomplete due to the fact that in several States this class of bank is not under the supervision of the State banking departments. The aggregate deposits in the banks reported amounted to \$147,191,000. The resources and liabilities of 22,140 State (commercial) banks, loan and trust companies, savings and private banks, 30 June 1922, were as follows:

RESOURCES	
Loans and discounts.....	\$16,435,991,000
Overdrafts.....	65,402,000
Investments (including premiums on bonds).....	7,984,242,000
Banking house (including furniture and fixtures).....	625,740,000
Other real estate owned.....	134,074,000
Due from banks.....	1,475,753,000
Lawful reserve with Federal reserve bank or other reserve agents.....	1,189,192,000
Checks and other cash items.....	515,692,000
Exchanges for clearing house.....	163,498,000
Cash on hand.....	503,711,000
Other resources.....	626,062,000
Total resources.....	\$29,719,357,000
LIABILITIES	
Capital stock paid in.....	\$1,636,734,000
Surplus.....	1,648,603,000
Undivided profits (less expenses and taxes paid).....	441,409,000
Due to all banks.....	742,335,000
Certified checks and cashiers' checks.....	101,732,000
Individual deposits (including dividends unpaid and postal savings).....	23,929,952,000
United States deposits (exclusive of postal savings).....	25,513,000
Notes and bills discounted.....	155,440,000
Bills payable (including advances from War Finance Corporation and certificates of deposit representing money borrowed).....	407,083,000
Other liabilities.....	630,556,000
Total liabilities.....	\$29,719,357,000

The following statistics are concerned with the 9,255 building and loan associations in the United States on 30 June 1922. These associations had a total membership of 5,809,888 and total assets of \$2,890,764,621. The average amount due each member was \$497.56. It appears that school savings banks have been established in about 5,000 school buildings. The enrollment in these schools aggregated 2,206,132 and the number of participants (depositors) 1,295,007, or 60 per cent of the enrollment. Deposits in the school year 1921-22 exceeded \$5,500,000 and the balance due on 30 June 1922 was \$6,518,171, with interest credited to the amount of \$145,554. For statistics of the United States postal savings

system see POSTAL SERVICE, UNITED STATES; see also FINANCE.

BANKS, CO-OPERATIVE. See CO-OPERATIVE MOVEMENT.

BANKS, Labor. See CO-OPERATIVE MOVEMENT.

BAPTIST CHURCH. The most of the Baptists of the world are simply known by the general designation of Baptist, without more specific names. Several small denominations, however, known by more specific names, are not included in the figures given for the world, but will be mentioned later.

The Baptists of the world, according to figures given in 1922, have the following numbers of churches, ministers, and members.

	Churches	Ministers	Members
Canada.....	1,338	903	140,534
Central America.....	22	6	1,531
Mexico.....	69	63	4,546
South America.....	275	243	23,358
United States.....	60,598	42,583	7,966,837
West Indies.....	582	200	52,162
Europe.....	5,213	3,753	633,054
Asia.....	2,496	1,654	264,652
Africa.....	378	238	29,540
Australasia.....	403	319	30,608
Total in the world.....	71,374	49,962	9,146,822

Of the Baptists in the United States, The Northern Baptist Convention has 8,631 churches, 8,463 ministers, and 1,267,721 members; The Southern Baptist Convention, 27,634 churches, 15,853 ministers, and 3,445,383 members; and negro conventions, 24,333 churches, 18,267 ministers, and 3,253,783 members. The Baptists in Great Britain and Ireland constitute a large part of those in Europe, numbering 3,068 churches, 2,078 ministers, and 402,688 members.

The facts concerning educational institutions are as follows. Within the territory of the Northern Baptist Convention: 13 theological seminaries, 1,030 students; 23 universities and colleges, 26,754 students; six junior colleges, 1,392 students; three training schools, 133 students; 18 secondary schools, including academies, institutes, and seminaries, 2,772 students; one college for Indians, 234 students. Within the territory of the Southern Baptist Convention: two theological seminaries, 1,497 students; 34 universities and colleges, 16,437 students; 27 junior colleges, 6,074 students; three training schools, 410 students; 69 secondary schools, including academies, institutes, and seminaries, 10,680 students. One college affiliated with both conventions has an attendance of 307. There are 85 negro schools, in the South, of various grades, several being of college rank, with an attendance of 18,230. The Baptists in Canada have five colleges, with an attendance of 1,305, and three other schools, with an attendance of 797. There are seven Baptist colleges in membership with the Baptist Union of Great Britain and Ireland, and one other Baptist college in England.

The following distinct organizations of foreign-language churches are found in the United States, a few churches in Canada being also included: German, Swedish, Danish, French, Italian, Finnish, Magyar (Hungarian), Norwegian, Czechoslovak, Polish, Rumanian, Portu-

guese, and Russian. These groups report 934 churches, 488 ministers, and 75,942 members, these figures being included, however, in the lists already given. No definite figures can be secured for a few other foreign-language churches which are in existence in the United States, including Chinese, Japanese, Letts, and Mexicans.

The Free Baptists have been in large measure merged with the Northern Baptist Convention, and their statistics are included with those of that organization. Various other Baptist bodies in the United States, however, have not been included in the figures previously given. These bodies, as given in the United States census, are the following: General Six Principle Baptists, Seventh Day Baptists, Free Will Baptists, Colored Free Will Baptists, Free Will Baptists (Bullockites), General Baptists, Separate Baptists, Regular Baptists, United Baptists, Duck River and kindred associations of Baptists (Baptist Church of Christ), Primitive Baptists, Colored Primitive Baptists, and Two-Seed-in-the-Spirit Predestinarian Baptists. The total number of members in these organizations as given in the United States census of 1916 is 261,159. Later figures for the most part are not available and, when available, show little change.

The following are the principal sources which were used in the preparation of the foregoing sketch: 'American Baptist Year Book, 1922'; 'Annual of the Northern Baptist Convention, 1922'; 'Southern Baptist Convention, 1922'; and the 'Baptist Handbook for 1922' (published by the Baptist Union of Great Britain and Ireland).

GEORGE RICKER BERRY,

Professor of Old Testament Interpretation and Semitic Languages, Colgate University.

BARBADOS, an island colony of Great Britain, the westernmost of the Caribbean group and lying to the east of the Windward Islands. It has an area of 166 square miles and a population of 198,336. The capital is Bridgetown with a population of 16,648. There are 135 primary schools with an enrollment of 19,472, six second-grade schools with 422 pupils and two first-grade schools for boys with 208 pupils and a first-grade school for girls with 130 pupils. Codrington College is affiliated with Durham University and has less than 20 students. The government spends annually on education about \$150,000. The government grants to the several religious denominations amounted to \$52,000 in 1920, of which sum about \$47,000 went to the Church of England. The police of all ranks number 404. There are a supreme court and seven magistrates' courts.

About 75,000 acres are under cultivation, about half of this being planted to sugar-cane. In 1920, 35,000 tons of sugar and 6,712,930 gallons of molasses were exported and 360,000 gallons of rum were produced. In the same year the cotton crop was 22,000 pounds. The colony exported 90 tons of bituminous petroleum in 1920. The value of the fish catch the same year was \$87,000. The revenue from all sources averages \$3,000,000; the expenses are slightly in excess of \$2,000,000. The public debt in 1922 was \$2,538,769. The imports in 1921 were valued at \$24,342,168 and the exports at \$23,463,151. Coal, cotton, fertilizers, flour, dried

fish, meats, iron and steel are the principal imports while sugar, molasses, are the chief exports. The United Kingdom, the United States and Canada are the largest takers of the exports and also furnish most of the imports.

The colony has 28 miles of narrow gauge railway belonging to the government and 470 miles of roads.

The government of the colony is vested in a Governor, assisted by an Executive Council, an Executive Committee, a Legislative Council of nine appointed by the King and a House of Assembly of 24 members who are chosen annually by the registered voters.

The governor in 1922 was Lieut.-Col. Sir C. R. M. O'Brien. The Governor receives a salary of 2,500 pounds sterling.

BARBERRY. See AGRICULTURE, UNITED STATES DEPARTMENT OF.

BARLEY. In a final report issued on the 12 December, the Department of Agriculture estimated the 1922 barley crop of the United States at 186,118,000 bushels valued at \$97,751,000. These figures compare with 154,946,000 bushels valued at \$64,934,000 grown in 1921 and 189,332,000 bushels valued at \$135,083,000 grown in 1920. The acreage for the three years was as follows: 1922, 7,390,000; 1921, 7,414,000; 1920, 7,600,000. California with a yield of 36,864,000 bushels led in production. North Dakota came second with 25,704,000 bushels and Minnesota third with 24,062,000 bushels. South Dakota was fourth with 21,896,000 bushels. Kansas was fifth with 19,332,000 bushels and Wisconsin was sixth with 14,220,000 bushels. The California production compares with 29,700,000 bushels in 1921 and 20,750,000 in 1920. The North Dakota figures compare with 16,988,000 bushels in 1921 and 19,530,000 bushels in 1920. Exports of barley from the United States in 1922 totaled 18,449,621 bushels valued at \$13,491,093, compared with 25,834,000 bushels valued at \$20,687,056 exported in 1921.

BARNARD COLLEGE, a non-sectarian educational institution for women, founded in 1889 and located at New York City. It is part of Columbia University. In 1922-23 it had a faculty of 101 members, 758 students, property valued at approximately \$6,900,000, and an approximate income of \$630,000. Nicholas Murray Butler, LL.D., D.Litt., Hon.D., is president.

BARRINGTON-FLEET, George Rutland, English actor: b. Penge, England, 15 Jan. 1853; d. London, 1 June 1922. He was educated privately and at the Merchant Taylors School, London. He was famous for his creation of leading parts in the Gilbert and Sullivan operas. His first appearance on the stage was at the Olympic Theatre, London, as Sir George Barclay in 'Clancarty.' Afterwards he joined the Gilbert-Sullivan-Cardé management and played in the original performances of all the Gilbert and Sullivan operas, except the 'Yeoman of the Guard.' In 1888 he took the management of the Saint James' Theatre, London, and produced 'The Dean's Daughter,' and 'Brantingham Hall,' and also appeared in George Edwardes' musical productions. His last performance was at the London Globe in 'The Gilded Pill.' Mr. Barrington wrote one play, and numerous duo-

logues and short pieces, magazine articles and songs; contributed to *Punch* and adapted Kingsley's 'Water Babies' for the stage. His 'Thirty-Five Years on the Stage' (1908), is an interesting record of an interesting man. When on the stage in the Gilbert and Sullivan operas he looked like a realization of one of John Tenniel's fantastic and delightful creations.

BASEBALL. See SPORTS.

BASKERVILLE, Charles, American chemist; b. Noxubee County, Miss., 18 June 1870; d. 28 Jan. 1922. In 1886-87 he studied at the University of Mississippi and in 1890 was graduated at the University of Virginia. He also studied at Vanderbilt University and at the University of Berlin. From 1891 to 1904 he was successively instructor, assistant professor and professor of chemistry and director of the chemical laboratory at the University of North Carolina. In 1904 he was appointed professor of chemistry at the College of the City of New York. Professor Bakerville discovered the chemical elements of carolinium and berzelium and invented processes for refining oils, etc. He made extensive investigations in the chemistry of anesthetics and in the applications of radium in medicine. He published 'School Chemistry' (1898); 'Key to School Chemistry' (1898); 'Radium and its Applications in Medicine' (1909); 'General Inorganic Chemistry' (1909); 'Laboratory Exercises,' with R. W. Curtis (1909); 'Progressive Problems in Chemistry,' with W. L. Estabrooke; 'Qualitative Analysis,' with L. J. Curtman; collaborator in 'Municipal Chemistry'; 'Anesthesia,' with J. T. Gwathmey; also scientific, educational, and technological articles in various periodicals.

BASKETBALL. See SPORTS.

BASUTOLAND, a territory with an area of 11,716 square miles, situated to the northeast of the province of the Cape of Good Hope, South Africa. It has a population of 500,000, of whom about 1,600 are Europeans. Maseru with a population of 2,319, is the capital. The territory is governed by a British Resident Commissioner who is subordinate to the High Commissioner for South Africa. The latter exercises legislative authority through proclamation. The revenue is about \$1,000,000 yearly. Wool, wheat and Kaffir corn are the chief crops grown. Manufactured goods are imported. The Resident Commissioner in 1922 was Lieut.-Col. E. C. F. Garraway.

BATAILLE, hā-ti'-ye, Henry, French dramatist; b. Nîmes, France, 4 April 1872; d. near Paris, 2 March 1922. He was brought up partly in Paris, where his father took up his residence following promotion to the Paris Court of Appeal, and partly in the South of France. His education was acquired at Versailles and at the Lycée Henry IV. Thereafter, having concluded that he had a talent for painting, he studied art under Jules Lefebvre and Doucet, entering the Ecole des Beaux Arts in 1890. In 1894, however, he made his first venture into drama with 'La Belle au Bois dormant' and then turned to poetry before settling down as a dramatist. His first great success in the dramatic field was achieved by that somewhat morbid play of hereditary malady 'La Lèpreuse,' written in 1896. It

was followed by the tragedy 'Ton Sang' (1897), 'L'Enchantement,' in which two sisters dispute for the loss of the husband of one of them (1900), 'Le Masque' (1902), and 'Resurrection,' adapted from Tolstoy in the autumn of the same year. In 1904 'Maman Colibri,' one of his best-known plays, was produced, to be revived in 1921. He produced 'La Marche Nuptiale' (1905), 'Poliche' (1906), 'La Femme Nuc' (1908), and 'Le Scandale' (1909). The appearance of the latter was hailed at the time as marking Bataille's definite "arrival" among the little group of great playwrights, and it was classed as one of the most interesting plays that had been produced in Paris for a number of years. It was followed by 'La Vierge Folle' (1910), 'L'Enfant de l'Amour' (1911), 'Les Flambeaux' (1912), 'La Phalène' (1913), 'L'Homme à la Rose,' a comedy, was first played in 1921, and at the time of his death two of his new plays—'La Possession' and 'La Chair Humaine'—were enjoying popular runs in Paris despite the general opinion that neither was representative of Bataille at his best. His volume of poetry, 'Le Beau Voyage,' published early in his career, attracted very favorable attention.

BATES COLLEGE, a non-sectarian educational institution, chartered in 1864 and located at Lewiston, Maine. In 1922-23 it had a faculty of 37 members, 587 students, total assets valued at \$1,927,575.60 and an income of \$210,466.15. Clifton Daggett Gray, Ph.D., LL.D., is president.

BAUXITE. The domestic production of bauxite in 1922 was at least twice as large as in 1921. The estimated output was 300,000 long tons, according to James M. Hill, of the United States Geological Survey. This quantity is about half of that normally consumed. The increase reflects a larger demand by all the consuming industries, particularly the abrasives industry. The operations in the Arkansas and the eastern fields were larger, though in Arkansas car shortage in the fall limited to some extent the production. During the first six months of 1922 the imports of bauxite averaged about 1,500 long tons a month, but after June they exceeded 3,000 tons a month. The prices of domestic dried bauxite ranged from \$6 to \$10 a ton, but were lower in the last half of the year. The prices of pulverized and dried bauxite ranged from \$12 to \$15 a ton, and of calcined from \$20 to \$25 a ton. The effect of a shortage of coal is reflected in an increase in the price of calcined bauxite during the later part of 1922. Under the new tariff the duty on bauxite is \$1 a ton, whereas under the old tariff it was on the free list.

BAVARIA, officially Freistaat Bayern, formerly a kingdom and since 22 Nov. 1918 a constituent Republic of the German Empire (Deutsches Reich) as Germany still is officially called. It has an area of 30,562 square miles and a population of 7,140,340. It is divided into the following districts for administrative purposes: Upper and Lower Bavaria, the Palatinate, the Upper Palatinate, Upper and Middle Franconia, Lower Franconia, Suabia and Coburg. There are 262 towns and 7,702 rural communes. The

principal cities are Munich (630,711); Nuremberg (352,675); Augsburg (154,555); Ludwigshafen (90,721); Wurzburg (86,571); Furth (68,162); Kaiserslautern (55,707); Regensburg (52,510); Bamberg (49,179). Roman Catholics numbered 4,862,233; Protestants, 1,912,262; and Jews, 55,065; Old Catholics, 5,816; Mennonites, 3,017; Greek Catholics, 1,611; Methodists, 1,833; Free Christians, 5,841 and 1,368 non-Christians other than Jews. Education is compulsory from six to 16. There were in 1922 6,483 elementary public schools with 22,000 teachers and 1,091,345 pupils in attendance; two agricultural schools with 323 students and three universities—Munich and Wurzburg (Catholic) and Erlangen (Protestant). There is a high court of appeal with 22 judges. Under this there are three classes of courts. The total number of judges is about 1,400. The budget for 1922 contemplated a revenue of 2,396,345,000 marks and an expenditure of 2,745,473,000 marks. The debt of the republic in 1922 was 2,736,207,473 marks of which 332,690,385 was the share of Bavaria, the remainder being the share of the central German government. Agriculture is in a flourishing state, about one-half of the total area being under cultivation and one-third in forest land. The crop acreage and production in 1920 were as follows:

CROP	Acres	Yield
Wheat.....	704,982	383,118 met. tons
Rye.....	1,185,950	548,276 " "
Oats.....	1,113,325	574,078 " "
Potatoes.....	806,450	3,173,858 " "
Hops.....	25,082	4,902 " "
Vines.....	50,042	18,252,662 gallons

The latest live stock census shows 3,667,244 cattle, 1,740,703 swine, 741,483 sheep, 365,026 horses and 431,691 goats. About two and one-half million tons of coal are produced annually and 600,000 tons of iron ore are mined. The brewing of beer is an important industry, the output in 1922 being 167,000,000 gallons. For extended statistics and other information consult 'Statistisches Jahrbuch fur Bayern' and 'Hof- und Staats-Handbuch fur Bayern' (Munich annually).

BAYARD, Thomas F., American public official: b. Wilmington, Del., 4 June 1868. His father, the late Thomas F. Bayard, was Secretary of State in President Cleveland's Cabinet and also served as Ambassador to the Court of Saint James. Young Thomas F. Bayard was a student at Saint Paul's School, Concord, N. H., from 1880-86, entered Yale University in the fall of the latter year and was graduated with the degree of A.B. in 1890. He thereafter studied law at the Yale Law School (1890-91), then studied law in his father's office in Wilmington and was admitted to the Delaware bar in 1893. In 1897 he moved to New York City and was appointed assistant to Hon. Francis W. Scott, Corporation Counsel of New York City. After a year here he opened an office for himself and practiced in New York until 1901 when he returned to Wilmington where he has lived

ever since. In 1916 Mr. Bayard was Democratic candidate for Congress, but was defeated by the late L. Irving Handy. In 1905 he was candidate for State Senator, but was defeated. He was chairman of the Democratic State Committee of Delaware, 1906-16. In 1917-19 he served as City Solicitor of Wilmington, having been appointed by Mayor John W. Lawson; this was the only public position that Bayard ever held. In 1921 he was candidate for mayor but was defeated. On 7 November he was elected to the United States Senate both to fill the vacancy for the unexpired term ending 4 March 1923, and for the full six year term beginning on that date. His father, his grandfather, James Asheton Bayard; his great-uncle, Richard Henry Bayard; his great-grandfather, James Asheton Bayard and his great great-grandfather Richard Bassett were all United States Senators from Delaware. He is therefore the sixth member of his family to sit in the Senate. On 3 Oct. 1908, he married Miss Elizabeth Bradford du Pont, daughter of the late Dr. Alexis T. du Pont, and a cousin of Col. T. Coleman du Pont, whom he defeated for the Senate.

BAYLOR FEMALE COLLEGE, an educational institution, under direction of Baptist Church, founded in 1845 and located at Belton, Texas. In 1922-23 it had a faculty of 65 members, 1,535 students, property valued at \$1,300,000 and an income of \$522,376.50. John Crumpton Hardy, LL.D., is president.

BAYLOR UNIVERSITY, a Baptist co-educational institution, founded in 1845 and located at Waco, Texas. In 1922-23 it had a faculty of 70 members, 1,200 students, property valued at \$1,000,000 and an income of about \$350,000. Samuel Palmer Brooks, LL.D., is president.

BEACH, S. A., d. 2 Nov. 1922. See HORTICULTURE.

BEAN BEETLE, Mexican. See ENTOMOLOGY, UNITED STATES BUREAU OF.

BEANS. The 1922 bean crop of the United States, according to the Department of Agriculture, totaled 11,893,000 bushels valued at \$44,429,000. These figures compare with 9,150,000 bushels valued at \$24,399,000 grown in 1921 and 9,185,000 bushels valued at \$27,134,000 grown in 1920. The 1922 acreage was 1,043,000, compared with 777,000 in 1921 and 847,000 in 1920. Michigan led in production in 1922 with 4,809,000 bushels. California was second with 4,778,000 bushels. New York was third with 1,302,000 bushels. In 1921 California produced 3,618,000 bushels, Michigan 2,972,000 bushels and New York 1,072,000 bushels. In 1920 California produced 3,000,000 bushels, Michigan 3,718,000 bushels and New York 756,000 bushels.

BEATTY, Troy, American Episcopal clergyman: b. Tuscaloosa, Ala., 12 Nov. 1866; d. Nashville, Tenn., 24 April 1922. He was educated at University of the South, Sewanee, Tenn., where he also studied theology. In 1891 he became deacon and in 1892 priest of the Protestant Episcopal Church. He was rector of Trinity Church, Mason, Tenn., in 1892; Saint Andrew's, Darien, Ga., in 1893-97; Emmanuel, Memphis, Tenn., in 1916-19. In the

latter year he was consecrated co-adjutor bishop of Tennessee and at the time of his death was acting head of the Church in the South. He was deputy to the Pan-Anglican Convention, London, England, in 1898. After 1901 he served as deputy to the General Convention of the Protestant Episcopal Church. For many years he was a member of the standing committee of the diocese of Atlanta and for three years of that of Tennessee. The University of Georgia gave him the degree of D.D. in 1917 and the University of the South the same in 1921. Doctor Beatty was a well-known Mason. He was grand prelate of the grand encampment Knights Templar of the United States; past prelate of Ancient Arabic Order Nobles Mystic Shrine and past grand chancellor Knights of Pythias of Georgia.

BEAVER COLLEGE, a Methodist educational institution for women, founded in 1853 and located at Beaver, Pa. In 1922-23 it had a faculty of 23 members, 267 students, property valued at \$350,000, and an income of \$47,000. James M. Thoburn, D.D., is president.

BECHUANALAND PROTECTORATE, a British territory of South Africa lying between the Zambesi and Molopo rivers and extending from Southwest Africa on the west to the Transvaal and Matabeleland on the east. It has an area of 275,000 square miles and a population in 1921 of 152,983, of whom about 2,000 were Europeans. The native tribes are governed by their chiefs, who rule under the protection of the king, the latter being represented by a Resident Commissioner responsible to the High Commissioner of South Africa. Mafeking is the administration headquarters. Agriculture and stock raising are the chief occupations of the inhabitants. In 1921, 32,450 head of cattle were exported. Gold and silver to the value of \$100,000 were produced in 1921. There are schools for natives and for Europeans, the government expending \$11,213 for education in 1921. The revenue in 1921 was \$491,261, with an expenditure somewhat in excess of this amount. There is no public debt. The figures regarding imports and exports are not available because of the fact that the protectorate is within the Customs Union of South Africa. The Rhodesia Railway traverses the protectorate. There are no banks. British currency is used. The Resident Commissioner in 1922 was J. C. McGregor.

BEEF CATTLE. See AGRICULTURE IN THE UNITED STATES.

BEE-KEEPING. See ENTOMOLOGY, UNITED STATES BUREAU OF.

BELGIAN CONGO, a central African colony of Belgium having an estimated area of 909,654 square miles and a population of 11,000,000. Of the population about 8,200 are European including 5,000 Belgians, 1,000 English, 300 Americans and 700 Portuguese. Many native dialects are spoken but Fiole is the commercial tongue used in the Lower Congo while Bangala holds a similar place in Upper Congo. The Minister for the Colonies governs the colony and is ex-officio president of the Colonial Council of 15 members, a majority of whom are appointed by the King. In the colony the representative of the King is the Governor-General to whom are

several subordinate or district governors. The budget of the colony is presented to the Belgian chambers and is voted on in the usual manner. In 1922 the revenue of the colony was \$13,617,428 and the expenditure was \$16,231,187. There is a force of native troops officered by Belgians numbering about 15,000 and is recruited by voluntary enlistment for a term of seven years. The colony produces rubber, palm nuts and palm oil, copal, cocoa, coffee, ivory, rice, cotton and tobacco. The live stock industry is hampered by the ravages of the tsetse fly but in the highlands of Katanga where this pest is absent it flourishes. Gold and copper are the chief minerals worked but others are known to exist such as diamonds, coal, iron. The output of copper was 21,000 tons in 1921 and diamonds sent out the same year amounted to 243,901 carats. The special imports in 1920 were valued at \$29,655,000; the special exports at \$39,546,099. Machinery, textiles and foodstuffs are the principal items of import. The chief centre in the colony until 1921 was the port town of Boma but in that year Kinshasa was officially made the capital of the colony. The Colonial Administration maintains 17 steamers on the Lower Congo and 46 on the Upper Congo. In addition to the latter there are over 50 steamers operated by private interests on the upper reaches of the river. The Congo is navigable from its mouth for a distance of 93 miles to Matadi. From this point for 200 miles there stretches a succession of rapids which render navigation impossible as far as Leopoldville from which town it is again navigable for 1,100 miles to Stanley Falls. Above this place it is navigable for vessels of lighter draught for a distance of 585 miles. Several of the tributaries also are navigable. The colony has 2,663 miles of railways and over 5,000 miles of roads. There is a pipe line 246 miles long for the transport of petroleum from Matadi to Leopoldville. An aerial courier service was established in 1921 between Kinshasa and Stanleyville. In 1922 the colony had 2,085 miles of telegraph line. There are 15 wireless telegraph stations. The Governor-General in 1922 was M. Maurice Lippens.

BELGIUM, officially "Royaume de Belgique" (Kingdom of Belgium), a country of northwestern Europe lying to the north of France and to the southwest of Holland and having an area of 11,744 square miles and a population of 7,684,272. Brussels is the capital and the reigning sovereign is Albert, who succeeded to the throne on the death of his uncle, Leopold II, on 17 Dec. 1909. According to the recent amendments to the Constitution all members of both houses of the legislature are elected by universal suffrage. Senators are elected for a term of four years and must be at least 40 years of age. Members of the lower house or Chamber are also elected for four-year terms and must have attained the age of 25 years. Of the total population about 2,900,000 speak French only, 3,250,000 speak Flemish only, 900,000 speak both those languages, 35,000 speak German only and about 55,000 speak all three languages. Brussels and its suburbs have a population of 684,870; Antwerp, 333,882, and Ghent and Liege, 165,000 each. The great majority of the people are of the Roman Catholic faith,

this church having about 6,000 clergy of all grades; the Protestant Evangelical Church having but 21, and the Jews 15 rabbis and ministers. There are no statistics regarding the religious adherence of the people since the profession of faith query has been omitted from the census forms.

Education.—In the whole kingdom there are 7,959 primary schools with an enrollment of 960,819 pupils, 3,375 infant schools with 205,418 pupils and 4,200 continuation schools for adults with 174,000 pupils. There are 75 normal schools which supply the teaching staffs of these elementary schools. There are also many private elementary schools, all of which are subject to state supervision. There must be at least one primary school in every commune and the cost of the primary education is borne by the communes, but in certain cases subsidies are granted by the central government and by the provinces. For secondary education there are 145 schools with 39,548 pupils. In addition there are 23 royal Athenaeums with 8,000 pupils, one provincial college, four municipal colleges and eight private colleges, with an aggregate registration of 3,154 pupils. There are six commercial high schools, one polytechnic, one agricultural institute, a state veterinary school, schools of design and royal conservatories. There are four universities—Ghent, Liege, Louvain and Brussels. The two first-named are state institutions. The aggregate attendance at these institutions is 8,089 according to the very latest reports. The various technical schools affiliated to the universities have a registration of about 3,000 students in the aggregate.

Agriculture.—In normal years about 2,000,000 hectares are under cultivation, but the latest available data showed only 1,340,415 hectares under cultivation. Wheat, barley, oats, rye, potatoes and sugar beets are the chief crops. Tobacco is also grown, but the acreage planted to this crop varies very greatly. In 1920 tobacco was planted to only 7,000 acres and the yield was 15,000,000 pounds.

Other Industries.—Coal is mined to the extent of about 20,000,000 metric tons annually, the production for the year 1920 being 22,413,530 tons, 2,922,000 tons of briquettes and an equal amount of coke. In that year there were 167,924 workers engaged in the coal industry. Pig iron was produced the same year to the amount of 1,128,518 tons, valued at 565,000,000 francs. Steel production the same year was 1,233,952 tons, and 1,071,900 tons of wrought steel. Crude zinc and lead were produced also in large quantities. There are 60 sugar factories in operation producing sugar from beets to the amount of 200,000 tons of raw sugar annually. This is slightly below the normal number of factories and their normal production, but the industry was virtually eclipsed during the war and has not yet fully recovered.

Commerce.—In 1920 the Belgian imports aggregated 17,511,863 metric tons, valued at 10,000,000,000 francs, and the exports 17,160,355 metric tons, valued at 7,150,000,000 francs. Wool, cotton, wheat, wine, machinery, iron and steel, asphalt and chemicals formed the bulk of these imports, while coal, glassware, manufactured iron and steel, cotton, textiles, hides and sugar

constituted the greater portion of the exports. The imports came from France, the United States and the United Kingdom to the extent of over two billions each, the balance coming from Germany, Argentina and Holland. In 1921 Germany reached third place in the list of countries furnishing the imports of Belgium. Belgian exported goods valued at 1,613,000,000 francs to France in 1920, to the United Kingdom went goods valued at 1,236,000,000 francs, and to Germany goods valued at 1,100,000,000 francs. Holland took goods to the value of 950,000,000 francs and Switzerland, Argentina, the United States and Italy in lesser amounts. See RECENT HISTORY, below.

Banking and Finance.—The National Bank is the only bank of issue and it carries on all the usual banking functions. Its capital and reserve in 1921 amounted to 100,175,300 francs. It is the state depository. There are several joint stock, private and savings banks. The state budget for the year 1922 showed a revenue of 2,573,178,900 francs and an expenditure of 3,468,143,961 francs. The state public debt amounts to 35,000,000,000 francs, of which 919,000,000 francs are due the United States. Significant progress in Belgian Government financial organization was shown by the presentation of the 1923 budget before the beginning of the year to which it related, an event the parallel of which will be vainly sought, not only since the war, but for at least five years before it. The budget for 1923 shows estimated total expenditures of 8,337,021,149 francs and anticipated total receipts of 5,942,079,740 francs, leaving an expected deficit of 2,394,941,409 francs, compared with an estimated deficit of 1,142,150,931 francs in 1922. Total expenditures show an advance of 877,196,349 francs over the 1922 estimate.

Reconstruction.—The *Bulletin de Documentation Economique* of 23 Sept. 1922 publishes the following figures concerning the reconstruction of houses and public buildings in Belgium up to 31 March 1922:

TYPES OF BUILDINGS	Number	Expenditure
Buildings reconstructed or restored by means of advances from State.....	12,650	Francs 182,031,257.90
Buildings reconstructed or restored by the State.....	6,720	332,739,056.16
Semipermanent houses.....	3,097	9,291,000.00
Stables constructed by State subsidies.....	620	3,100,000.00
Semipermanent houses constructed by the State to serve as models.....	524	5,240,000.00
Workmen's dwellings constructed by the State.....	625	14,000,000.00
Total.....	24,236	546,401,314.06
Public buildings.....	812	77,581,016.60
Grand total.....	25,048	623,982,330.66

Army and Navy.—The active army numbered about 100,000 men at the end of the year. The navy consists of a sloop, three torpedo boats and two submarines.

Railways and Roads.—There are 4,649 miles of railways in Belgium, of which 2,759 are

the property of the state and 1,766 miles are eight railways. Electrification of all the railways is in contemplation. There are 6,177 miles of roads, the greater part of which is paved with stone.

Belgian telegraph offices during the fiscal year ended 31 March 1922 numbered 2,817, of which 979 were open to the public. The total length of telegraph wire in service was 46,230 kilometers, 9,261 kilometers of which formed the Belgian sections of international telegraph circuits.

History.—The cabinet at the beginning of the year was constituted as follows:

Prime Minister and Minister of Finance	Georges Theunis
Minister of Foreign Affairs (Catholic)	Henri Jasper
Minister of Justice (Liberal) ..	M. Masson
Economic Affairs (Catholic) ..	M. Van de Vivere
Defense (Liberal)	M. Devese
Interior (Catholic)	Viscount Berryer
Railways (Liberal)	M. Neujean
Agriculture and Public Works (Catholic)	Baron Ruzette
Industry and Labor (Catholic)	M. Moyersoen
Sciences and Arts (Liberal) ..	Prof. Hubert
Colonies (Liberal)	M. Franck

The Prime Minister thus constituted his cabinet of five Catholics and five Liberals and gave no cabinet recognition to the Socialists. The elections which preceded the formation of the cabinet showed a net gain for the Catholic party, a status quo for the Liberals and a loss for the Socialists. The Chamber of Deputies is constituted as follows: Catholics, 80; Socialists, 68; Liberals, 34; other parties, 5. The alignment in the Senate is: Catholics, 73; Socialists, 52; Liberals, 28. Mme. Paul Spaak, Socialist, is the first woman elected to the Belgian Parliament. President Harding nominated Henry P. Fletcher to succeed Mr. Brand Whitlock as Ambassador to Belgium. The latter received in person from the King the thanks of the nation for his relief work during the German occupation.

In the spring Belgium continued to discuss with England a defensive pact. It was thought best to conclude a 30-year treaty under the terms of which England would agree to come to the aid of Belgium in the event of an attack by Germany, and that the terms of this accord would be made along the lines of the projected Anglo-French defensive agreement as well as with the agreement made between France and Belgium in 1920. It was felt that these pacts would tend to relieve Belgium of unnecessary military expense and enable a larger portion of her man-power to be turned to productive industry. Belgium also concluded an economic agreement with the Grand Duchy of Luxembourg. The latter state had up to the end of the war been a member of the German Zollverein or Customs Union and after the defeat of Germany it was believed in some quarters that she would agree to a political union with either Belgium or France. The inhabitants, however, decided to remain an independent state but to renounce all connection with the Zollverein. The

new agreement is of the very greatest importance inasmuch as the products of both countries supplement each other. Belgium has little iron ore but plenty of coal, while the Grand Duchy has an abundance of iron ore and no coal. The suppression of customs tariffs on these products is likely to conduce to the economic development of both countries.

The foreign trade of Belgium fell off somewhat in both imports and exports according to the statistics given out by the United States Department of Commerce on 6 March 1922. Imports showed a decrease of 2,887,182,000 francs, while exports declined only 1,714,684,000 francs in the trade of the preceding 12 months.

The national debt of the country is 35,000,000,000 francs. The interest on this huge sum together with running government expenses five times greater than in pre-war times has rendered the financial condition of the country most difficult and even perilous. The most hopeful sign of the year was the coalition effected by the Catholic and the Liberal parties by which the Socialists were excluded from the government. This has had a very stabilizing effect on business interests generally. Unemployment was decreased throughout the year but was still sufficient to embarrass the treasury through the indemnity of from five to 10 francs a day payable to the families of the unemployed.

The economic treaty with Luxembourg went into effect 1 May 1922, after which the customs frontier between the two countries was abolished. Under this treaty the absolute sovereignty and the political independence of the contracting states are preserved. The Belgian tariff schedule now obtains on all the frontiers of the Grand Duchy other than on the frontier facing Belgium. Customs receipts are to be pooled and divided in proportion to population. Further commercial treaties will be concluded by Belgium in the name of the Customs Union and the interests of the Duchy abroad will henceforth be cared for by the consuls of Belgium. The currency of the Duchy will be retired and the Belgian monetary system extended there as soon as possible. A section of the treaty provides for the operation of the railways of the Grand Duchy. To carry out the treaty on an equitable basis three mixed commissions and a court of arbitration are provided for.

During the summer the government set about making conventions, both economic and military, with her neighbors. A military convention was concluded with France and a similar understanding was sought with Great Britain. With Holland negotiations were begun looking to a revision of the Treaty of 1839. Belgium took a prominent part at the London Conference of Prime Ministers in August where she helped reconcile the extreme views of the French and British ministers. Belgium acceded to the proposal of a temporary moratorium on German reparation payments, being more concerned about the preservation of the Entente than about the temporary financial embarrassment caused by the cessation of payments. In the autumn the Belgian government was concerned chiefly with the negotiations relative to the German reparations payment. Bel-

gium agreed to accept six-month German treasury bonds guaranteed by the Reichsbank. These guaranteed bonds were to fall due as follows: 50,000,000 gold marks on 15 Feb. 1923; similar amounts on 15 March and 13 April 1923 and 60,000,000 gold marks on 15 May and again on 15 June 1923. The Italian sovereigns visited Belgium in October and received an enthusiastic welcome from all classes of the population. Later the same month the new law for military reforms was approved by the Council of Ministers. Under its terms the duration of service in the auxiliary divisions is eight months; in infantry and artillery 10 months; in the technical corps, 12 months, and in the cavalry and mounted artillery, 13 months. On 19 October the Fifth Diplomatic Conference on international maritime rights opened at Brussels with delegates present from 22 countries. The conference set about the elaboration of the first two chapters of the International Code of rights and agreements regarding landings, maritime assistance and salvage.

BELL, Alexander Graham, American scientist and inventor of the telephone: b. Edinburgh, Scotland, 3 March 1847; d. Beinn Breagh, his summer home near Baddeck, Nova Scotia, 2 Aug. 1922. He was a son of Alexander M. Bell. For a time he was taught at home by his parents, especially by his mother, whose musical talent he inherited, and by August Benoit Bertini, a musical authority and composer. He then attended McLauren's Academy in Edinburgh for one year, after which he entered the Royal High School, from which he was graduated shortly after his 13th birthday. He next went to London, where he received instruction in elocution and the mechanism of speech from his grandfather, Alexander Bell, a recognized authority on these subjects. Returning to his home, he was further trained along the same lines by his father with a view of following the family profession. He was then employed for a year as a pupil-teacher at Weston-House Academy, Elgin, Scotland, after which he entered the University of Edinburgh, where he attended lectures upon Latin under Doctor Sellers, and upon Greek under Professor Blakie. He next returned to Elgin as resident master and teacher of elocution and music, and remained there two years, after which he was made instructor in Somersetshire College, Bath, England, where he taught for one year. His father having in the meantime moved to London, where he was made lecturer of elocution in University College, the younger Bell also moved to that city and became his father's assistant. In 1868 he successfully taught several deaf-born children to speak, and from July to December of that year, while his father was delivering a course of lectures in America, he had entire charge of the latter's personal affairs, including the giving of lessons and lectures at various schools, and the correcting of defects in the speech of some of his father's pupils. From 1868-70, he attended lectures on anatomy and physiology at University College, London, joined the college medical society and matriculated as an undergraduate at the London University. When young Bell was 22 years old he was threatened with tuberculosis, which had caused the death of his two brothers.

His father, fearing that his only remaining son might also succumb to the disease, moved with his family to Canada and located at Tutelo Heights, near Brantford, Ontario. Here, by spending the greater part of his time out of doors, young Bell regained his health. A year later, in 1871, he moved to Boston and for a time gave special instruction to teachers of deaf children in the use of his father's physiological symbols of speech, teaching in Boston, Northampton, Mass., Hartford, Conn., and other cities. In 1872 he opened in Boston a normal training school, known as the School of Vocal Physiology for teachers of the deaf and for instruction in the mechanism of speech, faults of speech, etc. In 1873 he was appointed professor of vocal physiology in Boston University, which position he held until 1877.

Among the pupils who attended his private school was Miss Mabelle Gardiner Hubbard, a daughter of Gardiner G. Hubbard of Cambridge, Mass. Miss Hubbard, when but three years old, had suffered an attack of scarlet fever, which left her totally deaf. Mr. Bell's interest in Miss Hubbard's case led to a romance which culminated in their marriage in 1877. It has been said that his desire to devise a means of enabling her to hear led to experiments in the realm of phonetics, which resulted in his great invention — the telephone. Mrs. Bell, never having recovered from the shock of her husband's death, died 3 Jan. 1923 at the home of her daughter, Mrs. David Fairchild, Chevy Chase, Md., near Washington, D. C. Another daughter, Mrs. Elsie May Grosvenor, wife of Dr. Gilbert Grosvenor, president of the National Geographic Society, also lives in Washington.

Having conceived the theory that speech could be reproduced by an electrically-charged wire, it is said that Mr. Bell spent three years, working mostly at night in a cellar in Salem, Mass., in an effort to devise an instrument which would prove the truth of his theory. His first success came while he was testing his instruments in new quarters in Boston. He had as his assistant Thomas A. Watson, who one day struck a clock spring at one end of a wire, with the result that the sound was heard by Mr. Bell in another room. The inventor labored for 40 weeks and then one day Watson, who was working in another room, was startled to hear Mr. Bell's voice say, "Mr. Watson, come here. I want you." On 17 March 1876, Mr. Bell was granted a patent for his invention, often referred to as the most useful and valuable invention known. His experiments were financed largely by his father-in-law, who became the organizer and first president of the Bell Telephone Company. The first public demonstration of the telephone was given at the Philadelphia Centennial. Mr. Bell had been promised an opportunity to exhibit his invention on a certain Sunday afternoon. When the time arrived, it was hot and the judges were tired. For a while it looked as if there would be no demonstration. Then, Dom Pedro, the Emperor of Brazil, appeared and shook Mr. Bell by the hand. He had heard some of the young inventor's lectures and wanted to know what his invention was like. For the purpose of giving the demonstration, a wire had been strung along the room in which

the instrument was installed. Dom Pedro placed the receiver to his ear and Mr. Bell at the other end of the wire spoke into the transmitter. "My God, it talks," exclaimed the Emperor. Then Lord Kelvin took the receiver and listening for a moment said, "It does speak. It is the most wonderful thing I have seen in America." The judges thereafter took turns listening and the demonstration lasted until 10 o'clock that night. From that time until the close of the exhibition, the instrument was the center of interest for scientists. Although the telephone is by far Mr. Bell's best known invention, it was by no means his only invention. Before he was 17 he devised a method of removing the husks from wheat and he and his brother made a speaking automaton. Among his more important inventions are the harmonic multiple telegraph (1874), the photophone for transmitting speech and other sounds by means of light, an induction balance, and a telephone for painless detection of bullets in the human body, for which he was awarded an honorary degree of M.D. by the University of Heidelberg at its 500th anniversary. With C. A. Bell and Sumner Taintor, he invented the graphophone in 1883. He also invented a new method of lithography, tetrahedral kites and kite structures, and was joint inventor of a number of improvements designed to promote aerial locomotion, with the Aerial Experiment Association.

Medals awarded to Doctor Bell include the following: Centennial Exposition, Philadelphia, gold medal for speaking-telephone, gold medal for visible speech (1876); Royal Cornwall Polytechnic Society, the James Watt silver medal for the telephone (1877); Massachusetts Charitable Mechanics Association, gold medal for the telephone, gold medal for visible speech (1878); Society of Arts, London, Royal Albert silver medal for his paper on the telephone (1878); République Française Exposition Universelle Internationale, Paris, gold medal for the telephone and a silver medal (1878); Society of Arts, London, Royal Albert silver medal for his paper on the photophone (1881); the Karl Koenig von Wuerttemberg gold medal; Society of Arts, London, Royal Albert gold medal for his invention of the telephone (1902); John Fritz gold medal (1907); Franklin Institute of Philadelphia, Elliott Cresson gold medal for the electrical transmission of speech (1912); David Edward Hughes gold medal and a silver medal (1913); American Institute of Electrical Engineers, Thomas Alva Edison gold medal (1914). The honorary degrees conferred upon him include: Doctor of Laws, Illinois College (1881); Harvard College (1896), Amherst College (1901), Saint Andrew's University (1902), Edinburgh University (1906), Queen's University, Canada (1908), George Washington University (1913), Dartmouth College (1914); Doctor of Philosophy, National Deaf-Mute College (now Gallaudet College) (1880), Würzburg University (1882); Doctor of Science, Oxford University (1906); Doctor of Medicine, Heidelberg, Germany (1886). To him was awarded by the government of France the Volta prize of 50,000 francs for the electrical transmission of speech (1880); he was also

decorated and created an officer of the Legion of Honor of France (1881).

Among the societies of which Doctor Bell was a member are the following: Boston Society of Natural History; American Academy of Arts and Sciences, Boston; Royal Society of Arts, London (honorary); Society of Telegraph Engineers and Electricians, London; Institute of Electrical Engineers, London; American Association for the Advancement of Science (life); Philosophical Society of Washington; American Philosophical Society, Philadelphia; National Academy of Sciences; National Educational Association (life); Société de Physique (corresponding), Paris; American Otological Society (honorary); American Institute of Electrical Engineers (ex-president); American Association to Promote the Teaching of Speech to the Deaf (founder, endower and ex-president); Antiquarian Society of Massachusetts; Anthropological Society of Washington; Washington Academy of Sciences; National Geographic Society (ex-president); Association for the Improved Instruction of Deaf-Mutes (honorary); Telephone Pioneers of America; American Anthropological Society; American Senetic Association; American Laryngological, Rhinological and Otological Society (honorary). In 1887 he founded and endowed the "Volta Bureau for the Increase and Diffusion of Knowledge Relating to the Deaf," Washington, D. C. In 1900 he assisted in the formation of the American Association to Promote the Teaching of Speech to the Deaf and endowed the association. As special agent of the Bureau of the Census he determined the scope of that part of the 12th census relating to the deaf of the United States living on 1 June 1900, initiated the inquiry, specified the tabulations to be made from the data secured, conducted the correspondence and prepared the text of the special report of 200 pages that is valued highly by all who are investigating any phase of deafness. He was appointed by Congress a regent of the Smithsonian Institution in 1898. In January 1904 he brought the remains of James Smithson, founder of the Smithsonian Institution, from Genoa, Italy, to New York, where they were received with national honors and conveyed to Washington.

BELLS, Manufacture of. In 1921 there were nine establishments engaged in the manufacture of bells in the United States, compared with 10 in 1919 and 12 in 1914. The bells manufactured by these concerns were valued at \$645,000 in 1921, \$951,000 in 1919 and \$970,000 in 1914. Persons engaged in the industry numbered 240 in 1921, 275 in 1919 and 504 in 1914. Salaries and wages paid amounted to \$257,000 in 1921, \$264,000 in 1919 and \$320,000 in 1914. Materials used cost \$277,000 in 1921, \$450,000 in 1919 and \$438,000 in 1914. Of the nine establishments reported in 1921, three were located in Connecticut, two each in Missouri and New York and one each in Illinois and Ohio.

BELOIT COLLEGE, a non-sectarian educational institution, founded in 1846 and located at Beloit, Wis. In 1922-23 it had a faculty of 51 members, 556 students and prop-

erty valued at \$1,250,000. Income figures for 1922-23 are not given but for 1921-22 they were \$263,498. Melvin A. Brannon, Ph.D., LL.D., is president.

BENEDICT XV, (GIACOMO DELLA CHIESA), Pope: b. Pegli, near Genoa, 21 Nov. 1854; d. Rome, 22 Jan. 1922. He was the second son of Giuseppe, Marchese della Chiesa, and Contessa degli Migliorati, a member of a celebrated family of the Abruzzi, which had given Innocent VII (1404-06) to the Holy See. After finishing his schooling in Genoa and taking his degree in jurisprudence at the University of that city, he entered, in 1876, the Collegio Capranica in Rome to study theology. He completed his studies at the Accademia dei Nobili Ecclesiastici. Later in life he returned for a short time to the Accademia to lecture in diplomatics. It was there he made the acquaintance of Rampolla, then Secretary of Propaganda, who having been ordered to Spain on a delicate mission, took della Chiesa with him as his secretary. When Rampolla, in 1887, became Secretary of State to Leo XIII he secured for della Chiesa the post of Sostituto, or permanent Under-Secretary. Della Chiesa remained the close co-operator of Rampolla till the death of Leo XIII in 1903 and continued in office under Pius X until 1907, when he left Rome to become Archbishop of Bologna. At Bologna, Archbishop della Chiesa interested himself in co-operative societies, in education, especially the education of the poor and ignorant, and endeared himself to the people by his acts of charity. Here he gave some indication of that munificent charity which was to be the particular characteristic of his Pontificate. At Bologna he was a poor man, and he used to regret that his charities left him unable to patronize the arts, though he was always ready to help as far as he could the arts and crafts guilds of his archdiocese. In May 1914 he was admitted to the Sacred College.

Pius X died 20 Aug. 1914 and on 3 September, a month after the outbreak of the Great War, Cardinal della Chiesa was elected Pope, and chose the name Benedict XV. With the exception of Pius IX, who was elected Pope at the age of 54, Benedict XV was one of the youngest pontiffs of modern times, having been elected shortly before completing his 60th year. His election to the chair of Saint Peter so soon after his elevation to the cardinalate was almost unprecedented in modern times. By the choice of his title he indicated rather clearly what his policy was going to be. It may have been out of courteous memory that he chose the name of his great predecessor in the Archbishopric of Bologna, Prospero Lambertini, afterwards Benedict XIV, but it is certain that the two were not merely curiously alike in character—aristocratic, deeply read, liberal-minded, austere and ascetic—but also alike in outlook.

By the outside world little was known of Benedict XV at the time of his election except that he was an expert diplomatist. His first public message, issued 11 Sept. 1914, took the form of an appeal to the world, in which he declared his intention of devoting himself to the duty of bringing to a speedy end "this great calamity." The message, however, contained no direct censure of the invasion of Belgium, or of

the way in which that invasion was conducted and this was a sore disappointment to the Entente Allies. But Benedict remained true to his own policy and ignored whatever criticism there was. He appealed at various times to Francis Joseph of Austria, to the Emperor of Germany, to President Wilson, always with the same absence of condemnation. In the beginning of December 1914, the Pope endeavored to persuade the belligerents to arrange a truce during the Christmas season, but without avail. A little later he wrote to Cardinal Mercier (for whom several of the cardinals had voted at the Papal election, as a protest against German action in Belgium) to express his sorrow for the sad condition of the Belgian people, but in keeping with his policy of neutrality there was no note of censure in his letter. In January he addressed a letter to the Kaiser, begging him "to end this unholy war" and arrange an exchange of prisoners unfit for further service. The Emperor's reply was sympathetic, but that was all. At Easter, Benedict XV sent a message to America, in which he counselled prayers for peace, and said that the whole world was looking to America to take the initiative steps to bring it about. In May 1915 he wrote of the employment, "both on land and on sea," of methods of offense "contrary to the dictates of humanity and international law," but he did not say by which side they were being employed. Later he affirmed that there were wrongs on both sides. "Each accusation," he was quoted as having said to a French newspaper correspondent, "is replied to by the Germans, and I cannot at present make inquiries." Without manifesting the slightest partiality, he worked unceasingly in his efforts to bring the war to an end. On 28 July 1915 he addressed a letter to the heads of the belligerent states, the object of which was said to be the arrangement of a truce. In February 1916 he addressed a personal letter to the Emperor of Austria, urging him to use his influence in shortening the war. The following month he suggested in an appeal to the nations involved that each should clearly state its desires, but should also be ready to make the necessary sacrifices of pride and particular interests. Two months later Monsignor Bonzano, then Papal Delegate at Washington, presented a personal message to President Wilson in which the Pope suggested that the United States might volunteer to intervene among the belligerents of Europe. As Berlin and Washington, at that time, were in the midst of a diplomatic crisis, the President's reply, while sympathetic, was not encouraging. On 16 Jan. 1917, he formally and enthusiastically approved of President Wilson's peace note of 18 Dec. 1916, and through his nuncios and legates at the chancelleries of the belligerents sought to have it heeded.

Austria's attempt to secure a separate peace, coupled with the German Socialist-Centre demand for a peace "without annexations and indemnities," ultimately found expression in the Pope's famous peace note of 1 Aug. 1917. This note was answered by President Wilson on behalf of the Allied and Associated nations (the United States having been drawn into the war on 6 April 1917 as a result of Germany's U-boat

campaign), Mr. Wilson stating that the ideals which the Holy Father had expressed were their ideals, but that he saw no signs of the enemy acknowledging or accepting them. In his note Benedict XV said: "As to the damages to be repaired and as to the war expenses, we see no other means of solving the question than by submitting as a general principle complete and reciprocal condonation, which would be justified, moreover, by the immense benefit to be derived from disarmament, so much so that no one will understand the continuation of a similar carnage solely for reasons of an economic order." Prior to the issuance of this note, the Pope had rebuked the German and Austrian governments for the ruthless use of the U-boat and on another occasion he sent notes to the two Kaisers condemning as "a wanton massacre" the loss of life at the Paris church of Saint Gervais caused by bombardment with the German 70-mile range gun.

Although the Pope neither asked for nor suggested representation at the Paris Peace Conference he sent thereto as an observer, Monsignor Ceretti who after became Apostolic Nuncio at Paris after a 16-year break in diplomatic relations between the Vatican and France. In a letter to President Wilson, on the eve of the Conference, the Pope pleaded for aid to the oppressed nationalities, and when the Conference had framed the Treaty of Versailles, the Pontiff issued a letter declaring that as the head of the Church he would do "all in his power to support the decision of the delegates."

Notwithstanding the fact that his pontificate (1914-22) covered one of the most critical periods in the world's history, Benedict XV not only succeeded in increasing the prestige of the church at home and abroad in a religious way, but also in recovering something of the political prestige of the Vatican as a factor among the governments of the world. His position at the beginning of his reign was the most difficult any Pope had ever been confronted with. His attitude of strict neutrality seemed only to intensify his troubles. But when the conflict was over and passions had cooled to some extent, it was generally recognized that he had been right. At the beginning of the pontificate of Benedict XV about 20 nations had formal diplomatic relations with the Vatican; at its close there were 31. Relations with France had been restored and the British Empire had taken steps to have a more intimate representation. Relations with Portugal also had been restored and negotiations were pending for an exchange of envoys with Tokio. The Pope's influence upon Italian politics was constructive. In January 1919 he completely freed Italian Catholics from all inhibitions against participation in Italian political movements. His relations with the Quirinal were more cordial than those of any Pontiff since 1870, and the celebrated "Roman Question" was left by him in a fair way of settlement.

During his reign Benedict added the names of Margaret Mary Alacoque, Gabriel dell' Addolorata and Joan of Arc to the roll of saints. His most notable pronouncement was his encyclical ('Ad Beatissimi Apostolorum Principis,' 1 Nov. 1914. In it he discussed many matters

of world-wide importance; emphasized the moral disorders of the day; the disregard for authority; unjust quarrels between classes and referred to material prosperity as becoming the prominent object of human endeavor as if there were nothing higher and better to be gained. From the beginning he manifested a sincere friendship for America.

BENEDICT COLLEGE, a Baptist co-educational institution, founded in 1870 and located at Columbia, S. C. In 1922-23 it had a faculty of 35 members, 600 students and property valued at \$600,000. Income figures not available. Rev. C. B. Antisdel, LL.D., is president.

BENJAMIN, Park, American patent lawyer and author: b. New York City 11 May 1849; d. Shippan Point, near Stamford, Conn., 21 Aug. 1922. He was graduated from Trinity School, New York, in 1862 and from the United States Naval Academy in 1867. After making several cruises with Admiral Farragut, he was promoted to ensign and assigned to duty at the European station. Tiring of naval life, he resigned from the service in 1869 and studied law at the Albany Law School from which he was graduated with the degree of LL.B. in 1870. He then entered Union College, pursued a wide range of scientific studies and was graduated with the degree of Ph.D. in 1877. In the meantime he joined the staff of the *Scientific American* as associate editor and held the position for six years until 1878. From 1881 until 1892 he was editor-in-chief of 'Appleton's Cyclopedia of Applied Mechanics.' He built up his practice at the same time and developed into one of the foremost patent attorneys in the country. Mr. Benjamin was married three times. His first wife was Miss Helen Campbell, who died soon after marriage without issue; his second was Miss Isabel Torrans, by whom he had three children—Park Benjamin, Jr., Mrs. Frederick W. Goddard and Mrs. Margery Kenney, his third was Miss Ida Crane, whom he married in 1891 after the death of the second Mrs. Benjamin. By his third wife Mr. Benjamin had two children—a son, Romeyn P. Benjamin, and a daughter, Dorothy, who married Enrico Caruso about three years before the great tenor's death. Mr. Benjamin published: 'Early History of Electricity' (1895); 'History of the United States Naval Academy' (1900), and numerous essays in *The Forum*, *The Independent* and various other periodicals. He was a member of the Military Order of the Loyal Legion and foreign member of the British Chartered Institute of Patent Agents.

BENSEL, John A., American engineer: b. New York City, in 1863; d. Bernardsville, N. J., 20 June 1922. After graduation at Stevens Institute in 1884, he gained practical knowledge as a rodman for the New York Aqueduct and the Pennsylvania Railroad. He next was assistant engineer of docks and terminals for the Pennsylvania Railroad and the New York Dock Department, after which he spent six years (1889-1895) in charge of construction on the North River (New York) water-front. Then he became chief engineer and Commissioner of the Dock Department and in 1911 was made

State engineer. He was also consulting engineer for improvement of a mile of water-front on the Delaware River in 1895-98. After 1919 he was a member of the board of consulting experts for the New York and New Jersey vehicular tunnel and was frequently a member of important conferences on municipal engineering projects. In the Great War he commanded the 125th Battalion of Engineers.

BENSMAN, Matteo, Russian-Jewish composer; b. Minsk, Russia, in 1877; d. New York, N. Y., 7 April 1922. He was a pupil of Rubinstein, studied in Italy and was a professor at the Petrograd Conservatory before the Russian Revolution. His compositions attracted much attention in Europe. His oratorio, 'La Nunciazione,' won for him the Gold International Medal when given in Milan in 1905. He wrote three operas, 'Nuova,' 'Erasmus' and 'The Jews,' the latter based on Chirikoff's drama. His symphonic work, 'Palestrine,' for orchestra, chorus and ballet, was performed under Gustav Mahler's direction in Vienna. Mr. Bensman came to New York in 1921 and had a benefit concert at Carnegie Hall, New York, on 24 Dec. 1921. A concert was planned for 9 April 1922 but the composer failed to raise enough funds to meet the demands of the Musical Union and he died of heart disease, brought on by hardships, overtaxed strength and general weakness two days before the appointed concert. A memorial concert was held on 9 April and the Bensman Concert Association was organized to make his works known to the American public. Bensman counted among his friends Mascagni, Puccini, Leoncavallo, Zimbalist, Stokowsky and many other noted musicians.

BENTON, Guy Potter, American university president; b. Kenton, Ohio, 26 May 1865. He received an A. B. degree from Baker University, and a D.D. degree in 1900; an A.M. degree from Ohio Wesleyan, and a D.D. degree in 1905; an LL.D. degree from Upper Iowa University (1906), University of Vermont (1911), Middlebury College (1912), University of Mississippi (1914), Miami University (1916); and an L.H.D. degree from Norwich University (1916). He studied also at the University of Wooster and in Berlin. From 1890-95 he was Superintendent of Schools at Fort Scott, Kan., and Assistant State Superintendent of Public Instruction (Kansas) 1895-96. Other important educational positions which he has occupied have been the following: Professor of History and Sociology, Baker University, 1896-99; President of Upper Iowa University, 1899-1902; of Miami University, 1902-11, and of the University of Vermont, 1911-19. Since April 1921, he has been Chief Educational Consultant and President of the University of the Philippines, and he is a member of the Philippine Textbook Board. He was a member of the Kansas State Board of Education (1899); Secretary of the Ohio Conference of College Deans and Presidents (1903-05); President of the Ohio College Association (1904); Chairman of Committee from the Ohio College Association, on an educational policy for Ohio (1904-05); President of the Ohio Conference of College Presidents and Deans (1906),

Ohio Y. M. C. A. (1909-10). From 1910-16 he was Secretary of the National Association of State Universities, and from 1916-18 President of that body. Since 1910 he has been an elector in the Hall of Fame. From 1911-20 he was a member of the National Inter-Fraternity Conference, and 1912-13 President of the Vermont Free Library Commission; Chairman of the Vermont State Board of Education (1914), National President of the Phi Delta Theta Fraternity (1912-14); Director of the National Educational Association (1912-13), (1914-16); Vice-President (1912-13). With the American Expeditionary Forces he held important positions in the Y. M. C. A., and was Chief Educational Director, American Army of Occupation, with headquarters at Coblenz, Germany, until 30 June 1919. Honorably discharged from the United States Army, 24 July 1919, he was awarded the Distinguished Service Medal for war service by the President of the United States.

BEN YEHUDA, Eleazar, world-famous Hebraist; b. Lithuania in 1858; d. Jerusalem, 16 Dec. 1922. He was the son of Jehudah Perlman and he adopted the name (the Son of Yehuda) by which he was known, in the same way as his son, the editor of the *Doar Hayon*, adopted the name Ben Avi (son o' my father). At the time of the Russo-Bulgarian War he became attracted by the idea of the national resurrection of the Jewish people in the land of Israel and went to Paris to study medicine with the intention to practice in Palestine. While in Paris he published his first article in Smolenskin's journal, *Ha-Shakar*, a powerful plea for the regeneration of the Jewish people by means of the Hebrew language. In 1881 he and his wife went to Palestine and founded the first Hebrew-speaking household in the country. He then adopted the name Ben-Yehuda. He became editor of the Hebrew journal *Habazeleth*, in which he advocated the founding of Jewish colonies and the institution of the Hebrew language as the National tongue. He soon began his great work, the compilation of a Hebrew dictionary. At the outbreak of the World War he left Palestine and came to the United States where he continued his work and celebrated his sixtieth birthday in 1918. He returned to Palestine after the armistice and continued his work. At the time of his death a home was being erected for him by his admirers in the United States, who had collected the necessary funds. His funeral was the largest ever seen in Palestine; more than 30,000 Jews followed in procession. All Jewish shops and institutions were closed and three days of mourning were proclaimed. He was buried on the Mount of Olives. One of his followers says: "His name will go down to history as one of the spiritual builders of modern Hebrew and of the new old Land of Israel." In spite of ill-health for years, he not only fought valiantly for nationalism and the Zionist movement, but worked for 20 years upon the colossal Hebrew dictionary.

"As a writer he labored only with national objects in mind. He created the Hebrew language, it is claimed; but, in fact, he demonstrated by his conduct and his literary achievements that there was a Hebrew language, and,

if there was not, he was fully determined to create it. In his zeal he may have overstepped the limits of philological propriety, but he was not primarily concerned with philology; he had in mind the national value of doing what he did in his writings and in his monumental work, the 'Millon,' making the Hebrew language expressive of the unity of the Jewish people and of the ancient desire for rebirth." See *The Jewish Chronicle* (London, 22 Dec. 1922); *New Palestine* (New York, 19 Jan. 1923); and *The Maccabean* (New York 1918).

BEREA COLLEGE, a non-sectarian co-educational institution, founded in 1855 and located at Berea, Ky. In 1922-23 it had a faculty of 78 members (13 in College Department), 2,003 students (310 in College Department), property valued at \$3,807,740.30 (at close of year 30 June 1922). Its income was \$229,920.65 for the year 1921-22. William James Hutchins, D.D., is president.

BERMUDAS, a group of over 350 small islands which lie 580 miles off the coast of North Carolina and form a colony of Great Britain. Only 20 of the islands are inhabited. The area is 19.3 square miles and the population in 1921 was 21,987, of whom 7,500 were whites. About one-half of the population are members of the Church of England. Education is compulsory. There are no government schools but assistance is given in the form of grants and fees to those schools which measure up to government standards and submit to government inspection. There are 48 primary schools of which about 30 are in receipt of the government grant, which averages \$20,000 yearly. In addition there are garrison and naval schools and four secondary schools. Hamilton is the capital of the colony. It has a population of 2,700. The government is vested in a Governor, assisted by an Executive Council of six appointed by the King, a Legislative Council of nine, and an Assembly of 36 members. The colony has become popular as a winter resort and in the season is visited by about 25,000 Americans and Canadians. The chief sources of revenue are the customs, light-house tolls, post office receipts. The public debt of the colony is \$420,000. About 4,000 acres are under cultivation. Onions, potatoes and other vegetables are the chief crops. In 1920, the imports of the colony amounted to \$6,765,980 and consisted mostly of foodstuffs, cotton goods, hardware, coal, sugar, clothing, leather and leather manufactures. The greater portion of the trade is with the United States. There is a private telephone system with 1,600 miles of wire and 800 subscribers. There is also a military telephone system of over 200 miles of line. Submarine cables connect the colony with Nova Scotia, Jamaica and Turks Island. There are 20 post offices in the colony. The savings banks had on deposit at the last report the sum of \$201,852 to the credit of 2,270 depositors.

BERTILLON, Jacques, French statistician and criminologist: b. Paris, 11 Nov. 1851; d. there, 7 July 1922. With his brother, Alphonse (1853-1914), he originated a system of identification for criminals, which has, however, been superseded by the finger-print system. Since 1883 he had been chief of the Bureau of

Vital Statistics in Paris, having succeeded both his father and his grandfather in this office. He was the author of 'La Statistique humaine en France' (1880). See A. Bertillon, 'Identification Anthropométrique' (Paris 1893); Boies, 'Science of Penology' (1901); and R. W. McClaughry, 'The Bertillon System of Identification' (Chicago 1896).

BESELER, Hans von, German general: b. Pomerania in 1850; d. Berlin, 22 Dec. 1921. In 1868 he entered the German army and became major-general in 1904. He commanded the army that captured Antwerp 10 Sept. 1914. His force consisted of the third reserve corps, two Ersatz divisions, a marine division, two Landwehr brigades, an artillery brigade, a pioneer brigade and a Bavarian division numbering approximately from 125,000 to 150,000 men. The Germans concentrated about 200 guns and having shelled Mechlin on 27 August proceeded to bombard Antwerp. Subsequently General von Beseler was stationed on the eastern front, where he captured a strong Russian fortress in 1919. Afterwards he made successful charges against the Russians on the Dvina River. Under the German occupation of Poland he was Governor-General. In 1918 he fled from Warsaw by hiding on a river barge. A picture of General von Beseler appears in 'Nord und Sud' (14 Jahrgang, Band 160, März. 1917). See 'The Great War,' by George H. Allen, Henry C. Whitehead and Admiral F. E. Chadwick (Philadelphia 1916).

BESSARABIA, former province of the Russian Empire, which was joined to Rumania in March 1918. Its area is 17,146 square miles and its population 2,344,800. See **RUMANIA**.

BESSIE TIFT COLLEGE, an educational institution for women, belonging to the Georgia Baptist convention, founded in 1849 and located at Forsyth, Ga. In 1922-23 it had a faculty of 30 members, 273 students, property valued at \$410,000 and an income of \$145,000. Aquila Chamlee, D.D., B.A., Th.G., is president.

BEST, William Newton, American inventor: b. Quincy, Ill., about 1860; d. Brooklyn, N. Y., 11 April 1922. He devoted the greater part of his life to the invention of devices for burning oil for heat and held many patents for his inventions. He was president of the W. N. Best Furnace and Burner Corporation, New York, a member of the American Society of Mechanical Engineers, the American Institute of Mining and Metallurgical Engineers, the American Institute of Metals, the American Railway Mechanics Association and vice-president of the Goodwill Industries of Brooklyn.

BETHANY COLLEGE, a Disciples of Christ co-educational institution, founded in 1840 and located at Bethany, W. Va. In 1922-23 it had a faculty of 25 members, 305 students, and property valued at \$590,000. Income figures not given. Cloyd Goodnight, A.M., is president.

BETHANY COLLEGE, a Lutheran co-educational institution, founded in 1881 and located at Lindsborg, Kan. In 1922-23 it had a faculty of 43 members, 620 students, property valued at \$246,267.79, and endowment of \$210,000 and an income of \$99,284.75. Ernst F. Philblad, D.D., is president.

BETHEL COLLEGE, a co-educational institution under the supervision of the General Conference of Mennonites of North America, founded in 1886 and located at Newton, Kansas. In 1922-23 it had a faculty of 23 members, 280 students, and property valued at \$200,000. Its income for 1921-22 was \$37,411.97. J. H. Langenwelter, S.T.M., is president.

BETHLEHEM COLLEGE. See CHRISTIAN CHURCH.

BHUTAN, a semi-autonomous state in the Eastern Himalayas, bounded on the north and east by Tibet, west by Chumbi and Sikkim and on the south by British India. It has an area of 20,000 square miles and a population of a quarter million. From 1774 the native Bhutans and the British have had relations varying from the ordinary ones of trade to the sterner measures of hill warfare. In 1865 the British granted a subsidy of 50,000 roubles annually to the Bhutan government on condition of its good behavior. A supplementary treaty concluded in 1910 confines British interest to the external relations of Bhutan and leaves the latter entirely free in its internal administration. The subsidy was increased at the same time to 1,000,000 roubles annually. The head of the state is the hereditary Maharaja, Sir Ugyen Wangchuk, who assumed his post in 1907. The Bhutans are Buddhists nominally but the popular beliefs are a welter of superstition and devil worship or propitiation. There are no armed forces with the exception of the garrisons of the fortresses. Punakha is the winter capital and Tasichozong the summer capital. The natural products of the country are rice, millet, maize, wax, musk and silk. Guns and swords are manufactured. There are valuable forests in the country but their products never reach the world markets, remaining undeveloped for lack of capital. In normal years the trade with British India amounts to \$600,000 annually but it has decreased in the last few years.

BIBLE IN PUBLIC SCHOOLS. Daily reading of the Bible in public schools is required by law in six States: Alabama, Georgia, Massachusetts, New Jersey, Pennsylvania and Tennessee. In all of these States, except Georgia and Alabama, the law prescribes that the reading must be without comment. Reading from both the Old and the New Testaments is required in Georgia, but only the Old Testament is specified in the New Jersey law; the laws of the other States do not require any special part of the Bible to be read. The amount which must be read varies considerably. Georgia requires that at least one chapter be read each day; Pennsylvania requires at least 10 verses to be read each day and so does Tennessee; New Jersey directs the reading of at least five verses. Massachusetts and Alabama do not specify the amount to be read. At the written request of a parent or guardian a pupil may be excused from the Bible reading in Georgia and Tennessee. In Massachusetts a pupil whose parent or guardian informs the teacher in writing that he has conscientious scruples against Bible reading is not required to read from any particular version thereof or to take any personal part in the reading. The courts of California, in a decision

relating directly to the King James version, decided late in 1922 that it is a sectarian book and under the law must not be employed in public schools. Similar decisions have been rendered in other States.

BIBLE SOCIETY, American. An organization founded in 1816 to promote a wider circulation of the Bible. The society pursued its regular course of business in its 106th year. It steered clear of theological controversies and differences. There was strict adherence to the established principle of the society to translate literally from the original Scriptures, publish the same without note or comment, sell strictly at cost price, and make gifts or grants for missionary purposes where necessary in order that every person may possess a copy of the Bible. The various departments are under the direction of committees composed of prominent and capable men in their special lines. Translation and revision work was done in the Luragoli, Quechua, Portuguese, Chinese Phonetic, Zulu, Kpelle, Armeno Kurdish and Yiddish, and planned for or begun in various other dialects. A decided departure in the printing program was the discontinuance of doing its own printing and the allotting of contracts to commercial presses. Although an American Bible Society, yet it has a world program. It has work both at home and abroad. In the United States it functions through nine agency headquarters covering the entire country. Through these agencies it ministers to churches, cities, counties, mission boards and missionary and philanthropic workers, and undertakes to meet the last individual. It deals with special classes, such as immigrants, laborers and nationalities, in 1922 distributing through its Domestic Agencies 1,200,000 copies of the Scriptures in 95 different languages. The Society has established agencies in 12 foreign centers. These cover every country in the western hemisphere south of the United States. Japan, China, Siam, Philippines, and the Near East, and special grants of Scriptures were made to European countries and different missions in Africa. The total circulation, according to the latest annual report was 4,861,181 volumes in over 150 different languages and dialects. The Society's budget for 1922 totaled \$1,023,767. The officers of the society are: President, Churchill H. Cutting; General Secretaries, William I. Haven and Frank H. Mann; Recording Secretary, Lewis B. Chamberlain; Assistant Secretary, J. L. McLaughlin; Treasurer, Gilbert Darlington. The Society has its headquarters at The Bible House, Astor Place, New York City.

BICYCLING. This sport retained its popularity during the year 1922. The six-day race, held at Madison Square Garden, New York City, 3-9 December, was well attended. Seven teams finished the race. Of these Goulet-Belloni and Brocco-Coburn rolled off 2,457 miles and 8 laps and garnered 487 and 292 points respectively. The Egg-Eaton team finished one lap behind these leaders but garnered 439 points, while the Grenda-McNamara team finished two laps behind but secured 882 points. The record for this race is 2,625 miles made by Egg and Dupuy in 1916. In amateur competitions only one new record was hung up in 1922. This was for the

one mile unpaced event and was made by Mo-beck at Newark, N. J., on 2 July when he covered the distance in 1 m. 55 secs. A new record was also made in the unpaced amateur road competitions for three miles. This was made by Beckman at Ridgefield Park, N. J., 9 April 1922 when he rode the three miles in 7 m. 13 secs. On 30 May Nolen rode the 100 miles from Milwaukee to Chicago in the record time of 4 hrs. 36 min. 30 secs. Gronkowski on 18 March at Buffalo did the three-quarter and one mile in 1.35 $\frac{3}{4}$ and 2.05 $\frac{3}{4}$, respectively, thereby making two records in the amateur indoor flat floor competition. In professional events Goulet made a new record for the 10-mile human paced event, covering this distance at Newark on 31 Aug. in 19.25 $\frac{3}{4}$. Willie Spencer won the national professional sprint championship with a total of 35 points. The national amateur championship was won by Willie Grimm with a total of 16 points. George Chapman won the professional pace championship with 201 points.

BIOLOGICAL SURVEY, United States Bureau of. The work of the Bureau of Biological Survey of the United States Department of Agriculture during 1922 as in previous years was concerned chiefly with investigations relating to the wild birds and mammals of North America for the purpose of protecting and utilizing the beneficial and harmless species and of destroying or controlling those having destructive habits. This has involved both field and laboratory work on a considerable scale. Investigations into the value of wild birds and mammals as a national asset yielded information showing that they are of far greater value than has been generally understood. These studies have covered the value of insectivorous birds to the farmer, the recreational value of game and non-game birds to the public, and the money value of the game meat and furs taken each year, in addition to the support of industries and other economic activities attendant upon the utilization of these resources. Progress was made in the technical investigations of several groups of mammals, notably the shrews and chipmunks of North America, and reports on the field studies of the mammals of Wyoming and Oregon were nearly completed. Important information was obtained relative to the distribution and migration of birds. The extraordinary interest shown in the bird-banding phase of these investigations has resulted in enlisting the co-operation of a large number of people throughout the country. As a consequence an invaluable mass of information is being built up which will give an insight into the movements of migratory and other birds such as has never heretofore been available. Special studies were made of wild life conditions in national forests, particularly in regard to the predatory animals and injurious rodents. The campaign of the Bureau against such predatory animals as wolves, coyotes, mountain lions, and others has continued vigorously, and approximately 80,000 of these destroyers of livestock and game were killed in the extended trapping, den-hunting, and poisoning operations. A severe

outbreak of rabies among coyotes in Washington and neighboring States was suppressed. During the organized campaign against prairie dogs, ground squirrels, and other rodents destructive to agricultural crops, 17,678,041 acres of Federal and private lands were treated with poison baits, which resulted in the elimination of a great proportion of these pests. A second poison treatment was given to more than 8,000,000 acres, bringing the total amount of lands over which most of the rodent pests have been destroyed since 1916 up to more than 10,000,000 acres of the public domain and 93,000,000 acres of land owned by States and individuals. The establishment of a well-equipped laboratory at Denver, Colo., for the purpose of investigating poisons, and their preparation and use in the destruction of animal pests, has added very substantially to the effectiveness of the campaigns.

The need of work of this character is plain in view of the fact that more than \$20,000,000 worth of livestock is estimated to have been destroyed annually on the Western ranges, in addition to enormous quantities of game birds and animals; and that more than \$300,000,000 was being lost each year through the prairie dogs and other field rodents, and more than \$200,000,000 annually from the depredations of house rats. The work of the Bureau during the year has brought about an important decrease in these losses. As a result of information furnished by the Bureau, public sentiment has developed until there is apparent an ever-increasing intolerance of the presence of house rats and mice and the waste due to their destructive activities. Many local campaigns against rats were waged throughout the country during the year, and the Bureau has responded to innumerable requests for information, for practical plans of organization, and for effective methods of combating these animals in concerted community efforts.

Important progress has been made in investigations pertaining to the rearing of wild fur-bearing animals in captivity. About 500 fur farms, mainly for raising silver foxes, are established in 25 States. They contain from 12,000 to 15,000 silver foxes and the total investment amounts approximately to \$8,000,000. Investigations at the experimental fur farm of the Biological Survey in northern New York have yielded valuable information concerning the parasites of fur bearers and their treatment, and also regarding the physiology of fur bearers both in health and disease, and the effect of various remedial drugs upon them. The discovery at this farm that martens mate in July and August is a valuable contribution to the knowledge required for the successful rearing of these animals in captivity. Special investigations were also launched regarding fur-farming conditions in Alaska and on the Aleutian Chain.

Investigation of food habits of wild life has centered about the relations of birds to agriculture, but progress was made also on an economic study of toads, and the contents of numerous stomachs of mammals were analyzed. During the year arrangements were made with three States for preserving the stomachs of animals killed as vermin by game wardens and

by employees of game farms. By means of such co-operation it is planned to get a good basis of fact regarding the vexed vermin problem, consideration of which in the past has been based largely on conjecture and speculation. Investigations of reindeer in Alaska yielded important results which have been published in bulletin form by the department,—data and recommendations referring chiefly to the control of parasites, improvement of herd management, and allotment of grazing areas. Some herd owners have already adopted better methods of handling their animals as suggested by the Bureau's experts and report very satisfactory results. Plans were started for the cross-breeding of reindeer with the large woodland caribou with a view to increasing the meat output. It is believed that through such cross-breeding and the selection of breeding stock in the herds, the meat output of the reindeer may be increased from the present average weight per carcass of about 150 pounds to about 300 pounds. By means of educational work, and especially in the administration of the Migratory-bird Treaty Act, the Biological Survey is actively fostering interest in the conservation and increase of valuable birds and animals. Beneficial results following Federal protection of migratory game-birds are evidenced by reports from all parts of the country showing that these birds are steadily increasing in numbers, with corresponding increase in the amount of game available for sportsmen. The widespread interest in our game supply and the importance of its maintenance are indicated by the fact that more than 4,000,000 licenses were issued to hunters in the United States in 1921, and it is estimated that not less than 2,000,000 other persons hunted without licenses under provisions of the laws of various States.

BIRMINGHAM-SOUTHERN COLLEGE, a co-educational institution at Birmingham, Ala., formed by the consolidation of Birmingham College with the Southern University and controlled by the Alabama and the North Alabama conferences of the Methodist Episcopal Church, South. The consolidation was effected 30 May 1918, and the new institution was opened for the reception of students 11 September following. Southern University was located at Greensboro, Ala. The assets of the Birmingham-Southern College consists of 70 acres of land; a main building, three stories high, containing a chapel, a study hall, two society halls, and seven recitation rooms; four modern dormitory buildings; a gymnasium erected in 1911; a science hall opened in 1916; five residences for professors, and a library of 15,000 volumes. Productive endowments total \$200,000; unproductive endowments, about \$100,000; endowment pledges, over \$600,000. In addition, the two Alabama conferences levy an annual assessment on their members of \$20,000

for the maintenance of the college. The college offers courses leading to the undergraduate degrees of Bachelor of Arts and Bachelor of Science, and to the graduate degree of Master of Arts. Several scholarships and medals are awarded. Under certain conditions, special courses may be pursued. Pre-medical and preparatory courses for other professions are available. Extension courses in Spanish, Education, Religious Education, Accounting and Journalism are given. The college also maintains a summer school. The total student enrollment for the year 1922-23 was 797. The faculty numbers 40 members. Dr. Guy Everett Snively is president.

BIRTH RATE. See VITAL STATISTICS.

BISHOP COLLEGE, a Baptist co-educational institution for colored students founded in 1881 and located at Marshall, Texas. In 1922-23 it had a faculty of 20 members, 336 students, property valued at \$300,000 and an income of \$100,000. Charles H. Maxson, B.S., is president.

BJERREGAARD, Carl Henry Andrew, American librarian and author: b. Fredericia, Denmark, 24 May 1845; d. New York City, 28 Jan. 1922. He studied at Fredericia College and thereafter at the University of Copenhagen from which he was graduated in 1863. In 1866 he was graduated from the Military Academy of Denmark and then served as lieutenant in the Danish Army for five years. Thereafter, he was professor of botany at Fredericia College for two years, resigning to join the Danish Legation to the Court of Russia with which he also served two years. He came to the United States for political reasons in 1873 and in 1879 was made librarian of the Astor Library, now the Astor Branch of the New York Public Library. He was still a member of the New York Public Library staff at the time of his death. He was an authority on mysticism and wrote and lectured extensively on that subject. He published: 'Mysticism and Nature Worship' (two volumes); 'Being and the Philosophical History of the Subject'; 'Sufi Interpretation of Omar Khayyām, and Fitzgerald' (1902); 'History and Doctrine of Mysticism' (16 volumes, unfinished); 'Jesus, a poet, a prophet, a mystic and a man of freedom' (1912); 'The Inner Life and the Tao-Teh-King' (1912); 'The Great Mother' (1913); 'Sufism, Omar Khayyām and Fitzgerald' (1915). He was also a collaborator on the 'Encyclopedia Americana,' 'Standard Dictionary,' 'Jewish Encyclopedia,' and the 'International Encyclopedia.' Holding that youth can be preserved by the adoption of a new productivity, he taught himself painting at the age of 70 and produced a large number of sketches and pictures in oil and water color, drawing entirely from memory and frequently portraying scenes beheld only in his dreams.

BLAST FURNACE PRACTICE. See METALLURGY.

BLINDNESS IN THE UNITED STATES. Statistics compiled by the Bureau

of the Census on the causes of blindness in the United States, and published in the *Journal of the American Medical Association* show that there are 52,567 blind persons in the country, in 35,788 of whom definite information as to the cause of blindness was obtained. In 13,818, or 38.6 per cent of the 35,788 for whom the cause was reported, the blindness was caused by some specific disease of the eye, such as cataract or glaucoma; and in 5,623 cases, or 15.7 per cent, it was a result of some general disease, such as measles, meningitis or scarlet fever. Accidents were responsible for 5,913 cases, or 16.5 per cent of the total. Of this number 1,429 persons lost their sight through explosives or firearms. Cataract, the leading cause, was reported by 4,896, or 13.7 per cent. Glaucoma, ranking next, was reported by 1,932, or 5.4 per cent. Atrophy of the optic nerve was given as the cause by 1,756, or 4.9 per cent. Ophthalmia neonatorum, or "babies' sore eyes," was reported by 1,198, or 3.3 per cent of the total number reported. Recent statistics of admissions to schools for the blind show that there has been a marked decrease in the amount of blindness due to this cause. These figures show that only 14.7 per cent of the new students admitted in 1917-18 were reported blind from ophthalmia, as against 24.2 per cent. of the students then attending who had entered the previous year. This decrease reflects the more general adoption of scientific methods of treatment, and especially the routine use of silver nitrate drops in the eyes of infants. The campaign to eliminate trachoma also appears to be successful.

BLUE MOUNTAIN COLLEGE, a Baptist educational institution for women, founded in 1873 and located at Blue Mountain, Miss. In 1922-23 it had a faculty of 25 members, 225 students, and property valued at \$350,000. Income figures not available for publication. William T. Lowrey, M.A., LL.D., is president.

BLUE RIDGE COLLEGE, a co-educational institution, under the supervision of the Church of Brethren, founded in 1899 and located at New Windsor, Md. Statistics for 1922-23 show a faculty of 22 members, 180 students, property valued at \$187,755 and an income, including aid received from the State of \$45,000. J. Maurice Henry is president.

BLUFFTON COLLEGE, a Mennonite co-educational institution founded in 1900, reorganized as college in 1914 and located at Bluffton, Ohio. In 1922-23 it had a faculty of 25 members, 300 students, property valued at \$496,303.49 and an income of \$66,779.16. Samuel K. Mosiman, Ph.D., Litt.D., is president.

BLUNT, Wilfrid Scawen, English poet, traveller and diplomat: b. Petworth, England, 17 Aug. 1840; d. Shipley, Horsham, Sussex, 11 Sept. 1922. His father, Francis Scawen Blunt, representative also of the ancient Cornish family of Scawen of Molennick, served in the Grenadier Guards. Young Blunt was educated at Stonyhurst and Oscott, and in 1858 entered the diplomatic service, being appointed to the Hague, Frankfurt, Madrid, Paris and Lisbon. He began early to show his love for adventure. When an *attaché* in Madrid he became a pupil of a famous *Matador* and killed bulls in the arena.

He also served again in Frankfurt, thence in Buenos Aires and Berne, but resigned in 1869. In that year he married Lady Anne Noll, daughter of the first Earl of Lovelace, a name of poetic tradition, who, on her father's death, succeeded to the barony of Wentworth and died in 1917. In 1872, on the death of his elder brother, he inherited Crabtree Park. The next 10 years he spent in travel in Arabia, Syria, Persia and Mesopotamia. With his wife he went through Spain on horseback during the Carlist troubles and explored the mountains of Algiers and Asia Minor. In 1876 he took a perilous journey to Mount Sinai and through Mesopotamia into unknown regions beyond. These travels inspired his book, 'The Future of Islam.' He was in Egypt when the military émeute under Arabi occurred in 1881; and he took part in the affair, to the annoyance of the British government, having constituted himself a kind of unofficial plenipotentiary. After Tel-el-Kebir, he was active in Arabi's defense and continued to make himself a medium of communication with Mr. Gladstone. He bought an estate in Egypt and for many years continued to visit it. In 1882 he went to India and championed the Nationalists, as he had done in Egypt. Irish Nationalism next engaged his sympathies. He returned to England and unsuccessfully contested Camberwell as a Tory Home Ruler and in 1886, Kidderminster as a Liberal Home Ruler. In 1887 he was arrested in Ireland for calling a meeting in a proclaimed district and persisting in making a speech. He resisted arrest and made a violent speech at his trial, which ended in imprisonment in Kilmainham Gaol for two months. After that he devoted himself to writing to plead the cause for self-government in Egypt, India and Ireland and for Arabia in exile. His books are full of "indiscretions," private conversation with important personages (who never expected their utterances to appear in print), anecdotes varying in degrees of authenticity, trivial gossip, and notable judgments of insight, fearlessly set forth. In Cairo, Blunt was known as "the mad Englishman." It was said that "he would greedily swallow anything," and that "it was a favorite amusement with certain people to induce an intelligent donkey-boy to pose as a leading native and to pour horrible legends into his sympathetic ear." Lord Cromer's 'Modern Egypt' was in large measure a rejoinder to Mr. Blunt's 'Secret History of the Occupation of Egypt.' The opinion of England is that "Blunt will be remembered ultimately for his poetry." He was a real, even a great poet, and though he was many other things, too, professional diplomatist, politician, agitator, champion of little nations, traveller, diarist, horse-breeder — it was his poetry alone that really counted. He was a various man, wilful, prejudiced to the point of bigotry, a scorner of easy ways and the paths of compromise, a figure of mediæval picturesqueness full of charm and fascination in an age peculiarly adapted to enrage him at every point. 'My country right or wrong,' he improved into 'My country always wrong'; such a bourgeois virtue as patriotism was not for him, and yet he was a patriot on his own lines. Blunt's estate consisted of 2,000 acres.

He was a famous breeder of Arabian horses. His daughter, Judith, Lady Wentworth, married in 1899 the Hon Neville Lytton, son of "Owen Meredith," and grandson of Bulwer-Lytton, the novelist. Blunt's publications include: 'Love Sonnets of Proteus' (1880); 'Future of Islam' (1882); 'The Wind and the Whirlwind' (1883); 'Ideas about India' (1885); 'In Vinculis,' 'A New Pilgrimage' (1889); 'Esther,' 'Stealing of the Mare' (1892); 'Griselda' (1893); 'Satan Absolved' (1899); 'Seven Golden Odes of Pagan Arabia' (1903); 'Secret History of the English Occupation of Egypt' (1907); 'India under Ripon' (1909); 'Gordon at Khartoum' (1911); 'The Land War in Ireland' (1912); 'Poetical Works' (1914) and 'My Diaries' (2 vols., 1919 and 1920).

BOHEMIA, a constituent part of the new Republic of Czechoslovakia, formerly a crown-land of the Austrian-Hungarian Empire. Its area is 20,106 square miles with a population of 6,664,932. About 96 per cent of the population are of the Roman Catholic faith and 37 per cent are German-speaking. In the new republic Bohemia has nine electoral districts for the lower chamber and five for the senate. For production and industry see article CZECHOSLOVAKIA.

BOKHARA, officially the Bokharan People's Soviet Republic, a state of central Asia, bounded on the north by Russian Syr-Daria and Samarkand, south by Afghanistan, east by Ferghana and west by Khiva and the Russian Transcaspia. This state was founded in the 15th century and remained independent until 1866 when a war with Russia resulted in the loss of the Syr-Daria. A further treaty with Russia in 1873 practically made the state a dependency of Russia. In 1919 a revolution resulted in the expulsion of the reigning Amir and a Soviet government was established. The area of Bokhara is 79,000 square miles with a population of 3,000,000. The capital is Bokhara which has 75,000 inhabitants. Other cities are: Karshi, 25,000; Hissar, 10,000; Khuzar, 10,000; Charjui, Karakul and Kermine. Mohammedanism is the religion of the inhabitants. The country produces corn, cotton, hemp, silk, tobacco and fruit. Gold, salt and sulphur are mined. Bokhara exports silk to India and imports green tea, drugs, muslins and indigo. The Russian Trans-Caspian Railway traverses the country from Charjui to Tashkent.

BOLIVIA, an inland republic of South America, bounded on the north and east by Brazil, south by Paraguay and Argentina, and west by Chile and Peru. It has an area of 514,155 square miles and a population according to present estimates of 3,000,000. Of the population, 51 per cent are pure Indians, 27 per cent are mixed and the remainder white and negro. The whites number about 300,000. The principal cities and their populations are as follows: La Paz, the seat of the government, 107,252; Sucre, the capital, 29,686; Cochabamba, 31,014; Potosi, 29,795; Tarija, 11,644; Oruro, 31,360; Santa Cruz, 25,807; Trinidad, 6,096. The president of the republic is Dr. Bautista Saavedra. For administration purposes the republic is divided into

eight departments, three territories, 72 provinces, and 681 cantons ruled respectively by prefects, sub-prefects and corregidores.

Religion.—Roman Catholicism is recognized by the state but other forms are tolerated. Non-Catholics number about 27,000. The state expends annually about \$57,000 on the maintenance of the Church, a goodly part of this sum going toward the propagation of the faith among the Indians.

Education.—Primary education is free and compulsory. In 1922 there were 487 primary schools with 4,321 teachers and 56,470 pupils. There were 31 secondary schools with 187 teachers and 2,700 pupils. There are universities at Sucre and La Paz and there are schools of commerce in the larger centres and some special schools. The state spends yearly for education about \$1,700,000.

Agriculture.—About 5,000,000 acres are under cultivation but primitive methods obtain. Wheat, Indian corn, beans, barley, and potatoes are grown mostly for home consumption while coca, coffee, etc., are grown for export. Rubber is grown also in the territories and the tropical regions in the east of the country.

Mining.—Bolivia is rich in mineral deposits of a varied kind. It is claimed that within her borders may be found every mineral that men seek. The output of tin is about one-fourth of the world total. In addition, copper, silver, lead, zinc, gold, bismuth and antimony are mined in great quantities. There is a great oil field in the eastern part of the republic and development is expected in the next few years.

Trade and Commerce.—Bolivian exports consist mostly of tin, silver and rubber. The imports, consist of foodstuffs, cottons, linens, silks, wearing apparel, hardware, wines and spirits. Official statistics show a marked revival in Bolivian exports during the first six months of 1922. The exportations for the period amounted to 58,873 metric tons, valued at \$17,225,772, as compared with 48,996 tons, worth \$12,393,244, for the first six months of 1921, or an increase of 20 per cent in volume and 39 per cent in value. The biggest factor in this revival was the exports of tin concentrates, the total for the first half of 1922 having been 25,803 metric tons, as compared with 15,319 tons for the same period of 1921. These shipments were due to the increased demand from Great Britain and the United States, and a large part of them were probably from stocks on hand from 1921. It is reported that at the end of 1921 there were between 7,000 and 8,000 tons of tin concentrates on hand at the mines. The recent great rise in the rate of Bolivian exchange has been offset by the rise in the price of tin. Although imports for the first six months of 1922 showed a continued slump, they were beginning to increase during the latter part of the period, owing to the improved exchange situation and the depletion of stocks of imported merchandise. Importations for the period amounted to 49,713 metric tons, valued at \$9,065,859, as compared with 45,040 tons, worth \$15,272,264, for the corresponding six months of 1921, or an increase of 10 per cent in volume and a decrease of 40 per cent in value. Bolivian imports through the port of Arica, Chile, decreased from 29,940,881

pesos in 1920 to 14,226,873 pesos in 1921, while Bolivian exports through that port decreased from 52,165,891 pesos in 1920 to 6,218,179 pesos in 1921 (1 peso=\$0.365). Of the two principal countries supplying Bolivian imports, the United States has lost its lead of 1920 to Great Britain, but was still a close second in 1921, supplying over one-third in weight and nearly one-third in value of the Bolivian imports. Germany retains its position as third. The great shrinkage in American exports to Bolivia, aside from unfavorable dollar exchange, may in part be accounted for by the renewal in Bolivia of former trade connections with Europe and its cheaper goods and to the general business stagnation which has affected all importing countries. In Bolivian importations the United States during 1921 led in lubricating oils, autos, typewriters, machinery, electrical goods, and white sheeting, and had practically a monopoly in dynamite, paraffin paste, and lumber. In the last half year imports of rice, flour, and condensed milk from the United States were much heavier. Great Britain predominated in heavy steel products; cotton, woolen, and leather goods; carpets, and tea, and during the first six months also in sacks for metals. Germany was the chief source of hyposulphate of soda, toys, jewelry, and musical instruments, and also sold considerable quantities of hardware, steel products, aniline dyes, and novelties. India led in sacks for metals in the first six months of 1921, while Peru supplied nearly all of the sugar, kerosene, and gasoline. Since the state has no sea coast the foreign trade passes through the ports of Peru and Chile and some overland via Argentina. England and the United States are the chief buyers of Bolivia's exports.

Communications.—Bolivia has 1,656 miles of railway some of which are state-owned and operated. There are steamer routes on Lake Titicaca. All important cities are connected by cart roads aggregating a total mileage of 2,304. There are about 450 post offices and 4,000 miles of telegraph line. There are several wireless stations and there are about 30,000 telephones.

Banking and Finance.—Issue of notes is now confined to the state national bank, which has a capital of \$20,000,000 and is permitted to issue notes up to 150 per cent of its capital with the proviso that 50 per cent of the issue must be covered in gold. In 1921, the revenue of the state was \$19,625,199 and the expenditure slightly in excess of this amount. The public debt in 1922 amounted to \$29,513,652, of which about \$4,500,000 was external and the remainder internal and floating debt.

Army.—The army is made up of about 4,000 men of all arms. Military service is compulsory for all males from their 19th to their 50th year.

Government.—The executive power is vested in a President who is chosen by popular vote for a term of four years and who is ineligible for re-election. The legislative power is vested in two chambers—the Senate and a Chamber of Deputies. All who know how to read and write possess the suffrage. Senators, in number 16, are chosen for six years, and the 70 deputies are elected for terms of four years. The President is assisted by a cabinet of six departments or ministries—Worship and Foreign

Relations, Education and Agriculture, Public Works and Industry, Finance, Justice, and War and Colonization (Fomento).

History.—The outstanding event in the political history of the republic was the placing of a loan for \$24,000,000 with American bankers the proceeds to be used mainly in railway construction. The plans for the loan resulted in a series of fiery debates in the Congress of Bolivia and certain stipulations regarding the securities were removed from the final contract. The absence of a seaport retards the development of the republic according to the government. The arbitration of the Tacna-Arica dispute between Chile and Peru at Washington and the final settlement was regarded as likely to afford Bolivia independent access to the Pacific. Bitter comments were called forth in the Bolivian press over the prohibition imposed on Bolivia by the Allied powers of Europe forbidding the republic to incorporate German officers in its projected Supreme Military Council. It was expected that the republics of Argentina, Brazil and Chile would use their good offices to relieve Bolivia of this humiliation of her sovereignty. In the autumn the government called for bids for the construction work on the railway from Cochabamba to Santa Cruz. Estimates and plans must be filed by 1 June 1923 and the successful bidder is obliged to deposit 1,000,000 pesos as a guarantee of carrying out the work to its completion. The republic guarantees 8 per cent on the capital invested for a period of 25 years. The Standard Oil Company of New Jersey was awarded a concession of 1,000,000 hectares (2,470,000 acres) of oil lands. This company was successful over its European competitors through the fact that financial leaders of Bolivia were participants in the transaction.

BONNAT, Léon Joseph Florentin, French painter: b. Bayonne, 20 June 1833; d. Paris, 8 Sept. 1922. At an early age he went to Spain and studied painting under Madrazo in Madrid. At the age of 21 he went to Paris and studied under Léon Coignet. Winning the Prix de Rome, he studied four years in Italy. His painting of "Adam and Eve" (1860), was bought by the gallery at Lille and was followed by the "Assumption" and in 1874 by "Christ on the Cross," a commission from the Palais de Justice, Paris. In 1877 his portrait of Thiers brought him fame and this was increased by his portraits of Victor Hugo, Jules Grévy, Don Carlos, Léon Coignet, Dumas and others; from that date he painted many of the leading men of Europe as well as France and America. He was made chevalier in the Legion of Honor and finally given the Grand Cross and made a member of the council of the Legion of Honor. At the time of his death he was president of the French Society of Artists and director of the Ecole des Beaux-arts, as well as its chief professor of painting. Many of Bonnat's works are scattered in our American galleries, both

public and private. The Metropolitan Museum of New York owns several canvases. The influence of Ribera and Velasquez is evident in his style. His collection of paintings worth 5,000,000 francs will go to the Louvre and the museum of Bayonne. Consult Claretie, 'Peintres et sculpteurs contemporains' (1884).

BONUS. See AMERICAN LEGION, THE.

BOOK BINDING AND BLANK BOOK MAKING. Eight hundred and sixty-nine establishments engaged primarily in book binding and blank book making in 1921 turned out products valued at \$63,854,000, as compared with products valued at \$66,021,000 turned out by 865 establishments in 1919. The value of the products turned out by the concerns engaged in this industry in 1914 was \$38,104,000. This industry, in addition to book binding and blank book making, includes also embossing, book gilding, paper ruling, paper cutting, card, book and paper edging, card beveling and bronzing. Of the 869 establishments reported in 1919, 321 were located in New York, 88 in Pennsylvania, 78 in Massachusetts, 74 in Illinois, 45 in Ohio, 41 in California, 33 in Missouri, 24 in New Jersey, 18 each in Michigan and Wisconsin, 14 in Minnesota, 11 each in Indiana and Washington, 10 each in Connecticut and Maryland, 8 in Louisiana, 6 each in the District of Columbia, Iowa and Oregon, 5 each in Maine and Texas, 4 in Utah, while the rest, one, two or three to each of several States, were scattered throughout the country. The number of persons engaged in the industry in 1921 was 20,966, as compared with 25,287 in 1919. Salaries and wages paid in 1921 totaled \$26,209,000, compared with \$26,113,000 in 1919. Materials used in 1921 cost \$19,886,000, compared with \$23,235,000 in 1919.

BOOT AND SHOE INDUSTRY. Statistics compiled by the United States Bureau of Census and made public in December 1922 show that during the 12-month period, from 1 Nov. 1921, to 31 Oct. 1922, there were manufactured in the United States 318,424,917 pairs of footwear (other than rubber), of which 27.4 per cent was men's, 6.8 per cent boys' and youth's, 32.2 per cent women's, 12.2 per cent misses' and children's, 7.2 per cent infants', 2.5 per cent athletic and sporting, 3.1 per cent canvas, and 8.6 per cent all other, including slippers, moccasins, etc. This 12-month output exceeds that of the pre-war year of 1914 (292,666,468 pairs) by 25,758,449 pairs and is only 12,799,711 pairs less than the peak production of 331,224,628 pairs in 1919.

The business depression in 1921 brought down the prices of footwear, which had reached their peak about 1919-20. Retailers reduced their stocks which left many factories with insufficient work; and while the American public bought nearly as many shoes, it refused to pay war prices and the volume of sales measured in dollars marked a low level. Conditions began to improve in the early months of 1922 and by the end of the year, the normal level of the industry had been practically reached.

Boot and Shoe Exports.—The export trade, which was very promising at the opening of the World War, during the past three years

showed a tremendous decline. In 1920, the United States exported 16,842,000 pairs of shoes of all kinds, valued at \$67,145,000. In 1921, the exports dropped to 8,958,000 pairs, valued at \$24,679,000. During 1922 the United States exported to various foreign countries 5,404,662 pairs of leather boots and shoes (1,878,259 pairs of men's, 2,280,065 of women's, and 1,246,338 pairs of children's). Cuba, Canada, United Kingdom, Mexico, and Jamaica were the predominating markets for both men's and women's shoes, and these five countries received in 1921 and 1922, respectively, 1,009,708 and 1,226,468 pairs of men's and 1,121,000 and 1,617,205 pairs of women's boots and shoes of leather. It is most encouraging to note that during 1922 shipments to all of these countries, except Mexico, showed an increase as compared with 1921.

In 1919, the United States Census Bureau divided the shoe industry under three heads—shoe factories, boot and shoe findings and boot and shoe cut stock.

Boot and Shoe Findings.—Under this head are classed articles incidental or accessory to the manufacture, trimming and the care of shoes, such as laces, polishes, shoe trees, rubber heels, arch supports, etc., in fact, practically everything connected with shoes aside from leather. In 1921, the last year for which complete statistics are available, 344 establishments engaged primarily in the manufacture of shoe findings turned out products valued at \$39,117,000, compared with products valued at \$62,825,000 turned out by 427 establishments in 1919. The average number of persons employed by the boot and shoe findings establishments in 1921 was 5,916, compared with 8,941 in 1919. Salaries and wages paid out in 1921 amounted to \$8,568,000, compared with \$10,806,000 paid out in 1919. Materials used in 1921 cost \$22,931,000, compared with \$40,428,000, representing the cost of materials used in 1919. These figures cover only establishments reporting products valued at \$5,000 and more. Of the 344 establishments reported in 1921, 217 were located in Massachusetts, 56 in New York, 15 in Missouri, 12 in New Hampshire, 9 in Pennsylvania, 7 in Maine, 6 in Rhode Island, 5 in New Jersey, 4 each in Ohio and Wisconsin, 2 each in Connecticut and Illinois and 1 each in California, Kentucky, Maryland, Michigan and Texas. According to the Census Bureau, some of the establishments reported in 1919 had gone out of business in 1921, while others had so changed the character of their operation as to require classification in some other industry.

Boot and Shoe Cut Stock.—During 1921, 226 establishments engaged in the manufacture of boot and shoe cut stock turned out products valued at \$72,692,000, compared with products valued at \$161,203,000 turned out by 252 establishments in 1919. Of the 226 establishments reported in 1921, 164 were located in Massachusetts, 12 each in New York and Pennsylvania, 9 in Missouri, 8 in New Hampshire, 6 in Ohio, 4 in New Jersey, 3 in Illinois, 2 each in Michigan and Wisconsin, and one each in Connecticut, Kansas, Maryland and Virginia. Massachusetts, the leading State in the industry, in 1921, produced 55.5 per cent of the total value of the products of that year. The average

number of wage earners employed by the boot and shoe cut stock industry in 1921 was 7,084, compared with 9,715 in 1919. Salaries and wages paid in 1921 totaled \$10,061,000, compared with \$12,453,000 in 1919. Materials used in 1921 cost \$56,923,000, whereas the materials used in 1919 cost \$133,887,000.

As was the case with the trade of the United States, exports of leather boots and shoes from the United Kingdom showed a decided decline in 1921 and 1922 as compared with 1920. However the exports for the first 11 months of 1922 were very much larger than the exports for the corresponding period of 1921. The figures in dozens of pairs for the 11-months period of the three years mentioned are as follows: 1920, 777,713; 1921, 285,623; 1922, 446,661.

BOOTH, Mary Ann Allard, American microscopist; b. Longmeadow, Mass., 8 Sept. 1843; d. Springfield, Mass., 16 Sept. 1922. She was the daughter of Samuel Colton Booth and was educated at Wilbraham Academy, Mass., and by private tutors. She devoted many years to study with the microscope and made photomicrographs of germ-bearing fleas for stereopticon slides during the campaign against the bubonic plague in San Francisco in 1907-09. She travelled extensively to lecture in the United States and Canada and became one of the most noted women of science. She received medals and diplomas from the New Orleans, Saint Louis and San Francisco Expositions of 1885, 1904 and 1915. From 1905 to 1907 she edited *Practical Microscopy*. She was a member of various societies, including Royal Microscopical Society, London; Royal Photographic Society of Great Britain; American Microscopical Society; New York Microscopical Society; Photographers Association of America, and American Association for the Advancement of Science. Her home was in Springfield, Mass.

BORAH RESOLUTION. See PEACE AND ARBITRATION, INTERNATIONAL.

BORGLUM, Solon Hannibal, American sculptor; b. Ogden, Utah, 22 Dec. 1868; d. 31 Jan. 1922. He spent his youth in Fremont, Neb., and his early manhood on a cattle ranch. At the age of 24 he turned to art, spent two years with his brother Gutzon in California, and in 1895 entered the art school of Cincinnati. His first group, a 'Horse Pawing a Dead Companion,' won a special prize, and in 1897 he won a scholarship which took him to Paris. There he studied under Louis Rebisso and Frémiet. He achieved honorable mention with his 'Lame Horse' in the Salon of 1899, and attracted much attention by the originality of his subjects, taken from the life on the Western frontier, which he himself had experienced. His art has perpetuated vanishing types—the cowboy, the ranchman, Indian and the animals of the plains, with truth and inspiration and shows little French influence, even in technique. After 1900 he was active in New York. He became a member of the National Sculpture Society in 1901 and was made an associate of the National Academy in 1911. Among other awards he received a silver medal from the Pan-American Exposition of 1901, and a gold medal at Saint Louis in 1904. Among his principal works are 'On the Bor-

ders of White Man's Land' and 'Bulls Fighting' (Metropolitan Museum, New York); busts of C. A. Schieren, Simon Newcomb and the Packer Memorial (Brooklyn Institute Museum); equestrian statue of General Gordon (Atlanta, Ga.); 'Soldiers and Sailors' Monument (Danbury, Conn.); 'Stampede of Wild Horses' (Cincinnati Museum); 'The Last Roundup' (Metropolitan Museum, New York); 'Burial on the Plains'; 'Tamed'; 'Just Born'; 'Evening'; and 'The Bucking Broncho.' His later works include an equestrian statue of Captain O'Neill (Prescott, Ariz., 1907); portrait reliefs of Civil War generals in the Vicksburg National Park and 'Private Jones of the Confederate Army,' a bronze statue in Lynchburg, Va. During the World War he served in the Y. M. C. A. section with the French Army in 1918, and was awarded the Croix de Guerre for courage under fire. Later, he did educational work with the American Expeditionary Forces.

BORNEO. See BRITISH NORTH BORNEO.

BOSNIA AND HERZEGOVINA, former territories of Austria-Hungary, since 1918 a constituent part of the Kingdom of the Serbs, Croats and Slovenes (Jugoslavia). The area is 20,709 square miles with a population of 1,931,802. For production and industry see article on JUGOSLAVIA.

BOSTON COLLEGE, a Roman Catholic educational institution for men located at Newton, Mass. It was founded in 1863. In 1922-23 it had a faculty of 38 members, while the students enrolled numbered 883. The college property is valued at \$1,500,000. Income figures for the current year were not available. Rev. William Devlin, S.J., is president.

BOSTON UNIVERSITY, a non-sectarian coeducational institution, founded in 1869 and located at Boston, Mass. In 1922-23 it had a faculty of 367 members, a student enrollment of 8,906 (as of November 1922), property valued at \$5,644,135.25 and an income of \$1,293,616.67. Lemuel Herbert Murlin, LL.D., is president.

BOTANY. The past has shown that progress in agriculture and all of its related plant industries depends largely upon a preceding advance in our knowledge of the physiology of the plant tissues and the plant cell; the relation of the root system to the soil and its available plant foods and the relation of the growth of the plant to various external factors. Investigations, therefore, in the fields of pure physiology and ecology, whether undertaken with reference to some definite economic problem or whether from purely scientific standpoints, have all a most important bearing upon future progress in the agricultural sciences. In agriculture, medicine and the arts, there is a demand for more exact information regarding the functions of plant life, and a demand for a more careful survey of the plant life of all zones, especially the tropics, to find new and valuable plants and plant products.

Exploration.—Since the close of the World War there has been a notable increase in botanical explorations, chiefly in the American tropics. An account of the Mulford Biological Expedition to South America is given by Rusby in the

Journal of the New York Botanical Garden, and in the same journal Britton describes the results of the botanical explorations in Porto Rico, and the further exploration of Guatemala and Salvador is described by Standley; while several illustrated articles picture most vividly the recent explorations in tropical Florida by Small. An additional account of the botanical work of the Mulford Expedition is given by White in the July number of the *Brooklyn Botanic Garden Record*. Fernald, in *Rhodora*, gives an interesting account of the results of the recent Harvard Expedition to Nova Scotia. One of the most important of recent tropical explorations was the joint expedition sent out by the New York Botanical Garden, the Philadelphia Academy of Sciences and the United States National Museum to Colombia. Most of the collecting was done by Messrs. Pennell and Killip, who brought back over 7,000 numbers of plants, and Hazen, who secured in addition, over 200 photographs of plant life of that region. Medical science will be greatly benefited by the successful search in Cochinchina by Rock for the Chaulmoogra tree, which yields an oil believed to be the only cure for leprosy. An account of this search appears in the *National Geographical Magazine*.

Systematic Botany.—There appears to be few publications of outstanding merit during 1922 upon systematic botany but a large number of important papers of considerable local interest are to be found in various periodicals. There are some important contributions to the knowledge of the flora of the northeastern United States in *Rhodora* by Fernald, Weatherby, Blake, Wiegand and others. C. P. Piper's monograph of the genus *Lupinus* is continued in the *Bulletin of the Torrey Botanical Club* for July, and the belated report of the New York State Botanist (House) for 1919, contains matter relating chiefly to the flora of New York State. In the *North American Flora* (Vol. 33, pt. 1) begins the systematic treatment of the *Carduales* by Rydberg. A monograph of all of the known species of the *Isoetaceae*, a group of fern allies, by Pfeiffer, appears in the *Annals of the Missouri Botanical Garden*. The peltate species of *Peperomia* are treated by Trelease in the *Botanical Gazette* for February. Trelease has also published a second edition of *Plant Materials of Decorative Gardening*, which is a valuable guide to the cultivated woody plants of the Eastern United States, and their use in ornamental planting. Hitchcock has published in the *Contributions of the National Herbarium*, an account of the grasses of British Guiana. In the same publication, Maxon presents his seventh paper upon tropical American ferns, and Blake describes a number of new species from Guatemala and Honduras. In the *Journal of the Arnold Arboretum*, Schneider concludes his 'Notes on American Willows' by a systematic enumeration and key to the species and varieties, and Sargent reviews the 'First 50 Years of the Arnold Arboretum.' Holm's series of papers on the *Cyperaceae* is continued in the February and April numbers of the *American Journal of Sciences*. The botanical account of the Canadian Arctic Expedition of 1913-18 (pt. V), by Holm, contains most important con-

tributions to the morphology, synonymy and geographical distribution of the plants of Arctic America collected by this expedition.

Ecology and Phytogeography.—An interesting geological explanation of the coastal plain element in the flora of the Great Lakes by Peattie, appears in *Rhodora* for April and May; and Setchel, in *Rhodora* for January, gives additional information regarding Cape Cod in its relation to the marine flora of New England. The 10th paper on the phytogeography of the Rocky Mountains, by Rydberg, appears in the *Bulletin of the Torrey Botanical Club*. In the *Botanical Gazette* for March, W. B. MacDougal presents the results of extensive studies in symbiosis in a deciduous forest; in the February number, Woodard treats the subjects of sulphur as a factor in soil fertility, and in the September number, Waterman describes the development of plant communities of a sand ridge region in Michigan. The influence of certain soil factors on the growth of tree seedlings and wheat is discussed by Barrington Moore in *Ecology* for January, and he brings out the fact that the favorable influence of humus in the soil is largely due to its nitrogen content. Valuable additions to our knowledge of root systems is made by Weaver and Crist, in *Ecology* for July, by a study of the relation of hardpan to root-penetration in the Great Plains. Bews, investigating the flora of Southeastern Africa, discusses in *Annals of Botany* for April, the origin, migrations and evolutionary tendencies of the plant life of that region.

Genetics.—A study of the developmental selection in vascular plants by Buchholz, in the *Botanical Gazette* for April, adds valuable data to our knowledge of the causes of variation and mutations. Benedict makes an important contribution to the knowledge of the horticultural varieties of the Boston fern, in the *American Journal of Botany* for March, this being his second paper on genetic studies on *Nephrolepis*.

Physiology.—The distensive agencies in the growth of the cell, by D. T. MacDougal, in the *Proceedings of the Society for Experimental Biology and Medicine*, represents experimental work carried on for the past five years, and shows that substances known to accelerate or facilitate growth, also carry the hydration of living and dead cell masses and of pentosan protein colloidal masses to a point beyond that which may occur in pure water. All substances, not merely the protoplasm, which appear in the cell, must be taken into account in cell mechanics. The actual identity of living matter is not a question of structure but is one of intergraded actions, not one of equilibria but of energetics. Attempts to find separable membranes to protoplasts by dissection and ultramicroscopic methods have ended negatively. It has been possible to construct an artificial cell from which much of experimental value may be possible. In the *Journal of General Physiology*, additional and valuable papers upon direct and indirect determinations of permeability, by Osterhout; the penetration of cations into living cells, by Brooks, furnish further knowledge regarding the mechanics of cell life. A detailed study of the subject of respiration of plants is made by Irwin and Weinstein, and by E. P. Smith, in

the July number of the *American Journal of Botany*. Knudson, in the *Botanical Gazette* for January, studying the subject of nonsymbiotic germination of orchid seeds, concludes that the evidence for the necessity of a fungus for germination has not been conclusively proved, although under conditions of pure culture, germination of the seeds is dependent on the fungus. Doran, in the *Bulletin of the Torrey Botanical Club* for November, in a study of the effect of external and internal factors in the germination of fungus spores, determines among other facts, that the spores of the *Phycomycetes* can germinate at the lowest minimum temperatures, followed in order by the uredinospores, the aeciospores, and the teliospores of the *Uredinales*. Aeciospores have the lowest optimum temperatures for germination, followed in order by uredinospores, conidia of *Phycomycetes*, teliospores, and the spores of the *Imperfect Fungi*. The eighth and ninth papers of William Brown's 'Studies in the Physiology of Parasitism,' in the *Annals of Botany* for January and July, treat respectively of the exomosis of nutrient substances from the host tissue into the infection drop, and the effect on the germination of fungal spores of volatile substances arising from plant tissues, and in the April number Brown also presents a paper on the germination and growth of fungi at various temperatures. A first paper on the moisture relations of some terrestrial algae, by Fritsch, devoted to the report of some general experiments and observations, appears in the January number of the *Annals of Botany*.

Mycology.—An important recent contribution to mycology is a handbook to the larger British fungi by C. Rea, which will be of considerable value to American students. Saito, in the *Japanese Journal of Botany*, publishes a third paper upon the results of researches on atmospheric fungi. In German, has appeared the second edition of Lindau's 'Die Mikroskopischen Pilze,' 225 pages. In the *Annals of Mycology*, Sydow and Petrak contribute an important paper upon several new genera and species of fungi from the American Northwest. In American mycological literature, Krieger, in *Mycologia* gives a brief sketch of the history of mycological illustration in America, concluding that "compared with the output of Europe (it) is negligible." Murrill, in *Mycologia*, continues his monographs of the *Agaricaceae* by four papers devoted to the dark-spored genera. During the past 13 years, Murrill has described and illustrated, chiefly in colors, 249 species of fungi, and an index of the last 11 articles is given in the November number of *Mycologia*. In the *North American Flora* (Vol. 6, pt. 1), Seaver presents a systematic account of the North American species of the *Phyllostictaceae*, and in Vol. 7, pt. 7, Arthur continues the treatment of the North American *Uredinales*, in co-operation with Mains, Bisby and Jackson. Arthur has also a paper on new species of *Uredineae* in the July number of the *Torrey Botanical Club Bulletin*. A study of the known American species of the genus *Clavaria* is presented by Burt in the monographic form in the *Annals of the Missouri Botanical Garden*, and will serve as a guide for further studies and collections in this difficult group.

Plant Pathology.—The value of painstaking investigations into plant diseases and their control over wide areas is increasingly apparent in recent publications. Forest, field and garden crops represent in this country an enormous value, and the application of the most extensive and even costly measures of control is fully justified by the results to be obtained. The rapidly increasing population and its requirements of vast supplies of vegetable foods, is reflected in the great system of applied plant pathology represented by the many State experiment stations, the research work of the agricultural colleges, and of the Federal Department of Agriculture. It naturally follows that both by number of investigators and by published papers, plant pathology assumes a leading position in American botanical literature. Investigations upon rust diseases during the past year continue to lead in number and importance. In addition to purely systematic papers upon the *Uredinales*, mentioned under mycology, Hedgecock and Hunt, in *Mycologia*, discuss certain species of *Coleosporium*, rusts which have their aecial stage upon needles of pines, and other papers upon rusts by Jackson and by Fraser, also appear in *Mycologia*. Spaulding gives a summary of recent investigations upon the White Pine Blister rust, in the United States Department of Agriculture *Bulletin* 957, and Cooper, in *Ecology* for January, gives an account of the ecological life history of certain species of *Ribes* and its relation to the control of the White Pine Blister rust. Raines, in the *American Journal of Botany*, studying the vegetative vigor of the host as a factor influencing susceptibility and resistance to plant disease, with special reference to grain rusts, brings out the fact supporting the theory that lowered vitality does not favor infection and that the vegetative vigor of the host and the virulence of the disease may be in direct relation. Gardner and Kendrick, in the *Botanical Gazette*, present a study of the cause of overwintering of tomato mosaic, in which weed species of *Physalis* and *Solanum* are held largely responsible. The nature and distribution of the "take-all disease" of cereals and grasses, is treated by Kirby in *Phytopathology* for February, and ascribed by Fitzpatrick, in *Mycologia*, to the fungus *Ophiobolus cariceti* (Berk. & Br.) Sacc. The role of insects in the dissemination of plant diseases has long been recognized as important, and in *Phytopathology* for May, the result of past investigations is summarized by Rand, the systematic relations of carriers, by Ball, control problems, by Caesar, and the urgent problems of the future in this line of research, by Gardner. Mason, in the *Annals of Botany* for October, studying the growth and abscission in Sea Island cotton, gives a discussion of the external and internal factors which affect the shedding of bolls and flower-buds in Saint Vincent. The conclusion is drawn that the proportion of shedding over any given period was the result of two opposing factors, the rate at which food was synthesized by the plant, and the rate at which it was utilized in the maturation of the fruit, and that any check in the former caused either by weather conditions, fungus and bacterial disease or by insect depredations, caused the shed-

ding of the bolls, providing the injury was sufficiently pronounced to interrupt the translocation of food into the bolls. The additional literature upon all classes of plant disease and methods of control, by the many investigators in this field, is too extensive to be even briefly reviewed here. Most of this literature is found in the current numbers of *Phytopathology*, publications of the various agriculture experiment stations and of the United States Department of Agriculture, and these papers are carefully reviewed in the *Experiment Station Record*, published by the United States Department of Agriculture. In England, a textbook of 225 pages on the Ascomycetes, Ustilaginales and Uredinales, by Gwynne-Vaughn, is perhaps the outstanding contribution from that country, upon plant pathology during the past year, and will prove of value to American students, since in this country, in spite of the vast amount of valuable literature upon plant pathology, there is a paucity of practical or useful textbooks upon the subject.

Bibliography.—Britton and Brown, 'Illustrated Flora Northeastern United States'; Chamberlain, 'Methods in Plant Histology'; Coulter and Nelson, 'New Manual of Rocky Mountain Botany'; Gager, 'Heredity and Evolution in Plants'; Harshbarger, 'Textbook of Mycology and Plant Pathology'; 'Textbook of Pastoral and Agricultural Botany'; House, 'Wildflowers of New York'; Kelly, 'Some American Medical Botanists'; Livingston and Shreve, 'Distribution of Vegetation in the United States'; Murrill, 'Edible and Poisonous Mushrooms'; Oudemans, 'Enumeratio Systematica Fungorum' (2 vols.); Palladin-Livingston, 'Plant Physiology'; Rankin, 'Manual of Tree Diseases'; Rydberg, 'Flora of the Rocky Mountains and Adjacent Plain'; Small, 'Flora of the Southeastern United States'; Stevens, 'The Fungi Which Cause Plant Disease.'

HOMER D. HOUSE,
State Botanist, The University of the State of New York.

BOWDOIN COLLEGE, a non-sectarian educational institution for men, founded in 1794 and located at Brunswick, Maine. In 1922-23 it had a faculty of 36 members, 502 students, property valued at \$2,802,638.57 and an income of \$231,166.84. Kenneth Charles Morton Sills, LL.D., is president.

BOXING. See SPORTS.

BOY SCOUTS OF AMERICA, an organization similar to the Boy Scouts of Great Britain founded by Sir Baden Powell. Under the name of the Boy Scouts of America, the organization was founded 8 Feb. 1910, and it was incorporated by Act of Congress in June 1916. On 25 November the membership of the organization was 400,601 scouts and 126,396 scout leaders. A campaign was then on to increase the membership. On the same date veteran scout membership was 5,495, five-year men and boys, of which number 383 had been 10 or more years in the movement. Up to 1 November, 2,147 Life, 2,279 Star and 1,578 Eagle badges had been awarded. Awards made during the three years preceding were: In 1921, 2,667 Life, 2,598 Star and 1,306 Eagle badges;

in 1920, 1,610 Life, 1,667 Star and 629 Eagle badges; in 1919, 1,146 Life, 881 Star and 468 Eagle badges. On 1 Jan. 1922, a new uniform was adopted by the organization.

The 12th anniversary of the founding of the movement was celebrated in February, at which time 33 governors, numerous mayors and other public officials took the Boy Scout oath as part of the anniversary observance. During the Conference on the Limitation of Armament, which was held at Washington in the closing weeks of 1921 and the early weeks of 1922, the Boy Scouts of that city served as pages in the conference chamber. An international conference of Scout leaders was held at Paris 22-30 July. It was attended by James E. West, chief Scout executive of the American organization, and Sheldon Whitehouse, Charge d'Affaires, represented Ambassador Myron T. Herrick, a member of the executive board of the Boy Scouts of America. Other representatives of the American organization who attended the conference were Walter W. Head and Clarence M. Howard, members of the executive board, and Lorne W. Barclay, director of the department of education, in charge of Boy Scout camps in France which is conducted under the leadership of the American Committee for Devastated France. The annual meeting of the national council of the organization was held at Chicago 29-30 March.

Camping activities continued throughout the year and approximately 200,000 scouts took advantage of the summer camp privileges. An Indian village encampment was held at Springfield, Mass., in September in connection with the Eastern States Exposition. The second biennial conference of Scouts was held at Blue Ridge, N. C., 12-19 September. Among the foreign representatives present were Capt. Francis Gidney of England, M. Guerin Des Jardins of France and J. A. Stiles of Canada. The birthday of the late Colonel Roosevelt, 27 October, was nationally observed by the Boy Scouts of America, while the Scouts of Manhattan and vicinity participated in their third annual pilgrimage to Colonel Roosevelt's grave at Oyster Bay. The organization participated in the safety first, anti-fly and mosquito, fire prevention, tree planting, wild life conservation and other campaigns carried on during the year.

The officers on 1 Jan. 1923 were: Honorary president, Warren G. Harding; honorary vice-president, Woodrow Wilson; honorary vice-president, William H. Taft; honorary vice-president, William G. McAdoo; honorary vice-president, Daniel Carter Beard; president, Colin H. Livingston, Washington, D. C.; vice-president, Mortimer L. Schiff, New York, N. Y.; vice-president, Milton A. McRae, Detroit, Mich.; vice-president, Benjamin L. Dulaney, Bristol, Tenn.; vice-president, Arthur Letts, Los Angeles, Calif.; national scout commissioner, Daniel Carter Beard, Flushing, N. Y.; treasurer, George D. Pratt, Brooklyn, N. Y.; chief scout executive, James E. West, New York, N. Y.

BRADLEY, Alfred Eugene, American surgeon; b. Jamestown, N. Y., 25 Nov. 1864; d. Montgomery, Ala., 16 Dec. 1922. He took his medical degree at the Jefferson Medical College, Philadelphia, in 1887 and was appointed assistant surgeon in 1888. In 1898 he was major

brigade surgeon of volunteers and was honorably discharged in 1899. In 1902 he became major surgeon, United States Army, and major of the Medical Corps; in 1910 lieutenant-colonel; in 1916 colonel and in 1917 brigadier-general. His rank on retirement was that of colonel. He was military observer with the British on duty at the American Embassy, London in 1916-17 and on 8 June 1917 was appointed chief surgeon American Expeditionary Forces in France to organize medical services of the American forces abroad. He was fellow of the American College of Surgeons and a member of the American Medical Association and Association of Military Surgeons of the United States. Colonel Bradley was buried in the National Cemetery, Arlington, with military honors.

BRADLEY POLYTECHNIC INSTITUTE, a non-sectarian co-educational institution, founded in 1897 and located at Peoria, Ill. In 1922-23 it had a faculty of 81 members, 2,377 students, property valued at \$1,750,000 and an income of \$101,000. Theodore C. Burgess, Ph.D., is president.

BRANNER, John Casper, American geologist and university president: b. New Market, Tenn., 4 July 1850; d. Stanford University, Calif., 1 March 1922. He was graduated from Cornell University with the degree of B. S. in 1874 and in 1885 took his Ph.D. at the University of Indiana. The degree of LL.D. was conferred upon him by the University of Arkansas, Maryville College, and the University of California, and ScD. by the University of Chicago. Shortly after being graduated from Cornell, Doctor Branner went to Brazil and from 1875-77 was geologist of the Imperial Geological Commission of that country; from 1878-79 he was assistant engineer and interpreter of the S. Cyriaco Mining Company, Minas Geraes, Brazil; from 1880-81, special botanist in South America; from 1882-83, agent of the United States Department of Agriculture in Brazil. He then returned to America and from 1883-85 was topographical geologist of the geological survey of Pennsylvania. From 1885-92 he was professor of geology at Indiana University. He was also state geologist of Arkansas, 1887-93. In 1892, he was elected professor of geology at Leland Stanford Junior University and held this professorship until 1915, in the meantime serving as acting president of that institution from 1898-99, vice-president from 1899-1913, and president, 1913-15, having succeeded Dr. David Starr Jordan in the latter position. He was elected president emeritus 1 Jan. 1916. Doctor Branner was the director of the Branner-Agassiz Expedition to Brazil in 1899; a member of the California Earthquake Commission, 1906-07; special assistant to the Geological Survey of Brazil, 1907-08, and directed another scientific expedition to that country in 1911. He was a fellow of the Geological Society of America, serving as president thereof in 1904, and a member also of the Geological Society of London, Société Géologique de France, the National Academy of Sciences, and the Seismological Society of America. He was president of the latter in 1907 and was associate editor of the *Journal of Geology*. He wrote a number of

publications on Brazil, geology and physical geography.

BRAZIL, United States of, a federal republic of South America, consisting of 20 states, a federal district and one territory. The capital is Rio de Janeiro.

Area and Population.—The last census, that of 1920, gives the area and population of the states and territories as follows:

STATES AND TERRITORIES	Population September 1920	Area	Capital
Alagoas.....	990,278	22,577	Maceio
Amazonas.....	499,448	731,363	Manaos
Bahia.....	3,372,901	164,601	San Salvador
Ceara.....	1,436,309	40,241	Fortaleza
Espirito Santo.....	479,188	17,308	Victoria
Goyaz.....	528,879	288,462	Goyaz
Maranhao.....	853,050	177,515	St. Luis
Matto Grosso.....	274,138	532,210	Cuyaba
Minas Geraes.....	5,788,837	221,894	Bello Horizonte
Para.....	992,290	443,789	Belem
Parahyba.....	785,344	28,846	Parahyba
Parana.....	674,113	93,269	Curytiba
Pernambuco.....	1,975,441	49,560	Recife
Piauihy.....	548,250	116,494	Therezina
Rio de Janeiro.....	1,501,969	26,627	Nichtheroy
Rio Grande do Norte.....	552,071	22,189	Natal
Rio Grande do Sul.....	2,138,831	91,310	Porto Alegre
Santa Catharina.....	633,462	20,785	Florianopolis
Sao Paulo.....	4,823,100	112,278	Sao Paulo
Sergipe.....	535,094	15,089	Aracaju
Federal District.....	1,157,873	431	
Territory of Acre.....	104,430	58,672	
Total.....	30,645,296	3,275,510	

Rio de Janeiro, the present capital pending the erection of the new federal capital in the state of Goyaz, has a population of 1,157,873. Other large cities are: Sao Paulo, 504,300; Bahia, 348,130; Pernambuco, 216,484; Belem, 275,167; Porto Alegre, 150,343; Nichtheroy, 86,726; Manaos, 80,931; Fortaleza, 70,000; Maceio, 68,000; Saint Luiz, 57,709; Parahyba, 35,000. Immigration has increased notably in the last decade. In 1920, 71,206 immigrants were admitted, of whom 33,883 were Portuguese, 10,005 were Italians, 9,136 Spaniards and 4,120 Germans. Several boundary disputes with the neighboring republics were amicably settled by treaties in recent years.

Education.—Education is free but not compulsory except in certain municipalities which have enacted compulsory attendance laws. The latest reports give the number of elementary schools as 12,744 in all the states. Of these 85 are federal, 6,985 state and 2,647 municipal schools. In these schools there are 20,590 teachers and 700,120 pupils. There were 327 secondary schools with 30,000 pupils and professional schools to the number of 151 with 19,294 students. There are 30 training schools for teachers. Moreover, there are nine commercial institutions, 11 agricultural schools and 30 industrial schools. There are 12 faculties of law, one in each of the principal centres, also numerous medical and dental schools, three engineering schools and a mining school at Ouro Preto. There is a national university at Rio with 25 faculties. There are many public libraries. Education has made rapid strides since the opening years of the present century.

Religion.—Since the establishment of the republic there has been complete separation of church and state, but at the dissolution the state left all religious edifices and other property to the church together with their productive income. All forms of religion are placed on an equal footing and religious orders are permitted full freedom. Roman Catholicism is the religion of the nation, there being but about 100,000 non-Catholics in the entire country. At present there are five archbishops, one cardinal and 25 bishops. There are 13 seminaries for the training of the clergy.

Judiciary.—There is a supreme federal court in Rio de Janeiro and federal judges in each state. Judges are appointed for life. Justices of the peace and municipal judges with jurisdiction in limited degree are elected for four year terms. A new civil code went into effect in 1917.

Communications.—There are in the republic 17,847 miles of railways of which 9,455 miles are the property of the federal government, 1,527 are the property of the states and 6,231 the property of private owners. Of the federal mileage, 3,980 miles are operated by the government, the remainder being leased. The states of Sao Paulo and Minas Geraes have each over 4,000 miles of railways, Rio has 2,000 miles and Rio Grande do Sul about 1,800 miles. There were in 1922, 54,536 miles of telegraph lines under the control of the government. There are 252,318 miles of telephone line and over 20 wireless stations. The postal service is one of the best and most efficient in the western hemisphere. It is operated at a deficit, the yearly receipts being about \$7,000,000 and the expenditures about \$10,500,000. The merchant marine of Brazil consists of 643 vessels of 450,000 tons of which 588 are steam vessels of 433,000 tons. There is regular steamer service between Rio and New York and between Rio and Lisbon and Liverpool. The navigable inland waterways of the republic aggregate 40,300 miles.

Banking and Finance.—The Caixa de Conversao (Government Exchange Office) had on hand on 1 March 1921 gold to the value of 62,538,352 milreis. The currency unit is the real, but for practical purposes the milreis (1,000 reals or reis) is used. The milreis in 1920 was worth \$0.218 in American currency and \$0.25 in 1919. One thousand milreis is called a conto de reis. The gold milreis has about double the value of the paper milreis as given above. The federal revenue is mainly derived from import duties. On 10 August the President signed a bill fixing expenditures for the year 1922 at 85,931,211 gold milreis and 831,154,762 paper milreis. The totals of the budgeted receipts, as passed earlier in the year, were 92,276,320 gold milreis and 727,673,000 paper milreis. A comparison of the receipts and expenditures as budgeted gives a balance of 6,345,108 gold milreis and a deficit of 103,481,762 paper milreis. Conversion of the gold balance at the rate of 9d. gives 19,035,325 paper milreis, which reduces the paper deficit to 84,446,437 milreis. This deficit is only that shown in the budget tables. On 26 June the Brazilian Minister of Finance, Dr. Homero Baptista, sent the proposed national budget for

the year 1923 to Congress for consideration. The receipts were estimated at 106,586,320 gold milreis and 706,725,000 paper milreis. Of these 90,375,655 milreis are general receipts in gold, 16,210,665 milreis in gold are for special application, 650,215,920 paper milreis for general receipts, and 56,509,080 paper milreis for special application. (1 gold milreis=\$0.5462. On 24 July the paper milreis was quoted at \$0.135.)

The expenditures are estimated at 86,808,488 gold milreis and 771,793,386 paper milreis.

According to information made public in 1922 by the Minister of Transportation the value of railway and port properties owned by the federal government of Brazil is as follows:

	Milreis
Central do Brazil Railway.....	623,692,000
Noroeste do Brazil Railway.....	90,823,778
Oeste de Minas Railway.....	193,167,832
Therezopolis Railway.....	10,158,876
Madeira a Mamore Railway.....	59,157,768
S. Luiz a Therezina Railway.....	39,056,227
Basilio a Jaguarao Railway.....	4,041,808
Rio d'Ouro Railway.....	6,101,597
Sao Pedro a S. Luiz Railway.....	9,287,706
Sao Borja a Santiago branch.....	2,981,866
Sao Sebastiao a Sant' Anna Railway.....	4,587,334
Alegrete a Quarahy Railway.....	2,058,338
Tubarao a Ararangua Railway.....	4,603,616
Port of Rio de Janeiro.....	232,683,321
Properties of the port of Rio (material).....	6,486,543
Fiscalization of the Port.....	3,091,531
Total value.....	1,291,980,142

Agriculture and Forest Products.—Only a fraction of the arable area of the country has been brought under cultivation although this industry is fostered by the federal and state governments. Coffee is the chief crop of the country. It is grown chiefly in the states of Sao Paulo, Rio, Espirito Santo, and Minas Geraes, Sao Paulo being the chief, this state alone supplying over half of the world's supply. The average annual coffee crop is about 12,000,000 sacks of 132 lbs. each. In 1922, the crop was 8,030,000 sacks. Sugar, cotton, yerba mate, tobacco, rubber, cocoa, and nuts are also among the great products of Brazil. Rubber, of which this country furnishes one-half the world supply, comes chiefly from the districts of Manaos and Para. The yearly production of rubber is about 40,000 tons. The cotton crop is being augmented greatly in recent years, the yearly crop being at present about 110,000 tons. In the season 1922-23 it was estimated at 520,968 bales. Bahia and Espirito Santo are the chief producers of cocoa, the annual yield of which is about 65,000 tons. Bahia also produces the bulk of the tobacco crop, the annual yield of which is 54,000,000 kilos (kilo=2.04 pounds). The sugar crop in 1922 was 526,116 tons. Indian corn was grown to the extent of 5,000,000 tons. The livestock industry has received a great impetus of late years through the introduction of pure-breds. The census of 1920 showed 30,705,400 head of cattle, 18,399,000 swine, 10,633,000 sheep, 10,048,570 goats, 7,289,690 horses and 3,207,940 mules. The forest products of Brazil are among the world's greatest. The rubber output has already been dealt with in this article. The lumber industry is now being developed on a large scale. Pine is now an important article of export, about 200,000 tons being sent out of the country yearly.

Mining.—Several states have more or less

BRAZIL

extensive coal deposits, but the coal is of inferior quality. Gold is found but not in great bulk in any one district. There are several diamond mines, the output from which has become a factor in world trade. Of late years oil fields have been discovered and preparations are under way for the exploitation of these. Manganese exports in 1920 totaled 453,737,000 kilos. Monazite, mica, copper, talc, platinum, agate, and rock crystal are found also but in lesser quantities. Regarding the iron and steel industry important developments have taken place during the last year. The basis of this industry is the vast stores of high grade hematite and magnetite ore existing in the state of Minas Geraes and to a lesser degree in other states, including Sao Paulo and Parana. Competent geologists estimate that the total ore content of these fields is between 6,000,000,000 and 12,000,000,000 tons of hematite, a very large proportion of which runs over 60 per cent iron. This is exclusive of the lesser volume of magnetite ores. The chief obstacle to the exploitation of these resources is the lack of an adequate and proper fuel supply for smelting and reduction operations. Electric smelting of recent development has raised high hopes in Brazil where hydroelectric power is abundant but the imperfections of this method for the preliminary reduction of ore makes it doubtful if other fuel can be dispensed with. Another obstacle to the development of this industry is the distance from the seaboard of the ore fields. Moreover, the taxes levied by the several states on exports form a further impediment to the development of this industry.

Manufactures.—Cotton manufacture is the most important textile industry. In 1922 there were 242 cotton mills operating 1,521,300 spindles and giving employment to 108,960 workers. The output was valued at 442,000 milreis. There were 13 silk mills, 35 woolen and 18 jute mills in operation in 1922. Tobacco factories are numerous, there being 2,036 operating last year. There are 118 sugar mills and in the capital there are several flour mills. The total number of industrial establishments in the country is 11,335, capitalized at 665,676,000 milreis and producing goods to the value of 741,536,000 milreis.

Commerce and Trade.—Brazil's exports for the entire year 1922 were valued at 2,084,233,000 milreis and imports at 1,673,909,000 milreis. (Conversion at 7.72 milreis to the dollar—the average rate for the year.) This shows a visible favorable balance of trade of \$53,150,792 for the year. Exports of coffee during the year were valued at \$194,840,155, sugar at \$14,928,627, and cotton at \$13,427,850.

For the 11-month period ended 30 Nov. 1922, the volume of exports from Brazil increased by 175,994 metric tons, or 10 per cent, over the amount exported during the corresponding period in 1921, the total for the first 11 months of 1921 being 1,747,241 tons, as compared with 1,923,235 tons in the same period of 1922. Imports to the end of November 1922 were 2,988,735 metric tons, as against 2,336,481 tons during the first 11 months of 1921—an increase of 652,254 tons, or about 28 per cent. From these figures it will be seen that Brazil imported 1,065,500

tons more than it exported in the first 11 months of 1922, as against an unfavorable balance of 589,240 tons during the corresponding period of 1921.

Import statistics of the Brazilian Bureau of Commercial Statistics covering the first nine months of 1922, show that Great Britain was leading the United States by a little over \$5,000,000 in supplying Brazilian imports. The five leading countries in the Brazilian import trade for the period, with the value of their respective shares, were as follows: Great Britain, \$36,754,208; United States, \$31,736,565; Argentina, \$22,622,461; Germany, \$12,862,411; and France, \$8,711,161. The total value of Brazilian imports for the nine-month period was \$146,078,196. (Conversion at the rate of 7.484 milreis to the dollar—the average rate for the period.)

Government.—For constitution, federal government, etc., see article BRAZIL in 'The Americana.'

History.—During the year the government sponsored an organization for safeguarding the staple products of the republic at home and abroad. This organization is called the Institute for the Permanent Defense of the National Products and is a limited company under official patronage. Its aim is to protect home industries through loans to producers while holding their crops for a better market. Platinum was discovered in Parahyba do Norte and the exploitation of the mine was at once begun. Disturbances occurred in Maranhao and other states over the results of the April presidential elections, the returns of which were very close and caused the partisans of former President Nilo Pecanha to rise in protest when Doctor Bernardes was declared elected. Harmony was restored in June and all parties prepared for the celebration of the first centennial of national independence at the capital in September. Two Portuguese aviators received great demonstrations of welcome in the cities of Pernambuco and Rio over their completion of the crossing of the South Atlantic in April. After meeting disaster at the Sao Paulo Rock the trip was finished in a new plane, the landing being made safely at Pernambuco on 5 June. The congress decided the contest over the presidency in favor of Doctor Bernardes on 6 June. The centennial of Brazilian independence was celebrated with great eclat in September. Secretary of State Hughes headed the mission of the United States to attend the celebration and arrived at Rio on 6 September. On the 7th, the anniversary proper, the festivities began. President Pessoa reviewed some 40,000 troops and marines assembled from every state of the republic and from the visiting foreign contingents. Thirty-three nations were represented at the great three nations were represented at the great state dinner, 17 of which sent special ambassadors or envoys, the others being the regularly accredited diplomats at the Brazilian capital. Messages of congratulation were received from all parts of the world and Mexico made 7 September a national holiday in honor of Brazil. Though opened according to schedule the buildings of the exposition were far from complete. The United States building will later house the American Embassy to Brazil. Seventeen pavilions covered the exposition grounds. The character of the utter-

ances of the American Secretary of State made a very favorable impression on the public opinion of Brazil and on the eve of his departure the Secretary received a visit of a commission representing both houses of the Brazil Congress — an action not extended to the head of any other national mission to the centennial celebration. President Pessoa advised the Congress to enact a law forbidding the acquisition by aliens of land bordering on the frontiers of the republic, as such was deemed a source of national danger. In the autumn the Brazilian Ambassador to the United States made a contract with the American Secretary of State by the terms of which a commission of 17 American naval officers and about an equal number of chief petty officers went to Brazil in November to serve in the reorganization and building of the navy, the commission to remain in Brazil four years. Commander Vogelgesang headed the mission and on his arrival was made vice-admiral of the Brazilian navy. On 15 November President Pessoa was succeeded in the presidency by Senhor Arturo da Silva Bernardes.

Senhor Bernardes has had a remarkable career in Brazilian politics. He was in turn state deputy, federal deputy, secretary of finance of the state of Minas Geraes, and finally president of that state. He distinguished himself as an administrator, and at the 1919 election was chosen as president of the republic, but refused the post on the ground that he was under an obligation to fulfil his programme as head of the Minas Geraes government. Senhor Epitacio Pessoa was thereupon elected.

As president of Minas Geraes, Senhor Bernardes has been the prime mover in a vast number of state improvements, including the creation of schools, scientific institutes, sanatoria, and roads and railways. He has taken the lead in promoting the metallurgical industry, which is of paramount importance to the state. His greatest achievement has been in the direction of finance. He transformed the heavy state deficit into a considerable balance without increasing taxation. His term of office will last until 1926.

BREAD. See FOOD STANDARDS, FEDERAL.

BRENAU COLLEGE, a non-sectarian educational institution for women, founded in 1878 and located at Gainesville, Ga. In 1922-23 it had a faculty of 40 members, 457 students, property valued at \$400,000 and an income of \$233,000. Haywood J. Pearce, Ph.D., is president.

BRERETON, Austin, English journalist: b. Liverpool, England, 13 July 1862; d. Chipperfield, England, November 1922. He began his career as the writer of "Dramatis Personæ" in the *Observer*. At the age of 19 he settled in London, and for the next seven years he was on the staff of the *Stage* as dramatic critic. During that period he also edited *Dramatic Notes* (a journal of his own), and acted as assistant editor of the *Theatre* and other journals. Later he combined art with dramatic criticism, and contributed work of the latter kind to the *Sydney Morning Herald* from 1889-91. Two years later he became dramatic critic and assistant editor of the *Illustrated American* of New York, but continued that combined work for only about a

year. He was dramatic critic of the *Sphere* from 1901 to 1906. Three years later he became manager for H. B. Irving at the Shaftesbury and Queen's theatres, this work lasting till 1911. For many years he was secretary to Sir Henry Irving whose biography he wrote as well as that of H. B. Irving.

BRETHREN, Church of the. See CHURCHES IN THE UNITED STATES, STATISTICS OF THE.

BRICK PRODUCTION. The manufacture of building brick boomed during 1922, as a result of the activity in building. The total consumption was very close to 1,250,000 thousand, the unit in enumerating brick being 1,000 of standard size. The manufacture was slightly less, as stocks were nearly exhausted at the end of the year. The product was divided into 552,383 thousand face brick (the largest figure recorded except in 1916), 131,490 thousand silica and 564,512 thousand clay firebrick. New York prices were \$17 at the beginning of the year, rising to \$20 in February, down to \$18 in April, \$20 in May, \$22 15 May, and \$24 during June, July and August, when demand was greatest. In September the figure was \$23, and shaded off gradually to \$18 at the close of the year. Boston, Philadelphia and Chicago prices took nearly the same course, but were somewhat lower.

BRIDGES. The bridge building of the country in the last few years has been confined mainly to small structures. The concrete bridge for highway crossing of creeks, and for elevating railway tracks above the level of traffic has taken a permanent place in construction and is seen more and more. There have been a few instances of fair-sized bridges being destroyed by freshets undermining the foundations of the arches, and this has led engineers to urge larger appropriations for bridges, permitting them to go down deeper and secure more solid bases. The notable bridges that characterized the industry 20 years ago are not being repeated, and the only large bridge now under way in the Eastern States is the Philadelphia-Camden bridge over the Delaware, which meets a long-felt want. This great bridge is slightly the largest steel wire suspension bridge yet constructed, being 1,750-foot span, with 400-foot towers. The first caisson sunk was 72 by 143 feet and 65 feet high. The supporting cables are 30 inches diameter, or 45 per cent thicker than those of the Manhattan Bridge. The cost when completed will be about \$30,000,000. The coming bridge over the Hudson at Anthony's Nose and Bear Mountain, above Peekskill, is to be of 1,650-foot span, rising 135 feet above the water, thus comparing with great bridges across the East River, New York. It is to be a wire cable suspension bridge, of much the same style as the Manhattan bridge, but owing to the high banks at this point the landings are on a level with the bridge centre. At Springfield, Mass., there was completed in 1922 a bridge over the Connecticut River, of a type that is destined to increased use. It has seven arches, the largest span being 176 feet and is of concrete with reinforcing arched rib supports that take the place of the wooden centring or false work formerly employed. The light steel arches are first posi-

tioned and the concrete built around them. The steel remains in place to strengthen the bridge. Another bridge of this type was built at Oregon City in 1922, with 360-foot arches. A novelty was the final coating of the bridge with concrete thrown on with a cement gun. At Chicago, where the bascule type of drawbridge is favored, two new bridges have been built within the past two years, that carry both surface and elevated tracks, yet which are opened for the passage of river traffic by swinging the two halves high in the air. On the Wells Street bridge, which is the largest, the great leaves weigh 2,500 tons each, plus 1,300 tons of counterweight. At Winnipeg, Canada, there was completed in December 1921 a large and most ornate concrete bridge, so designed that it appears to be of stone blocks. It has 240-foot arches, is 60 feet wide and carries four lines of tracks from Maryland Street. There has been designed an international suspension bridge to connect Detroit with Windsor, Canada. It is not yet under way, but if constructed will rival the Philadelphia bridge. For many years there has been talk of constructing a bridge across San Francisco Bay, between the city of that name and the three cities of Oakland, Alameda and Berkeley on the eastern shore of the bay. The bay at this point is about four miles wide and all traffic is carried on by means of the great ferries of the railroads. The four communities named above have a combined population of about 1,000,000 and are growing at the rate of 5 per cent yearly. There is a great daily movement of people and freight between the east and west shores of the bay, and the resultant congestion is very great, especially during the rush period. The land route is a trip of 100 miles around the shores of the bay. Two engineers requested to report upon the feasibility and probable cost of constructing the bridge early in the year submitted a scheme for a combination of mole, trestle, girder bridge and tunnel. They estimated the cost of this structure at \$40,000,000. In view of the expense involved there is little probability that the project will be carried further in the immediate future, though the engineers estimate that within five years after its completion the receipts from traffic would meet full interest charges on the capital cost of the undertaking. The location recommended is on a line beginning at any convenient point on the San Francisco side between Mission Rock and Potrero Point, running due east across the bay, crossing the site of the proposed naval base at Alameda and terminating at the bridge across Oakland Creek at the foot of Broadway, Oakland. Such a bridge would provide a route about 9.38 miles long between the city halls of San Francisco and Oakland, compared with an airline distance of 8.13 miles.

During the fall the War Department approved plans for the construction of a suspension bridge 3,000 feet long over Carquinez Straits, a narrow arm of water connecting San Pablo and Suisun bays, both estuaries of the northern end of San Francisco Bay. The bridge will cost approximately \$2,500,000. During the year the new North Hill Viaduct, bridging the "valley" in Akron, Ohio, was opened to traffic.

It is a half-mile concrete span and its construction had been hoped for for 20 years.

The most ambitious bridge project the East has ever known is the proposed bridge across the Hudson River from the centre of New York City, probably from the west end of 57th street, to Weehawken, N. J. It has been stated that the bridge, as planned, would be the most stupendous engineering task ever undertaken. The plans, drafted by Gustav Lindenthal, of New York, call for a single span reaching clear across the river without a single pier in between. According to Congressman Ernest R. Ackerman, of New Jersey, who is greatly interested in having the bridge built, eight streets on either side of the bridge will be required to handle the vehicular traffic, estimated at 25,000,000 annually by 1940, coming off this bridge with its 3,000-foot span 150 feet above the river. The steel towers, encased in an outside coat of masonry, will be 685 feet tall. Their base will be 200 by 400 feet. The upper deck will form a solid water-tight, fireproof roof over the lower decks, carrying 12 trunk line railroad tracks for use of heaviest types of railroad locomotives, in addition to subway and elevated railroad tracks. Sixteen lines of vehicular traffic will be provided for on this bridge. The bridge will contain more than 10 times the steel and masonry tonnage of the Quebec bridge, or 450,000 tons, and twice as much as all five East River bridges combined. Early in 1923 it was announced that the Tanana River bridge at Nenana, Alaska, a 700-foot single span, was virtually complete. Another ambitious bridge plan is that for spanning the Mersey at Liverpool, England.

BRIDGEWATER COLLEGE, a coeducational institution of the Church of the Brethren, founded in 1880 and located at Bridgewater, Va. In 1922-23 it had a faculty of 24 members, 216 students, property valued at \$540,000 and an income of \$75,000. Paul H. Bowman, M.A., D.D., is president.

BRITISH COLUMBIA, the only maritime province of Canada on the Pacific Ocean, bordered by Alaska, the State of Washington and the Province of Alberta. It has an area of 355,855 square miles and a population of 524,582 in 1921. The chief cities, with their populations, are as follows: Victoria, the capital, 38,727; Vancouver, the metropolis, 117,217; New Westminster, 14,495; Nanaimo, 9,088; Nelson, 5,230; Prince Rupert, 6,393. The government is administered by a Lieutenant-Governor appointed by the Governor-General at Ottawa, and a Legislative Assembly of 47 members, the latter elected for four years by adult suffrage.

Economic Conditions.—The British Columbia Department of Labor issued an exhaustive report in October 1922 covering the year 1921 and dealing comprehensively with all phases of the industrial situation in this province. The mass of data presented is compiled from figures submitted by 2,275 industrial concerns. During the slump many plants have been closed altogether, others have reduced staff and there have been drastic cuts in wages all around. The decline of the shipbuilding industry on this coast, which had an amazing record during the

war, is one illustration of changed conditions. At the peak of production in 1918 shipbuilding employed 9,980 men at very high wages. There was a steady decline, until in December 1921 only 589 men were so employed. The returns for July 1920 gave a total of 56,935 men employed by 1,869 firms. In January 1921 the 2,275 firms which made returns employed 42,111 men. Making allowances for firms which did not supply data to the department, the report says: "It is probably no exaggeration to say that the industrial employers of the province had 25,000 more men on their pay-rolls in July 1920 than they had in the following January, and 24,000 more than in December last." These figures explain to a large extent the unusually serious unemployment problem which had to be met in 1921-22. In a country of such diversified climate as Canada, there must always be a large number of men whose employment is of a seasonal nature, and on the Pacific Coast there is at all times a certain floating population of unemployed. Despite the somewhat gloomy tale these figures tell it is satisfactory to note that few of the established concerns in staple lines have been swept away by the depression. There have been considerable decreases in wages with the reopening of sawmills, logging and mining camps. In 1920, for instance, there were few logging or mining camps where the wages were less than \$5 a day, less board at approximately \$1.25 a day. In the latter part of 1921 many camps were paying from \$2.75 to \$3 a day with little or no decrease in the deduction for board. Striking a general average covering a large number of trades, the following figures are arrived at as the wages for a full week's work for adult male wage-earners: 1921, \$27.62; 1919-20, \$31.51; 1918-19, \$29.11; 1918 (January to July), \$27.97. See CANADA.

BRITISH EAST AFRICA. See KENYA COLONY.

BRITISH GUIANA, a colony of Great Britain situated on the northeast coast of South America and bounded on the north by the Atlantic Ocean, south by Brazil, east by the Dutch Guiana and west by the Republic of Venezuela. It has an area of 89,480 square miles and a population at the census of 1921 of 297,691. The capital, Georgetown, has a population of 53,422. Of the entire population in 1921 there were 124,546 East Indians. In the same year 224 schools received government assistance aggregating \$258,000. There were 35,037 pupils registered. The revenue of the colony is about \$4,000,000 yearly and the expenditures a similar amount. There are about 200,000 acres under cultivation. Sugarcane, rice and coconuts are the chief crops; but coffee, cacao, rubber and limes are also grown. The livestock industry is in a thriving condition. There are rich gold deposits, the output being valued at \$250,000 yearly. Diamonds valued at \$1,000,000 were recovered in 1920. There are large deposits of bauxite which at present are being appraised by the government geologists. Manganese, mica and oil are also believed to exist. The overseas trade of the colony amounts to about \$53,000,000 yearly and is about equally divided between imports and exports. The chief imports are ma-

chinery, fertilizers, textiles, flour and tobacco. The chief exports are sugar, rum, rice, diamonds, balata, charcoal and timber. The United Kingdom, the United States and Canada are the principal marts for the exports of Guiana and also supply about all the imports. The colony has 100 miles of railway of 4 ft. 8½ in. and 3 ft. 6 in. gauges. There are 75 post offices with 600 miles of telegraph lines. Georgetown and New Amsterdam have telephone systems. The Governor in 1922 was Sir Wilfred Collet. Consult 'Blue Book of British Guiana' (Annual).

BRITISH INDIA. See INDIA, BRITISH.

BRITISH NEW GUINEA. See NEW GUINEA.

BRITISH NORTH BORNEO, a territory consisting of the northern part of the island of Borneo which is under the jurisdiction of the British North Borneo Company. It has an area of 31,106 square miles and a population of 208,183. There are about 350 Europeans and 25,000 Chinese. There are Mohammedan settlers along the coast but the most numerous element is the natives who number about 175,000. The administration is vested in a Governor in Borneo and in a Court of Directors in London. Both Catholic and Protestant churches maintain missions in the region. A railway, 130 miles in length, runs from Jesselton on the coast to Melalap in the hinterland. There is little land under cultivation, the chief sources of commerce and revenue being the exploitation of the natural resources which consist of lumber, gums, rice, rubber, rattans, nutmegs, cinnamon, tobacco, coffee and coconuts. The revenue and expenditures of the territory approximate \$2,000,000 yearly and the external trade which is largely with Hong Kong and Singapore amounts to \$14,000,000 yearly and is about equally divided between imports and exports. The Governor in 1922 was A. C. Pearson.

BRITISH SOMALILAND. See SOMALILAND PROTECTORATE.

BRITISH SOUTH AFRICA. See SOUTH AFRICA, UNION OF.

BRITISH WEST AFRICA, included in this general term are the Colony and Protectorate of Nigeria; the Gambia Colony and Protectorate; the Gold Coast Colony and Sierra Leone (qq.v.).

BROADHURST, Sir Edward Tootal, English manufacturer and philanthropist: b. Manchester, England, 19 Aug. 1858; d. there in 1922. He was educated in Wimbledon and Winchester and in 1876 began his business career in the world of cotton. Under his control the Tootal Broadhurst Lee Company, Limited, became one of the greatest cotton-spinning concerns in England. He was also a director of the London and North-Western Railway, the Atlas Insurance Company and chairman of the Manchester and Liverpool District Bank. The city of Manchester and the whole of Lancashire felt the benefit of his energies, for he was public-spirited and gave largely to charities and institutions. His own firm had an educational system of its own with a director on education with special facilities and scholarships for its employees and a school and institute at Bolton.

His benefactions to the Manchester University were large, both individually and with his firm. He took a prominent part in war work, serving on the Cotton Control Board and under the Ministry of Reconstruction. The large sums of money he contributed to the help of people at home, as well as to the public interests, brought him a baronetcy in 1918. In celebration of peace he gave land for a park and playing-fields at Moston, a suburb of Manchester, valued at £35,000.

BROCK, Sir Thomas, English sculptor: b. Worcester, in 1847; d. London, 31 Aug. 1922. At the age of 19 he went to London and entered the studio of J. H. Foley, one of the leading sculptors of the day. The next year he entered the Royal Academy School and took a gold medal in sculpture, 'Hercules Strangling Antæus' (1869). On the death of Foley he was chosen to complete his unfinished statues—O'Connell and Lord Gough for Dublin and Lord Canning for Calcutta. Then followed half a century of strenuous work, which brought him many honors. He became K.C.B. in 1911. Oxford gave him the degree of D.C.L. He was a member of the Royal Academy; honorary member of the Royal Scottish Academy; honorary associate of the Royal Institute of British Architects, and honorary member of the Société des Artistes Français. Sir Thomas is best known by the 'Queen Victoria Memorial,' in front of Buckingham Palace, which he was commissioned to design in 1901. He was also responsible for the head of Queen Victoria on the 1897 coinage. His portrait statues were numerous; one of the earliest was 'Richard Baxter' (1870) for his native town, for which he made one of 'Rowland Hill' in 1882. His London statues are 'Robert Raikes' (1888) and 'Sir Bartle Frere' (1896). Thames Embankment; 'Sir Richard Owen' (1895), Natural History Museum; 'Gladstone' (1902), Westminster Hall; 'Lord Russell of Killowen' (1904), at the Law Courts; 'Gainsborough' (1906), Millbank; and 'Captain Cook' (1914), in the Mall. India has his 'Sir Richard Temple' and 'Lord Sydenham,' in Bombay; 'Brigadier-General John Nicholson,' in Delhi, and several native dignitaries. Two monumental effigies, 'Lord Leighton,' in Saint Paul's Cathedral, London, and 'Dr. Philpott,' in Worcester Cathedral, extended his fame greatly. His portrait busts are also numerous. The best known of these are 'Longfellow's' for the Poet's Corner, Westminster (1884); one of 'Queen Victoria' (1901), considered one of her best; the 'Marchioness of Westminster' (1881); 'Sir Richard Owen' (1892); 'Sir Henry Tate' (1901); 'King Edward VII' (1911); 'Lord Lister' (1913) for the College of Surgeons; and 'Edwin Abbey' (1917) for the British School at Rome. A colossal figure of the 'Black Prince' was erected at Leeds in 1902, and the Tate Gallery has his 'Moment of Peril,' an Indian warrior on horseback attacked by a serpent (1881); 'Eve' (1898), and 'The Genius of Poetry,' a youthful male figure (1889).

BROOKLYN INSTITUTE OF ARTS AND SCIENCES. The Institute was founded

in 1824 and reincorporated in 1890. It comprises four departments: The Department of Education, Charles D. Atkins, director; the Department of Museums, William H. Fox, director; Department of Botanic Garden, C. Stuart Gager, director, and Department of Biological Laboratory, Charles B. Davenport, director. The educational department arranges addresses, lectures, courses of instruction and concert-tures, throughout the year by important men and eminent artists. Only small fees are charged for these opportunities. The School of Pedagogy is one of the well-known features of the Institute. There were 1,070 students in attendance under 24 instructors during the year 1922-23. The Brooklyn Museum conducts departments in art, ethnology and natural science which are among the finest in the world. There are 30,000 volumes and many pamphlets in its library. The Botanic Garden ranks with the best in the United States. In the four departments there was an enrollment of 10,696 toward the close of 1922, and students at the summer session of the Biological Laboratory numbered 82. Permanent funds of the Institute for the year amounted to \$1,430,395.01. Receipts available for current expenses were \$616,359.56. There were several bequests during 1922. By the will of Mrs. Georgietta H. Proctor, the Department of Education received \$61,000 for the work of its Department of Physics, and the general work of the Institute, \$10,000 by the will of Mrs. Caroline Mather Jackson. The Museum and Botanic Garden also received substantial gifts through the wills of the late A. Augustus Healy and Alfred T. White, both members of the board of trustees and already benefactors of the Institute. There is a branch of the Institute at Jamaica, L. I., with a membership of about 700. The president of the Institute and of the board of trustees is Frank L. Babbott. The headquarters are care of the Brooklyn Academy of Music, Lafayette Avenue, Brooklyn, N. Y.

CHARLES D. ATKINS,
Director, Department of Education.

BROOKLYN POLYTECHNIC INSTITUTE, a non-sectarian educational institution for men, founded in 1853 and located at Brooklyn, N. Y. In 1922-23 it had a faculty of 50 members, 427 day students, 790 evening students, property valued at \$1,363,383.19 and an income of \$241,617.32. Fred W. Atkinson, Ph.D., is president.

BROOM CORN. The 1922 broom corn crop of the United States, according to the final estimate of the Department of Agriculture, was 34,500 tons, valued at \$7,614,000, compared with the 1921 crop, 38,200 tons, valued at \$2,758,000, and the 1920 crop, 36,500 tons, valued at \$4,605,000. The total acreage planted in 1922 was 253,000, compared with 222,000 acres in 1921 and 275,500 acres in 1920. Oklahoma led all States in production with a total yield of 18,000 tons, compared with 23,000 tons in 1921 and 19,200 tons in 1920. Illinois came second with 7,100 tons, compared with 4,440 tons in 1921 and 5,000 tons in 1920.

BROOME, Isaac, American sculptor: b. Valcartier, Lower Canada, 16 May 1835; d. Trenton, N. J., 4 May 1922. He was educated

in Philadelphia and studied art at the Pennsylvania Academy of Fine Arts. After working on the Crawford statues for pediment of the Capitol at Washington and making the statue for W. W. Corcoran's mausoleum in Georgetown, D. C., in 1857, he went to Rome, opened a studio and made much sculpture. He also devoted his attention to art-tiles. In 1860 he returned to Philadelphia, having been elected academician of the Pennsylvania Academy of Fine Arts and the director of the life and antique department, which position he held for three years. A medal for ceramic arts was given to him at the Centennial Exhibition in 1876 and at the Paris Exposition in 1878, to which he had been sent as special commissioner on ceramics from the United States Government and State of New Jersey. Mr. Broome was director of many schools for teaching the fine and industrial arts and sciences; was active in educational, political and industrial reforms and lectured frequently on all these subjects. He was a member of the Ruskin Industrial Co-operative Association and Chautauqua lecturer on ceramic arts. He was also an inventor, originating the Broome Safety Wheel for Automobiles (1909), and the Perfected Rotary Press (1906-07). He was scientific and technical expert of the Lenox, Incorp. (ceramic art), Trenton, N. J. He contributed to magazines and newspapers and was author of 'The Brother' (1890) and 'Last Days of the Ruskin Co-operative Association' (1902).

BROWN, Elon Rouse, American political leader: b. Orleans, Jefferson County, N. Y., 7 Oct. 1857; d. Fox Island, near Watertown, N. Y., 24 Sept. 1922. He was graduated from Brown University in 1876, admitted to the bar and practiced at Watertown until 1920. In that year he opened a New York office and became counsel for a number of corporations. He was delegate to the Constitutional Convention of 1894 and elected to the State Senate in 1898. He served until 1904. He was again elected in 1912 and became majority leader in 1913. In 1915 he headed a legislative committee which made a study of the finances of New York City during the administration of the late Mayor John Purroy Mitchel. After retiring from the Legislature in 1919, he devoted himself to his law practice. Mr. Brown served as counsel in the prosecution of the Socialist Assemblymen who were unseated by the Legislature in 1920. One of his last undertakings was as counsel to the Meyer committee which, in 1921, investigated the administration of the government of New York City and was instrumental in bringing to light evidence tending to show exorbitant waste involved in the leasing and guarding of the city's piers. Mr. Brown had a remarkable memory for the details of legislation. He was an opponent of woman suffrage and of prohibition and made a particular study of finance and the financing of cities. As chairman of the legislative committee to investigate the finances of New York during his second service in the Senate, he acquired the knowledge that qualified him for counsel of the Meyer committee.

BROWN, John, English Congregational minister and author: b. Bolton, Lancashire,

England, 19 June 1830; d. London, 16 Jan. 1922. After a preliminary education in schools in Manchester, he was graduated at London University in 1853. He became a Congregational minister and in 1855 was minister of the Park Chapel, Manchester. From 1864 to 1903 he had charge of the Bunyan Church at Bedford. In 1891 he was chairman of the Congregational Union of England and Wales; in 1878 Congregational Union Lecturer, and in 1899 Lyman Beecher Lecturer at Yale University. His book on 'John Bunyan: His Life, Times and Work' (1885) attracted much attention. He also published 'Lectures on the Book of Revelation' (1866); 'God's Book for Man's Life' (1882); 'The Pilgrim Fathers of New England' (1895); 'Apostolic Succession in the Light of History and Fact' (1898); 'Puritan Preaching in England' (1900); 'From the Restoration to the Revolution' (1904); 'Commonwealth England' (1904); 'The English Puritans' (1910), and 'History of the English Bible' (1911). Yale bestowed on him the degree of D.D. in 1887.

BROWN UNIVERSITY, a non-sectarian educational institution, founded in 1764 and located at Providence, R. I. Both men and women are admitted but there are separate colleges for women. In 1922-23 the university had a faculty of 90 members, 1,250 men students, 420 women students, 130 graduate students and 1,425 students in the extension department. No information was given as to the value of the institution's property or its income. William H. P. Faunce, LL.D., is president.

BROWN-TAIL MOTH. See ENTOMOLOGY, UNITED STATES BUREAU OF.

BRYANT, Sophie, British educator: b. Dublin, 1850; d. near Chamonix, Switzerland, August 1922. She was the daughter of the Rev. Dr. W. A. Willock, who was conspicuous in the Irish national educational movement. After spending her childhood in County Fermanagh, taught by her father, she went to London and entered Bedford College with an Arnott scholarship. At 19 she was married to Dr. William Hicks Bryant of Plymouth, who died the following year. She then returned to her studies and became mathematical mistress of the North London Collegiate School for Girls. In 1881 she was graduated at London with mathematical and natural science honors and three years later was the first woman in the British Isles to receive the degree of doctor of science. In 1895 she became headmistress at North London, from which she retired in 1918. She was appointed to serve on the Royal Commission on Secondary Education in 1894; and in 1900 London University elected her to a seat on the senate, the first woman to be given such an appointment. She was active in educational affairs after her retirement and wrote books on the subject of teaching. She was an enthusiastic mountaineer and made the ascent of the Matterhorn twice. Dr. Bryant left her hotel at Montanvert on 15 August to join a party, which had started for Chamonix, and her body was found a fortnight later. She was much beloved for her high qualities of character and idealism as well as respected for her mental accomplishments.

BRYCE

BRYCE, (VISCOUNT) **James**, British historian and diplomat: b. Belfast, Ireland, 10 May 1838; d. Sidmouth, England, 22 Jan. 1922. His father was James Bryce, LL.D., a distinguished teacher and, for many years, headmaster of the high school, Glasgow, Scotland, who married Margaret, eldest daughter of James Young, of Abbeyville, County Antrim, Ireland. His grandfather, also named James Bryce, was born in Glasgow, but moved to the North of Ireland when still a young man. He was a minister of the Anti-Burgher Secession Church, and left his native city, it is said, under suspicion of entertaining too free opinions in theology. James Bryce, the third, received his preliminary education at the high school, under his father, and thereafter studied at the University of Glasgow. He next passed as a scholar to Trinity College, Oxford, where his career was a brilliant one and from which he was graduated with the degree of A.B. in 1862. The same year he was elected a Fellow of Oriel College, Oxford, and in 1863 he attended Heidelberg University. It was in 1862, when he was but 24 years of age, that he wrote his Arnold prize essay, 'The Holy Roman Empire,' which, when published in book form, became one of his best known works and passed through many editions. It has been extensively used as a textbook and has been translated into German, French and Italian. Before that, in 1859, he had published a volume entitled 'The Flora of the Island of Arran.' In 1867 Mr. Bryce was called to the bar by Lincoln's Inn and he practiced law until 1882. From 1870 until he resigned in 1893 he was Regius Professor of Civil Law at Oxford, one of the oldest scholastic chairs in Europe, having been established about 1546. In 1880 he was elected to Parliament as a Liberal for the Tower Hamlets Division. Up to that time he had been a leading personage at Oxford among academic Liberals. As a journalist he had criticised Lord Beaconsfield's administration, especially its foreign policy. Curiously enough his best work in this connection was done, not in English newspapers, but in the *New York Nation*, then edited by E. L. Godkin. At the general election in 1885 he did not again stand for the Tower Hamlets, but was elected for South Aberdeen and held the seat until 1907. When Lord Salisbury's Government fell at the beginning of 1886, Mr. Bryce was one of the new recruits taken in to fill the gaps in the short-lived Administration that followed, becoming Under-Secretary of State for Foreign Affairs. His opportunities for distinguishing himself, however, were not great for the reason that, at that time the Irish controversy, overshadowed all others. In fact it was a matter of considerable surprise that he had accepted a place in a Home Rule Government, or that, having accepted it, he did not, like Mr. Chamberlain, at once resign when the provisions of the Gladstone bill were disapproved. As did others, however, he rapidly learned to adapt himself to the transformed personality of his leader, and, after the Unionist victory at the general election, became a thorough-going, if somewhat elastic, adherent of Home Rule. When Gladstone formed his fourth administration in 1892 Mr. Bryce was appointed Chancellor of the Duchy of Lancaster

with a seat in the Cabinet; in 1894 he became President of the Board of Trade, a post held by him until the defeat of Lord Rosebery's ministry in January 1895. Just 10 years later, in 1905, he accepted the office of Chief Secretary for Ireland, and discharged the duties thereof until February 1907. He was perhaps the most popular holder of that position in its history, his only close rival being his immediate successor, Augustine Birrell. Meanwhile Mr. Bryce had traveled in South Africa shortly before the rupture with the Transvaal government and in 1897 published his 'Impressions of South Africa' in which he recognized frankly the difficulties between the Boers and the Uitlanders. He was a severe critic of the Anglo-Boer War, the peace terms and the resettlement. He strongly opposed also Mr. Chamberlain's fiscal views. Following his relinquishment of the Chief Secretaryship for Ireland in February, 1907, came his appointment as Ambassador to the United States. At the time he was no stranger to the American people. As far back as 1870 he visited the country and from that time on had been preaching the doctrine of closer friendship between the United States and the British Empire. Furthermore, in 1888, he had published his 'The American Commonwealth,' a monumental work, which was immediately recognized as a classic and the most authoritative book ever written upon the subject. At the time of his death it still held first place in America among the authoritative works on the country's government. Whether the belief that Mr. Bryce's appointment would be highly pleasing to the people of the United States was the primary consideration which actuated Sir Henry Campbell-Bannerman in commissioning him, it is certain that no Englishman, and perhaps no representative of any other foreign country, ever has been so hospitably received as was he when he first arrived at Washington. Furthermore, it is doubtful if any foreign representative or foreign man of letters has been able to so closely identify himself with the life of another nation as did Mr. Bryce during his official visit to America. Occasionally some of his own countrymen referred to him in sneering fashion as "the English Yankee," but the fact remains that he did more for the betterment of Anglo-American relations than any man, or, perhaps any group of men, of his time. When he received his appointment he was without previous diplomatic experience. Notwithstanding that handicap it was not long before he had won acknowledgment as a diplomatist of exceptional ability. Candor was the keynote of his diplomacy. Visitors found him ever willing to discuss freely and openly the international controversies that from time to time threatened the entente between America and Great Britain. In a speech delivered at Williamstown, Mass., in August 1921, one of the last made by him in the United States, he asserted that the world had suffered too much from "secret diplomacy" and predicted that the time would come when "trickery" would vanish from statecraft. Despite the fact that the reciprocity negotiations between the United States and Canada in 1911, with which he had had much to do, came to naught, and despite also the failure of the General Arbitra-

tion Treaty between Great Britain and the United States, with the complications over the Panama Canal tolls, his tenure of office at Washington was a conspicuous success. So much so, that upon his retirement in 1913 the expressions of regret were universal. Upon his return to England in 1914 (he made the trip back home by the Pacific route, traveling around the world) he was created first Viscount of Dechmont, County Lanark. He had refused an offer of a peerage in 1907 because, as he said, he preferred to come to the United States as "plain James Bryce." One of the tasks assigned to Mr. Bryce after the outbreak of the World War was the chairmanship of a commission on "Alleged German Outrages." After a thorough sifting of all of the charges, the commission filed a report holding, that in its opinion, the German army had committed innumerable violations of the laws of humanity in Belgium. One of the first speeches made by Mr. Bryce after his elevation to the peerage was delivered at Manchester, England, on the constitution of the second chamber (House of Lords)—a subject that was to occupy his attention later when in 1917 he was appointed chairman of the Second Chamber Conference by the Prime Minister. He filed his report in the spring of 1918, but at the time of his death the proposals of himself and his colleagues for the reform of the House of Lords had not been acted upon. To the cause of permanent international peace, Viscount Bryce gave the full support of his temperament and authority. Likewise he was an enthusiastic advocate of the League of Nations. His last visit to America was made in the summer of 1921 when he delivered a course of lectures before the Institute of Politics at Williams College, Williamstown, Mass. In a speech delivered in London the same year he referred to the Constitution of the United States as "the greatest single contribution ever made to government as an applied science" and in another part of the same address said: "Freedom in America, as elsewhere, has been at some moments abused, at others undermined or secretly filched away; but the pride in freedom and the trust in the saving and healing power of freedom have never failed her people, and have enabled them many a time to recover what they seemed to be losing. It is by these moral forces that nations live." Bryce, the scholar and diplomat, almost completely overshadowed Bryce, the mountain climber, and many who knew the distinguished Briton had no idea that he was the first person to scale Mount Ararat, a feat theretofore considered impossible, or that he was president of the Alpine Club from 1899 to 1901. He was also an excellent linguist, who spoke the principal European languages with ease, and was one of the most widely traveled men of his day. Another of his books, 'South America: Observations and Impressions,' published in 1912, was based on an extended visit to that country. His last book, 'Modern Democracies,' was published in 1921, when he was 83 years old, and was the fruit of many years of inquiry, travel, reflection and experience. In addition to the positions already mentioned as having been held by Viscount Bryce, he was appointed chairman of the Royal Commission on Secondary Education,

1894; member of the senate of London University, 1893; corresponding member of the Institute of France, 1891 (foreign member, 1904); foreign member of the Royal Academies of Turin and Brussels, 1896, of Naples, 1903, Saint Petersburg, and Stockholm; corresponding member of Società Romana di Storia Patria, 1885; member of Reale Accademia dei Lincei, Rome, 1904; one of the British members of the International Tribunal at the Hague; honorary Fellow of Trinity and Oriel Colleges, Oxford; honorary member of the faculty of law, University of Santiago; trustee of the National Portrait Gallery; and honorary fellow of the Royal Geographical Society. At one time he was president of the British Academy. The honorary degree of LL.D. was conferred on Mr. Bryce by the universities of Edinburgh, Glasgow, Michigan, Saint Andrews, Aberdeen, Jena, California, Leipzig, Buenos Aires, Adelaide, Brisbane and Belfast. The Royal Hungarian University of Budapest conferred upon him the degree of D.P.Sc. The degree of D.C.L. was conferred upon him by Trinity University, Toronto; Harvard University and Princeton University. The following universities conferred upon him the degree of Litt.D.; Victoria, Cambridge, Oxford, and Trinity College, Dublin. In addition to those already mentioned, his published works include: 'Report on the Condition of Education in Lancashire' (1867); 'The Trade Marks Registration Act, with Introduction and Notes on Trade Mark Law,' 'Transcaucasia and Ararat' (1877); 'Studies in History and Jurisprudence' (1901); 'Studies in Contemporary Biography' (1903); 'The Hindrances to Good Citizenship' (1909); 'University and Historical Addresses' (1913); and 'Essays and Addresses on War' (June 1918).

BRYN MAWR COLLEGE, a non-sectarian educational institution for women, incorporated in 1880 and located at Bryn Mawr, Pa. In 1922-23 it had a teaching staff of 61 members, and 463 students. The cost of the institution's buildings and grounds was given as \$1,815,037.88, in addition to which it has investments totaling \$5,596,435.56, par value. Its income for the year from investments amounted to \$229,128.25; tuition fees amounted to \$148,636.03, gross receipts from other sources amounted to \$330,638.62. Marion Edwards Park, Ph.D., is president.

BUBONIC PLAGUE. See PUBLIC HEALTH SERVICE, UNITED STATES.

BUCHTEL COLLEGE OF LIBERAL ARTS. See AKRON, MUNICIPAL UNIVERSITY OF.

BUCKNELL UNIVERSITY, co-educational institution, founded in 1846 and located at Lewisburg, Pa. Four-fifths of the trustees are Baptists. In 1922-23 it had a faculty of 50 members, 950 students, property valued at \$1,000,000. Figures not given as to income. Emory W. Hunt, D.D., LL.D., is president.

BUCKWHEAT. According to the final estimate of the United States Department of Agriculture, the 1922 buckwheat crop of the United States totaled 15,050,000 bushels valued at \$13,312,000, compared with 14,207,000 bushels valued at \$11,540,000 produced in 1921 and 13,142,000 bushels valued at \$16,863,000 produced in

1920. Pennsylvania led in production in 1922 with a total yield of 5,208,000 bushels. New York was second with 4,368,000 bushels and Minnesota was third with 1,050,000 bushels. The 1922 total acreage was 785,000 compared with 680,000 in 1921 and 701,000 in 1920.

BUDGET, United States. See under UNITED STATES.

BUENA VISTA COLLEGE, a Presbyterian co-educational institution, founded in 1891 and located at Storm Lake, Iowa. In 1922-23 it had a faculty of 14 members, 148 students, and an income of \$35,000. Figures not given as to value of property. Dr. Arthur M. Boyd, D.D., is president.

BUFFALO. According to figures supplied by M. S. Garretson, secretary of the American Bison Society, there were in the United States at the close of the year 1922 a total of 3,654 buffaloes, and in Canada and the United States together a total of 11,964. The largest herd of buffalo in the United States is in the Yellowstone National Park and numbered at the close of 1922 600 head. There are 400 head in the herd on the Montana Bison Range and 200 head on the Wichita National Forest and Game Preserve in Oklahoma. Several years ago the Canadian Government established a game preserve of 162,000 square miles at Wainwright, Alberta. Into this 709 buffaloes were turned. In the spring of 1922 the caretakers reported having counted 6,146 buffaloes in this herd and it was anticipated that the calves dropped during the year would increase the herd by from 1,000 and 1,500 head. Besides the buffaloes at Wainwright, Canada also has a herd of 300 head at Elk Island Park and a wild herd on Peace River, estimated at anywhere from 600 to 2,000 head. There are other small herds scattered throughout the Dominion. In 1903 there were but 969 buffaloes in the United States. The increase has been due mainly to the efforts of the American Bison Society.

BUFFINGTON, Adelbert Rinaldo, American army officer: b. Wheeling, W. Va., 22 Nov. 1837; d. Madison, N. J., 10 July 1922. He was graduated from the United States Military Academy, 1861; was brevetted major in 1865, and was commander successively of the United States ordnance depot at Wheeling, W. Va., and of the arsenals in New York, Baton Rouge, Watertown, Mass., Watervliet, Indianapolis, Pittsburgh, Springfield, Mass., and Rock Island. In 1899 he was appointed Chief of Ordnance and was raised to the rank of brigadier-general; was retired in 1901. He invented depressing carriages for heavy guns, light steel artillery and shielded machine gun carriages, novel road and recoil brakes, magazine small arms and parts of small arms; of which all that were used by the United States government were given to it without cost. He was a life member of the Graduates' Association of the United States Military Academy, the Luther Burbank Society and the American Tract Society.

BUILDING. The high cost of materials together with the scarcity of labor almost paralyzed the building industry in the United States during the World War. The housing shortage was universal until it became to be estimated that building was some three years behind the normal demand for new structures. Because of the pressure for accommodations, this industry began to recover from its stagnation sooner than most others; and in the spring of 1921, a considerable increase in building permits was noted. This increase showed an almost steady progression and developed into a real boom in the spring of 1922.

At the end of that year, such authorities as the F. W. Dodge Company, S. W. Straus and Co. and the Copper and Brass Research Association agreed that all records for construction in the United States had been broken. By the Copper and Brass Research Association the total expenditures for building construction in the United States during 1922 was placed at \$4,910,000,000. In addition it was stated there were projected (but not built) other buildings of a total estimated cost of \$2,480,000,000. In other words, in 1922, there was developed, according to the authority mentioned, an actual building program of \$7,390,000,000. Apartment houses constructed during the year, according to the Copper and Brass Research Association, cost approximately \$950,000,000. The amount expended in the construction of churches was approximately \$205,000,000. Dwellings erected cost approximately \$680,000,000; hospitals, about \$230,000,000; hotels, \$640,000,000; industrial buildings, \$655,000,000; office buildings, \$645,000,000; public buildings, \$260,000,000; public garages, \$125,000,000, and schools, \$610,000,000. Despite the enormous amount of money spent during the year in the erection of dwellings, reports made to the National Association of Real Estate Boards indicated that the general housing shortage, which became so acute just after the close of the World War, still existed. One hundred and twenty-one cities out of 184 to which questionnaires were sent by the organization above mentioned reported housing shortages, while 53 reported no shortages and 10 reported only moderate shortages.

In its analysis of the building industry in 1922 the Dow Service Daily Bulletin Reports stated: "National construction touched a first quarter weekly average of \$49,033,000, a second quarter weekly average of \$81,478,000 and a third quarter weekly average of \$71,999,000. The October and November weekly average was \$59,925,000 with plan filings and permits granted in December indicating an average well above \$70,000,000. Contrasting the foregoing figures with the \$40,613,000 weekly average for 1919 and \$48,716,000 weekly average for 1920 and \$28,952,000 first quarter and \$53,130,000 second quarter and \$52,261,000 third quarter and the \$47,178,000 fourth quarter average for 1921, a graphic conception is at once obtained of the true scope of the biggest building era in history. Housing had a gigantic part to play in the accumulation of these totals which gave the building industry the first place in the national prosperity for the year just closed, overflowing into the 30 different industries allied with that of construction. It

represented the construction of 160,000 buildings of all kinds for 1922 as against 110,000 in 1921 and 80,000 in 1920, according to Babson's reports.⁹

While general costs in the building industry at the close of the year were estimated roughly at 25 per cent below the 1920 peak prices, they were then said to be advancing. The cost of building materials was reduced during 1921 and 1922. In April 1922 (and the situation was not materially different at the close of the year) it was 1.55 as compared with the standard of one for 1913. Thus measured, the leading materials in April were rated:

Brick.....	1.72	Pine flooring.....	1.80
Portland cement....	1.48	Window glass.....	1.54
Building sand.....	1.59	White lead.....	1.81
Reinforced bars.....	1.09	Hollow tile.....	1.88
Structural steel.....	.99	Lime.....	2.10
Hemlock (Chi.)....	1.57		

The wage workers in the building industries suffered general reductions, New York unions maintaining the highest figures. In Chicago Judge Landis was called on to arbitrate the wage concessions, and in February 1922, decided on figures representing about 20 per cent reduction for the men. The hourly wages in seven large cities are here given, for the spring of 1922.

	New York wage
Bricklayers.....	\$1 25
Carpenters.....	1 12½
Electrical workers.....	1 12½
Structural iron workers.....	1 12½
Painters.....	1 12½
Plasterers.....	1 25
Plumbers.....	1 12½
Sheet metal workers.....	1 12½
Concrete laborers.....	81½

WAGES IN SIX OTHER CITIES.

	High	Average	Low
Bricklayers.....	\$1 30	\$1 06	\$0 90
Carpenters.....	1 12½	1 04	95
Electrical workers.....	1 10	1 01	90
Structural iron workers.....	1 12½	1 00	90
Painters.....	1 25	96	80
Plasterers.....	1 25	1 08½	90
Plumbers.....	1 10	99	90
Sheet metal workers.....	1 10	97	90
Concrete laborers.....	72½	55	40

Of the money that went into wages for these new buildings, it is interesting to note the division. On average dwellings, spring of 1922, each \$100 paid for wages, was divided as follows:

	Frame dwelling	Brick dwelling
Carpenters.....	\$49 60	\$32 20
Bricklayers.....	6 20	21 50
Hod carriers.....	2 20	6 70
Plasterers.....	7 90	8 80
Plumbers.....	8 70	6 60
Electricians.....	2 60	2 50
Painters.....	10 00	6 30
Laborers.....	6 30	9 90
Others.....	6 50	4 50
	<u>\$100 00</u>	<u>\$100 00</u>

On this date common laborers on buildings are reported to have received as low as 30-40 cents in Akron, 25-30 in Raleigh, N. C., 30 in Baltimore, and 33-40 in Columbus and from 35-50 cents in Washington, Omaha and Louisville.

On 5 December, the Lockwood Committee, appointed by the Legislature of New York, succeeded in bringing about a permanent settlement of the controversy between the rival building laborers' unions, which threatened to embroil 125,000 building craftsmen and tie up construction in New York City. Thus was averted perhaps the most serious labor situation connected with the building industry in the United States in 1922. See also BUILDING AND HOUSING DIVISION OF THE DEPARTMENT OF COMMERCE.

BUILDING AND HOUSING DIVISION OF THE DEPARTMENT OF COMMERCE.

A division of the United States Department of Commerce, formed in July 1921, along general lines suggested in March by the Senate select committee on reconstruction and production, and following a survey of the housing problem and the needs of the construction industry, which was made, with the approval of President Harding, by Secretary Hoover and some of his assistants. The Division endeavors to keep in touch with current housing conditions and with the building situation, with the object of focusing attention on the basic facts and possible remedies for manifest ills. It has, therefore, obtained the assistance in its work of some of the most noted men connected with the construction industry, and has gained the co-operation of many national associations and professional societies in forming and carrying out its program. Furthermore, it has established contacts with different groups in the building industry in many cities, for it has been found that an efficient building industry and good housing depend mainly on the ability of each individual community to handle its own local problems. Construction costs can be materially reduced, for instance, in places where building operations are carried on more evenly throughout the year than is usual in American cities, and where corrupt practices have no foothold in the building industry.

The activities of the Division of Building and Housing in 1922 centered mainly along three lines: (1) statistics and economics; (2) technical service for municipalities; (3) elimination of waste within the construction industry.

1. Statistics and Economics.—The Division works closely with the Bureau of the Census in collecting and publishing statistics on building activities and on prices, production, consumption and stocks on hand of certain principal building materials. Some of these figures appear monthly in the Commerce Department's *Survey of Current Business*; others, such as prices paid for building materials at the place of consumption, are issued in mimeographed form; and still others in graphic charts that are reproduced by trade papers. The uncertainty in the building material market due to temporary fluctuations in prices and production is directly traceable to ignorance of the conditions of supply and demand. It has made accurate estimates of building costs practically impossible, and done much to upset the even course of building operations. Economic studies have been made of tenancy and home ownership, and the Division issues bulletins for the guidance of home buyers and home builders.

2. Technical Service for Municipalities.—

Most building operations are subject in some degree to State or municipal regulations, such as building codes, plumbing codes, housing ordinances, and zoning ordinances. It is universally agreed that such regulation would be far more effective, yet less burdensome, if there were greater consistency on certain points throughout the country and if centralized research were brought to bear on some specific problems.

Building Codes.—The advisory committee on building codes, composed of practicing engineers and architects, appointed by Secretary of Commerce Hoover to work on local building code problems, prepared and printed a 100-page report on 'Recommended Minimum Requirements for Small Dwelling Construction.' This report, wherever possible, is based on the results of experimental work at the Bureau of Standards (q.v.). The officials of over one hundred municipalities were consulted in compiling the first draft, which was subjected to the criticism of about 975 engineers, architects, municipal officials, and representatives of the building industry, before the final text was prepared. The committee consisted of: Ira H. Woolson, chairman, consulting engineer, National Board of Fire Underwriters, New York City; Edwin H. Brown, architect, Minneapolis, Minn.; William K. Hatt, professor of civil engineering, Purdue University; Rudolph P. Miller, former superintendent of buildings, New York City; John A. Newlin, United States Forest Products Laboratory, Madison, Wis.; Ernest J. Russell, architect, Saint Louis, Mo.; and Joseph R. Worcester, consulting engineer, Boston, Mass.

Plumbing Codes.—A special sub-committee on plumbing, composed of sanitary engineers and plumbing experts, issued a tentative report on code requirements for small house plumbing systems. At present some local codes require installations costing 20 per cent more than is required by good safe practice, and it has been difficult for manufacturers of plumbing fixtures to standardize their products on account of these varying requirements. It is hoped that the revised report, to be issued in 1923, will help to remedy this situation. This sub-committee consisted of: George C. Whipple, chairman, professor of sanitary engineering, Harvard University; Harry Y. Carson, research engineer, Birmingham, Ala.; William C. Groeniger, consulting engineer, Columbus, Ohio; Thomas F. Hanley, master plumber, Chicago, Ill.; A. E. Hansen, hydraulic and sanitary engineer, New York City; William J. Spencer, journeyman plumber, secretary-treasurer of building trades department, American Federation of Labor, Washington, D. C.; and Albert L. Webster, consulting engineer, New York City.

Zoning and City Planning.—The spread of zoning and city planning in American cities has been exceedingly rapid since 1916, and in some cities ill-considered schemes have been proposed. The advisory committee on zoning, appointed by Secretary Hoover, composed of distinguished specialists in city planning, real estate, housing, and municipal engineering has issued 'A Zoning Primer,' explaining the elements of zoning in popular style; 'Zoning: A Selected Bibliography'; and 'A Standard State Zoning

Enabling Act,' by the enactment of which States may authorize cities to zone. Work in connection with city planning is also under way. Misplaced construction and the scrapping of new and valuable buildings have been common in American cities as a result of undirected growth and it is the department's position that proper city planning and zoning can do much to avoid such wastes in the future. At the beginning of 1922, 55 cities and towns in the United States had zoning ordinances in effect, while over 100 had adopted such ordinances by the end of the year. In more than 150 cities organized efforts are being made to secure the adoption of zoning. The members of the advisory committee on zoning are: Edward M. Bassett, lawyer; counsel, Zoning Committee of New York, New York, N. Y.; Irving B. Hiett, realtor; ex-president, National Association of Real Estate Boards, Toledo, Ohio; John Ihlder, housing consultant; manager, Civic Development Department of the Chamber of Commerce of the United States, Washington, D. C.; Morris Knowles, consulting engineer, from the Chamber of Commerce of the United States; Pittsburgh, Pa.; Nelson P. Lewis, municipal engineer; National Conference on City Planning and National Municipal League, New York City; J. Horace McFarland, master printer and civic investigator, The American Civic Association, Harrisburg, Pa.; Frederick Law Olmsted, landscape architect; president, American Society of Landscape Architects, Brookline, Mass.; and Lawrence Veiller, housing expert; secretary and director, The National Housing Association, New York City.

3. Elimination of Waste.—The Division of Building and Housing is co-operating with the different elements of the construction industry in their efforts to eliminate waste and provide better housing at less cost. In addition to helping local groups that are endeavoring to eliminate seasonal unemployment, and effect other economies within the construction industry, the division is also making studies of the methods used by builders, and of the best building practice. Houses that are more economical to build and at the same time more livable can be produced through better house plans. In this matter the department of commerce is co-operating with the architects' small house service bureau, which is affiliated with the American Institute of Architects, and which, through its regional divisions, is issuing small house plans suited for the different climates and building materials in the United States. As a means of stimulating the public generally to take an interest in better living accommodations through the exhibits of modern well-furnished homes, the department co-operated in the Better Homes in America campaign, 9-14 Oct. 1922. Volunteer committees equipped and maintained demonstration homes in 961 communities throughout the country. Some of these houses were visited by as many as 20,000 persons.

Building Activity, Material Prices and Labor.—General building activity in 1922 exceeded that of any other year in the past decade. Record breaking residential construction in many cities has furnished the backbone of the revival in building. A record amount of

highway construction, encouraged by Federal aid, also contributed to the large total. The construction of business buildings was active, but that of industrial buildings amounted apparently to less than half of what it did in 1919.

In March, 1922, wholesale building material prices, as shown by the Department of Labor *Index*, reached a recent low level of 155, as compared with 100 in 1913, and advanced 19 per cent by the middle of November, when they stood at 185. The retail building material price index, computed by the Department of Commerce, stood at 168 in April, and had reached 196 in November.

Building trades labor was generally well employed. Wage increases exceeded the number of decreases reported, while some trades in a number of cities received premium wages at certain seasons.

Housing Conditions.—The construction activities of 1922 substantially met the demand for higher-priced houses in many cities, and for the country as a whole more than kept pace with the demand created by increasing population and the razing of old houses. The number of building permits for alterations remained high throughout the year, and the number of individual living accommodations was increased in some measure by means of sub-division and alteration of existing buildings. Rent decreases for higher priced accommodations were reported in New York and a number of other cities.

Relief to the lower income groups through abandonment of old houses for newer ones by the well-to-do does not seem to have been felt yet, and probably will not be felt until there is more building for the middle groups. As yet there are no definite developments in the building situation that promise an early and widespread alleviation of workmen's housing conditions. When the demand for other types of construction begins to slacken, it may be that the great potential demand for low-priced housing will enlist the efforts of the construction industry in bringing suitable living accommodations more nearly within the range of workmen's incomes.

It cannot be said that any revolutionary progress was made in dwelling construction, either in design or methods of construction, during 1922, but the field for such developments is rich, and is attracting the attention of many able men. It is reasonable to expect that continued application of organizing ability and of technical skill, such as was made during 1922, will bring substantial results.

One angle of approach is by local groups which seek to reduce building costs by elimination of corrupt practices, reduction of seasonal peaks in building activity, and in other ways requiring concerted action. In a number of cities, such as New York, Boston, Philadelphia and Portland, Ore., building congresses representing architects, contractors, engineers, material men, labor and other groups, have been organized to carry on such work.

From another side, the architects' small house service bureau, with eight regional bureaus formed out of 13 contemplated, has attracted the efforts of some of the foremost

architects of the country to the small house problem, with substantial results.

The movement for standardization of lumber grades and sizes, and elimination of excess dimensional varieties of windows, doors, mill work and other building material, should also help in keeping down building costs.

A shortage of skilled building trades workers is reported from different cities, and this is confirmed by the 1920 census of occupations. The fluctuations of building activity from year to year and the usual seasonal slumps, undoubtedly have helped discourage young men from learning the building trades, but the situation has aroused the attention of employers, trade unions and the public, and 1922 saw definite accomplishments in many cities throughout the country.

The research work carried on at universities and by different associations of building material producers is steadily making more economical construction possible. The modernization of building and plumbing codes, and the extension of city planning and zoning ordinances in American cities, mentioned above, should all have their effect.

JOHN M. GRIES,

*Chief, Division of Building and Housing,
Department of Commerce.*

BUKOWINA, a former crownland of the empire of Austria-Hungary, which was annexed by Rumania after the fall of that empire in 1918. Bukowina has an area of 4,030 square miles and a population of 800,098. The population includes colonies of Germans and Ruthenians.

BULGARIA, a kingdom of the Balkans, the area of which as at present constituted is 40,656 square miles with a population of 4,861,439. As a result of the Great War Bulgaria lost her Aegean littoral, was compelled to cede Thrace to Greece and the Strumitza line and some territory on her northwest frontier to Serbia. However, the same treaty provided Bulgaria with an outlet to the Aegean. Sofia, the capital, has a population of 154,431. Other large populous centres are: Plovdiv, 63,418; Varna, 50,819; Ruschuk, 41,574; Sliven, 28,695; Plevna, 27,779; Stara Zagora, 25,491; and Choumen, 23,975. The reigning sovereign is Boris III, who succeeded to the throne on the abdication of his father on 3 Oct. 1918.

Religion.—The religious faith of Bulgaria is the Greek Orthodox which since 1870 has been independent of the patriarchate of Constantinople. The ruling body in the church is the synod of bishops. The clergy of all denominations are paid by the state.

Agriculture.—This industry is the main occupation of the people. The land is held in freehold by very many small proprietors, numbers of whom have but five acres or less. About 9,000,000 acres are under cultivation, of which one-fourth is planted to wheat and about 1,500,000 acres to Indian corn. Rye, barley and oats occupy about 500,000 acres each. There are extensive vineyards which yield 10,000,000 gallons of wine in normal years. Tobacco, cotton and sericulture are also crops of importance. The tobacco crop of 1922 amounted to only 18,000 tons—the smallest in four years. The quality, however, was excellent. The last livestock cen-

sus showed 1,900,000 cattle, 925,000 goats and 7,500,000 sheep.

Education.—Education is free and compulsory for children between the ages of 7 and 14. The 'Statesman's Year-Book' gives the following statistics relative to the state schools for the year 1919-20:

SCHOOLS	Number	Teachers		Registration	
		Male	Female	Male	Female
Elementary					
State.....	3,601	5,141	5,675	290,890	214,394
Private.....	1,382	1,686	157	37,654	29,227
Gymnasia					
State.....	396	1,010	1,607	52,857	23,352
Private.....	35	97	28	1,379	585
Incomplete gymnasia					
State.....	33	270	283	9,838	7,079
Private.....	9	10	16	584	448
Complete gymnasia					
State.....	47	852	457	18,146	11,831
Private.....	3	10	20	126	357

In addition there are 36 special schools with an attendance of 7,000. There is a national university at Sofia for higher education. About 35 per cent of the populace are illiterate.

Other Industries.—State aid is granted to several industries. About 485 factories receive this subsidy and nearly one-half of these are engaged in the production or preparation of food-stuffs. Mining of coal is a major industry. The state coal mines produce 700,000 tons yearly or 85 per cent of the total output of the country. Copper, gold, lead, manganese and silver are mined in paying quantities.

Commerce and Trade.—The foreign trade of Bulgaria was \$770,000,000 in 1920, with imports slightly in excess over exports. The foreign trade declined the following year and in 1922 it was but a little over \$300,000,000. Italy, Turkey and the United Kingdom furnish most of the imports, while the United States, Germany, Austria and France are large takers of the exports. Textiles, metals and oils are the chief imports and tobacco, otto of roses and corn the chief exports.

Banking and Finance.—The National Bank of Bulgaria has a capital of 100,000,000 leva, and issues both gold and silver notes. The Postal Savings Bank had on deposit in 1922, 287,000,000 leva. The debt of Bulgaria is as follows: A foreign debt of 3,209,035,000 francs and 24,967,000,000 leva; and an internal debt of 3,947,155,578 leva. The budget for 1922 estimated revenues at \$18,501,000 and disbursements totaling \$17,737,000. On 31 Aug. 1922 the bank-note circulation amounted to 3,874,472,019 leva, an increase of 612,414,000 leva since 31 Aug. 1921. This total circulation is appreciably less, in terms of gold value, than the total gold, silver and paper circulation in 1911, the last normal year in Bulgaria. The floating debt of the government to the National Bank of Bulgaria on 31 Aug. 1922 was 3,947,155,578 leva, an increase of 765,492,000 leva over 31 Aug. 1921. The increase in the floating debt during these 12 months is greater than that in the bank-note circulation by 153,078,000

leva. The leva rose from \$0.00638 on 13 October to approximately \$0.00679 on 8 November, having been as high as \$0.007 on 30 October and 2 November. This improvement may have been induced, partially by the scarcity of money. Little foreign trade was expected in view of the generally disturbed conditions in the Near East, although in Bulgaria the effect was that of optimism. Exports to the United States dropped from \$862,892 (mainly tobacco) in June to the insignificant figure of \$8,701 in July, while imports from the United States showed an increase from \$29,861 to \$42,919.

History.—At the beginning of the year diplomatic relations were resumed with Yugoslavia after long bickering over certain provisions of the Treaty of Neuilly. The deposed ruler, Ferdinand, is forever barred from entering the country, but two of the sisters of the present King, Boris, have been permitted to return to Sofia. The action of the government in imposing burdensome taxation upon foreign corporations was vigorously protested by the Diplomatic Corps. A treaty was concluded with the United States in order to safeguard American interests in view of the many reparations claims against Bulgaria, resulting from the treaty of peace. This treaty was really the after-war settlement with America and equaled a treaty of peace but for the fact that the two countries had not been formally at war. A Greek commission arrived in the country for the purpose of taking over from the Bulgar authorities those archaeological objects seized by the latter in Greek territory during the war and ordered returned by the terms of the peace. A conflict arose between the National University and the Minister of Education over the latter's decree abolishing three letters of the Bulgar alphabet. At the general election held in spring, the Agrarian party scored a substantial victory, winning over 13,000 municipal council seats out of a total of 26,000 seats, the balance going to the Bourgeois and Communist parties. The Reparations Commission exacted a payment of 10,000,000 gold francs before 30 April and another of 30,000,000 to be paid next year.

Great excitement prevailed at the capital when, on 11 March a bomb was exploded in the building of the American Legation. At first it was believed that the outrage was due to Soviet sympathizers, but investigation showed that it was the work of some irresponsible person and was devoid of political significance. The Bulgarian government offered a reward of 50,000 levas for the apprehension of the perpetrator. In May complaint was made by American business men in Bulgaria that the Allied Reparations Commission, made up of British, French and Italians, was discriminating against American business firms and goods. This was a serious matter since the Commission has control of all government expenditure. Anarchists threatened to destroy the American Legation at Sofia unless two labor radicals imprisoned in Massachusetts were released. The economic mismanagement of the Agrarian party government and the failure to secure the promised outlet to the Aegean Sea brought about a situation of complete exhaustion of a potentially rich country and an inability to pay the reparations demanded by the

Treaty of Neuilly. For a time there was danger of a peasant dictatorship under the lead of Premier Stambolisky. The government's anti-bourgeois policy was approved by the congress of the Peasant party, which met at Sofia on 28 May 1922. The congress protested at the proposals of the Reparations Commission to take over the control of the mines, forests and customs revenues. It was seen, however, that these proposals would have to be accepted and the congress adjourned without putting its threatened policies into operation. The burden of the indemnity was increased 13 fold by the depreciated exchange. The indemnity was fixed at 2,250,000,000 gold francs. The first anniversary of the Conscription Labor Law was observed on 13 July. For a certain period of every year all men from 20 to 50 years are liable to take part in public work, and women from 16 to 50 years of age. Thirty thousand workers were conscripted the first year and the budget for these workers showed a profit of over 5,000,000 leva. The government in July banished several of the officers of General Wrangel's Russian army from the country because of the alleged discovery of documents implicating these officers in a plot against the government. Throughout the year the trial of the 12 members of the Radoslavoff war cabinet dragged on. Finally after a session of over 11 months the matter was left to a popular referendum on the guilt or innocence of the accused men to be held on 12 November. A 70 per cent vote of guilty would result in life imprisonment for the accused ministers and a vote of 60 per cent guilty in 10 years' imprisonment, while a 50 per cent vote of guilty would bring a sentence of exile for 10 years. On 5 October it was announced that Bulgaria would remain neutral in the Near East controversy under all circumstances. The deadlock between the government and the Reparations Commission continued to the end of the year, the former claiming that the control over the government revenue sources involved an interference with the sovereignty of the nation.

BULKELEY, Morgan Gardner, American public official and insurance company president: b. East Haddam, Conn., 26 Dec. 1837; d. Hartford, Conn., 6 Nov. 1922. At the age of 15 he entered a mercantile house in Brooklyn, N. Y., and in a few years became a partner in it. When the Civil War broke out he went to the front as a private in the 13th New York regiment and served during the McClellan-Peninsula campaign under General Mansfield at Suffolk, Va. In 1872 he went to Hartford, organized and became president of the United States Bank in that city, and later (1879) was elected president of the Aetna Life Insurance Company, a position he held until his death. For over 30 years he was a prominent figure in local and State politics. He was four times elected mayor of Hartford (1880-88), and in 1889 was elected Governor. At the State election in November 1890, the first gubernatorial election under the new secret ballot law, the Democratic ticket received a considerable plurality over the Republican, but a majority being necessary to elect, there was some doubt whether there had been a choice by the people for Governor or Treasurer. Ac-

cordingly the matter went before the General Assembly, which met in January 1891, and in which the Republicans had a majority of four on joint ballot, the Senate being Democratic. A long contest ensued between the two houses, the Senate claiming the election of the recent Democratic candidates and refusing to recognize in any manner Governor Bulkeley and the other hold-over Republican officials. The matter was finally settled on 5 Jan. 1892, when the State Supreme Court, in the *quo warranto* suit brought against Governor Bulkeley by the Democratic candidate for Governor, found "Morgan G. Bulkeley to be Governor, both *de facto* and *de jure*," and his right to hold over till both houses of the General Assembly should unite in declaring the election of his successor was affirmed. As the two houses could not agree, the Governor remained in office for another full term. In November 1892 the Democratic ticket swept the State. He was United States Senator from 1905 to 1911. He received the honorary degree of A.M. from Yale University in 1889, and the degree of LL.D. from Trinity College in 1917. He was a delegate to the Republican National Conventions of 1888 and 1896; was a member of the Grand Army of the Republic (department commander of Connecticut), a member of the Massachusetts Commandery, Loyal Legion, the Connecticut Society, the Cincinnati Society, the Baronial Order of Runnymede, Mayflower Society, etc.

BÜLOW, Karl von, German field-marshal: b. Berlin, 24 March 1846; d. there, 31 Aug. 1921. As one of Germany's high military officials, Marshal von Bülow at the outbreak of the World War was given command of the German Second Army, which invaded Belgium. On 7 Aug. 1914 he occupied Liège and then advanced to the Marne. During the retreat from the Marne and at the battles of the Aisne, he commanded the First and Seventh Armies, and by many, was held responsible for the failure of the German effort to take Paris. He was raised to the rank of field-marshal on 27 Jan. 1915, the fifty-sixth anniversary of the birth of the former Kaiser Wilhelm II. At his own request he was placed on the retired list in June 1916. Marshal von Bülow's military career began in 1864, when he joined the Second Guards regiment of infantry. He achieved distinction at Königgrätz in 1866. He served through the Franco-Prussian War of 1870 and won the Iron Cross of the second class. He served as a staff officer for a number of years and in 1894 was promoted to colonel of the Fourth Guards regiment. In 1897, he was made a major-general and transferred to the War Office. He was made a lieutenant-general in 1900 and in 1901 was promoted to general, commanding the Guards division. He attained the rank of *generaloberst* in 1912.

BUNDY, Edgar, English painter: b. in 1862; died in London, England, 1922. He was chiefly known as a painter of subjects and historical pictures permeated by a spirit of patriotism and romance. Many of his works are inspired by historical events on the sea. He was only nineteen when his 'Simon Tappertit' (a character in Dickens's 'Barnaby Rudge') was accepted by the Royal Academy. Thereafter he

was a yearly contributor. Among his works are 'The Saucy Arethusa,' 'A Witch,' 'Puritans,' 'Watercress,' 'The Discovery of Grinling Gibbons by John Evelyn, January, 1671,' 'Two Years Old To-Day,' 'A Country Cousin,' 'From Southern Seas,' 'The Spanish Yoke' and 'Finance.' The latter, exhibited at the Academy in 1913, because of its introduction of Jewish characters aroused indignation in the Jewish community in London and a protest was made to the Royal Academy; but Mr. Bundy disclaimed the idea that he was actuated by any anti-Semitic feeling. He was also a capable portrait painter.

BURIAN VON RAJECZ, **Baron Stefan**, Austro-Hungarian diplomat and statesman of Slovak extraction: b. near Pressburg, Hungary, 15 Jan. 1851; d. 20 Oct. 1922. He served in various consular capacities at Alexandria, Bucharest, Belgrade, Sofia and Stuttgart, as Austro-Hungarian Consul-General at Moscow, and as Ambassador to Greece, where he became conversant with the intricacies of Balkan politics. For a time he was Finance Minister of the Dual Monarchy, and succeeded von Kallay in 1903 as chief administrator of Bosnia-Herzegovina. When Count Berchtold resigned as Austro-Hungarian Foreign Minister, in 1915, Burian succeeded him. His appointment at this critical time was interpreted as a desire for important political changes. The World War had been precipitated by the policy of Berchtold, who was now occupied arguing with Italy the latter's territorial demands. Contrary to his convictions, at the instigation of Germany, he finally agreed to the cession of practically all Italian-speaking Austria. Nevertheless, negotiations failed because of Italy's insistence that the transfer should be made at once, and Italy declared war on Austria 23 May 1915. In negotiating the Bulgarian and Turkish alliances with Austria, Burian performed signal service. Regarding the demands of Rumania he was, politically speaking, decidedly apathetic. He strongly opposed Germany in the matter of the Polish problem, and just as strongly favored an Austro-Polish solution. It is typical of his relations with Germany that he considered the latter as ever refusing to practice the policy of partnership which theoretically existed between the two countries. Burian and the political and military leaders of Germany differed still more acutely over the question of peace with the Entente Allies. Burian strongly opposed the possible loss of any southern Austro-Hungarian territory. He went so far as to urge (1915-16) Germany to guarantee Belgian independence, and to give up all idea of western conquests. Serious friction between the German and Austro-Hungarian cabinets resulted. The quarrel was ended by Burian's peace note, dated 12 Dec. 1916, which also constituted his final official important act. Very shortly afterward he gave up his duties and was succeeded by Count Czernin. When the latter resigned, 14 April 1918, Burian was recalled by Emperor Charles. Again, in his official capacity, he strongly antagonized Germany in bending every effort toward the conclusion of a permanent peace. Germany held off until after their great offensive had failed, August 1918, before they would consent even to the principle of an agreed peace. When negotiations

finally were taken up, they proved ineffectual on account of fundamental differences, regarding essentials between the Entente Allies and the Quadruple Alliance. The gap between Burian and the German leaders was still further widened when the former consistently with his previous policy, and in spite of German veto, officially suggested to the belligerent nations (14 Sept. 1918), that negotiations toward a conclusion of hostilities be conducted. The Entente Allies vigorously rejected this proposal, and united in one final victorious drive which crushed all semblance of opposition and paved the way toward the conclusion of separate peace treaties. Burian gave up his office while the clouds still hung heavy over the Austro-Hungarian horizon.

BURLAP. Importations of burlap into the United States during 1922 amounted to a total of 962,000,000 yards compared with imports of 859,000,000 yards in 1921 and the record-breaking total of 1,011,000,000 yards in 1920. Advices received from Calcutta, the great burlap market of the world, early in January 1923, fixed the price of standard lightweight goods at 7.60 cents and the price of standard heavy burlaps at 9.25 cents.

BURLINGAME, **Edward Livermore**, American editor: b. Boston, Mass., 30 May 1848; d. New York City, 15 Nov. 1922. His father, Anson Burlingame, was appointed Minister to China by President Lincoln and took him to Peking as his private secretary. Consequently he left Harvard before graduation, but Harvard in 1901 gave him his M.A. He won a Ph.D. in Heidelberg in 1869. Returning to America he joined the staff of the *New York Tribune*. Subsequently he was on the staff of Appleton's 'American Encyclopedia.' In 1879 he became connected with the publishing firm of Scribner's and in 1884 was made editor of *Scribner's Magazine* revived after several years. He held this position until 1914 when he resigned, but remained with Charles Scribner's Sons as general literary adviser. Columbia made him an LL.D. in 1914.

BURMA, the easternmost province of British India. It has an area of 230,839 square miles and a population of 13,205,564 in 1921. There are several racial groups but the Burman comprises about 9,000,000. Agriculture is the chief occupation of the inhabitants. Rice is extensively grown and is the chief article of export. There are also extensive forests and the export of cabinet woods is important. Cotton is grown and exported. Rangoon and Mandalay are the chief cities respectively of Lower and Upper Burma. The lieutenant-governor in 1922 was Sir R. H. Craddock.

BURTON, **Ernest DeWitt**, American educator and theologian: b. Granville, Ohio, 4 Feb. 1856. He was graduated with the degree of A.B. from Denison University in 1876; from the Rochester Theological Seminary in 1882; studied at the University of Leipzig in 1887 and at the University of Berlin in 1894. The degree of D.D. was conferred upon him by Denison University in 1897; by Oberlin College in 1912 and by Harvard University in 1920. From 1876-79 he taught in academics and public schools; from 1882-83 he was instructor in New

Testament Greek at the Rochester Theological Seminary; from 1883-86 he was associate professor and from 1886-92, professor of New Testament interpretation in the Newton Theological Seminary. He then was made professor and head of the department of New Testament literature and interpretation at the University of Chicago, which position he held until 20 Feb. 1923, when he became acting president of the university in place of Dr. Harry Pratt Judson, who resigned a short while before. From 1892-1920, Doctor Burton was one of the editors (from 1906-13, editor-in-chief) of the *Biblical World*; he was managing editor of the *American Journal of Theology*, 1907-15. He served as oriental educational commissioner of the University of Chicago in 1908-09 and was director of the university libraries of the University of Chicago after 1910. He has published: 'Syntax of the Moods and Tenses in New Testament Greek' (1893); 'Harmony of the Gospels for Historical Study' (with the late W. A. Stevens, 1894, 1904); 'Records and Letters of the Apostolic Age' (1895); 'Handbook of the Life of Paul' (1899); 'Constructive Studies in the Life of Christ' (with Shailer Mathews, 1901); 'Principles and Ideals of the Sunday School' (with Shailer Mathews, 1903); 'Short Introduction to the Gospels' (1904); 'Studies in the Gospel of Mark' (1904); 'Principles of Literary Criticism and Their Application to the Synoptic Problem' (1904); 'Biblical Ideas of Atonement' (with J. M. P. and G. B. Smith, 1909); 'Harmony of the Synoptic Gospels in English' (with Edgar Goodspeed, 1917); 'Spirit, Soul and Flesh in Greek Writings of the Earliest Period to 180 A. D.' (1918); 'Harmony of the Synoptic Gospels in Greek' (with Edgar J. Goodspeed, 1920), and 'Commentary on Paul's Epistle to the Galatians' (1920).

BUSINESS FAILURES. Notwithstanding a more or less general improvement in business conditions, following the depression of 1921, more failures occurred in the United States during 1922, according to records compiled by Bradstreets, than in any other year of the country's history. Liabilities were the second largest recorded. The number of failures in 1922, exclusive of banking suspension and personal bankruptcies, was 23,676 compared with 19,652 in 1921, and 8,881 in 1920, according to R. G. Dun and Company. Liabilities aggregated \$617,896,251 in 1922, compared with \$627,401,883 in 1921, and \$295,121,805 in 1920. The statistics for 1919 were exceptionally favorable, the 6,451 failures of that year being the smallest since 1881 and the indebtedness of \$113,291,237 less than the amounts for all other years back to 1905. Prior to 1922, the maximum in number of defaults was established in 1915, with an aggregate of 22,156, and that high mark was exceeded by 6.9 per cent during the year recently ended. The increase over the total for 1921 was 20.4 per cent, but the liabilities of the past year were 1.5 per cent below those of the earlier period. Commenting upon the business failures of 1922 Bradstreets whose figures differ but slightly from those of R. G. Dun and Company said: "The number in business in 1922 in the United States was 2,074,617, a gain of 1.2 per cent over 1921, but as failures increased 11.9 per cent, the proportion

of those failing to those in business rose to 1.08 per cent, as against ninety-seven hundredths of 1 per cent in 1921, forty-three hundredths of 1 per cent in 1920, and twenty-nine hundredths of 1 per cent in 1919, the latter the lowest percentage ever recorded since compilations of failures were begun. In 1922 the Southern States, with 6,483 failures, 24 per cent of all in the country, led in the list of casualties, as indeed they did in 1921, when they reported 6,161 failures, or 28 per cent of casualties. The Middle Atlantic States, with \$175,515,125, or 25 per cent, of all liabilities, led in the total of failure damage, but whereas every group of States showed more failures than the year before, the Western group, with \$156,137,876, or 24 per cent of all liabilities, alone showed an increase in this direction over 1921."

The following table shows the percentages of change in failures and in liabilities in 1922 as compared with 1921:

	Increase in number of failures	Decrease in liabilities
New England.....	5.3	50.7
Middle Atlantic.....	10.3	12.0
Central-western.....	17.7	*40.0
Northwestern.....	13.6	40.5
Southern.....	5.2	24.0
Far-western.....	31.5	8.0
Total United States.....	11.9	14.3
Manhattan and Bronx.....	5.5	10.0
Canada.....	35.6	12.1

* Increase.

The following table gives the failures by months and quarters for 1922:

1922	Number	Assets	Liabilities
January.....	2,722	\$66,218,132	\$105,773,899
February.....	2,072	41,559,827	66,922,618
March.....	2,297	35,362,139	61,768,569
First quarter....	7,091	\$143,140,098	\$234,465,086
April.....	1,954	\$45,614,287	\$73,085,708
May.....	1,775	27,217,463	48,208,104
June.....	1,660	20,152,404	39,592,368
Second quarter....	5,389	\$92,984,154	\$160,886,180
Six months.....	12,480	\$236,124,252	\$395,351,266
July.....	1,575	\$20,708,453	\$43,120,289
August.....	1,675	19,296,340	36,886,079
September.....	1,460	15,825,563	32,514,510
Third quarter....	4,710	\$55,830,356	\$112,520,878
Nine months.....	17,190	\$291,954,608	\$507,872,144
October.....	1,602	\$20,548,049	\$39,939,509
November.....	1,757	26,553,307	53,299,904
December.....	1,851	25,596,474	45,844,076
Fourth quarter....	5,211	\$73,451,788	\$139,864,410
Twelve months....	22,400	\$364,052,438	\$646,955,633

BUTLER, Howard Crosby, American archaeologist and educator: b. Croton Falls, N. Y., 7 March 1872; d. Paris, France, 15 Aug. 1922. He was educated at Princeton University and at the Columbia School of Architecture and American schools of classical studies in Rome and Athens. He organized and conducted archaeological expeditions in Syria in 1899, 1900, 1904-05, and 1909. In 1905 he was appointed professor of the history of architecture at Princeton. In 1914 he uncovered the great Temple of

Artemis at Sardis, capital of the ancient Lydian empire ruled over at its apogee by King Croesus of fabled wealth, and brought to light treasures of jewelry, pottery, inscriptions and many examples of art and craftsmanship. His last trip was for the Metropolitan Museum of Art, New York, to continue excavations at Sardis, and he died on a visit to Paris from Constantinople. His publications are: 'Scotland's Ruined Abbeys' (1900); 'The Story of Athens' (1902); 'Architecture'; Part II of 'Publications of American Expedition to Syria' (1903); 'Ancient Architecture in Syria' in Division II of 'Publications of Princeton Expedition to Syria.' He also contributed to archaeological journals.

BUTLER, Pierce, American jurist: b. Dakota County, Minn., 17 March 1866. He was graduated at Carleton College, Northfield, Minn., in 1887, studied law and was admitted to the Minnesota bar in 1888. In 1891 he became assistant State's attorney of Ramsey County and in 1893 was elected State's attorney. After serving four years, he retired and engaged in general practice. He soon became general attorney of the Chicago, Saint Paul, Minneapolis and Omaha Railroad. Retained by a group of railroads to look after their interests in connection with the Federal legislation providing for the valuation of railroads, he became a noted authority on railroad questions. Two years ago he was counsel for the government of Canada in the proceedings to determine the price which the Grand Trunk Pacific Railroad Company should be paid for its property when taken over by the government. He was also retained by the city of Toronto to handle its case in fixing the valuation at which its traction system should be bought by the city. In 1910 he was special counsel for the government in the prosecution of the Chicago meat-packers under indictment for violation of the Sherman Act. He has been a regent of the

University of Minnesota for 18 years. President Harding appointed him an associate justice of the United States Supreme Court on 23 Nov. 1922, and his nomination was confirmed, after much discussion, by the Senate on 21 Dec. 1922. Mr. Butler is a Democrat and a Roman Catholic. He succeeded Justice William R. Day, resigned.

BUTLER UNIVERSITY, a Christian-Disciples of Christ co-educational institution, founded in 1855 and located at Indianapolis, Ind. In 1922-23 it had a faculty of 40 members, 1,011 students, property valued at \$252,742.54 and an income of \$180,000. Robert Judson Aley, Ph.D., LL.D., is president.

BUTTER. See COLD STORAGE; DAIRY PRODUCTS; FOOD STANDARDS, FEDERAL.

BUTTERFIELD, Ernest Warren, American educator: b. Weathersfield, Vt., 7 June 1874. After attending the local elementary and secondary schools he entered Dartmouth College from which he was graduated with the degree of A.B. in 1897. In 1921 New Hampshire College conferred upon him the degree of LL.D. From 1897 to 1910 he held high school principalships in Bethlehem, N. H., Groveland, Mass., Laconia, N. H., and Dover, N. H. He then became superintendent of schools in Dover and held this position until 1915 when he was made deputy superintendent of public instruction for the State of New Hampshire. Two years later he was made State Commissioner of Education for New Hampshire which position he still holds. In 1919 Doctor Butterfield secured a revision of the New Hampshire public school system and in 1921 a codification of the school laws of the State. He is a member of the National Educational Association, the National Council of Education, the American Institute of Instruction, the New Hampshire State Teachers' Association (ex-president), and the Educational Council of New Hampshire.

C

CABBAGE. The United States Department of Agriculture estimated the 1922 commercial late cabbage crop of the United States at 50,060 cars as compared with 27,260 cars in 1921. The acreage for the two years was 64,861 in 1922 and 50,946 in 1921. New York led in production in 1922 with a total of 17,924 cars grown on 24,895 acres; Wisconsin was second with 14,586 cars grown on 16,575 acres. The early 1922 crop was estimated at 15,696 cars and the intermediate crop at 22,074 cars, making a total crop of 87,830 cars. See also **HORTICULTURE**.

CAETANI, Gelasio, Italian Ambassador at Washington; b. Rome, 7 March 1877. His family is one of the oldest in Italy. One of his ancestors—Dominus Constantinus Gaetanus, who lived before the year 1000 A.D.—was granted by the King of Naples vast tracts of land in the Gaeta district, and many privileges. Two popes, Gelasius II (1118-19) and Boniface VIII (1294-1303) were members of this family. His family numbers also many legislators and men of letters, cardinals and military leaders. His father was a member of the Italian Parliament, Senator of the Kingdom and minister for Foreign Affairs in Marquis D'Rudini's Cabinet. His mother was Lady Ada Constance, Duchess of Lathom whom his father married in London. He himself bears the title of Prince. He was graduated as a civil engineer from the University of Rome and then came to America, enrolling as a student at the Columbia University School of Mines from which he was graduated with honors. For several years after leaving Columbia he worked in mines in the West and in Alaska, starting as an ordinary miner and working his way up until he became chief engineer of a mine. In 1913 he went into business for himself in San Francisco under the name of Burch, Caetani and Hershey, consulting engineers. When Italy declared war on Austria he left at once to join the Italian army and as an officer therein, distinguished himself. One of his war episodes suffices to show his military spirit and his gallantry. The Italians had been trying for some time to occupy the peak of a hill called Col d'Lana, which was the key to important positions and had made tremendous sacrifices without being able to reach their aim. Prince Caetani, who in the meantime had become a colonel, decided to blow up the position by digging a tunnel 2000 feet long through the hill and placing a mine underneath the peak. The feat was a very difficult one. A deviation of 10 per cent would have meant complete failure. Assisted by two other engineers and 80 miners,

and often risking his life, he succeeded in blowing up the hill before the time fixed by the Austrians for discharging a countermine. The Italians occupied the position, and the way for the Italian army to more important positions was cleared.

From the Alps Prince Caetani went to Macedonia and thence to the Carso. After the war he was sent by Italy to the Paris Peace Conference. Upon his return home, he started to work towards the redemption of the marshes of the Roman Plain. He was one of the supporters of Fascismo from its inception. He agreed with Mussolini that Italy can regain her prestige and economic independence by working hard, by eliminating strikes, and through strict enforcement of law and order. Mussolini rewarded his attachment in November 1922, by making him Italy's Ambassador at Washington. Upon his arrival in Washington as Ambassador, he said: "I have lived the greater part of my life in America, especially in the Far West and Middle West. I am proud to say that I have acquired American methods and systems."

CALIFORNIA, a Pacific Coast State of the United States lying between Oregon and Mexico. Its area is 158,297 square miles and in 1920 it had a population of 3,426,861, of whom 38,763 were colored, 28,812 Chinese, 71,952 Japanese, 17,360 Indians, and 3,263,711 whites. The census of 1920 showed a foreign-born population of 681,662, of whom 67,180 were Germans, 45,308 Irish, 58,572 English, 16,597 Scottish, 59,556 Canadians, 20,387 French, 88,502 Italian, and 31,925 Swedish, together with lesser groups of Portuguese, Swiss, Russians, etc. The chief cities, with their populations, are: Sacramento, the capital, 65,857; Los Angeles, 576,673; San Francisco, 506,676; Oakland, 216,361; San Diego, 74,683; Berkeley, 55,886; Pasadena, 45,354; and Fresno, 45,086.

Religion.—All the great denominations are well represented in the State as are most of the lesser ones. The larger church groups in the order of their numerical strength are: the Roman Catholic, Methodist, Presbyterian, Baptist and Congregationalists.

Education.—Primary instruction is free and compulsory for at least five months of the year for children between the ages of eight and 16 years of age. In 1920 there were 3,473 primary schools with 15,319 teachers and 500,357 pupils enrolled. In the same year there were 318 public high schools with 5,026 teachers and 162,650 pupils; seven State normal schools with 205 teachers and 2,198 students. There were also 756 teachers and 32,944 children in public kindergartens. The total expenditure on education in 1920 was \$54,228,000.

Charitable and Penal Institutions.—On 31 July 1922, there were 17,714 persons in State institutions as compared with 16,690 on the same

date in 1921. These were distributed as follows:

Industrial Home for the Adult Blind	133
Industrial Farm for Women	25
State reform schools:	
California School for Girls	159
Preston School of Industry	446
Whittier State School	294
State hospitals:	
Agnews	1,794
Mendocino	1,226
Napa	2,540
Norwalk	653
Southern California	2,497
Stockton	2,585
Institutions for feeble-minded:	
Sonoma State Home	1,562
Pacific Colony	30
State prisons:	
Folsom	1,143
San Quentin	2,627
Grand total	17,714

The charitable and penal institutions of the State are administered by a board of six unpaid members appointed by the Governor for a term of four years. The board in 1922 consisted of: president, Charles A. Ramm; vice-president, Carrie Parsons Bryant; John R. Haynes, M.D.; Jessica B. Peixotto; B. H. Pendleton; and Hattie Hecht Sloss.

Finances.—The receipts and disbursements for the fiscal year ending 30 June 1922 were as follows:

Balance on hand July, 1921	\$19,191,846 87
Receipts year ending 30 June 1922	95,764,903 55
Total	\$114,956,750 42
Disbursements year ended 30 June 1922	84,066,708 08
Balance on hand 1 July 1922	\$32,260,029 96

The bonded debt of California at the beginning of 1922 amounted to \$76,124,500. The State has no general property tax, the State government being supported by a tax on the gross receipts of public utilities, express companies, insurance companies, capital stock of banks, etc. The several classes of property assessed in 1921-22 were: real estate, \$2,286,301,355; improvements, \$983,625,375; personal property, \$714,476,947; money and solvent credits, \$53,221,648; making a total value of non-operative property of \$4,037,625,325. To this must be added operative property to the value of \$640,748,308; railroads assessed at \$243,412,852; making a grand total assessed value of \$4,921,786,485.

Communications.—There are 8,356 miles of railroads in the State. The total mileage of public roads in the State, exclusive of the roads within the limits of incorporated cities and towns, is 70,000 miles. The total mileage of the State highway system is 6,400 miles, including approximately 946 miles of special act roads maintained by the State. Roads, improved or contracted for at the close of 1922, had an aggregate length of 3,007 miles. The State highway system is constructed and maintained at the expense of the State. The cost of maintenance is provided for through funds derived from the license fees imposed on motor vehicles. State highway construction has been financed by three bond issues, as follows:

First State Highways Act	\$18,000,000
Highways Act of 1915	15,000,000
Constitutional amendment approved by the electorate, 1 July 1919	40,000,000

The source and amount of funds expended in 1921 were:

State highway bonds	\$9,366,721 09
Motor vehicle fund	3,303,446 76
Special appropriations	25,463 84
Contributions	95,132 96
Federal aid	1,569,154 89
	<u>\$14,359,920 35</u>

For 1922 the highway estimates were as follows:

Highway bond sales	\$12,000,000
Motor vehicle fund	3,500,000
Federal aid	2,500,000
	<u>\$18,000,000</u>

Agriculture and Horticulture.—The last Federal census showed 117,670 farms in the State comprising 29,365,667 acres of which 11,878,339 acres were improved land. The value of these farms was \$3,431,021,861, with an annual product valued at \$587,600,591. The acreage, yield and value of the chief crops in 1922 were as follows:

CROP	Acreage	Yield	Value
Corn	116,000	4,176,000 bu.	\$4,176,000
Wheat	712,000	15,308,000 bu.	17,604,000
Barley	1,152,000	36,864,000 bu.	23,224,000
Oats	150,000	5,250,000 bu.	3,360,000
Hops	9,000	14,760,000 lbs.	1,181,000
Hay (tame)	2,108,000	5,059,000 tons	75,885,000
Hay (wild)	160,000	176,000 tons	1,584,000
Beans	325,000	4,778,000 bu.	17,918,000
Potatoes	76,000	10,260,000 bu.	7,387,000
Cotton	203,000	85,000 bales	11,050,000
Apples		7,656,000 bu.	
Peaches		17,500,000 bu.	
Pears		5,205,000 bu.	

In 1922, there were 400,443 acres of vineyards in the State. In the same year the California Fruit Growers' Exchange reported that the State had furnished 12,926,358 boxes of oranges and grapefruit and 4,054,771 boxes of lemons to the markets of the United States and Canada. Based on exchange returns the growers received \$71,366,464 for this citrus crop, the delivered value in the markets being \$95,993,485, which included \$24,627,021 for freight and refrigeration. Strawberries, figs, apricots, plums, and other fruits are grown in vast quantities. On 1 Jan. 1923 there were in the State 363,000 horses valued at \$29,403,000; 61,000 mules valued at \$6,283,000; 645,000 milch cows valued at \$49,020,000; 1,435,000 other cattle valued at \$49,794,000; 2,403,000 sheep valued at \$19,456,000; and 876,000 swine valued at \$10,337,000.

Mining and Mineral Products.—Among the metals found in the State are gold, silver, copper, lead, mercury. Petroleum is the chief mineral output of the State, the yield therefrom being second only to that of Oklahoma. Granite and building stone is another important product, while all of the borax produced in the United States comes from California. Minor mineral products are pyrite, salt, mineral waters, magnesite, bismuth, asbestos, manganese, lithium, tungsten, chromium, infusorial earth, ochre, and many varieties of precious stones. The output of gold, silver, copper, lead, and zinc in California in 1922, according to preliminary estimates by Charles G. Yale, of the United States Geological Survey, Department of the Interior,

was valued at \$21,625,600, an increase of \$673,177 over that in 1921. The yield of gold, however, (\$14,845,000) was \$859,822 less and that of silver (3,181,200 ounces) was 448,023 ounces less than in 1921. The production of copper was 22,660,500 pounds, valued at \$3,036,500, an increase of 10,917,096 pounds and \$1,521,601; that of lead was 6,260,800 pounds, valued at \$356,800, an increase of 5,136,524 pounds and \$306,208; and that of zinc was 3,615,900 pounds, valued at \$206,100, an increase of 2,558,169 pounds and \$153,213.

The loss in gold for the year was almost entirely due to a diminution in the output of the deep or quartz mines. The disastrous fire in the Argonaut mine stopped the regular output from two of the largest producers on the mother lode and several other producers of note worked with reduced forces and mill equipment. Complaint was made of the scarcity of first-class miners, who seem to have gone into occupations that are more profitable and less hazardous than underground mining.

Manufacturing.—There are over 10,000 manufacturing establishments, very many of which are connected with the agricultural and horticultural industries of the State. The motion picture industry has its centre in the suburb of Los Angeles called Hollywood.

Fishing.—About 5,000 persons are employed in the coastal fisheries, the average value of which is about \$4,000,000.

Banking.—The State Banking Superintendent in his report to the Governor for 1922 gives the following statistics relative to the banks, depositors, etc., of the State of California:

"On 20 June 1917, the depositors in the State system were 1,584,940, of which the greater number, 1,160,810, were depositors in savings banks. Five years later the depositors in the State banks had increased virtually 1,000,000 in number.

"It is also interesting to note the increase in the number of banking institutions during the same period. On 20 June 1917, California had in its State system 448 banks and 126 branches, making a total of 574 banking institutions, while in 1922, five years later, there were 429 banks with 281 branches, or a total of 710 State banking institutions.

"During the same period the national banks located within the State had increased from 251 in 1917 to 295 in 1922, or a total increase of 180 in the number of banks.

"During the same period the assets of the national banks here increased from \$609,581,000 in 1917 to \$954,486,000 in 1922.

"In banking power California stands fifth among the states, exceeded only by New York, Pennsylvania, Illinois and Massachusetts."

Government and Constitution.—The State Legislature is bicameral—the Senate is composed of 40 members elected for terms of four years—one-half retiring every two years; the Assembly is composed of 80 members elected for two years. The legislature convenes biennially the first Monday in January in odd years. The State is divided into 58 counties, each administered by a board of five members elected from districts. Sacramento is the seat of the State government.

Officials.—Governor in 1922, Hon. William

D. Stephens; lieutenant-governor, C. C. Young; secretary of state, Frank C. Jordan; attorney-general, U. S. Webb; controller, Ray L. Riley; treasurer, Friend William Richardson; superintendent of education, Will C. Wood. On 8 Jan. 1923, Hon. Friend W. Richardson was inaugurated Governor of California before a joint session of the Legislature.

Judiciary.—Chief Justice, State Supreme Court, Lucien Shaw; associate justices, Curtis D. Wilbur, Thomas J. Lennon, W. A. Sloane, Charles S. A. Shurtleiff, William H. Waste and William P. Lawlor.

Legal holidays as provided in section 10 of the political code are as follows:

Every Sunday, 1 January, 12 February (Lincoln day), 22 February, 30 May, 4 July, 9 September, first Monday in September, 12 October (Columbus day), 25 December, 11 November (Armistice day), every day on which an election is held throughout the State, except a general primary election, and every day appointed by the President of the United States or by the Governor for a public fast, thanksgiving or holiday.

CALIFORNIA, University of, a State co-educational institution, founded 23 March 1868 and located at Berkeley, Calif. In 1922-23 it had a faculty, including assistants, of 1,860 members, property valued at \$10,000,000 and an income of \$7,000,000. In 1921-22 it had a total enrollment of 19,225 students in all departments. Of this number, 10,607 were resident students in Berkeley schools and colleges, the remainder included students in Lick Observatory; those in the graduate School of Tropical Agriculture; those in the Hastings College of Law; Medical School, College of Dentistry; College of Pharmacy, etc. The enrollment in the summer school of 1922 was 20,861, including 1,836 students of the regular session. David Prescott Barrows, LL.D., is president.

CAMBODIA, a native kingdom of Indo-China under the protection of France since 1863. It is bounded on the north by Laos and Siam, south by Cochin China, east by Annam and west by the Gulf of Siam. The area of the kingdom is 57,900 square miles with a population of 2,000,000, including 1,000 Europeans and about 150,000 Chinese. The reigning monarch is Sisowath who succeeded his father in 1904. The capital, Pnom-Penh, has a population of 87,870. The budget for the fiscal year 1921-22 balanced at 6,809,815 piastres. Smoked fish is the chief native industry. Other products are rice, kapok, cotton, cattle, hides, pepper, salt and tobacco, also coffee, rubber and iron. Salt, textiles and wines are the chief imports. Exports of rice aggregate 300,000 tons yearly, pepper 1,750,000 pounds, cotton 9,000 tons.

CAMEL'S HAIR PRODUCTS. In view of the great vogue of camel's hair fabrics during 1922 it is interesting to note the origin of the real camel's hair which is used in the making of these fabrics. Most of the fine camel's hair comes from the cooler sections of China, as the hair obtained from the camels in the very warmer sections is neither fine nor abundant. Camels at a certain season of the year shed their hair, this dropping off in bunches most frequently while they are asleep. When a cara-

van is on a trip there is always a special boy whose duty it is to gather up this shed hair in baskets before the march for the day is resumed. After this has been done and the caravan reaches a certain point, the hair is sorted and baled for export. In sorting into different grades, the basis of selection is the fineness in the diameter of the hair. The coarser the fibre the less valuable it is. After reaching the United States, dyeing, weaving and finishing processes are used that are in many respects dissimilar to those used in the production of wool fabrics. One of the features of the camel's hair fabrics is that they give warmth with lightness. In this connection it is pointed out that the camel must have adequate protection against the cold of the night on the desert, but must not be too heavily burdened in the heat of the noonday sun by thick hair.

CAMEROON, a former German colony of west Africa, lying between British Nigeria and the French Congo and extending from the coast in a northeasterly direction to the shore of Lake Chad. The colony was captured by French and British troops in February 1916 and at the peace settlement was divided between the French and British. It has a total area of 191,130 square miles and a population of 2,540,000. The British portion of the colony has an area of 31,000 square miles and stretches from the sea along the frontier of Nigeria to Lake Chad and is attached to Nigeria. Bantu tribes predominate in the coastal region and Sudanese in the interior. Cloves, vanilla, ginger, pepper, ivory and palm oil are the chief products of the colony. Ebony is abundant and gold and iron are found. The revenues in the British sphere in 1920 amounted to \$273,400. Imports the same year amounted in value to \$835,000 and exports to \$700,000. The chief imports were textiles, spirits, foodstuffs, hardware, etc. The mark is still in use valued at seven pence but with a purchasing power of the English shilling. The administrator of the British zone in 1922 was the Governor of Nigeria. The area allotted to France has an extent of 166,489 square miles, exclusive of the 107,270 square miles ceded to Germany by France in 1911 and which now forms part of French Equatorial Africa. The seat of the French mandatory administration is at Yaoundi. The general budget for the year 1921 balanced at 11,715,500 francs. The chief products are coffee, tobacco, palm oil and ivory. There are 359 miles of railway in the mandated territory. The Commissioner in 1922 was M. Carde.

CAMPFIRE GIRLS, an organization founded in 1912 by Dr. and Mrs. Luther Gulick for promoting the health of girls by means of outdoor life. The organization also inculcates thrift among its members and seeks to render the homely tasks of everyday life agreeable and to be enjoyed rather than dreaded. Camping out is an annual feature of the various units of the organization. These units are known as Campfires and are made up of from 6 to 20 girls under a guardian who must be at least 18 years of age. The dues of membership are \$1, which goes to the maintenance of the national headquarters in New York. The total membership in 1922 was estimated at 150,000 in

about 8,000 campfires or groups. The secretary and national executive in 1922 was L. F. Scott, 31 East 17th Street, New York, N. Y.

CAMPHOR, *Synthetic*, a preparation made from turpentine. In the process the turpentine is treated with certain chemicals and brought from one stage to another until finally camphor is produced. There is practically an unlimited source of supply of turpentine in the United States, most of which comes from the long-leaf pine of the South, the annual production reaching 25,000,000 gallons. The chemicals used in the manufacture of synthetic camphor are easily obtained at low cost in the United States. The manufacture of the synthetic camphor is the work of Prof. R. J. Moore, formerly of Columbia University. Previous to his discovery of the synthetic process American industries were entirely dependent on Japan for their supply of camphor. Camphor is used in the manufacture of films for motion pictures, billiard balls and in the celluloid industry for the making of brushes, combs, etc., also for piano keys, so-called "Parisian ivory," etc. Of late years the supply of camphor from Japan was insufficient for the requirements of the United States manufacturers, especially since Japan entered the motion picture field on a large scale and it was due to this shortage of the natural supply that Professor Moore was led to undertake experimental work to discover a synthetic substitute.

CANADA, *Dominion of*, a self-governing state of the British Empire, situated on the continent of North America to the north of the United States. The total land area of the Dominion is 3,603,910 square miles plus a water area of 125,755 square miles. The following table gives the area and population of the several provinces:

PROVINCES	Area, square miles	Population	
		1921	1911
Alberta.....	255,285	588,454	374,295
British Columbia.....	355,855	524,582	392,480
Manitoba.....	251,832	610,118	461,394
New Brunswick.....	27,985	387,876	351,889
Nova Scotia.....	21,428	523,837	492,338
Ontario.....	407,262	2,933,662	2,527,292
Prince Edward Island.....	2,184	88,615	93,728
Quebec.....	706,834	2,361,199	2,005,776
Saskatchewan.....	251,700	757,510	492,432
Yukon.....	207,076	4,157	8,512
North West Territories.....	1,242,224	7,988	6,507
Royal Canadian Navy.....		485	
Total.....	3,729,665	8,788,483	7,206,643

Of the population about 105,000 are Indian and 3,500 Eskimos. About 1,000,000 of the population are from the United Kingdom and 350,000 from the United States. The chief cities and their populations are: Montreal (607,063); Toronto (376,538); Winnipeg (178,364); Vancouver (100,401); Ottawa, the Dominion capital, (107,137); Hamilton (81,969); Quebec (78,710); Halifax (70,203); London (53,592); Calgary (63,117); Saint John, N. B.,

(46,504); Victoria (38,775); Edmonton (58,627), and Windsor (38,541). According to the census of 1921 the population is about equally divided as between urban and rural, there being 4,436,041 classified as rural and 4,352,442 as urban. Immigration which just prior to the World War had reached vast proportions fell off during that conflict but is again mounting. In 1922, 89,999 immigrants passed into the Dominion through its inland and ocean ports. Of these, 23,225 were English, 11,596 were Scotch, 3,572 Irish and 627 Welsh. In the same year there arrived 1,746 Chinese, 5,216 Polish Jews, 851 Russian Jews, 2,413 Italians, 2,707 Poles and 759 Rumanians. From the United States there arrived 29,345.

Religion.—There are in the Dominion 2,833,041 Roman Catholics, 1,115,324 Presbyterians, 1,079,892 Methodists, 1,043,017 Anglicans, 382,666 Baptists and 229,864 Lutherans.

Education.—Education is administered by the provincial governments. Primary education is free and compulsory. There are separate schools for Roman Catholics in Alberta, Ontario, Quebec and Saskatchewan. In the other provinces the primary schools are non-sectarian. The following table from 'The Statesman's Year Book' for 1922 shows the primary school statistics by provinces:

PROVINCES	Schools	Teachers	Pupils	Expenditure
Ontario.....	6,995	14,801	584,724	\$26,198,347
Quebec.....	7,589	16,213	486,201	16,844,684
Nova Scotia.....	1,797	3,012	106,982	2,097,593
New Brunswick.....	1,299	2,107	71,029	1,530,256
Manitoba.....	2,040	3,479	114,662	8,827,092
British Columbia.....	582	2,332	72,006	4,228,720
Prince Edw. Island.....	475	594	17,865	285,960
Alberta.....	3,046	4,902	121,567	8,805,529
Saskatchewan.....	4,145	6,550	164,219	11,783,943
Total.....	27,968	53,990	1,738,977	80,602,124

There are many special schools and for purposes of higher education there are 22 universities with affiliated professional and technical colleges. Of the universities, six are state controlled; three are controlled by the Anglican Church; five by the Roman Catholic Church; two each by the Baptists and Methodists and four are undenominational. The total number of students at the universities is 35,969.

Agriculture.—Statistics furnished by the Dominion Bureau of Statistics showed a great increase in the cereal yield of 1922 over that of 1921.

The total yield for the five principal grains dealt with in the report is placed at 1,078,423,000 bushels. This is an increase of 266,058,000 bushels, or 32¼ per cent over the quantity actually harvested in 1921, and, as it exceeds the bumper crop of 1915 by 157,310,000 bushels, is the largest aggregate yield for the five grains in the history of the Dominion. Wheat and flax are the only grains to which this remark does not apply, for although the yield of wheat is larger than that of 1921 by nearly 88,000,000 bushels, it falls short of the crop of seven years ago by 4,769,000 bushels, and the 1922 flax

crop is 818,000 bushels below that of 1915. The following table gives the latest estimate in bushels for the crop of 1922 in each of the five principal grains and the corresponding figures for 1921 and 1915:

	1922	1921	1915
Wheat.....	388,773,000	300,858,000	393,542,000
Oats.....	558,358,000	426,232,000	464,954,000
Barley.....	76,395,000	59,709,000	54,017,000
Rye.....	49,601,000	21,455,000	2,486,000
Flax.....	5,296,000	4,111,000	6,114,000
Total...	1,078,423,000	812,365,000	921,113,000

All the provinces except British Columbia—which is relatively a negligible quantity—contributed to the increase. The three prairie provinces, which furnish over 75 per cent of the Dominion's total output in the five grains, are estimated to have a crop of 811,957,000 bushels. This is the largest crop in the history of these provinces, being in excess of those of 1921 and 1915 by 179,977,000 and 129,245,000 bushels respectively. Wheat is estimated at 365,045,000 bushels, compared with 280,098,000 and 360,187,000 bushels for the harvests of 1921 and 1915 respectively; oats 338,898,000 bushels, compared with 284,147,000 and 279,692,000 bushels; and barley 46,937,000 bushels, against 44,681,000 and 36,003,000 bushels. The most remarkable increase was in rye, which, owing to the lateness of the spring, was largely sown as a substitute for wheat, the yield being estimated at 46,937,000 bushels, compared with 19,109,000 bushels in 1921 and 785,726 bushels in 1915.

Although the Dominion's yield per acre in the five principal grains shows a higher average than in 1921, it is, as a rule, much lower than for the bountiful harvest of 1915, thus indicating that the current year's increase over the latter is due, not to productivity of the soil, but to greater acreage under cultivation. The average for wheat is 17.25 bushels to the acre, compared with 13 in 1921 and 26.05 in 1915; for oats, 34.75, against 25.25 a year ago and 40.24 in 1915; barley, 28, against 21.25 in 1921 and 31.51 bushels per acre seven years ago. The fact that the central parts of Alberta and Saskatchewan experienced unusual drought during the whole of July undoubtedly materially affected the average yield.

The same authority places the total value for the whole of Canada of the principal field crops of 1922 at \$984,139,500, compared with \$931,863,670 for 1921, \$1,455,244,050 for 1920 and \$1,537,170,100 in 1919, the highest aggregate for Canada on record. The bureau's statement then goes on to show the part contributed by each of the great crops of the Dominion to this aggregate.

"The total for 1922," it states, "comprises \$333,966,000 for wheat, as compared with \$242,936,000 in 1921 and \$427,357,300 in 1920; \$197,783,000 for oats, as against \$146,395,300 in 1921 and \$280,115,400 in 1920; \$33,782,000 for barley, as against \$28,254,150 in 1921 and \$52,821,400 in 1920; \$21,235,000 for rye, as against \$15,399,300 in 1921 and \$15,085,650 in 1920; \$59,872,900 for other grains, as against \$48,036,920 in 1921 and

\$86,296,700 in 1920; \$54,253,000 for potatoes, as against \$82,147,600 in 1921 and \$129,803,300 in 1920; \$205,075,000 for hay, clover and alfalfa, as against \$280,975,200 in 1921 and \$362,053,900 in 1920, and \$78,172,600 for other root and fodder crops, as against \$87,719,200 in 1921 and \$101,710,400 in 1920.

"With few exceptions, the average prices per unit do not differ greatly from those of last year, the prices being as a rule somewhat more. For wheat the price for 1922 is 85c per bushel as against 81c last year. Oats are 39c against 34c, barley is 46c against 47c, rye 59c against 72c, peas \$1.81 against \$1.96, beans \$2.86 against \$2.90, buckwheat 80c against 89c, flax \$1.77 against \$1.44, potatoes 54c against 77c, turnips, etc., 27c against 34c.

"The abundance of the hay crop as compared with last year's scarcity is reflected in the price, which is for 1922 \$13.45 per ton as against \$23.56 per ton in 1921. Similarly, alfalfa is \$12.84 per ton as against \$19.95. By provinces the total value of the field crops is as follows: Prince Edward Island, \$10,388,800; Nova Scotia, \$24,236,000; New Brunswick, \$31,657,100; Quebec, \$167,599,000; Ontario, \$233,556,000; Manitoba, \$104,830,000; Saskatchewan, \$290,158,000; Alberta, \$94,369,600, and British Columbia, \$18,345,000."

According to the latest bulletin of the International Institute of Agriculture at Rome, Canada figures as the greatest wheat exporting country in the world. The exportable surplus estimated by the Institute as of 1 August is as follows: Canada, 312,000,000 bushels; United States, 305,000,000; British India, 37,000,000; Australia, 33,000,000; Argentine, 20,000,000, and other countries 29,000,000.

Apple and potato production decreased in 1922 in most provinces. The exception to the rule was the Province of Quebec, where the apple crop was 75 per cent in excess of that of 1921 or 61,600 barrels. In Ontario the apple production was 90 per cent of that of 1921, or 796,500 barrels. The potato acreage was considerably larger than that of 1921 but the yield per acre was somewhat less, due to rot, in many districts. The total production was placed at 18,480,000 bushels. British Columbia produced 2,538,000 boxes of apples or about 80 per cent of the crop of 1921. The potato crop in that province was about 90 per cent of that of 1921 or 2,646,000 bushels. The potato production in the other western provinces was: Alberta, 6,861,000 bushels; Saskatchewan, 7,240,800 bushels; Manitoba, 969,000 bushels. The New Brunswick apple crop in 1922 was 41,250 barrels. The potato crop in this province was only 50 per cent of normal, while in Prince Edward Island it was 75 per cent of normal. The Nova Scotia apple crop amounted to 1,628,800 barrels. The potato crop of this province was 7,055,400 bushels or about 10 per cent larger than that of the year 1921. Among the lesser crops are peas, beans, buckwheat, turnips, sugar beets, fodder corn and alfalfa. The live stock of the Dominion on 15 June 1921 were: 3,814,000 horses, 3,737,000 milk cows, 6,469,000 other cattle, 3,676,000 sheep, 3,905,000 swine, 34,340,000 poultry. The wool clip for 1922 was estimated at 21,000,000 pounds. Dairying has become a major industry,

the annual production of butter being 110,000,000 pounds; tactory cheese, 138,000,000 pounds; condensed milk, 51,000,000 pounds; evaporated milk, 30,000,000 pounds, and whole milk sold 29,000,000 gallons.

On and after 1 Jan. 1923, grains, vegetables and seeds in Canada are to be sold only by weight. Hitherto, corn, wheat, barley, oats, maize, dried peas, dried beans, linseed, potatoes and the seed of grass, clover, vetches, swedes, turnips, rape cabbages, kale, mangels, beets, etc., were sold by the quarter, which is a variable quantity depending on the material. For instance, a quarter of maize is 480 pounds; one of wheat, 504 pounds; oats may be either 304, 320 or 336 pounds; barley may be either 400, 448 or 416 pounds, in each case according to the country of origin.

Fur-farming in Canada now appears to be on a sound basis as an established and growing industry of some importance. An official report, issued December 1922, shows that there are more than 800 fur-farms in the Dominion, with real estate and fur-bearing animals of an aggregate value of more than \$7,500,000, and a gross income of about \$1,500,000, annually from the sale of foxes and pelts. Such farms are found in all of the nine provinces and in the Yukon Territory.

No fewer than 225 new farms were brought into operation during 1921. Pelts of animals raised on fur-farms accounted for approximately 6 per cent of total value—officially placed at \$10,151,594—of raw fur production in Canada for the season, 1920-21, the balance being taken by trappers. During the last fiscal year, 1,390 live foxes, valued at \$310,709, were exported from the Dominion.

Silver foxes constitute approximately 78 per cent of the total number of more than 23,000 fur-bearing animals on Canadian fur-farms. The fox has been proved to be the animal most suited to domestication, although farms for raising certain other kinds of fur-bearing stock are now being successfully operated. Statistics for 1921 show 375 fox-farms in Prince Edward Island, with a total of 11,486 foxes. Nova Scotia, New Brunswick, Quebec, and Ontario have also engaged largely in fox farming, and the other provinces of the Dominion have done so to a smaller extent.

Other fur-bearing animals raised on fur-farms in Canada are mink, raccoon, marten, fisher, skunk, opossum, beaver, muskrat, and Karakul sheep. In 1921, the number of miscellaneous fur-bearing animal farms—i. e., farms engaged in raising fur-bearing animals other than foxes—was thirty-seven, compared with nine in the previous year. Mink farms are the most numerous of the miscellaneous class, followed by those handling raccoon and Karakul sheep. Three beaver farms and three muskrat farms were recorded in 1921.

Forestry.—There are nearly 600,000,000 acres under timber, the largest acreages being those of Quebec, 100,000,000 acres; Ontario, 70,000,000 acres; British Columbia, 50,000,000 acres; the prairie provinces, 11,000,000 acres; and New Brunswick, 9,000,000 acres. The total export of manufactured or partly manufactured wood up to 1 Nov. 1922 was valued at \$66,426,783 and by the close of 1922 it was esti-

mated that 1,310,000,000 tons of newsprint paper had been made. The value of newsprint paper export for 1922 was \$67,000,000 and the value of all wood and paper exports for the year was \$209,758,000. There is \$250,000,000 invested in the lumber industry, which employs about 73,000 hands in 3,410 mills.

Mineral Production.—The value of the output of metallic minerals in Canada during 1922 was \$61,731,000 (1921, \$49,343,232), non-metallic minerals \$83,891,000 (1921, \$87,833,161), and structural materials and clay products \$35,000,000 (1921, \$37,139,260), according to the Chief of the Mining and Metallurgical Branch, Dominion Bureau of Statistics.

The outstanding feature of the metal production was the excellent gain made in the output of gold by Ontario and British Columbia. The total gold output of Canada in 1922 amounted to 1,230,985 fine ounces (value \$25,446,717) against the 1921 production of 926,329 fine ounces (value \$19,148,920). In spite of the medium price silver obtained, production of this metal amounted to 15,726,000 ounces, a gain of more than 2,000,000 ounces over 1921.

An increased output of copper (51,223,000 pounds in 1922 as against 47,620,820 pounds in 1921) is said to have been due entirely to the resumption of nickel-copper smelting. The improvement in the copper industry during the latter part of 1922 is predicted to lead to greater activity in this field in 1923. Lead output was 98,738,000 pounds in 1922 and 66,679,000 pounds in 1921. Zinc production amounted to 54,000,000 pounds, exceeding 1921 production by approximately 1,000,000 pounds.

The output of coal from Canadian mines during the calendar year 1922 was estimated by the Dominion Bureau of Statistics at approximately 14,210,000 tons valued at \$68,349,500, as compared with 15,057,493 tons, valued at \$72,451,656, in 1921; 16,946,764 tons, valued at \$82,496,538, in 1920; and 13,919,096 tons, valued at \$55,622,670, in 1919. The great strike which tied up the United States coal mines for several months was reflected in Canada and resulted in a loss of 1,199,427 working days. The Province of Alberta led in production with 5,387,000 tons, a little more than half of which was lignite and nearly all the rest bituminous. Nova Scotia contributed 5,349,000 tons; British Columbia, 2,936,000 tons, and New Brunswick and Saskatchewan 288,000 and 250,000 tons, respectively. Canada exported 1,821,000 tons of coal during the year. In spite of the strike, the amount of coal exported was only about 166,000 tons less than in the preceding year. The exports during 1920 were 2,558,000 tons, and in 1919 amounted to about 2,000,000 tons. For the first time in many years coal was imported from Great Britain, about 874,000 tons having been received, 710,000 tons bituminous and 164,000 tons anthracite. Imports of coal from the United States amounted to 13,937,000 tons—11,255,000 tons of bituminous and 2,683,000 tons of anthracite. As compared with the records for the preceding year, the imports of bituminous coal from the United States were 2,300,000 tons lower, and the imports of anthracite were 1,885,000 tons less. Comparison with 1920 figures would indicate an even greater shortage, as the imports of United States bituminous coal in that year were close to

16,000,000 tons, and the anthracite imports came very near 5,000,000 tons.

Canada's production of iron and steel in 1922, estimated by the Dominion Bureau of Statistics, showed a considerable decrease from the previous year. Total output of pig iron was 383,057 long tons, compared with 594,354 tons in 1921, 974,000 tons in 1920, 819,000 tons in 1919, and the record of 1,067,000 tons in 1918. The maximum production in 1922 was in March, when output was 41,733 tons; the minimum was in May with 23,363 tons.

Steel production totaled 485,643 tons, compared with 667,484 tons in 1921, 1,109,000 tons in 1920, 924,000 tons in 1919 and the record of 1,681,000 tons in 1918. There was considerable improvement during the last half, output for the first half being 177,080 tons and the second half 308,140 tons.

Fisheries.—The fisheries of the Atlantic Coast comprise the deep-sea fishing for cod, haddock, hake, pollock, and halibut and the in-shore or coastal fishing for herring, mackerel, alewife, shad, smelt, flounder and sardines. Lobster and oyster catches are also considerable in the Atlantic area. On the Pacific Coast the salmon fisheries are predominant but halibut fishing is becoming of large proportions. The inland lake fisheries yield whitefish, trout, pike, pickerel, sturgeon and fresh-water herring. About \$50,000,000 represents the entire investment in this industry, the catch from which in 1922 was valued at \$42,124,000. About 70,000 persons are employed in the industry.

Economic Condition in 1922.—The Canadian Bank of Commerce of Toronto in a review of the Dominion published in October 1922 said: "Reports that business is showing marked improvement are becoming more and more frequent from all parts of the country. There is still, of course, an unevenness in industrial conditions, and certain industries which depend primarily on large supplies of coal, iron and steel have, in a number of cases, been obliged to close their plants. But this is obviously the result of an artificial curtailment of supply rather than a decreased demand. On the other hand, an increasing number of factories are running at full capacity, with many working overtime, the building trades continue to be extremely active, and there has been a marked revival of highway and railway construction work.

"Unemployment on a large scale is almost a thing of the past, and there appears to be in some industries a real scarcity of skilled labor. On the whole, there is little complaint from the industrial world, and in the case of the wholesale and retail trades the sobering experience of the last two years has modified to a large extent the general opinion as to what constitutes an autumn revival of business. Orders, though moderate in volume, have become steadier, collections have improved and there appears to be a disposition on the part of customers to be satisfied with a much shorter term of credit.

"It is true that the number of commercial failures continues to be higher than at this time last year, but the amounts involved show a substantial decline. This may be taken to mean that, although the natural process of weeding out continues, there are no longer large accumu-

lations of unsalable commodities to act as a drag on the market.

"The laws of economics involve many compensations and not the least among these is that resulting from a high tariff and an adverse exchange. Within the last few years a great many manufacturing firms in the United States have built branch factories in Canada, thereby increasing the aggregate production of this country and swelling the local demand for labor and other services and, to a large extent, for Canadian materials and supplies. Although adverse exchange conditions no longer exist, American enterprises continue to establish themselves in Canada, and this in itself is a striking testimony to the soundness of economic conditions in this country.

"While new industries both Canadian and American, are being established in this country at a satisfactory rate, the same cannot be said of the new settlers. The total number of immigrants arriving in Canada during the four months ending last July was 32,849, as against 49,926 for the corresponding period last year; this decrease of 34 per cent is accounted for chiefly by the decline in the number of arrivals from Great Britain and Europe. Now that steps are being taken to make the immigration policy of Canada less restrictive in its effect, the favorable position of the Dominion should attract a large number of settlers from Great Britain and other countries."

Building projects for the Dominion in 1922 totaled \$331,843,000, according to Maclean's Building Reports. Ontario led, with \$166,628,000, with Quebec second at \$103,291,000; British Columbia, \$27,406,000; Manitoba, \$9,365,000; Alberta, \$8,903,000; Nova Scotia, \$5,769,000; Saskatchewan, \$5,064,000; New Brunswick, \$4,926,000; Prince Edward Island, \$458,200.

There were 21,054 houses built at a value of \$99,858,800. Schools came next with \$27,364,200; factories, \$25,755,800; stores, \$19,212,500. Included in the list were 38 theatres at \$1,189,300, and 204 churches, at \$6,979,700.

Commerce.—During the 12 months ended 31 Oct. 1922 the total imports from all countries were \$740,261,771, a decrease of \$119,448,391, under the total of 1921, the decrease being practically accounted for by the falling off from the United States. From the United Kingdom a total of \$131,000,000 worth of products were imported, an increase of \$2,000,000.

Exports of domestic products from Canada to all countries fell from \$926,654,122 in the 12 months ending 31 Oct. 1921, to \$815,530,510 during the 12 months ended 31 Oct. 1922, a decrease of \$111,123,612. The decrease in value of exports from Canada to the United States when these two periods are compared is shown to be \$63,700,800. During the 12 months ending 31 Oct. 1922, exports to the United States were to the value of \$327,037,218. During the previous 12-months period they totalled \$390,738,018. Exports to the United Kingdom, on the other hand, increased from \$296,778,084 in the 12 months ending 31 Oct. 1921, to \$326,370,742 in the period ended 31 Oct. 1922.

The following table shows the most important articles of Canadian export and their value in 1913 (the last pre-war year), in 1920 (the year of greatest inflation), and in 1921 (the

first year showing a return to normal conditions):

ARTICLES	1913	1920	1921
Animals, living....	\$8,526,683	\$28,129,834	\$12,326,900

Not stated.....			

Exports of butter from Montreal to Europe in 1922 were the largest since 1906, according to the Dominion Department of Agriculture. A total of 318,144 packages was exported between 1 May and 30 November, compared to 70,369 packages in 1921, showing an increase of 247,775. In 1906 361,400 packages were shipped, and in 1905, the highest year on record, 573,449 were exported.

Exports to the United States were 8,747 packages, Newfoundland 4,389 and British West Indies 1,103. These figures represent a decrease of 21,172 packages in the case of the United States and 1,405 in the case of Newfoundland. Total shipments were 332,383 packages in 1922.

The increase in butter exports was largely caused by the better prices prevailing for that product in Great Britain and the fact that supplies in that country were the lowest in years. As there was an opposite price movement in cheese, export figures for the latter commodity show a decrease to a figure which has been touched only once in the past 22 years.

Exports of cheese to Europe were 1,166,147 boxes, a decrease of 275,632 boxes from last season. The total in 1916 was 1,142,699 and in 1903 2,395,982, the low records for the period. Cheese shipments to the United States in 1922

were 30,614, compared to 26,231 in 1921; Newfoundland, 2,727, compared to 3,263, and British West Indies 2,646. Total exports were 1,202,134 boxes in 1922,

Shipments of eggs to Europe were 208,700 cases, a decrease of 5,503 cases from 1921. The principal articles on the Canadian import list are iron and steel, cotton, coal, crude and refined petroleum, silk, wool, sugar and molasses, vehicles, wood, chemicals, bricks, clays and tiles, breadstuffs and rubber.

Finance.—The expenditures for the various public services for 1922 are given in detail in the following table:

Public debt, including sinking funds.....	\$142,800,127
Charges of management.....	816,575
Civil government.....	10,856,022
Department of justice.....	2,181,633
Canadian mounted police.....	3,527,571
Penitentiaries.....	1,371,600
Legislation.....	2,288,847
Agriculture.....	5,602,140
Department of health.....	721,940
Immigration and colonization.....	1,636,190
Pensions.....	31,816,924
Superannuation.....	660,000
Militia and defense.....	11,890,000
Railways and canals, chargeable to income.....	168,009,791
Mail subsidies and steamship subventions.....	1,033,801
Ocean and river service.....	1,950,300
Lighthouse and coast service.....	2,465,100
Scientific institutions.....	684,535
Steamboat inspection.....	108,810
Fisheries.....	1,435,000
Subsidies to provinces.....	11,490,860
Department of mines.....	641,600
Indians.....	2,750,639
Government of the Northwest Territories.....	195,000
Government of the Yukon Territory.....	120,000
Dominion lands and parks.....	5,142,070
Soldiers' land settlement.....	35,017,000
Soldiers' civil re-establishment.....	19,310,000
Miscellaneous.....	16,057,231
Customs and inland revenue.....	6,782,195
Air Board.....	1,625,000
Weights and measures, gas and electric inspection.....	487,070
Railways and canals.....	9,270,000
Public works — chargeable to revenue collection.....	1,080,600
Public works — chargeable to income.....	11,115,283
Post office.....	25,028,323
Trade and commerce.....	3,727,433
Naval service.....	3,726,980
Labor.....	1,402,000
Total Consolidated Fund.....	\$546,826,191
Railways and canals — Capital.....	11,495,127
Public works — Capital.....	5,031,000
Public works — Capital — Marine Dept.....	10,933,000
Total capital.....	\$27,459,127
Total.....	\$574,285,318
Demobilization.....	7,777,380
Grand total.....	\$582,062,698

The net debt at the beginning of 1922 amounted to \$2,366,861,252, contrasted with \$2,308,218,462 12 months before, and with \$303,562,104 at the end of 1913.

Bank deposits in the Dominion decreased by \$298,000,000 in the two years ended 30 Sept. 1922, while bank note circulation decreased in the same period by \$54,000,000. In September bank deposits payable on demand and after a fixed date, together totaled \$1,648,000,000, compared with \$1,798,000,000 in September 1921 and with \$1,947,000,000 in September 1920. Notes in circulation in September were \$176,000,000 compared with \$186,000,000 in 1921 and \$231,000,000 in 1920. Governmental and bank gold

reserve as of 31 Aug. 1922 totaled \$174,200,000 compared with \$173,300,000 in 1921 and \$186,600,000 in 1920. During the year the Canadian dollar returned to par. This was largely due to the building up of a favorable trade balance and the decrease in note circulation, also to the large wheat crop.

Communications.—Canada has 51,582 miles of railways. Of his total about 22,646 miles are operated by the Government. In 1922 the Canadian National Railways was formally created through the merging of the Canadian Northern and the Grand Trunk lines by the Cabinet. The following report issued by the Dominion Department of Railways and Canals gives combined statistics for first time of Canada's national railway system, including Grand Trunk Railway. At 31 Dec. 1921 the total long-term or funded debt of railways taken over by Dominion Government was \$1,342,582,740, of which the Canadian Northern owed the Dominion for advances and accrued interest \$286,279,000; the Grand Trunk Pacific \$97,209,000 and the Grand Trunk \$76,965,000. In addition, capital expenditure on older national railways, built by Dominion—Intercolonial and National Transcontinental—totaled \$415,438,000. The total amount under head of fixed charges in 1921 was \$60,023,000 or nearly \$7 a head of population. Total operating revenues in 1921 were \$235,789,013; total operating expenses \$247,509,397 and total operating deficit \$11,720,384. Freight carried was in 1921, 51,865,596 tons; 1920, 62,986,194 tons; passengers carried, 1921, 26,617,850; 1920, 29,421,008; freight earnings, 1921, \$172,202,025; passenger earnings, \$42,053,232; labor operating payroll, \$149,426,000.

The Dominion has a system of canal, river and lake navigation over 2,700 miles in length, and vessels reach the Atlantic from lake ports without transshipping cargo. The freight traffic on Canadian canals increased 672,182 tons during 1921 compared with 1920 as the result of gains on the Welland of 800,894 tons, on the Saint Lawrence of 666,103 tons, and on the Saint Andrews of 456 tons. These increases were due almost entirely to large gains in shipments of grain and lesser ones in shipments of pig iron, iron and steel, petroleum and oil, and sugar. The traffic on the Welland and Saint Lawrence canals was the heaviest in their histories except for the years 1913 and 1914. There was a decrease on the Canadian Sault Sainte Marie Canal of 480,226 tons, due to a falling off of 730,568 tons in iron ore carried, 100,388 tons in soft coal, 42,410 tons in pulp wood and other minor decreases, although grain shipments were considerably heavier. There was also a falling off of 30,555,288 tons of freight through the American locks, caused almost entirely by the slump in iron-ore shipments, which dropped from 55,784,496 tons to 22,457,888 tons. Chambly Canal traffic declined by 145,042 tons, the largest decreases being pulpwood 83,760 tons, and sawn lumber 44,511 tons. Ottawa Canal traffic fell short of the 1920 total by 61,560 tons, with a decrease of 56,560 tons in lumber. The Murray Canal showed a decrease of 82,052 tons in crushed stone and a total loss of 90,955 tons. The other canals showed small decreases.

There are 1,699 miles of electric railways

which in 1922 carried 841,117,342 passengers and about 3,000,000 tons of freight. There are 12,251 postoffices; 49,576 miles of telegraph lines and 856,266 telephones. There are several powerful wireless stations.

Shipping.—The Canadian Register of Shipping for 1922 shows that the total gross tonnage in October 1922 was 1,781,018. The number of steamers was 4,357, with a gross tonnage of 1,305,581. There were 3,255 sailing vessels of 475,431 gross tons. The total appropriations of the Canadian Government for mail subsidies and steamship subventions for the year 1915 were \$2,962,900; for 1921 they were \$1,463,467; for 1922 they were \$1,033,800. Clearances of seagoing vessels from Canadian ports average approximately 12,000,000 tons and 16,000 vessels yearly. Coastal vessels clear to the average of 73,000, aggregating 25,000,000 tons yearly.

Defense.—The land forces are the active militia and the reserves. The former is divided into the permanent and non-permanent forces. Service in the active militia is voluntary and for three years, but in case of necessity the Government may apply compulsion. The permanent force comprises all arms of service and provides the garrisons and the personnel for the various military schools. The authorized establishment of the permanent force is 6,700. The non-permanent active militia has an estimated strength of 68,000 men. These organizations are supplemented by numerous cadet corps and rifle associations.

Schemes for a Canadian navy are in abeyance for the present. Two old cruisers formerly used as training ships have been sold. Two submarines built in the United States during the war are now on the Pacific Coast and two others have been allocated to the Dominion by the British Admiralty. Two destroyers have been acquired also. About 60 young Canadians are receiving naval training on British ships. The present plans contemplate first coast defense and then to work into the larger undertaking of providing a Canadian navy for service on the seas.

Government.—The British North America Act of 1867 created the Dominion of Canada with federated provinces and a constitution similar in principle to that of the United Kingdom. This Act declares that the executive government of Canada shall continue to be vested in the sovereign of the United Kingdom, represented for federal purposes by the Governor-General, just as for Provincial purposes by the Lieutenant-Governor. The Governor-General is advised by the King's Privy Council of Canada, a committee of which constitutes the ministry of the day. The Dominion Parliament consists of the King, the Senate and the House of Commons. It must meet at least once a year, so that 12 months do not elapse between the last meeting in one session and the first meeting of the next. Senators, 96 in number, who are appointed for life by the Governor-General in council, must be 30 years of age, British subjects, residents of the Province for which they are appointed, and possess \$4,000 over and above their liabilities. Members of the House of Commons, 235 in number, are elected by the people for the duration of the Parliament, which may not be longer than five

years. The Speaker of the Senate is chosen by the Governor-General in council, the Speaker of the House is chosen by the members of that house. Provincial representation in the Senate is as follows: Ontario, 24; Quebec, 24; Nova Scotia, 10; New Brunswick, 10; Prince Edward Island, 4; Manitoba, 6; British Columbia, 6; Alberta, 6; Saskatchewan, 6. Representation in the Commons is as follows: Ontario, 82; Quebec, 65; Nova Scotia, 16; New Brunswick, 11; Manitoba, 15; British Columbia, 13; Prince Edward Island, 4; Saskatchewan, 16; Alberta, 12; the Yukon, 1. Women have the vote and are eligible for election to the Commons.

The powers of the Dominion Parliament include all subjects not assigned exclusively to the Provincial Legislatures. More especially it has exclusive legislative authority in all matters relating to the following: Public debt and property; regulation of trade and commerce; raising of money by any mode of taxation; borrowing of money on the public credit; postal service; census and statistics; militia, military and naval service and defense; fixing and providing for salaries and allowances of the officers of the Government; beacons, buoys and light-houses; navigation and shipping; quarantine and the establishment and maintenance of marine hospitals; seacoast and inland fisheries; ferries on an international or interprovincial frontier; currency and coinage; banking, incorporation of banks and issue of paper money; savings banks; weights and measures; bills of exchange and promissory notes; interest; legal tender; bankruptcy and insolvency; patents of invention and discovery; copyrights; Indians and lands reserved for Indians; naturalization and aliens; marriage and divorce; the criminal law, except the constitution of courts of criminal jurisdiction, but including the procedure in criminal matters; the establishment, maintenance and management of penitentiaries; such classes of subjects as are expressly excepted in the enumeration of the classes of subjects by the Act exclusively assigned to the Legislatures of the Provinces.

At the general election of December 1921 117 Liberals were returned to the House of Commons; 65 Progressives; 51 Conservatives and two Laborites. For Cabinet officers in 1922 see following section on *History*.

The Governor-General in 1922 was General the Lord Byng of Vinny, who received his present appointment 2 Aug. 1921. He receives a salary of \$50,000 per annum.

History.—In the new party alignment due to the Liberal triumph in the December elections of 1921, Arthur Meighen, the defeated Prime Minister, undertook to lead an opposition group of Conservatives in the House of Commons. The new Premier, William Lyon Mackenzie King, stated on 29 December that national unity through having all parts of the Dominion represented in his Cabinet was the principal aim of his administration. On the same date he announced his Cabinet as follows:

W: L. Mackenzie King of Ontario, Premier; William S. Fielding of Nova Scotia, Finance; Daniel D. Mackenzie of Nova Scotia, Solicitor-General and Minister without portfolio; A. B. Copp of New Brunswick, Secretary of State; John E. Sinclair of Prince Edward Island, Min-

ister without portfolio; Raoul Dandurand of Quebec, Minister without portfolio; Henri S. Beland of Quebec, Health and Soldiers' Re-establishment; Sir Lomer Gouin of Quebec, Justice; Jacques Bureau of Quebec, Customs and Excise; Ernest Laponte of Quebec, Marine and Fisheries; James A. Robb of Quebec, Trade and Commerce; George P. Graham of Ontario, Militia, Defense and Naval Service; Charles Murphy of Ontario, Postmaster-General; Thomas A. Low of Ontario, Minister without portfolio; William C. Kennedy of Ontario, Labor; William R. Motherwell of Saskatchewan, Agriculture; Charles Stewart of Alberta, Interior, Mines and Indian Affairs; Hewitt Bostock of British Columbia, Public Works.

A post-election survey of the political parties showed that the Liberals had been returned to office with a very slight margin of safety in the House, while the Senate had a Conservative majority of 30. The new Premier was obliged to forego his project of a strictly National government through the refusal of the leader of the Progressives and the leader of the Ontario Farm-Labor Coalition to join his ministry. A further analysis of the election showed a growing cleavage between the western farmers and the industrial and banking interests of the older parts of the Dominion. In the East it was regarded as political heresy that the West should have in Parliament a bloc determined to make tariff changes and also changes in the taxation system while assuming no direct responsibility for the general public policy of the Dominion. The outlook early in 1922 was that the farmers would retain their own political organization. The Redistribution Bill was introduced at the 1922 session of the Parliament following the census returns. By the terms of the British North America Act the representation of Quebec is fixed at 65 members, and the ratio of that number to the total population of the Province is the unit which determines the representation of the other Provinces in the House of Commons. Quebec returned a population of 2,349,067 in 1921. By dividing this number by 65 it is seen that the unit of population for determining the representation of the other Provinces has risen from 30,858 in 1911 to 36,100. The representation of a Province is reached, therefore, by dividing this number into its population.

On 24 March the Department of Justice ruled that no women Senators could be created in the Dominion without an amendment to the British North America Act. During the 1922 session of the Parliament the question of a Dominion-wide Prohibition Act was kept in abeyance. A reciprocal trade agreement with the United States loomed on the political horizon in the spring but the Dominion Finance Minister learned from American sources that the new United States Tariff Act would arrange for favored nation treatment under which some measure of relief would be afforded to Canada. On 29 May it was announced in the Commons that the United States Government was prepared to enter into a treaty preliminary to the construction of the Saint Lawrence waterway. The Dominion Government did not consider the time opportune for the subject and pleaded the necessity of making a complete study of the sub-

ject so as leave the question open for future negotiations. In July the Premier visited Washington and discussed with the American Government the question of limiting the naval forces of Canada and the United States on the Great Lakes and Lake Champlain, the coastal fisheries, the great waterways, Canadian representation at Washington and reciprocal treatment of Canadian and American nationals in income taxation. Labor troubles came to the front, due to the coal strike in the United States and it was feared that the shopmen's strike in the United States would spread to the Dominion. Troops were ordered to certain areas to quell disturbances. The Premier asked the presidents of the Canadian railways to restore previous wage scales pending the findings of the Government board investigating the rail wage situation. In August an agreement was reached by the western coal operators and the local branches of the United Mine Workers under which the mining of coal was resumed in Alberta and British Columbia. An appeal for political equality for the 1,200 Hindus resident in Canada was made by the Hon. V. Scrinivassa Sastri, member of the Council of State of India. "Rightly or wrongly," said Dr. Sastri, "many of the young men of India find in the failure of Canada and other countries to extend to the Hindu resident within their boundaries full citizenship, an evidence that their nationality will not be accorded the full privileges of membership in the British Empire. This is not the sole cause of political agitation in India, but it has been made an important one, and frequent references have been made to the fact that in Canada the Hindu is forbidden the franchise, whether or not he is a British subject.

"With the extension of the franchise in India, and the further development of that country as an integral part of the British Empire, it is rather puzzling to those who are now taking their first steps in political freedom to find that in the most important Dominion the man freely recognized as a British subject is barred from the franchise. From this it is argued that the white man is not willing to give full liberty to India. That adds another difficulty in the way of those of us who believe in the British connection."

The Dominion secured the consent of the British Government to negotiate directly with the United States Department of State on the framing of a new treaty regulating the naval strength on the Great Lakes. Preliminary exchanges were initiated with Washington and an agreement resulted to dispense entirely with naval vessels on the Great Lakes and to replace those in commission there with revenue cutters. The questions relating to fisheries, waterways and smuggling were reserved for separate treatment. Several restrictions on immigration to the Dominion were removed during the year and the Australian plan of selective and financially assisted desirables was adopted. On 2 November it was announced in Washington that Canada was to send there an official diplomatic representative to the United States with the probable title of High Commissioner. On 8 November completed plans for wireless stations in the Arctic were announced. Stations are to be established at Fort Smith, Resolution, Simpson, Norman and McPherson and Dawson City.

Sir Henry Thornton, general manager of the Great Eastern of England, was made president of the Canadian National Railways, now including the Grand Trunk system. During the summer the Governor-General, Lord Byng, made a tour of the western Provinces of the Dominion, visiting over 50 cities and towns and spending almost a month in the Yukon. A proposal was mooted in western Ontario in the closing months of the year for a plebiscite to decide on the partition of Ontario, forming a new Province of Western Ontario, which would include the districts of Thunder Bay, Rainy River and Kenora. A number of Roman Catholic churches and other buildings were burned during 1922 under circumstances pointing to incendiary action of certain groups of religious bigots. The Dominion Government appeared greatly concerned over the affair.

CANALS. A number of important canal projects were launched during the year 1922. The most important from an international point of view was the plan to render the Saint Lawrence River navigable by ocean-going vessels up to the Great Lakes. In brief this project is to deepen and broaden the stream at some points between Montreal and Lake Ontario, and to construct dams and locks at others. The construction of the dams is by far the most costly part of the project, but the heads of water thus obtained would render possible the development of approximately 4,000,000 horsepower. The estimated cost of dams, locks and power-houses is \$250,000,000. The Joint Waterways Commission, representing both Canadian and American interests, recommended that the cost of all navigation works be apportioned between the two countries on the basis of the benefits each will receive in the shape of increased foreign and coastwise trade and development of resources. The cost of works for the combined use of navigation and power is to be apportioned separately and equally. In Canada the project was strongly favored in Ontario and as strongly opposed by the Province of Quebec. In the United States the Middle Western and Northwestern States favored the project, while the Eastern States, especially New York opposed the plan. As the year closed the plan bade fair to become a major political issue in 1923 and on both sides of the border. For the Middle Western States an alternative plan was that of a canal connecting the Great Lakes with the Gulf of Mexico. At the close of 1922 approximately only a strip of 64 miles remained to be dredged, excavated and deepened and the necessary locks constructed, all within the State of Illinois, to make the Lakes to the Gulf waterway an accomplished fact. The waterway from Lake Michigan is complete to Joliet, Ill., via the Chicago River and the drainage canal and from La Salle, Ill., the Illinois River is navigable to its confluence with the Mississippi, thus leaving only the 64-mile link between Joliet and La Salle upon which construction has yet to be completed. Work on this was commenced during the year. On 1 December the Governor of Illinois approved the plans for five locks—two with a greater lift than any in the Panama Canal—which will raise and lower tugs and barges a total of 123 feet. This waterway will not af-

ford ocean-going vessels ingress to the Great Lakes, but will afford an outlet by water for the produce of the midwestern States cheaper than that afforded by the trunk line railways.

During 1922 the Congress of the United States refused to purchase the Cape Cod Ship Canal for \$9,000,000. Congress also refused to expend \$33,500,000 for the deepening of the East River at New York. In Canada a company was organized with a capital of \$15,000,000 to further the construction of a short-cut canal between Lake Huron and Lake Erie, crossing the southwestern peninsula of Ontario from Port Franks to Port Stanley. The plans of the company also contemplate a waterway from Montreal up the Ottawa River to the city of Ottawa, then by canal across country to Prescott, thence up the Saint Lawrence to the Great Lakes. In New Jersey the old Morris Canal passed to the control of the State by agreement with the Lehigh Valley Railroad. Of the larger canal projects in the United States was the widening and deepening of the Chesapeake and Delaware Canal. Eight million dollars are being spent on this project by the Government of the United States to make it a genuine passageway for ships of large size between the two largest bays on the Atlantic Coast, the Delaware and Chesapeake. It is expected that the new waterway will be completed by 1926.

In Europe, the city of Paris planned a perfected canal system which would also obviate the danger from floods. The deepening of the Seine at given points coupled with the demolition of old bridges here and there are among the contemplated improvements. An abnormal rise of the Seine has had at times a very destructive effect on river commerce and has also flooded the capital. With a perfected canal system, the river in rainy seasons would be under control. On rising to a certain height the water would, according to the plan drain into great reservoirs, which, during times of drought, could be made to feed the canals. Hydroelectric development is also a part of the plan. In Holland the construction of a new lock at Ymuiden went onward to completion. This lock is one of the largest in the world. Its dimensions are: Length, 400 metres; width, 45 metres, and draught, 15 metres. The lock will admit the largest ocean-going vessels to the port of Amsterdam. The entire cost of deepening the channel and constructing the great lock is 30,000,000 guilders.

In Italy there was projected a trunk system of canals joining Lake Maggiore with the Adriatic Sea and serving all the intensely industrialized areas of Northern Italy, besides affording a new means of approach to Switzerland from Venice and Trieste. Proposals in 1922 called for a canal from Turin to Milan, with a branch connecting with Lake Maggiore, another from Milan to Lecco and the Lake of Como, and a third from Milan through the Bergamo and Brescia districts to the upper River Mincio, including connections with the Lake of Iseo and Lake Garda.

During the year there was controversy with Germany over the status of the Kiel Canal. The question arose over the refusal of Germany to permit the passage of Allied ships during the

Russian assault on Poland. The Germans claimed that the ships carried munitions for Poland and that since she was neutral the passage would be a violation of international law.

In France, late in December 1922 it was reported that Germany was digging "the most stupendous system of waterways ever undertaken by any nation. The project involved the construction of 1,200 miles of navigable inland waterways—including actual canals and improvement of river channels. For this scheme it was alleged that the sum of 2,000,000,000 gold marks had been set aside. The main object was to place Hamburg ahead of all other European seaports by making it the terminus of a network of waterways that will bring it within easy reach not only of all parts of Germany, but also of Switzerland, Czechoslovakia, Austria, Hungary, Poland, Russia and the Balkan states. The project is believed to give Germany a huge preponderance commercially over all other European countries since it will give her control over the heart of Europe.

On 6 Feb, 1923 it was reported that the need of another canal connecting the Atlantic and Pacific oceans had been a subject of discussion at the President's Cabinet meeting of that date. It was brought up by a report of Secretary of War Weeks showing that all records for tolls from commercial vessels passing through the Panama Canal in January 1923 had been broken when they amounted to \$1,505,285 for the month. It is the opinion of Government officials that at the rate at which traffic through the Panama Canal is increasing another canal will be needed in the comparatively near future. The canal traffic has nearly quadrupled since the opening of this waterway. In January 352 vessels passed through the canal, compared with a monthly average for the six months ending 31 Dec. 1922 of 273 vessels and average monthly tolls of \$1,167,007. It is understood that both another Panama and a Nicaragua route was discussed at the Cabinet meeting. The existing Panama Canal is being used now to 40 per cent of its capacity.

Statistics of United States Canals.—In the United States there are 1,547.17 miles of private or State canals which were built at a cost of \$316,351,329. There are 281.39 miles of Government canals constructed at a cost of \$58,238,594 and 4,385.06 miles of canalized rivers, the deepening of which cost \$108,919,650.

Canal Tonnage.—*New York State Canals.*—The largest tonnage in any year since 1913 passed through the New York State canal system in 1922, according to the report of State Superintendent of Public Works. The tonnage was divided as follows: Barge Canal, 1,485,259 tons; Champlain Canal, 335,814 tons; Cayuga-Seneca Canal, 42,592; Oswego Canal, 9,740; New York City canal terminals, 76,519; Buffalo canal terminals, 38,451. During 1922 there were carried through the Erie Canal between Troy and Buffalo a total of 1,485,259 tons, which constituted an increase over 1921 of 50 per cent. In 1919 the increase was about 25 per cent, and in 1920 almost 6 per cent. In spite of the industrial depression in 1921, the freight transported through the Erie Canal advanced over 11 per cent.

Soo Canals.—Freight movement through the Soo Canals during the navigation season of 1922 amounted to approximately six times the tonnage handled through the Panama Canal in a like period. The total for the season was reported as 66,067,258 net tons, while 10,419,125 net tons passed through the Panama Canal during the first seven months of last year. See also PANAMA CANAL.

CANARY ISLANDS, an insular group lying off the northwest coast of Africa and belonging to the kingdom of Spain with which for administrative purposes it forms a single unit. The area of the islands is 3,342 square miles with a population of 506,414. The capital of the group is Santa Cruz de Teneriffe (Pop. 73,000). The second largest city is Las Palmas with 70,000 population. There is a succursal of the University of Seville which provides for the higher educational needs of the islands. There are about 4,000 camels used as beasts of burden. A wireless station and submarine cables maintain rapid communication with Spain and the outer world and lines of steamers ply between the islands and Spain. Bananas, potatoes, tomatoes, citrus fruits and wheat are the principal products of the islands and form the basis of the flourishing export trade.

CANCER AND ITS CONTROL. That 90,000 people die every year in the United States from cancer is a startling fact, and one which has only recently become fully appreciated. Cancer being a disease which lasts on the average for about two years, there must be at least another 180,000 people in this country suffering from the disease in its earlier stages who will die of cancer in the years 1924 and 1925. The appreciation of these facts, a realization of the widespread ignorance concerning cancer and its curability if taken in time, led in 1913 to the formation of the American Society for the Control of Cancer. This organization's function is outlined in the following extract from its articles of incorporation. It is "to collect, collate, and disseminate information concerning the symptoms, diagnosis, treatment and prevention of cancer; to investigate the conditions under which cancer is found, and compile statistics thereto."

The officers of the Society for the Control of Cancer are: President, (Vacant 1 March 1923 owing to the death of Dr. Charles A. Powers); Vice-President and Chairman of Executive Committee, Dr. Howard C. Taylor; Secretary, Mr. Thomas M. Debevoise; Treasurer, Mr. Calvert Brewer; Field Director, Dr. J. E. Rush; Executive Secretary, Mr. Frank J. Osborne, whose address is, office of the American Society for the Control of Cancer, 370 Seventh Avenue, New York City.

The object of the Society is thus to furnish knowledge concerning cancer to everyone in the United States and Canada. This is a large task, and while the Society has unquestionably reached millions of people, yet the information which is thus spread is of no value unless these people have it so firmly fixed in their minds and so fully appreciate the importance of what has been taught that they act upon their knowledge. While there still remains a vast number of individuals who have either never heard the

Society's speakers or read its pamphlets, nevertheless, it is felt that especially in some of the larger centers of population a very marked influence has been exerted on the more intelligent classes by the cancer propaganda. Surgeons report that many persons are now coming for diagnosis and treatment at a far earlier stage of the disease than ever before. Cancer clinics report that among all patients seeking advice because of the activities of the Society 10 per cent are sufferers from the disease. All this points to the practical value of the Society's work.

There are relatively few things which the average individual should know concerning cancer which are important, and these can be found in the pamphlets issued by the Society, and obtainable from the Executive Secretary on request. In brief they are as follows: that the recorded instances of death from cancer are rapidly increasing in this country; so that the disease after the age of 45 is one of the chief causes of death; that before the age of 40 cancer rarely occurs; that cancer is not due to a germ; that it is not contagious, nor is it a "blood disease," but that it is on the contrary an overgrowth of the cells of the body itself, brought on by long-continued chronic irritation or inflammation. Originally local in its origin and curable if wholly removed, it spreads to the rest of the body if neglected and is then incurable. These statements are now accepted by most authorities as representing our present knowledge.

The artificial production of cancer in man, by such social habits as result in prolonged chronic irritation has demonstrated the effectiveness of this as a cause. But there must be a susceptible soil as well as a suitable irritant. Thus it has been commonly stated that x-ray produces cancer. But x-ray of itself does not directly produce cancer. If, however, the skin is exposed to x-ray for a very long time, usually a matter of years, a chronic, warty, thickening may develop. Only after this skin inflammation has existed for a period of from six to ten years has cancer been known to occur in the damaged area and then in only about 140 persons,—all professional operators of x-ray machines. This is a very small proportion of those whose skin has been damaged by x-ray and hence the disease appears only in persons very susceptible to cancer. Such cancers will not occur in the future because the operator and patient is now carefully protected from excessive exposure to x-ray.

If then cancer is a growth of the patient's own body, its nature and structure must resemble the part of the body from which it comes, and this is true, for cancer of the liver looks and acts and grows like liver tissue; cancer of the skin looks like skin, and so on. If cancer then is like the tissue from which it sprang it is evident that we are not likely to find any serum or medicine which will cure the cancer, because such medicine or serum would also kill the corresponding healthy tissue. Nor will any diet influence the growth favorably. It is therefore necessary to fall back upon cutting out the cancer at an early stage, before it has spread to the rest of the body, and this is believed at

the present time to be on the whole the best and most satisfactory method of curing cancer. It is the only means of cure which can show a large series of patients whose tumors have been accurately diagnosed with the microscope, and who have been followed for a period of five to ten years to demonstrate absolutely that they have had no return of the cancer. Neither x-ray nor radium can show such an extensive record as surgery, though it is possible these agents will become much more effective as our knowledge of their action increases. It is therefore a rule that all cancers which can be removed by surgical means should be so treated. If they can not be removed, their growth should be checked by the use of x-ray or radium. Which is to be used depends upon the situation, the extent, and the nature of the individual tumor. It has been estimated that if this rule were strictly applied, and that if people came to a surgeon when their cancer was at an early stage, which is the only time when a cure is possible, at least 20,000 lives could be saved per annum in the United States.

People frequently ask, is cancer hereditary? It is not. There is no evidence at the present time that there is any hereditary transmission of the disease in man. Unquestionably families occur in which a large number of cases of cancer appear, but this is almost certainly due to the fact that the liability to the disease is transmissible. But if these people who are liable to cancer avoid all irritation, they are not likely to have cancer, because the cancer itself is not inheritable. A similar family liability has long been known to exist to tuberculosis.

Those whose families have a history of a large number of cases of cancer should see to it that after the age of 45 they are examined at least once a year by a competent physician in order to see that no cancer is present, or if one is discovered, to recognize it at a time when it is curable by operation.

FRANCIS CARTER WOOD,
Director, Institute of Cancer Research, Columbia University.

CANDIA. See CRETE.

CANDY AND CONFECTIONERY.

This industry felt the hard times in full measure. Manufacturers, jobbers and retailers all suffered, and fully 6 per cent of failures were scored per year for the three years ending in December, 1922. More jobbers disappeared from business than from either of the other branches of the trade. An estimate of conditions in 1921 showed \$750,000,000 invested in candy and confectionery and ice cream trade, and that \$37,000,000 was paid in taxes to the government. During the war period the industry lost by reason of the high price of sugar, and when the drop came, their own prices followed so promptly that no profit was generally made. Many manufacturers closed down wholly or in part in 1920 and 1921, so that in 1922 there was little stock ahead, resulting in much better feeling at the opening of 1923, when good business was expected. The trade is well supplied with associations, the Western Jobbers Confectionery Association and Associated Retail Confectioners and Western Confectionery Salesmen all being active. The per capita con-

sumption of candy increases, being now 13 pounds, but export decreases having fallen off perhaps three-fourths from the \$9,000,000 export of 1919.

CANE SYRUP. Syrup produced from the sugar cane crop of 1922 was estimated by the United States Department of Agriculture at 41,141,000 gallons, as compared with the 1921 production of 41,167,000 gallons and the 1920 production of 38,986,000 gallons. The foregoing estimate, it was stated, includes the sugar-cane syrup produced in the Southern States which grow that crop but does not include molasses produced as a by-product of sugar. Of course, sorghum syrup, which is a different product, also is excluded. The total sugar cane area in the eight States referred to was estimated at 521,000 acres, of which 212,800 acres were used for syrup. The rest of the crop, it was stated by the Department of Agriculture, was used for sugar or for chewing, or will be used for planting new acreage. By States the amount in gallons of cane syrup produced in 1922 was as follows: South Carolina, 1,288,000; Georgia, 7,040,000; Florida, 4,800,000; Alabama, 11,937,000; Mississippi, 7,040,000; Louisiana, 6,020,000; Texas, 2,485,000, and Arkansas, 531,000. The production of molasses, a by-product of sugar, in Louisiana was estimated at 20,420,000 gallons for 1922 as compared with 25,423,000 gallons produced in 1921 and 16,857,000 gallons produced in 1920.

CANNING AND PRESERVING. This industry held its own during the hard times of 1921 and first half of 1922, and since then has been in a healthy condition. The obvious reason is that canned fruits, vegetables, fish and oysters have become such a necessity for household and restaurant use, that they cannot be dispensed with, for people must eat. There are over 3,000 fruit and vegetable canneries in the United States, 410 fish canneries, and 65 devoted to oysters. In addition over a hundred concerns put up dried fruits and 150 make canned soups. The normal annual production of all these is nearly \$500,000,000, but even the census figures never can be accurate, and the total of one year may be composed of considerably different edibles than the next year. The reason for this is the variability of the crops. For instance, in 1921, the tomato crop was very light, and most of it was conserved fresh, leaving little for the canners to put up. It is excess crops that find their way to the canning factory, to save them. One of the reasons for the high prices of canned goods in 1919 and 1920 was the great cost of the tin cans. But cans dropped about 25 per cent in 1922, and sugar also was low, so that canned goods were again found on the grocer's shelves at prices varying from 50 to 100 per cent above prewar figures. Exports of canned foods from the United States in 1922 totaled 518,285,760 pounds. Canned fruits exported amounted to 207,000,000 pounds; canned milk, 187,496,000 pounds; canned vegetables, 44,644,000 pounds. For canning crop averages, see HORTICULTURE.

CAPE COD CANAL. See CANALS.

CAPE OF GOOD HOPE PROVINCE, an original province of the Union of South

Africa, formerly known as Cape Colony. It occupies the southern extremity of the African continent, has an area of 276,966 square miles and a population of 2,781,185 in 1921. The European or white population is 651,554, the remainder colored. The chief cities, with their populations in 1921, are: Cape Town, white population, 112,548; Port Elizabeth, 25,940; Kimberley, 18,225. The province is divided into the province or colony proper and the native territories of East Griqualand, Tembuland, Transkei, Walfish Bay, Pondoland and Bechuanaland. Of the colored races, about 23,000 are Malays, the remainder being Hottentots, Kaffirs and Bechuanas but the largest colored element is a mixture of the various races, which mixture now numbers over 400,000. The province has 4,734 aided schools with 9,939 teachers and 121,475 European pupils and 146,128 non-European pupils. The province expends about \$10,000,000 yearly on education. Of the total population 1,500,000 profess the Christian faith, the Dutch churches having the largest number of adherents. The provincial revenue aggregates \$5,000,000 yearly, which sum is supplemented by a subsidy from the Union of about \$6,000,000. The provincial administrator in 1922 was Sir Frederic de Waal. For government and relations with the Union of South Africa, see article on the last named.

CAPE VERDE ISLANDS, 14 islands belonging to Portugal and located off the west coast of Africa, and administered by a Governor. Praia is the capital. The area of the group is 1,517 square miles with a population of 149,793 at the last census (1912). Of this population, 4,799 were returned as whites, 51,509 as negroes and 87,621 as colored. Coffee, hides, raw drugs, and wheat are the chief products. The public revenue in 1922 was estimated at 2,783,196 escudos. The foreign trade in normal years is about 8,000,000 escudos of which two-thirds are imports (escudo=\$1.08 at par in American currency but in 1922 had greatly depreciated).

CAPEN, Samuel Paul, American educator: b. Somerville, Mass., 21 March 1878. His father was the late Elmer Hewitt Capen, president of Tufts College, 1875-1905. He received the degrees of A.B. and A.M. from Tufts College in 1898; the degree of A.M. from Harvard University in 1900, and the degree of Ph.D. from the University of Pennsylvania in 1902. Lafayette College conferred the degree of LL.D. upon him in 1920 and in 1921 Tufts College awarded him the degree of L.H.D. He was instructor, assistant professor, and professor of modern languages at Clark College, Worcester, Mass., 1902-11; professor of German in the same institution and lecturer on educational administration in Clark University, 1911-14. From 1908-11 he served as president of the Worcester Public Education Association and was a member of the Worcester School Board, 1908-14. During the latter year he resigned as a member of the Clark College faculty to go with the United States Bureau of Education in Washington as a specialist in higher education. This latter position he held until 1919 when he was chosen as the first director of the American Council of Education. In the fall of 1922 he was elected

chancellor of the University of Buffalo. Doctor Capen served as executive secretary of the Commission on Education of the Council of National Defense in 1917, as a member of the advisory board of the War Department on education and special training, 1918-19; as a member of the advisory commission of the educational bureau of the Young Men's Christian Association, 1918; was made a member of the division of educational relations of the National Research Council in 1918, and a year later was made a member of the advisory board of the War Plans Division of the General Staff. In 1920 he became secretary of the Educational Research Committee of the Commonwealth Fund. He is vice-president in America of the British Society for Experiment and Research in Education, trustee of the American University Union in Europe, a member of the National Institute of Social Sciences, member of the National Economics League, member of the Society for the Promotion of Engineering Education, member of the National Educational Association, and member of the National Dante Committee. He has published 'Lessing's Nathan der Weise' (1914); 'Opportunities for Foreign Students at Colleges and Universities in the United States,' 'A Survey of the University of Oregon' (1915); 'Recent Movements in University Administration' (1916); 'Reports of Surveys of Higher Institutions in Washington and Nevada' (1916-17); 'Resources and Standards of Colleges of Arts and Sciences' (1918); also bulletins of United States Bureau of Education, and numerous articles in educational periodicals. He became editor of the *Educational Record* in 1920.

CAPITAL UNIVERSITY, a Lutheran co-educational institution, founded in 1850 and located at Columbus, Ohio. In 1922-23 it had a faculty of 29 members, an enrollment of 325 in academic work (300 men and 25 women), and 240 in the music school; property valued at \$800,000 and an income of \$75,000. Otto Mees, D.D., is president.

CARBON DIOXIDE, Manufacture of, for Soda Fountains. See CHEMICAL MANUFACTURING.

CARBON TETRACHLORID, Medicinal Use of. See MEDICINE AND SURGERY, ADVANCEMENT OF.

CARINTHIA, a province of the republic of Austria and formerly a crownland of the dual monarchy of Austria-Hungary. It is bounded north by Salzburg and Styria, south by Carniola, Gorizia and Venetia, east by Styria and west by the Tyrol. The area of the province including the plebiscite district which on 13 Oct. 1920 decided to remain in Austria, is 3,684 square miles. The population at the census of 31 Jan. 1920 was 366,589. Over 75 per cent of the population is German-speaking. Klagenfurt is the capital. It has a population of 26,000. The government is vested as regards local matters in a provincial assembly at the head of which is the provincial committee chosen by the assembly.

CARLETON, William T., American opera singer: b. 1849; d. Flushing, Long Island, 25 Sept. 1922. He was the founder of a noted musical organization, the Carleton Opera Com-

pany, and appeared in operas with many of the foremost stars of his day. He was in the original casts of 'Claude Duval' and of the opera 'Rip Van Winkle' in the 80's. He sang in various grand opera companies besides that of his own organization, among them the Adama Opera Company at the Academy of Music, where the Wagner operas were sung in English.

CARLETON COLLEGE, a Congregational and Baptist co-educational institution, founded in 1866 and located at Northfield, Minn. In 1922-23 it had a faculty of 71 members, 860 students, property valued at \$3,200,000 and income of \$750,000. Donald John Cowling, LL.D., is president.

CARNEGIE CORPORATION OF NEW YORK, the last trust created by the late Andrew Carnegie for the support and development of institutions previously established by him and to provide an endowment, the annual income of which will be available generation after generation for such purposes as the trustees might deem most significant. The first complete report of the Corporation was made 4 Feb. 1923. It showed expenditures since the organization of the Corporation in 1911 of \$57,939,846. The assets of the Corporation on 1 Oct. 1921, the report stated, totaled \$131,819,143. It was stated that the assets will be increased by \$10,000,000 when Mr. Carnegie's estate is settled. The income in 1922 was \$6,466,516. In the report referred to Dr. Henry S. Pritchett, acting president of the Corporation, discussed frankly the dangers of wholesale giving and the accumulation of large sums of money in trust for general and specific purposes. The following summary of expenditures of the Corporation for the years 1911-22 was made public: Carnegie institutions, \$23,415,031; public library buildings, \$12,292,549; colleges and universities, \$8,357,515; educational agencies engaged in war work, \$3,145,000; Church Peace Union, \$2,125,000; civic, social and educational agencies, \$1,855,184; church organs, \$1,717,727; research (including schools and colleges), \$1,511,732; Teachers' Insurance and Annuity Association, \$1,026,621; administration, \$966,915; secondary schools, \$919,075; pension systems, \$474,744; simplified spelling board, \$110,000; administrative investigations, \$21,749.

CARNEGIE ENDOWMENT FOR INTERNATIONAL PEACE. See PEACE AND ARBITRATION, INTERNATIONAL.

CARNEGIE INSTITUTE OF TECHNOLOGY, a non-sectarian educational institution, founded in 1900 by the late Andrew Carnegie, and located at Pittsburgh, Pa. It offers courses for men only, courses for women only and courses for both men and women. In 1922-23 it had a faculty of 281 members, 4,009 students (2,343 in day classes and 1,666 in night classes), property valued at \$6,000,000 and an income of \$1,370,000 including tuition fees. Thomas Stockham Baker, A.B., Ph.D., was acting president in February 1923.

CARNEGIE INSTITUTION OF WASHINGTON. An institution founded by the late Andrew Carnegie on 28 June 1902 and endowed by him for the purpose of encouraging "in the broadest and most liberal manner investigation, research and discovery, and the application of

knowledge to the improvement of mankind." During the year 1922 the institution published directly 24 volumes, totaling 6,605 pages. In addition, it issued numerous articles on various subjects which were printed in a large number of journals.

At an annual meeting of the board of trustees of the institution held in Washington on 15 Dec. 1922 appropriations totaling \$1,364,647 were authorized. Of this sum allotments to the departments and divisions of research totaled \$927,662. At this meeting Cleveland H. Dodge resigned as secretary of the board and as a member of the executive and finance committees. Dr. Charles D. Walcott also resigned at the same meeting as a member of the executive committee. W. Cameron Forbes was elected secretary of the board, thus becoming an ex-officio member of the executive committee; and John J. Carty was elected a member of the executive committee for the unexpired term of Doctor Walcott. William Barclay Parsons also was elected a member of the finance committee for the unexpired term of Mr. Dodge. The board of trustees as constituted on 15 Dec. 1922 was as follows: Robert S. Brookings, John J. Carty, W. Cameron Forbes, Charles L. Hutchinson, Henry Cabot Lodge, Andrew J. Montague, James Parmelee, William Barclay Parsons, Stewart Paton, Henry S. Pritchett, Elihu Root, Martin A. Ryerson, Charles D. Walcott, William H. Welch, Henry White and George W. Wickersham. John C. Merriam was president of the institution. Receipts for the year totaled \$1,345,530.49; expenditures, \$1,370,537.87. Receipts of the institution from its founding to 31 Oct. 1922 totaled \$21,831,544.38; expenditures, \$21,510,698.04.

CAROLINE ISLANDS, former German possessions in the Southern Pacific under a single administration with German New Guinea. The islands are now under mandate to Australia. See **NEW GUINEA**.

CARRIAGE AND WAGON INDUSTRY.

The phenomenal growth of the automobile industry is principally responsible for the steady decline of carriage and wagon building. Those makers of horse-drawn vehicles that have saved themselves have mostly gone into the manufacture of automobile tops or parts. In 1919 the establishments engaged in this industry turned out 608,833 vehicles of all kinds valued at \$56,174,000. In 1921 production dropped to 107,273 vehicles valued at \$12,175,000.

CARROLL, B. Harvey, United States consul: b. Waco, Texas, 3 March 1874; d. 30 March 1922 in a hospital at Gibraltar. He received the degree of B.A. from Baylor University 1892; the degree of LL.D. from the University of Texas 1894; Th.M. from the Southern Baptist Theological Seminary, Louisville, Ky., 1899 and Th.D. 1900. During the summer of 1899 he studied at the University of Chicago. He held the degrees of M.A. and Ph.D., magna cum laude, from the University of Berlin (awarded in 1902). From 1902-04 he was head of the department of history and political economy at Baylor University; he also served on the editorial staff of the *Houston Chronicle* 1906-14. On 24 April 1914 he was

appointed American consul at Venice, Italy, and received the Italian War Cross for valor. During the World War while a representative of the American Red Cross, he established the first relief stations, first free kitchens and first hospital of American Red Cross in Italy. At the time of his death he was the United States consul at Cadiz, Spain. He published: 'Die Annexion von Texas'; 'Ein Beitrag zur Geschichte der Monroe Doctrin' (thesis) (1902); 'Political History of Europe, 1815-1848'; 'The High Priest of the Lost Temple.'

CARROLL COLLEGE, a Presbyterian co-educational institution, located at Waukesha, Wis. In 1922-23 it had a faculty of 16 members, 300 students, property valued at \$1,050,000 and an income of \$85,000. William A. Ganfield, LL.D., is president.

CARSON, Sir John Wallace, Canadian army officer and business man: b. Montreal, Canada, 13 Oct. 1864; d. there, 13 Oct. 1922. He was one of Canada's leading business men, but had always taken a keen interest in military matters. He was educated at the Montreal schools, and began his business career with the Royal Insurance Company, passed to the Northern Company, and from 1887 to 1892 was manager of the Fire Department Insurance Company of North America. He then started for himself as insurance and financial agent and broker, and in 1907 he consolidated his interests in the Crown Trust Company, which he founded in that year. He was a director of the Union Bank of Canada and director of various milling, mining, asbestos and smelting companies. He served in the Canadian militia for 39 years; and, when the World War broke out, he went overseas as a representative of the minister of militia and defense, and did notable work in organizing the arrangements for the Canadian Expeditionary Force. In 1915 he was promoted to brigadier-general, and in 1916 to major-general, and received a knighthood, the C.B., and the Russian Order of Saint Stanislaus of the first class. In addition, he held the Canadian Long Service Decoration, and had been active in support of the Dominion Rifle Association and the Boy Scout movement.

CARSON AND NEWMAN COLLEGE, a Baptist co-educational institution, founded in 1851 and located at Jefferson City, Tenn. In 1922-23 it had a faculty of 27 members, 414 students, property valued at \$313,260 and an estimated income of \$108,275. Oscar E. Sams, LL.D., is president.

CARTHAGE COLLEGE, a non-sectarian co-educational institution, founded 10 Jan. 1870 and located at Carthage, Ill. In 1922-23 it had a faculty of 30 members, 326 students, property valued at \$500,000 and an income, including dormitory account, of \$107,000. Harvey Daniel Hoover, Ph.D., S.T.D., is president.

CARY, Henry Nathaniel, American journalist: b. Racine, Wis., 11 Feb. 1858; d. Chicago, 23 Nov. 1922. He was educated in the public schools of La Cygne, Kan., where, on *The Journal*, he began his newspaper career by learning the printers' trade. In 1876 he moved to Milwaukee, where he rose in six years from reporter on *The Sentinel* to managing editor. He became managing editor of *The Chicago*

CASE SCHOOL OF APPLIED SCIENCE — CATHOLIC CHURCH

Times in 1889 and continued in that capacity until three years later, when he became western manager of the Associated Press. A year later he became managing editor of The New York *Times* and remained in that capacity until September 1896. Then followed service on The Saint Louis *Post-Dispatch*, in charge of the New York *World* staff of correspondents in New Cuba during the Spanish-American War; New York *Verdict*, The New York *Morning Telegraph*, Detroit *Free Press* and The Saint Louis *Republic*. He resigned from the *Republic* in 1911 to accept the position of general manager of the Chicago Newspaper Publishers' Association, which position he held at the time of his death.

CASE SCHOOL OF APPLIED SCIENCE, a non-sectarian educational institution for men, founded in 1881 and located at Cleveland, Ohio. In 1922-23 it had a faculty of 62 members, 637 students, property valued at \$4,267,126.14 and an income of \$320,144.67. Charles Sumner Howe, LL.D., is president.

CASSIA, OIL OF. See **FOOD STANDARDS, FEDERAL.**

CATHOLIC CHURCH, Roman. The outstanding event of the year, in the Catholic Church, was the passing of the "frail and gentle Pontiff," Benedict XV. His death roused general interest and was marked by universal sympathy. He became Pope in September 1914, and during his pontificate saw the horrors of a war in which millions of his spiritual children were engaged on both sides. He had a difficult part to play. That he dealt fairly with both sides may be inferred from the fact that each side accused him of favoring the other during the struggle, and both acclaimed him as a friend when he died. The Washington *Post* said editorially: "Toward the United States Benedict always entertained and displayed the most kindly feelings. By his communications to Presidents Wilson and Harding, by his reception of the former at the Vatican, and in a variety of other ways during and since the war he showed his recognition of the greatness and importance of this country. He was intensely interested in Ireland. The statue erected to him in Constantinople . . . sufficiently proves the opinion entertained of him in the Orient." He died 22 Jan. 1922. It was about noon 6 February when Cardinal Bisleti announced to the multitude, assembled in the Piazza di San Pietro, the election of a new Pope, Cardinal Ratti, who had taken the name of Pius XI. The announcement was soon followed by the appearance of the new Pope at the outer balcony of the Basilica, to give his blessing to the people. This was a departure from recent custom and a return to the more ancient one, observed in the days when the Pope was temporal ruler of Rome. The action of the Pope was variously interpreted till official statement was made, that the Holy Father intended thus to signify his universal good will and his hope for peace among all peoples. The Pope soon gave evidence of his interest in America. That America might be represented in future Conclaves, he changed the law governing the time of their opening. To Cardinal O'Connell of Boston he thus expressed himself: "You Americans are young in years, but old in wisdom,

worldly prudence and foresight. Your innate qualities of fairness, justice and peace; your great moral and spiritual stability, and your infinite riches make you the hope and anchor-sheet of the world." That Pope Pius intends to interest himself in human welfare generally is indicated by his protest to the Near Eastern Conference at Lausanne concerning the plight of Christian minorities in the Turkish Empire. The Holy See has world-wide interests. This is officially recognized by many governments, which have established diplomatic relations with the Vatican. The 'Annuario Pontificio' (1922), an official publication, gives the following list:

COUNTRY	Sends to Holy See	Receives

Switzerland	"	"
Venezuela	Minister	"

Many countries have no diplomatic relations with the Holy See. To some of these the Pontiff sends an Apostolic Delegate. This representative of the Pope is not an accredited minister. He is of the Hierarchy rather than to the government, and his duties are entirely ecclesiastical. There is an Apostolic Delegate to the United States. The present delegate was but recently appointed, Archbishop Pietro Fumasoni-Biondi. He was formerly delegate to India; and later Secretary to the Congregation de Propaganda Fide, in Rome. Other countries which have Apostolic Delegates are: Albania, Australasia, Canada, Constantinople, Cuba and Porto Rico, Egypt and Arabia, Greece, India, Japan, Latvia, Lithuania and Esthonia, Mesopotamia, Kurdistan and Armenia Minor, Mexico, Philippine Islands, Persia, Syria.

Papal Bulls and Decrees.—The year was not marked by any notable legislation. From time to time, however, circumstances necessitated regulations which concerned particular places rather than the Church in general. There were several decrees regarding missionary provinces in China, Japan and Africa. These effected erection of new Vicariates in some cases, and mere change of boundary in others. There was a change of boundary made, in one instance, in the United States. The counties of Erie, Huron and Richland (in the State of Ohio) constitut-

ing the western part of the diocese of Cleveland, were, in June, detached from that See and made part of the diocese of Toledo. There was also a new diocese created in the United States, the diocese of Fresno and Monterey. The erection of this diocese is of interest in as much as it includes seven of the old Franciscan Missions, among them the famous "Carmel," where Fra Junipero Serra is buried. The General Grant, Sequoia and Yosemite National Parks, and the proposed Roosevelt Park, are also in the new diocese. Monterey was the original diocese of California, and at one time included the whole State. An important decree, in March, changed the time for the opening of the Conclave for the election of a Pope. Formerly the Conclave opened 10 days after the death of the Pope. The time was extended to 15 days, so that American cardinals could arrive in time for the election.

The Society for the Propagation of the Faith is well known to Catholics as an agency for collecting funds to support missionaries. The Society was founded at Lyons 100 years ago. Branches have been established in various countries, including many dioceses in the United States. But the headquarters of the Society remained in Lyons until 1922, when, by a decree of Pius XI, dated 3 May, headquarters were moved to Rome. The practical workings of the Society remain unchanged. Another document of interest to America is a letter of the Pope, dated 25 April, addressed to the American Hierarchy, commending the work of the Catholic University at Washington, D. C. Among other things the Pope says: "Better one university completely organized and equipped than many of stunted growth."

The appointment of new members to the Sacred College, the creation of new cardinals, is always a matter of interest. No American cardinals were created during 1922, but there is persistent rumor that 1923 will see at least two. Cardinal Bonzano, however, one of the new cardinals, is well-known in the United States. As Apostolic Delegate he lived in Washington, D. C., since February 1912. In a public statement issued at the time of his departure for Rome, he expressed the highest admiration for America, her spirit and institutions.

The other new Cardinals are: Monsignor Locatelli, Nuncio to Madrid; Monsignor Rey y Casanova, Archbishop of Toledo; Monsignor Charost, Archbishop of Rennes; Monsignor Tosi, Archbishop of Milan; Monsignor Touchet, Archbishop of Orleans; Monsignor Mori, Secretary to the Congregation of the Council; Father Ehrle, S. J., formerly Vatican Librarian.

From this we see that among the new Cardinals there are four Italian Prelates, two French, one Spanish and one German.

These Cardinals will fill vacancies in the Sacred College. None had been created since June 1921, when the present Pope was made Cardinal. Since then the following Cardinals died: Cardinal Gusmani, Archbishop of Bologna, 24 Aug. 1921; Cardinal Dubourg, Archbishop of Rennes, 23 Sept. 1921; Cardinal de Cabrieres, Bishop of Montpellier, 21 Dec. 1921; Cardinal Almaraz y Santos, Archbishop of Toledo, 24 Jan. 1922; Cardinal di Bonzo, Prefect of the Congregation of Religious, 25 June 1922.

CATHOLIC CHURCH IN UNITED STATES

The Church in the United States is divided into 14 ecclesiastical provinces. There is an Archbishop at the head of each province. The provinces are: Baltimore, Boston, Chicago, Cincinnati, Dubuque, Milwaukee, New Orleans, New York, Oregon, Philadelphia, Saint Paul, San Francisco and Santa Fe. Each province embraces several dioceses. Each diocese has its own bishop. The diocese which the archbishop rules is called the archdiocese or the Metropolitan See; the dioceses of his province are called dioceses or Suffragan Sees. The archbishop, however, has no jurisdiction in the dioceses of his province, except in the special cases stipulated in Canon Law. In all practical matters the bishop is supreme within the territory assigned to him as his diocese. The diocese is subdivided into parishes, which are in the care of priests subject to the authority of the bishop of the diocese.

There are in the United States 14 archdioceses and 89 dioceses. Many of the archdioceses and some of the dioceses have a Bishop Auxiliary. The bishop of Omaha is by title archbishop as he was formerly archbishop of Manila; and when the bishop of Pittsburgh resigned he was made honorary archbishop. There is also one bishop with special charge of the Ruthenian-Greeks.

In the Philippine Islands there are, besides an apostolic delegate, one archbishop and nine bishops. There is a bishop in Porto Rico, and another in the Hawaiian Islands. The following statistics refer only to the United States proper:

Archbishops.....	17
Bishops.....	96
Churches with resident priest.....	10,994
Missions.....	5,621
Secular clergy.....	16,026
Regular clergy.....	6,023

Changes in the Hierarchy during 1922.—

On 8 March 1922, Rt. Rev. A. J. McGavick, D.D. made bishop of LaCrosse successor to bishop Schwebach, who died June 1921.

24 May, Rt. Rev. B. J. Mahoney, D.D., spiritual director at North American College, Rome, made bishop of Sioux Falls, succeeding Bishop O'Gorman, who died September 1921.

27 June, Rt. Rev. M. J. Keyes, S.M., named bishop of Savannah, successor to Bishop Kieley, who resigned on account of poor health.

24 November, Rt. Rev. P. G. E. Nussbaum, D.D., appointed bishop of Marquette, in place of Bishop Eis, resigned.

24 November, Rt. Rev. John J. Swint, D.D. made bishop of Wheeling, W. Va., as successor to Bishop Donohue.

14 December, Rev. Edward A. Mooney of Cleveland, Ohio, succeeded Bishop Mahoney as spiritual director at the American College, Rome.

1 March 1923, Rt. Rev. Daniel J. Curley, D.D., of New York appointed Bishop of Syracuse, N. Y., as successor to Bishop Grimes, who died 26 July 1922.

Missionary activities.—Home Missions.—The missionary strives to propagate religion by making converts. Yet much of the missionary effort, if not most of it, in the Catholic Church

in the United States is spent in caring for those who are Catholics already.

Some mission societies are general in their interests, while others are for restricted fields. The purpose is often indicated by the name. The following is the list given in the 'Catholic Directory.'

"Catholic Church Extension Society"—General offices; McCormick Building, Chicago, Ill. The society has for its object the helping of already existing churches and missions, and the establishing of missions in country districts.

"The Catholic Missionary Union"—Office: Apostolic Mission House, Brooklands, D. C. Its purpose is to engage priests and laymen as missionaries to non-Catholics in the United States, to provide for their maintenance, to distribute Catholic literature, and in every way to assist the bishops in establishing and carrying on home missions in their various jurisdictions.

"International Catholic Truth Society"—Office: 407 Bergen Street, Brooklyn, N. Y. Distributes literature dealing with Catholic doctrine, for the instruction of Catholic and non-Catholic alike.

"Catholic Missionary Aid Society"—Office: 125 North Craig Street, Pittsburgh, Pa. As the name indicates its object is to obtain material help for those engaged in missionary work.

There are three societies devoted to missionary work among the Indians. These are: "Bureau of Catholic Indian Missions"; "Society for Preservation of Faith among Indian Children"; office for both: 1326 New York avenue, N. W. Washington, D. C. "The Marquette League"—Office: United Charities Building, Fourth avenue and 23d street, New York, N. Y.

All missionary activity in the Reservations must have the permission of the government. The Bureau is the representative of the Catholic Church in all dealings with the United States Indian Office. Besides this, the missionaries among the Indians look to the Bureau for the support of the mission schools, and for material aid in establishing and maintaining missions. The Preservation Society collects an annual fee from each of its members for the benefit of the mission; while the League is an auxiliary of the Preservation Society, helping the repair and building of chapels, the support of catechists, scholarships for Indian pupils and other missionary purposes.

"Commission for Catholic Missions among Colored People and Indians"—Office: Saint Mary's Seminary, Baltimore, Md. Collects funds for the work indicated.

There are two societies devoted to work among the colored people. These are: "The Catholic Board for Mission Work among the Colored People." Office: 1 Madison avenue, New York, N. Y.; "Saint Joseph's Society for the Colored Missions." Office: Saint Joseph's Seminary, Baltimore, Md.

The board collects and distributes funds. The funds are collected by way of fee for membership and by appeals in churches throughout the country. They are distributed, through the bishops, according to the needs of each diocese.

The society is composed of priests devoted to work among the colored people. It began in 1871 when four young priests took charge

of a parish for colored people in Baltimore. It has now about 50 priests, in charge of nearly 50 parishes. It conducts besides four educational institutions, two devoted to the preparation of missionaries, and two schools for colored boys. There are, besides, parochial schools attached to the missions.

Foreign Missions.—Many religious orders of men and women send missionaries to foreign lands. Yet these orders are not listed as foreign mission societies, and their statistics are not available. Within the past three years the Dominicans, Vincentians and Passionists have undertaken missionary work in China; and priests belonging to the society of the Divine Word have gone to China from Techmy, Ill.

There are two societies of priests established for, and devoted to, the work of evangelizing China, namely: "The Catholic Foreign Mission Society of America," with headquarters at Maryknoll, near Ossining, N. Y., and "The Chinese Mission Society," with headquarters at Saint Columban's Mission House, Omaha, Nebr. Both of these societies are of recent origin and both are American. While they are quite young, neither being more than a dozen years old, they have begun active work in China, with missionary nuns as well as priests.

The foreign mission depends for funds on some home agency. Among Catholic organizations supplying such funds, we may mention:

"The Society for the Propagation of the Faith"—National Offices: 343 Lexington Avenue, New York, N. Y.

"The Association of the Holy Childhood"—Office: 801 Standard Life Building, Pittsburgh, Pa.

"American Missionary Society of Catholic Women"—Office: Milwaukee, Wis.

"Sodality of Saint Peter Claver for African Missions"—Office: Fullerton Building, Saint Louis, Mo.

It is estimated that these agencies collect \$1,200,000 for the foreign missions. Exact figures are not available; but there is a tendency to co-ordinate effort, and this may result in more definite information.

Meeting of the Hierarchy.—With His Eminence Cardinal O'Connell presiding, the Hierarchy held a meeting at the Catholic University, Washington, D. C., September 27 and 28. A writer in the "Catholic Historical Review" gives this summary of the proceedings:

Continuation of the work of the National Catholic Welfare organization; a committee was appointed to place before the public the stand of the Catholic Church on education; steps were taken for the unifying and systematizing the many mission activities; a resolution was adopted petitioning the Holy See to grant to the bishop of Albany permission to open an informative process of inquiry into the virtues of Kateri Tekakwitha, the Mohawk Indian heroine of sanctity, who was born and baptized 40 miles from Albany, as the first step towards her ultimate canonization.

Of public interest also were the meetings of the National Council of Catholic Women, and of the National Council of Catholic Men. These councils are intended to secure co-operation of existing societies, of Catholic women and men, in matters of national concern.

Education.—The Catholic Church does not condemn the public school. Neither is it opposed to the purpose for which these schools were established. What then is the fundamental reason for the Catholic school? Catholic educators tell us that the Catholic system of elementary schools is based on these principles. (1) The need of religion. The spiritual interests of the child are supreme. Learning, health, ability to make a living are important, and must not be slighted. But, to the Church eternal welfare is most important. (2) The need of moral training. Moral training is best when based on religion. This is particularly true of the moral training of a child. (3) Religion and morality are best taught when associated with secular training. To divorce them from secular education leaves in the immature mind the impression that they are secondary, at least in daily life.

Catholic educators acknowledge the right of the State to see that children are properly educated; but they claim that in the Catholic school the child receives an education at least as good as it would receive in the public school. Patriotism is inculcated; reverence for God and God's laws beget reverence for all duly constituted authority and its legal enactments; religion and morality are bulwarks against radicalism and anarchy, which are the greatest enemies of our country and its institutions.

The organization of the elementary school system is diocesan. The bishop of the diocese is the supreme authority. He legislates for the schools through a school-board. Diocesan superintendents visit the schools, examine the children and the work of the teachers, and report their findings to the board.

Besides the diocesan organizations there is the department of education under the National Catholic Welfare Council. This supplies information to the diocesan boards and superintendents, collects data and co-ordinates the whole system of education, elementary, high school, college and university. It suggests improvements in methods and helps to standardization.

While elementary education in the parochial school is diocesan, many Catholic high schools are in charge of members of the teaching orders, and in large measure independent, and the Catholic colleges and universities are almost entirely in the hands of the religious.

There can be no question of increase in the number of Catholic schools and colleges. Their friends claim an equal advance in equipment and standard of education, and point to successes in public examinations and competitions to prove their claim.

The seminary, for the education of aspirants to the priesthood, is in a category of its own. A college education is a prerequisite for admission; the seminary course occupies six years.

The religious orders train their own members. The secular clergy is trained in the diocesan seminary. These seminaries are under the bishop; he appoints the professors; he is responsible in matters of discipline and economy. There are, however, certain regulations to which all seminaries must conform. These regulations are made by the Sacred Congregation of Seminaries and Studies, in Rome. These determine the course of studies, the methods of

teaching, and exact certain qualifications on the part of the professors. Thus uniformity and standardization are obtained.

The following is a brief summary of the statistics available:

	Total number	Faculty number	Students
Universities.....	16	2,000	19,802
Seminaries.....	51	1,063	6,667
Colleges.....	114	1,697	13,996
High schools.....	1,552	7,927	129,838
Elementary schools.....	6,551	41,581	1,795,673

CATHOLIC EASTERN ORTHODOX CHURCH. See CHURCHES IN THE UNITED STATES, STATISTICS OF THE.

CATHOLIC SISTERS' COLLEGE, a Roman Catholic educational institution for women, founded in 1911 and located at Washington, D. C. In 1922-23 it had a faculty of 37 members, and 115 students. No information was given as to the value of the institution's property or its income. Rev. Dr. P. J. McCormick, is dean.

CATHOLIC UNIVERSITY OF AMERICA, The, an educational institution of higher learning for men, founded in 1887 and located at Washington, D. C. In 1922-23 it had a faculty of 96 members, 667 students, property valued at \$5,000,000 and an income of \$600,000. Rt. Rev. Thomas J. Shahan, D.D., was Rector during the year indicated.

CATHOLIC UNIVERSITY OF OKLAHOMA. See SAINT GREGORY'S COLLEGE.

CATHOLIC WELFARE COUNCIL, National, an organization founded 24 Sept. 1919 at a meeting of the Bishops of the Roman Catholic Church of the United States, held in Washington, D. C. Its first president was the late Cardinal Gibbons. The National Catholic Welfare Council was established to unify, co-ordinate and encourage all activities of the Catholic Church in America. It is primarily a service organization under the direction and control of the hierarchy. By its service of information, advice, co-operation and assistance, it aims to create a sentiment of national solidarity amongst American Catholics. In the pursuance of this purpose it functions under an Administrative Committee of seven archbishops and bishops which acts as a continuation committee of the general body of bishops between annual meetings. The Administrative Committee of the National Catholic Welfare Council consists of the following archbishops and bishops: Most Rev. Edward J. Hanna, D.D., of San Francisco, Chairman; Rt. Rev. P. J. Muldoon, D.D., of Rockford, Vice-Chairman; Most Rev. Austin Dowling, D.D., of Saint Paul, Treasurer; Rt. Rev. Joseph Schrembs, D.D., of Cleveland; Rt.

Rev. Edmund F. Gibbons, D.D., of Albany; Rt. Rev. Louis S. Walsh, D.D., of Portland, Me., and Rt. Rev. Thomas E. Molloy, D.D., of Brooklyn.

The National Catholic Welfare Council is divided into the following departments:

Executive Department.—The principal function of this department is to supervise the work of the Council as a whole. The General Secretary, the Rev. John J. Burke, C.S.P., represents the National Catholic Welfare Council in Washington on all matters affecting Catholic rights and interests. Under the immediate supervision of this department are the following bureaus:

Bureau of Immigration which deals with the immigration problem in its Catholic aspects. Branch offices are maintained at the ports of New York, Boston, Philadelphia, San Francisco and Seattle.

Bureau of Motion Pictures. This bureau has done effective nation-wide work in preventing the increase in the output of indecent moving pictures.

Bureau of Historical Records keeps an account of all Catholic activities as well as of all Catholic soldiers and sailors who were engaged in the World War.

Department of Education.—The chief purposes of this department are: (1) a clearing house of information concerning Catholic education and Catholic education agencies—for educators, students and the general public; (2) an advisory agency to assist the Catholic educational system in its development; (3) a connecting agency between Catholic activities and government education agencies; (4) an active organization to safeguard the interests of Catholic education. In the pursuit of these purposes, educational surveys and investigations are conducted. The department also issues bulletins, pamphlets and books treating of educational questions.

Department of Press and Publicity conducts a weekly news service for the Catholic press of the United States. It serves 87 Catholic newspapers with up-to-date news gathered by its own correspondents from every part of the world.

Department of Laws and Legislation.—The principal purpose of this department is to keep in touch with all legislation, Federal or State, which in any way affects the interests of the home, the school or the Church.

Department of Social Action.—This department deals with the social and industrial problems of the day and spreads information concerning Catholic ideals in these fields. It operates in three divisions—Bureau of Industrial Relations, Bureau of Citizenship, and a Rural Life Bureau.

Department of Lay Organizations.—All Catholic organizations of men and women are brought together by the two co-ordinate branches of this department, namely, the National Council of Catholic Men and the National Council of Catholic Women. These two organizations are interested in all problems affecting youth, education, immigration, motion pictures, men and women in industry, as well as other questions relating to the well-being of American Catholics.

Some of the important publications of the National Catholic Welfare Council are: 'Fundamentals of Citizenship'; 'Civics Catechism'; 'Catechism of the Social Question'; 'Catechism of Catholic Education'; 'Directory of Catholic Colleges and Schools'; 'American Catholics in the War'; 'Church and Labor'; 'Social Mission of Charity'; 'Social Reconstruction,' and 'The State and the Church.'

CEDAR CREST COLLEGE. See ALLENTOWN COLLEGE FOR WOMEN.

CEDARVILLE COLLEGE, a Reformed Presbyterian co-educational institution located at Cedarville, Ohio. In 1922-23 it had a faculty of 10 members, 109 students, property valued at \$100,000 and an income of \$20,000. Wilbert Rudnick McChesney, A.M., Ph.D., D.D., is president.

CELTIC LANGUAGES. See PHILOLOGY.

CEMENT. According to a preliminary report issued by the United States Geological Survey on 13 Jan. 1923, production of Portland cement in the United States during 1922 totaled 113,870,000 barrels, compared with 98,293,000 barrels produced in 1921. Shipments totaled 116,563,000 barrels in 1922, as compared with 95,051,000 barrels in 1921. Stocks on hand at the close of the years were: 9,134,000 barrels in 1922, and 11,938,000 barrels in 1921. Stocks of clinker or unground cement at the mills at the end of December 1922 amounted to approximately 2,823,000 barrels. These statistics, it was said by the Geological Survey, were based mainly on reports of producers of Portland cement, but in part on estimates, the use of estimates being made necessary by lack of returns from four producers. The Bureau of Foreign and Domestic Commerce of the Department of Commerce reported imports of hydraulic cement from 1 Jan. 1922 to 21 September totaling 151,701 barrels, as compared with 122,317 barrels imported during the 12 months of 1921. Exports of hydraulic cement up to 1 Dec. 1922 totaled 1,020,907 barrels, as compared with 1,181,014 barrels exported during the 12 months of 1921. Further details regarding the production of Portland cement in 1922 were not available 1 Feb. 1923, but statistics compiled by the Bureau of Census for the years 1921 and 1919 show that during the

former year 125 establishments engaged primarily in the manufacture of cement turned out products valued at \$203,627,000, as compared with products valued at \$175,265,000 turned out by 123 concerns in 1919. Persons engaged in the industry, including proprietors, firm members, salaried employees and wage earners, totaled 30,907 in 1921, compared with 30,247 in 1919. Salaries and wages paid amounted to \$44,959,000 in 1921, as compared with \$42,691,000 in 1919. Materials used cost \$102,360,000 in 1921; compared with \$79,510,000 in 1919. The total production of cement of all kinds in 1921 was 99,063,000 barrels, valued at \$184,801,000, compared with 81,307,000 barrels, valued at \$138,714,000, produced in 1919. As shown above, the production of Portland cement in 1921 was 98,293,000 barrels, which was valued at \$183,808,000, an average of \$1.87 per barrel. Of the total production of 1919, 80,778,000 barrels were Portland cement. This output was valued at \$138,130,000, or an average of \$1.71 per barrel.

CENSUS. The Act of Congress, approved 3 March 1919, the full title of which was "An act to provide for the Fourteenth and subsequent decennial censuses," designated the three years beginning on the first day of July next preceding each decennial census as "the decennial census period," and provided for an expansion, during that period, of the force of the permanent bureau at Washington, and for the creation of a special field force to collect the census data. The principal subjects covered by the Fourteenth Census were the same as those provided for by the Thirteenth Census Act, namely, population, agriculture, manufactures and mines and quarries (including oil and gas wells). In addition an inquiry on forestry and forest products was provided for, and the census of agriculture was broadened to include the subject of drainage and a more detailed inquiry regarding irrigation than had been made in 1910. The data collected by the enumerators of the Fourteenth Census will be found in the articles on the UNITED STATES, the several States, industries, etc. (qq.v.).

CENTENARY COLLEGE OF LOUISIANA, a co-educational institution, founded in 1839 and located at Shreveport, La. It is owned by the Methodist Episcopal Church, South, but controlled by board of trustees, members of which are not required to be members of the Methodist Church. In 1922-23 it had a faculty of 24 members, 350 students, property valued at \$1,205,780.98 and an income of \$175,000. George S. Sexton, D.D., is president.

CENTRAL AMERICAN CONFERENCE. A conference of representatives of Guatemala, El Salvador, Honduras, Nicaragua and Costa Rica, held at Washington, D. C., 4 Dec. 1922 to 7 Feb. 1923, and participated in by representatives of the United States government. The outstanding feature of the conference was the adoption of a convention limiting for a period of five years (except in case of civil war or impending invasion by another state), the number of enlisted men in the standing armies and national guard of the participating countries as follows: Guatemala, 5,200; El Salvador, 4,200; Honduras, 2,500; Nicaragua, 2,500; Costa Rica, 2,000. It was stated that in adopting these armament limitations, the

convention took into consideration the relative population, area, extent of frontiers and various factors of military importance. The convention further binds the contracting parties to establish a national guard organization in accordance with the most efficient modern methods and for this purpose it was stated they will consider the employment of foreign officers as instructors. The contracting parties further agreed to furnish one another, semi-annually during the life of the convention, full reports of the measures adopted by each government for the execution of the convention.

The conference also adopted a general treaty of peace or amity embodying those provisions of the Treaty of 1907 which had been found to be of practical value in furthering friendly relations among the Central American states. Among its features may be mentioned a declaration to the effect that the violent or illegal alteration of the constitutional organization of any one of the Central American states is a menace to the peace of all. It also binds each state not to recognize in another a government resulting from a coup d'état or a revolution against a recognized government of a person constitutionally disqualified from holding office. Other provisions include the obligation, in case of civil war, not to intervene in favor of or against the government of any republic; the obligation to seek constitutional reforms, which would make impossible the re-election of a president or vice-president; the obligation on the part of each government not to intervene in the internal political affairs of any other republic and not to permit, within its territory, the organization of a revolutionary movement against the recognized government of any other Central American republic, and finally an obligation not to enter into secret treaties.

The conference also adopted a convention for the establishment of an international Central American tribunal, replacing the convention of 1907 which established the Central American Court of Justice. The new convention provides for a tribunal to which shall be submitted all controversies arising among the Central American republics, which it has been found impossible to settle through diplomatic channels or by other pacific means, provided that such controversies do not affect the sovereign and independent existence of the nations concerned.

Another convention adopted by the conference provides for the establishment of two permanent international commissions in each republic—one a commission of finance and one a commission on means of communication. These commissions are to prepare practical plans for economic reforms and for the construction of public works.

A fourth convention adopted was a four-power compact for the establishment of free trade, signed by Guatemala, El Salvador, Honduras and Nicaragua. Costa Rica, by the observance of certain formalities, may become a party to this compact if it desires to do so.

Two of the conventions adopted by the conference were six-power compacts, the United States being the sixth signatory. One provides for the establishment of international commis-

sions of inquiry and is a general unification of the conventions which the United States concluded with the other five powers mentioned in 1913-14, establishing international commissions of inquiry. The other six-power compact was in the form of a protocol in which the United States declared its full sympathy with the convention providing for the establishment of a Central American tribunal and stated its willingness to designate 15 citizens to be available for service on the tribunal.

Other conventions adopted were, one providing for the unification of protective laws for workmen and laborers; another relating to the practice of the liberal professions; another relative to the preparation of projects of electoral legislation; another providing for the establishment of agricultural and animal experiment stations; another providing for the reciprocal exchange of Central America students and finally an extradition convention.

Altogether, the conference adopted one treaty, 11 conventions and three protocols. When this treaty and conventions had been signed, the announcement was made that Guatemala and Honduras had decided to submit their boundary dispute to arbitration by President Harding. This dispute has lasted for a number of years and has resulted in much friction. Francisco Sanchez Latour, headed the Guatemala delegation; Dr. Francisco Martinez, the Salvadorean delegation; Dr. Alberto Ucles, the Honduran delegation; Gen. Emiliano Chamorro, the Nicaraguan delegation, and Alfredo Gonzales Flores, the Costa Rican delegation. The American delegates were Secretary Hughes, and Sumner Wells, of the State Department. Secretary Hughes was chairman of the conference. See also PEACE AND ARBITRATION, INTERNATIONAL.

CENTRAL AMERICAN FEDERATION. On 15 Sept. 1921 the republics of Guatemala, Honduras and San Salvador signed the constitution of a new state formed by the federation of the three republics. The other states of Central America were invited to come into the Federation but there developed obstacles of one kind or another which prevented their entrance. The city and department of Tegucigalpa were ceded free to the Federation for its capital and federal district. The constitution provided for a Legislature of two chambers and for a Federal Council in which the executive power should be vested. Before the date (1 Feb. 1922) arrived for the inauguration of the Federation, Guatemala and El Salvador withdrew from the Federation and thereby reassumed their former sovereignty and independence. The chief cause of the collapse of the Federation was the overthrow of the Herrera administration in Guatemala. See articles on the several countries and republics in Central America.

CENTRAL BAPTIST COLLEGE, an educational institution for women, founded in 1892 and located at Conway, Ark. In 1922-23 it had a faculty of 19 members, 175 students, property valued at \$250,000 and an income of \$10,000. Doak S. Campbell, is president.

CENTRAL COLLEGE, a Methodist Episcopal Church, South, co-educational institution,

founded in 1854 and located at Fayette, Mo. In 1922-23 it had a faculty of 15 members, 325 students, property valued at \$1,500,000 and an income of \$75,000. Paul H. Linn, D.D., is president.

CENTRAL HOLINESS UNIVERSITY, a non-sectarian co-educational institution, founded in 1905 and located at University Park, Iowa (railroad station, Oskaloosa, Iowa). In 1922-23 it had a faculty of 19 members, 210 students, property valued at \$500,000 and an income of \$36,823.42. John Lakin Brasher, D.D., is president.

CENTRAL WESLEYAN COLLEGE, a Methodist Episcopal co-educational institution, founded in 1864 and located at Warrenton, Mo. In 1922-23 it had a faculty of 25 members, 370 students, property valued at \$600,000 and an income of \$60,000. Otto E. Kriege, D.D., is president.

CENTRE COLLEGE OF KENTUCKY, a non-sectarian educational institution for men (under Presbyterian auspices), founded in 1819 and located at Danville, Ky. In 1922-23 it had a faculty of 16 members, 300 students, property valued at approximately \$300,000 and an approximate income of \$85,000. R. Ames Montgomery, D.D., LL.D., is president.

CEYLON, a British island colony to the south of Hindustan in the Indian Ocean. It has an area of 25,481 square miles and a population of 4,504,283 in 1921. Divided according to race there were in the colony 3,016,423 Sinhalese, 1,120,478 Tamils, 284,704 Moors, 28,923 Burghers, 13,745 Malays, 8,421 Europeans, 4,402 Veddas and 20,503 non-descript. In addition there were 6,684 persons connected with the military forces and with shipping. Over 60 per cent of the population is engaged in the pursuit of agriculture, over 10 per cent in industrial occupations and the remainder in the trades and the professions. The marriage registration in 1920 was 21,821 (exclusive of Mohammedans); births, 163,719; deaths, 132,955. The urban population is about 15 per cent of the total. The chief cities of the colony are Colombo, 244,100; Galle, 39,000; Jaffna, 42,000; Kandy, 32,000.

Religion.—In 1921 there were 2,770,000 Buddhists, 982,000 Hindus, 302,000 Mohammedans and 440,000 Christians.

Education.—In 1920 there were 895 government schools with an attendance of 124,477; 1,868 aided schools with 197,640 pupils, and 1,350 unaided schools with 27,709 pupils. All of these schools are vernacular schools and there were in addition 278 English schools with 48,127 pupils. Fees are charged in the latter schools but the vernacular schools are free. There are 84 industrial schools and technical students numbered 446 in 1921. The government maintains the Royal College and the Training College. The total outlay on education in 1920 was \$750,000.

Finance.—The budget of Ceylon, submitted 12 Aug. 1922, to the legislative council provides for an increase in both revenues and expenditure. The revenue is estimated at 80,400,000 rupees (\$20,000,000), which exceeds the estimate for 1921-22 by 1,650,000 rupees, and is only 800,000 rupees less than the estimated revenue for 1919-20 — the highest estimate for Ceylon in any financial

year. The expenditures are estimated at 92,509,200 rupees, or 16,020,000 rupees more than for last year, and 741,500 rupees more than the actual expenditure of 1920-21. It also exceeds the estimated revenue of the year 1922-23 by 12,109,200 rupees. The net public debt in 1920 was \$23,836,965, incurred entirely for the construction of harbors, railways, water systems, etc.

Production.—About one-fifth of the area of the colony is under cultivation, or about 3,100,000 acres, while 1,000,000 acres are under pasture. The principal crops are paddy, cacao, cinnamon, tea, cocoanuts and rubber. The exports of tea in 1922 were 171,390,789 pounds, while in 1920 51,000,000 pounds of dried cocoanuts, 135,000,000 pounds of copra, 51,000,000 pounds of cocoanut oil, 88,552,000 pounds of rubber were exported. In the same year there were in the colony 1,598,833 horned cattle, 3,210 horses, 57,497 sheep, 59,070 swine and 155,570 goats. There are over 100 plumbago mines in operation, the exports of which in 1920 amounted to 18,400,000 pounds. Monazite is also produced in commercial quantities, but the gold and thorium deposits have not yet reached the stage of commercial development. There are numerous veins of small gems, such as rubies, sapphires, moonstones. The native manufactures are weaving, basket-making, shell boxes, etc., and earthenware, lacquer work. In addition to these manufacturing industries, which are on a primitive scale, are the large industries dependent on the agricultural products, including 1,154 tea and rubber factories, 120 fibre and cocoanut oil factories, 50 saw mills and about 20 manufactories of ice, aerated water, etc.

Commerce.—In 1920 the exports were valued at \$77,362,731 and the imports at \$101,059,610. The chief imports were enumerated above under production. The chief imports were cotton textiles, rice, coal, sugar, spirits and fertilizer. The most of the tea trade is with the United Kingdom. All imports from America and Canada into Ceylon quadrupled between 1913 and 1919 and in 1920 trebled the 1919 figures. In 1913 Ceylon imported goods valued at \$60,368,249, of which only \$773,341 came from the United States. In 1919 total imports were valued at \$77,636,618, of which \$3,716,156 was American. In 1920 total imports were \$104,221,821 in value, and the participation of American imports was \$14,217,359, or 13.64 per cent of the total, against a percentage of American imports of 1.28 per cent in 1913. It is believed that imports credited to Canada were usually manufactured in the United States and for this reason the two countries are combined in the tables. In 1921, a year of general industrial and commercial reaction, American imports declined to \$3,193,228 in value, slightly under the 1919 figures, but over four times those of 1913. In exports also Ceylon has increased rapidly in importance to American trade. In 1913 the United States and Canada took from Ceylon goods valued at \$12,554,066, out of a total export of \$75,588,656. In 1919 we and Canada took \$39,921,160 worth of Singalese exports, out of a total of \$119,072,570, or 33.53 per cent; in 1920, \$30,104,120 of a total of \$87,089,132 and in 1921, \$22,810,041, or 21.92 per cent of the total exports amounting to \$104,051,467 in value.

Communications.—The colony has 750 miles of railway in operation and several branch lines under construction, 561 post offices, an equal number of telegraph offices and money order offices and 7,600 miles of telegraph wire.

Government.—The government of the colony is vested in a Governor who is assisted by an Executive Council of seven members. These are the Colonial Secretary, Colonial Treasurer, the Attorney-General, the Agent of the Western Province and three nominees of the Governor. To this is added a Legislative Council of 37 members, 11 of whom are elected to represent territorial divisions, two to represent Europeans and one each the Burghers, the Chamber of Commerce and the Low Country Products Association. The remainder are nominated by the Governor. In 1922 the Governor was Brig.-Gen. Sir William Henry Manning, and the Colonial Secretary, Sir Graeme Thomson.

CHAD, a territory of French Equatorial Africa constituting a separate colony since 17 March 1920. It has an area of 501,676 square miles and a population of 2,090,000. Its affairs are administered by a Lieutenant-Governor assisted by an administrative council. The colony has administrative and financial autonomy. The general budget of the colony for the year 1921-22 was 3,850,000 francs. The colony raises large numbers of cattle, sheep, asses, camels, horses and ostriches, but trade is hampered by lack of export facilities.

CHALMOOGRA, or **CHAULMOOGRA**, **OIL**. See MEDICINE AND SURGERY, ADVANCEMENT OF.

CHAMBER OF COMMERCE OF THE UNITED STATES OF AMERICA.

The operation of the Transportation Act of 1920 engaged much of the attention of the National Chamber during 1922. In the investigations and hearings on railroads and revenues by the Interstate Commerce Commission the Chamber was directly instrumental in arranging for the appearance of the Secretary of Commerce as the spokesman of the public. Mr. Hoover appeared before the Commission on 3 February and there outlined the situation of the railroads from the point of view of the Department of Commerce. His statements gave an unusually effective picture of conditions and contained important suggestions of broad principles designed to solve the problem. The Chamber also was active in opposition to some proposed amendments to the Transportation Act, particularly one to repeal provisions which laid upon the Interstate Commerce Commission duty to fix rates such as would provide an adequate return to the roads, and another to repeal those provisions which increased the authority of the Interstate Commerce Commission over intra-State rates. The Chamber's opposition in these matters was successful.

In connection with the railroad strike of 1922, the Chamber disseminated information giving the outstanding facts regarding the questions at issue; the board of directors commended the statement of President Harding making clear the issues involved in the strike, and the Chamber, through the request of its President, aroused business organizations of the country to support the President of the United States and to secure such local protection and community public

order as would assure every man his right to work without intimidation.

In the coal strike of 1922 the Chamber, through the Coal Bureau of its Natural Resources Production Department, kept the Chamber's membership fully informed of developments and the situation with reference to supplies of coal and its production. The organization members were urged to organize to meet the existing situation and were offered the services of the Chamber in helping to meet particular difficulties. Following the cessation of the strike, the Chamber, at the request of the Government, enlisted the co-operation of its organization members in helping to meet the difficulties due to shortage of coal and transportation through the efforts of industry rather than Government regulation. The Chamber's Coal Bureau gathered important information as to supplies of coal and coal needs which was useful not only to government authorities but to industry generally.

The Chamber supports the policy of an adequate privately owned and operated merchant marine, a subject which was one of the two principal topics at the Chamber's annual meeting in Washington in May 1922. The Chamber's policy includes support of such Government aid as may be necessary to the upbuilding of such a merchant marine, and this policy the Chamber's officers have publicly urged upon Congress. Other fields of transportation include the development and co-ordination of highway and waterway transport. These matters have received the attention of the Chamber's Transportation and Communication Department and a special Committee on Inland Waterways.

In a referendum which closed 21 Jan. 1922, the Chamber became committed to six proposals regarding principles of tariff legislation, including the principle of a flexible tariff and the creation of a Tariff Adjustment Board to administer adjustable rates and also reasonable protection for American industries subject to destructive competition from abroad and of benefit to any particular section of the country. The Chamber's policies in these particulars were placed before Congress with considerable success, particularly in regard to the flexible tariff.

On behalf of veterans of the World War, the Chamber actively supported a national system of reclamation at Federal expense to be carried out for the purpose of affording ex-service men an opportunity to cultivate the soil, and national legislation and appropriations to enable ex-service men to obtain vocational education. The Chamber also actively concerned itself with measures relating to the care of sick and disabled soldiers. To these measures the Chamber was committed by votes of delegates at two annual meetings, reaffirmed through a referendum which closed in February 1922. Through the same declarations and referendum the Chamber was also committed to opposition to the adoption of an indiscriminate Federal cash bonus to all veterans of the World War. As a result, the Chamber took the leadership in opposition to the adoption of such a bonus, which was ultimately defeated.

The development of the National Budget System has been of special interest to the Chamber because the adoption of a budget system was the subject of the first referendum ever held by the

Chamber shortly after its organization in 1912 and because of the Chamber's persistent activities in favor of the passage of a budget act. The Chamber has also advocated reform of the personnel policy of the National Government and has concerned itself with questions relating to government reorganization. It has worked closely with the Department of Commerce through a special committee for the purpose of establishing closer contact between the Department and representative business organizations.

During 1922 it prepared a plan for commercial arbitration, that is, for the adjustment by definitely organized machinery within the National Chamber of commercial disputes by arbitration in domestic as well as foreign transactions and for similar arbitration through local chambers of commerce and trade associations acting for themselves.

Soon after the completion of the Conference on Limitation of Armaments and while the Four-Power Treaty was awaiting ratification by the Senate the Chamber's Committee on Foreign Affairs issued a report in which the committee urged ratification of the treaties prepared in the Conference as designed to accomplish those purposes which the Chamber had supported. This report was distributed to the Chamber's membership and laid before the members of the Senate.

The National Chamber has been conspicuously active in the development of the International Chamber of Commerce, which was organized as the result of an international trade conference held under the auspices of the National Chamber in Atlantic City in 1919. The offices of the American Section of the International Chamber of Commerce are located in the headquarters of the National Chamber, which also provides an administrative Commissioner for the United States at International Headquarters in Paris.

The Chamber has actively opposed measures designed to inject the Government into the fields of private business, such as bills in Congress which provide for Government operation of monopolistic workmen's compensation insurance in the District of Columbia and a bill to amend the Postal Savings Act which would place the Government in the savings business in competition with a large number of banks.

The tenth annual meeting of the Chamber was held in Washington 16-18 May 1922 and was devoted to discussion of the subjects "European Conditions and Their Effect on American Business" and "A Merchant Marine." From this meeting came declarations from the delegates in attendance favoring among other things official representation of the United States on the Reparations Commission, participation by our Government in the International Court of Justice, confidence in the principles of the Federal Reserve System and endorsement of the work of the Conference on Limitation of Armaments and Far Eastern questions.

Special problems of the great branches of American industry and commerce have received the attention of the Chamber's various departments, which include Fabricated Production, Civic Development, Domestic Distribution, Finance, Insurance, Transportation and Communication, Natural Resources Production and Foreign Commerce.

In addition several investigating committees of the Chamber have been at work including committees on ocean transportation, fire waste and insurance, free zones, par collection of checks, forestry policy, immigration, education, business ethics and refunding of the war debt.

A referendum was held which closed 14 October on a report of the committee on par collection of checks through which the Chamber became committed in favor of legislation which would make par remittance of checks universal throughout the United States.

The officers of the Chamber are: Julius H. Barnes, president; John Joy Edson, treasurer; A. C. Bedford, Thomas E. Wilson, Harry A. Black and Thomas B. Stearns, vice-presidents; Willis H. Booth, William Butterworth, A. B. Farquhar, L. S. Gillette, Charles Nagel, honorary vice-presidents; Elliott H. Goodwin, resident vice-president, and D. A. Skinner, secretary.

The membership of the Chamber on 1 Nov. 1922 was 1,293 organizations, with an underlying membership of 764,154; 6,448 associate members and 6,667 individual members.

D. A. SKINNER.

Secretary.

CHARLES I (IV in Hungary), former Emperor of Austria and King of Hungary: b. Persenbeug, 17 Aug. 1887; d. in exile at Funchal, Madeira, 1 April 1922. He was a son of Archduke Otto Franz Joseph and a grandson of the late Archduke Karl Ludwig and Princess Annunziata, daughter of the late King Ferdinando II of the Two Sicilies. He succeeded his great-uncle, Franz Joseph I, as ruler of the former dual monarchy of Austria-Hungary upon the death of the latter at Schoenbrunn Castle on 21 Nov. 1916. He and his consort, the Princess Zita, daughter of Duke Robert, of Bourbon-Parma, whom he married on 21 Oct. 1911, were crowned King and Queen of Hungary at Budapest on 30 Dec. 1916. His reign lasted until 11 Nov. 1918, when, by a manifesto issued upon that date, he was prohibited from exercising any prerogatives as Emperor of Austria. Two days later he "temporarily" relinquished the throne of Hungary. The following March, accompanied by his family and suite, he left Austria under British protection and took up his residence in Switzerland. In April 1919 the Austrian Parliament formally deposed him and deprived the House of Hapsburg of all sovereign rights and other prerogatives in Austria. Charles never attempted to regain his position in Austria, but endeavored twice to re-establish himself as King of Hungary, which, with a Soviet interlude, had elected to remain a kingdom wherein the Hapsburg party was strong. His first ineffectual effort to regain the throne of Hungary was made on 26 March 1921, when he suddenly appeared in a suburb of Budapest and attempted to rally around him the Royalists. Two members of the Little Entente—Jugoslavia and Czechoslovakia—at once mobilized for an invasion of Hungary. Austria remained cool. Admiral Horthy, the Regent of Hungary, warned by the Conference of Ambassadors which in February 1920 had resolved that Charles should never again be allowed to return to Hungary, advised him to return to Switzerland. He did so on 5 April after issuing

a proclamation in which he regretfully admitted that the time was not then ripe for his return to power. His second attempt to regain the Hungarian throne was made a few months later and was spectacular. Accompanied by his wife, he flew in an airplane from Hertensein Castle, Switzerland, on 22 Oct. 1921 and landed in Burgenland where, gathering together a sort of army, he marched on Budapest. In the meantime he issued at Raab a proclamation in which he invoked the loyalty of his "subjects" and ordered the convocation of the old Parliament, which had been dissolved since October 1918. The Hungarian government stood firm and its troops soon disposed of Charles' army. On 24 October the Council of Ambassadors issued an ultimatum to Admiral Horthy demanding the deposition of Charles and the surrender of him and his wife to the Entente within 48 hours. The Little Entente once more had mobilized. Horthy complied with the ultimatum, and, the decision having been reached that it was not safe to permit Charles and his consort to reside in Switzerland, they were placed on board the British cruiser *Cardiff* and taken to Funchal, Madeira, where they were landed 19 Nov. 1921, and where Charles spent the remainder of his days. His final illness was brief. He died of pneumonia contracted a little over a week before his death.

Charles was educated under tutors at Persenbeug and thereafter in the public schools of Vienna. At the time of his ascension to the throne of the dual monarchy the process of dissolution already had started. With youthful impetuosity Charles did bold things in an effort to save his country and his dynasty. He endeavored to break away from the German control that had fastened itself upon Austria-Hungary during the closing years of the rule of his great-uncle Franz Joseph I. The death of the latter on 21 Nov. 1916 was regarded by Emperor William II of Germany as a serious blow to the cause of the Central Empires. The German Kaiser did not trust Charles who had been brought up in the school of his uncle, Archduke Francis Ferdinand, the heir presumptive to the Austro-Hungarian throne, whose assassination at Sarajevo on 28 June 1914 was the spark that kindled the World War. Charles, like his uncle, is said to have hoped for a tri-une empire of German, Czech, and Slav nationals entirely free of Berlin patronage or direction. William II, on the other hand, desired to bring about a union of German-Austria and Germany upon the death of Franz Joseph, but when the old Emperor passed away the time for putting the scheme into effect was not regarded as propitious. There was another reason for the German Kaiser's distrust of Charles. The latter's wife was a descendant of the old Italian house of Bourbon-Parma and is said to have detested the Prussians. Within a month after Charles' succession to the throne, he endeavored to get into communication with his wife's two brothers—Prince Sixtus and Prince Xavier—both of whom were then serving in the Belgian army, the former in the ambulance corps and the latter as a captain of artillery. The Austro-Hungarian monarch's purpose was to bring about, if possible, a separate peace for his own country. Without the knowledge of the German Kaiser, Prince Sixtus

was invited to meet Charles and the Empress Zita at Laxenburg. Inasmuch as Zita, who penned the invitation, had intimated rather strongly what the nature and result of the meeting might be, Sixtus had no difficulty in securing a furlough from the Belgian army and a passport from the French government, granting him permission "to go to Switzerland." His passport bore the date 25 Jan. 1917. At Laxenburg Charles handed him a letter with the request that he show it to Raymond Poincare, then President of the French Republic. The letter was written on paper bearing the Hapsburg coat-of-arms and was signed "Charles." It was written in French entirely in Charles' own hand. Although not dated Sixtus afterward declared that his brother-in-law wrote it and handed it to him at Laxenburg on 24 March 1917. The letter described in general terms what the Austro-Hungarian Empire had suffered because of the war and asserted that neither the government nor the people could stand more. It praised the endurance of the French and stated that Charles wished President Poincare to know that he, Charles, would use his best offices to secure for France the return of Alsace-Lorraine. The letter further stated that Belgium also should be restored to her pre-war condition. The letter was taken to Paris by Prince Sixtus, shown to President Poincare, and its contents communicated to the British Prime Minister, Lloyd George. Charles' scheme for a separate peace is said to have been received with a certain amount of favor in both Paris and London. However, Charles had failed to make any promises with respect to "Italia Irredenta" or to provide for any compensation to Italy and because of this fact the Italian government, when taken into the secret, rejected the overtures. The matter was kept secret for about one year, but, in the attempt of the Publicists to show the German war plans back of the Reichstag's peace resolution of July 1917 and the Pope's Peace Note of 1 August following, something of the truth leaked out during certain unofficial negotiations France was conducting in Switzerland for the purpose, it has been alleged, of reviving of Charles' plan. When Emperor William II of Germany was informed of what had taken place, he sternly rebuked the Austro-Hungarian ruler and forced from Charles a denial of the whole matter. It has been asserted that the text of Charles' denial was brought from the German General Headquarters by an officer of the general staff and presented to Charles for his signature. As an answer to this denial, Georges Clemenceau, then Premier of France, published in facsimile on 12 April 1918 Charles' letter and all documents connected therewith. After the close of the war, Prince Sixtus published a book confirming the entire matter and giving the additional information, not known at the time Clemenceau published the facts regarding Charles' proposal, that the failure of the scheme was due solely to the fact that Italy was not mentioned in the plan.

Charles was a man of no more than average ability. His failure politically and militarily proves that he was no statesman. His last days were spent in comparative poverty. For a short while after their banishment to Madeira, he and

his wife lived at the Villa Victoria, an annex of Reid's Palace Hotel, at Funchal. They had but two servants and only the Count and Countess Hunyadi as courtiers. Later, being unable to realize anything on his Austrian and Hungarian properties and the funds which he took with him having become exhausted, he and the former Empress Zita moved into a bungalow which was loaned them by the Portuguese government and in which he died.

CHARLES A. COFFIN FOUNDATION.

During the latter part of 1922 the General Electric Company, by action of its directors, set aside a fund of \$400,000 to be known as the Charles A. Coffin Foundation, the income from which, estimated at approximately \$20,000 per year, is to be available, it was said, for encouraging and rewarding service in the electrical field by giving prizes to the company's employees and recognition to lighting, power and railway companies for improvement in service to the public, also fellowships to graduate students, and funds for research work at technical schools and colleges. The Foundation is to be controlled and administered by the Foundation Committee appointed by the General Electric Company Board. This committee, within the limits of the purpose for which the Foundation was created, has power to change the conditions applicable to the distribution of the fund and the amounts for each particular purpose.

CHARLESTON, College of, a non-sectarian co-educational institution founded in 1785 and located at Charleston, S. C. In 1922-23 it had a faculty of 12 members, 152 students, property valued at \$607,300, and an income of \$40,020.59. Harrison Randolph, LL.D., is president.

CHATTANOOGA, University of, a Methodist-Episcopal co-educational institution, founded in 1886 and located at Chattanooga and Athens, Tenn. In 1922-23 it had a faculty of 37 members, 625 students, property valued at \$726,298.32 and an income of \$107,000. Arlo Ayres Brown, D.D., is president.

CHAUTAUQUA INSTITUTION, the controlling organization of the popular educational centre at Chautauqua Lake, N. Y. This corporation is organized not for profit but is conducted for educational purposes by a board of trustees. Its property comprises about 200 acres on the terraces above Lake Chautauqua. Here are located large and commodious school buildings, an hotel and several cottages, a hall of philosophy and a large amphitheatre which seats about 6,000 persons. Founded in 1874 for Biblical and religious teaching, the institution has long since outgrown its sectarianism and at present it gives a popular series of lectures and addresses, concerts, dramas, etc. For a smaller number there are literary, scientific and philosophical lectures in progressive courses. Reading circles carry on the work throughout the year in neighborhoods and villages throughout the country. The total enrollment of Chautauqua readers is nearly 500,000 but many drop out before the completion of the four-year course. The number of those who have completed the full courses is about 65,000. The president of the institution in 1922 was A. E. Bester and the secretary, E. H. Smith.

CHEESE. See DAIRY PRODUCTS; also COLD STORAGE.

CHEMICAL MANUFACTURING. Very great advances have been made in many lines of chemical manufacturing during recent years. This has been, of course, a more or less continuous process, of which only a few of the more novel may be here described. Our theoretical knowledge is rapidly improving and is constantly applied to the manufacturing process, greatly to its advantage. In the hydrogenation of fats, for example, the chief line of advance open to improvement seems to lie in the cheapening of the hydrogen, and important developments have been reported by Georges Claude and others. Another development of the gas industry is the application of liquid oxygen to blasting. This idea while not novel has been perfected and put into commercial use by the Real del Monte y Pachuca Company at Pachuca, Mexico. This is a subsidiary of the United States Smelting, Refining and Mining Company. The cartridges are composed of lampblack made by burning the residual gum from the refining of Mexican petroleum. They are prepared for use by soaking in liquid oxygen prepared at the plant, inserting rapidly into the drill holes and exploding. Their use shows economies which can probably be increased as the process is better handled. Progress has also been made in the manufacture of carbon dioxide for use in soda fountains. This is now made from the waste gases of the boiler plant used for generating steam for the pumps necessary to liquefy the gas. This waste gas is first cooled by using it to boil sodium bicarbonate solution. The cooled gas is then freed from soot and sulphur dioxide by passing it up through towers filled with limestone down which water is trickling. The gas is then passed through two towers filled with coke over which a solution of sodium carbonate is passing. Part of the carbon dioxide dissolves (about 8 out of 18 per cent) and the rest is run to waste. The sodium bicarbonate solution so obtained is now pumped into boilers through the tubes of which the waste gases of the steam boilers are first passed; this liberates carbon dioxide which is cooled, compressed, liquefied and charged into steel tubes to be sent to the soda fountain. The soda solution is used over again. Nearly 60,000,000 pounds of carbon dioxide were produced in 1919, valued at over \$6,500,000.

In the early days of sulphuric acid manufacture, the acid was made altogether by burning sulphur, the most of it coming from Sicily. The government then granted a monopoly to a French syndicate which raised the price to \$70 per ton. This led to the substitution of pyrites as the source of sulphur, and the use of pyrites continued until the great war when difficulties in transportation from Portugal led to the almost entire substitution of sulphur from the Louisiana and Texas districts. In 1892 the American production was 2,300 tons. In 1921 this had touched the peak at 1,879,150 tons, with imports of only 50 tons. In this same year exports from the United States were 285,762 tons, showing the important place we now occupy in the production and use of sulphur. While the American production has been increasing the Sicilian production has steadily decreased and

sales are now limited to nearby consumers. The three producers in this country—the Texas Gulf Sulphur Company, Union Sulphur Company, and the Freeport Sulphur Company, have now formed an export association to promote the use of sulphur abroad in the place of pyrites in the manufacture of sulphuric acid. Sulphur dioxide is a waste product in many remote places where it is formed in immense quantities in roasting sulphide ores. A beginning has been made in utilizing this material by separating it from the waste gases, pumping it into cylinders like those used for carbon dioxide and transporting it to market. Of course, success in this operation will depend very largely upon transportation costs. The product is especially fitted for use in the disintegration of spruce for the manufacture of sulphite paper stock.

Selenium and tellurium are obtained from the slimes of copper refineries and the amount that can be produced from this source greatly exceeds the consumption. Efforts are now being made to find new outlets for these substances. Successful attempts have been made to prepare phosphoric acid from inferior bone phosphate by heating it with coke and sand in the electric furnace. The product is separated in a Cottrell separator in the form of a light powder which attracts moisture rapidly from the air and is converted into a syrupy solution. The product is available for the manufacture of any phosphate as well as for the preparation of concentrated superphosphate of lime for use as fertilizer. The tendency in the fertilizer trade is now toward the production of higher grade products, thus cheapening the cost of carriage. Synthetic fertilizers such as ammonium nitrate and ammonium and potassium phosphate have much to commend them as fertilizing material and their use is on the increase. Urea is now prepared in quantity from calcium cyanamide and seems likely to be of use as a fertilizer. In ceramics and in refractories and glass very rapid progress is being made. The American Ceramic Society is now well organized and is a powerful instrument in promoting progress in these lines. The tunnel kiln has been widely adopted for quantity production with great saving of fuel and better uniformity of product.

The Fansteel Products Company has placed on the market a new commercial metal, tantalum, which has very interesting properties. It is described as having a specific gravity of 16.6 with a melting point of 2,850° C. and the wire drawn from it has a tensile strength of 130,000 pounds. It is malleable and may be worked at ordinary temperatures to a remarkable extent without annealing. The electrical resistance is eight times that of copper. It acts as an electrolytic valve and may be used in rectifying alternating current. The most unusual property of this metal is its resistance to corrosion. It is not attacked by hydrochloric or nitric acid nor by aqua regia, hot or cold. This metal absorbs gases readily and would appear to be worth testing in radio apparatus. The new metal is prepared from tantalite by fusion with caustic potash adding hydrofluoric acid and crystallizing out the double fluorid. This is mixed with sodium and heated in a

vacuum. The powder so produced is compressed and melted in a vacuum furnace. This description shows at once that unless a cheap source of supply can be found and a much simpler process of reduction the metal is bound to be so high in price as to be more of a curiosity than a commercial product. No doubt these will in time be found and the metal is certain, if its properties have been correctly described, to be of greater value than platinum. Tank cars for conveying hydrochloric acid now have pure rubber linings which acts as a complete protection to the steel shell. Pumps of hard rubber and pumps made of metal with hard rubber linings as well as hard rubber pipes are now on the market. All these as well as improvements in the manufacture of chemical stoneware and the size of stoneware vessels obtainable mark the increase in man's command over the forces of nature. In this connection the manufacture of large containers of pure nickel and aluminum is noteworthy as well as the improvement in enameled vessels.

The Du Pont chemists have discovered that the addition of small amounts of a metallic salt to an acetone solution of nitro-cotton greatly decreases its viscosity so that it may be sprayed. The cleaned articles such as automobile bodies are sprayed with the solution and the solvent allowed to evaporate. This produces a thin varnish which is tough, flexible, elastic and impervious to water or even to dilute acids, and protects corrodible metals and wood perfectly. This varnish may have any desired color by the addition of dyes or pigments which gives a wide field of application. It has been suggested that this may prove to be an admirable anti-fouling coating for sea-going vessels. Filtration processes have recently been greatly improved. It has been shown, for example, that by the introduction of paper pulp made of old newspapers into a liquid the rapidity of filtration, as well as the clarity of the filtered liquid is greatly improved. In this way water containing a very large bacterial count may have this reduced to, say, 100 per cubic centimeter. In addition the mechanical construction of the filter press has been improved, allowing it to do more and better work.

EDWARD HART,

Professor of Chemical Engineering, Lafayette College.

CHEMICALS. This industry in the United States includes a great variety of concerns that make widely different chemicals, and many that produce one or more chemicals as a by-product. The census has grouped them under one head for convenience, and reports every five years on nearly the same concerns. There were 395 of them in 1914, and 598 in 1919, and there is no evidence of a larger total in 1923. Change in values has been so great that the growth in business is best measured by the number of employees—32,311 in 1914, 55,586 in 1919, and 57,000 (est.) in 1923. Measured in dollars, the

expansion was much greater, from \$158,000,000 production in 1914 to \$438,659,000 in 1919, and \$450,000,000 (est.) in 1922. During the latter year the larger concerns were reported as working 80 per cent of their normal capacity. The analysis of conditions does not reveal as much general prosperity as at first suggested by these figures. Twenty-five leading industrial chemicals which are systematically averaged to secure an index to rising and falling prices, showed 440.3 index number in 1922, as against what is called the normal index of August, 1914—326.6. But the December index was only 430.7, the first week in January 429.5, and second week in February 434.7; indicating a rather weak market. Twelve representative acids made a better price showing. Their index number was 14.3 in 1922, and the normal of 1914 was 12.6. In December, 1922, they stiffened to 16.2, but fell off very slightly in January and February, 1923.

Coal tar products became very stiff in price, due to the situation in the Ruhr coal fields, where this industry reached such high development. For 20 leading coal tar products the index number for 1914 is 12. In 1922 the index averaged 28.9, and was above 30 through December and January, and 31.6 15 Feb. 1923. The United States production of benzol and crude derivatives in 1923 was much reduced by the coal strike conditions.

The chemical sensation of the year 1922 was in industrial arsenic. It became so scarce that a government investigation was instituted. The shortage of white arsenic was estimated 18 Jan. 1922, as 5,000 tons, with the situation growing worse, as arsenic is relied upon to fight the boll weevil in cotton growing. Then came a report from an expert of the Cotton Growers Association, that very large deposits of iron arsenate existed in Utah, and were being opened up, and that there would be an abundance by July 1923, with indefinitely large reserves for the future. Naturally the price of arsenic has been very high and unstable.

Early in 1923 the industrial chemicals which commanded a rising price were arsenic, blue vitriol, soda ash, caustic soda and nitrite soda.

Chemicals, Exports of. During the fiscal year 1922 chemicals and allied products valued at \$100,518,943 were exported from the United States. Exports during the preceding year amounted to a total of approximately \$220,000,000. But, asserts the United States Department of Commerce, the authority for the values quoted, "from these figures it cannot be assumed that there was a 50 per cent decrease in exports, as there was a marked decline in the value of the products exported during that period. In the more important chemicals there were both marked decreases and important increases in the quantity shipped from the United States." Among the so-called heavy chemicals, says the Department of Commerce, exports of acetate of lime and glycerine more than doubled in quantity to 27,606,499 pounds (value of \$587,174) and 3,625,999 pounds (value \$508,807), respectively; caustic soda rose by 20,000,000 pounds to more than 123,000,000 pounds, valued at \$4,660,815; borax advanced by 150 per cent to 10,094,724 pounds, valued at \$545,601; and silicate of soda and copper sulphate increased slightly to 26-

024,366 pounds (value \$279,041) and 4,809,948 pounds (value \$227,019), respectively. On the other hand the exportation of bleaching powder decreased by 11,000,000 pounds to 26,439,251 pounds, valued at \$502,870; and soda ash showed a marked decline—from 113,000,000 pounds in 1921 to about 33,000,000 pounds (value \$757,648) in 1922. The export classification for chemical products was expanded considerably beginning with January 1922. Several articles for which export statistics are first shown for the six-month period ending 30 June 1922 indicate an important trade in these items. For example, dextrine was exported to the extent of 7,723,920 pounds, bichromate of potash 3,716,760 pounds, aluminum sulphate 11,986,218 pounds, ammonia and ammonium compounds (ammonium sulphate excepted) 2,573,598 pounds, and boric acid 834,598 pounds.

The foreign trade in coal-tar dyes, colors, and stains, except color lakes, showed a marked decrease—from \$13,577,788 for the fiscal year 1921 to only \$3,805,917 in 1922. The exports of pigments, paints, and varnishes amounted to \$10,069,211, or about 50 per cent in value of foreign shipments for 1921. This decrease was largely accounted for by a decline in the trade in white lead from 17,400,000 pounds in 1921 to about 9,000,000 pounds in 1922. The export classification for these products has also been materially expanded. The exports during the six months ending 30 June 1922 of the more important pigments for which figures are shown for the first time are lithopone 1,909,041 pounds, bone black 1,014,390 pounds, and carbon and lampblack 10,187,055 pounds. Medicinal and pharmaceutical preparations decreased to \$5,383,399, or only one-third of the value of the exports for the fiscal year 1921. Among fertilizer materials, exports of ammonium sulphate more than doubled in quantity to 168,077 long tons, valued at \$8,720,775, while there was a slight decrease in shipments of phosphate rock. In contrast were the exports of prepared fertilizers for the first six months of 1922 which amounted to only 9,204 tons, valued at \$469,366.

Exports of naval stores indicated an improvement in this trade during the 1922 fiscal year, particularly with respect to rosin. Shipments of this product increased in quantity from 877,109 barrels in 1921 to 1,403,921 barrels in 1922, but declined in value from more than \$10,000,000 to \$6,623,499. Exports went chiefly to the United Kingdom, Germany, Argentina, and Brazil. Foreign shipments of turpentine increased slightly—to 10,786,280 gallons, valued at \$8,071,839. This was a decrease, however, of \$3,000,000 in value.

During the last six months of the calendar year 1922, the chemical export business improved to such an extent that the total shipments for the year slightly exceeded those for the calendar year 1921, the aggregate values being \$106,101,562 for 1922 compared with \$104,639,941 for 1921.

CHEMISTRY, General, Physical and Inorganic. During the World War the chemical industry underwent an immense expansion and the production reached a point far in excess of peace demands. On the conclusion of the armistice much of this production was arrested, but

the crash in the chemical trade was not reached until early in 1921. Most of the great corporations which had organized a tremendous staff during the war then began to discharge their personnel, cutting the force to the barest skeleton of what it had been. This resulted in many cases of severe hardship. The process of getting back to a peaceful base of operations seems at this writing to have been accomplished. Prices have fallen, but not so greatly as might have been expected. This is due largely to the fact that by operation of the emigration law and the strong position of the labor unions wages have fallen very little. The research carried on during the war was largely on technical lines; most of the results were not revealed but are now coming to light. Since the war numerous fellowships have been established for fostering research and during the year 1922 great advances in our knowledge were made. It will be impossible in the available space to give a full account of these. The American Chemical Society is now the greatest chemical society in the world, both in numbers and in the quality and quantity of the material published. The membership is now about 15,000 and three journals are published: *The Journal of the American Chemical Society*, *The Journal of Industrial and Engineering Chemistry* and *Chemical Abstracts*. The first prints 2,800, the second 1,200 and the third 5,000 pages annually at a cost of \$15 to each member. In addition we have *Metallurgical and Chemical Engineering* and *The Chemical Age*.

In the *Journal of the Franklin Institute* William D. Harkins has published a series of articles on Atom Nuclei, the Separation of Isotopes and the Whole Number Rule. It is assumed that the simplest atom is that of hydrogen. This has a mass = 1.0078. It consists of a positive ion of mass nearly equal to that of the atom, or 1.0023, positively charged, called proton, p , and an electron, e , with a mass of 0.0055, and a negative charge = 4.77×10^{-10} electrostatic units. The atom of hydrogen is p, e and it is believed that all other atoms are intra atomic compounds of hydrogen. It is believed that in oxygen there are 16 electron pairs united more closely than in the hydrogen atom. This closer union is designated by pe , and oxygen is therefore $p_{16}e_{16}$ and calcium is $p_{40}e_{40}$. This closer union is accompanied by a loss of potential energy = 0.0078, which Harkins calls the packing effect. It is evident that if this be true the mean atomic weights will be close to whole numbers. It is believed that the alpha particle and the helium nucleus are identical and that the helium atom is represented by $(p_{4}e_{2})_{4}$, in which half the negative electrons are contained in the nucleus, and that lithium is = $He + H$, beryllium $2He + H$, boron $2He + H$, carbon $3He$, etc. It is shown that if this theory be true the heat evolved by transformation of one pound of hydrogen into helium would equal that of 10,000 tons of coal. It is possible that this reaction occurs at high temperatures and pressures in the stars which would be a possible source of heat and light in these bodies.

By dissolving beryllium carbonate in glacial acetic acid, recrystallizing the basic acetate and subliming it Homigschmid and Birkenbach have

obtained a very pure acetate. This was converted into nitrate by heating with nitric acid and the nitrate treated with pure ammonium carbonate until the precipitate redissolved. The solution was then filtered, the filtrate boiled in platinum and the precipitate collected, washed and ignited. The oxid produced they think was exceptionally pure. This was then mixed with sugar charcoal and ignited in a stream of chlorine. The chlorid was resublimed and portions weighed out and precipitated as silver chlorid. As the mean of two series of determinations, the first of 13 and the second of five, varying between 9.015 and 9.022 the mean 9.018 was obtained as the true atomic weight. The authors point out that if the hypothesis that beryllium is composed of He_2 is accepted the atomic weight must be eight. If it be $\text{He}_2 + \text{H}$ the figure found by them is nearer the whole number required than those of other recent determinations. In further confirmation of the theory of whole numbers, Fogg and James have determined the atomic weight of Yttrium as 89.03. But Hopkins and Driggs find the atomic weight of Lanthanum to be 138.89 which is in close agreement with the value found by Baxter, Tani and Chapin of 138.91. Mullikin and Harkins have separated the isotopes of mercury by evaporation in a vacuum, and Mullikin has asserted that isotopes should be separable by diffusives and by centrifuging a liquid. Crocker has applied the Lewis-Langmuir octet theory of atomic structure to benzene. Huggins has also developed his ideas of the structure of benzene and Eastman has speculated on the electron structure in unsaturated molecules. Laue, of Zurich, has previously shown that if a pencil of X-rays is allowed to pass through a crystal the diffracted rays show arrangements about a primary beam which differ with the different crystals employed. Work which has since been done with the X-ray spectrometer has shown that conclusions may be drawn concerning the atomic structure of crystals.

At the meeting of the British Association for the Advancement of Science at Hull, Sir William Bragg reported upon the work which, assisted by his son, he had recently performed. It will perhaps be best to quote his words, "Every crystal," he says, "is built up of units, and every unit is the counterpart of the crystal. The crystal unit contains every kind of atom or bond; every feature and every property that the crystal possesses as a whole." "X-ray analysis tells us the number of atoms in the unit, and is throwing more and more light on their arrangement. The limitation to our knowledge of the properties of gases and liquids is severe. We remove it when by aid of X-ray analysis we examine the nature of crystal units, because the unit displays all the properties of the solid. A crystal has elasticities, thermal expansions, thermal and electrical conductivities, dielectric capacities, optical activities, and these not only as scalars but as vectors."

"The many properties, for example, of quartz as a crystal, are all displayed by its crystal units—i. e., by three molecules of SiO_2 arranged in a particular way. They are not characteristic of the separate molecules of SiO_2 , still less of the separate atoms of Si and O.

When we know the exact arrangement of the nine atoms of this unit we can apply all that we know about quartz to that small group. In this way a wide field of research opens out in which the crystal unit plays a part like that of the molecule in other fields. And the magnitude of the results may be as great."

Pease has shown that it is possible to calculate the interatomic distances in Angstrom units ($\text{\AA} = \text{U} = 10^{-8} \text{cm}$). The calculated distances are in close agreement with those observed.

Numerous studies of crystal structure have been made by Dickinson, Bozorth, Wyckoff and Huggins. Equilibria in various systems has been examined by Loomis, Walton and Wise, Bichowski and others and the absorption of silica gel has been studied by Davidheiser and Patrick.

A considerable number of catalytic phenomena have been studied. C. L. Burdick has discovered that activated carbon greatly increases the speed of the reaction: $2\text{NO} + \text{O}_2 = 2\text{NO}_2$. This is likely to be of use in the distillation of nitric acid and in many oxidations. Lamb and others have found that small amounts of carbon monoxid may be removed from water gas by selective oxidation without affecting the hydrogen thereby enabling the hydrogenation of fats, etc., to be carried on more cheaply.

Intensive work has been going on recently in an effort to determine the real nature of the action of light on the silver halides and the physical and chemical condition of the latter as they exist in photographic emulsions. Among those especially active in this field are Renwick, Sheppard, Mees.

Glund reports that when copper is precipitated from an ammoniacal solution with hydrogen sulfid, the properties of the precipitate change entirely in the course of four or five hours. The sulfid first formed oxidizes readily in air with separation of sulfur; after the lapse of five hours, the sulfur oxidizes to SO_2 or SO_3 . He believes that the first sulfid is Cu_2S while the second form is $(\text{Cu})_2\text{S}_2$.

Organic and Biological.—Denham and Hurst have shown that cellulose ($\text{C}_6\text{H}_{10}\text{O}_5$) is composed wholly of glucose units. They prefer the following formula:

Macdonald is of opinion that starch is a polysaccharide derived from a comparatively simple anhydro-sugar by profound polymerization. The formula proposed is:

Both the symbol for cellulose and that for starch are the result of studies on the methylation of these substances carried out at the University of Saint Andrews under the direction of the principal, Prof. J. C. Irvine.

Wise and Russell are of opinion that the cellulose from spruce wood is practically identical with cotton cellulose if properly purified. Mahood and Cable find that by recocking easy bleaching sulfite pulp with soda and bleaching with 2 per cent bleach a material nearly corresponding to purified linters is obtained. Ritter and Fleck have made proximate analyses of a number of American woods.

In a recently published book on colloidal behavior, Dr. Jacques Loeb states that colloids are amphoteric electrolytes and they are found to combine with acids and alkalis in stoichiometrical proportion if their hydrogen ion concentration is taken into consideration. It is also shown that experimental evidence accords with Donnan's theory of membrane equilibria, so that colloids do not form exceptions to general chemical law.

Bogue has reported on the progress of work made in the knowledge of gelatin, as follows: "Gelatin is found to exist in three states: as non-ionogenic or isoelectric gelatin; as a metal gelatinate; and as a gelatin salt." Bogue has collected the known data on this subject into a book.

The world's supply of petroleum has been discussed by David White. The total available amount is put at 70 billion barrels. We have already taken out five and a half billion barrels in the United States and only 11 billion remain. The world's output has been eight and a half billion. We are using 525 million and producing 490 million. Our shale deposits are capable of supplying 80 billion barrels, and much more may be obtained by the low temperature distillation of inferior bituminous coal.

Penta phenyl ethyl has been prepared by Schlink and Mark who draw interesting conclusions regarding valency from its behavior. Cake finds that some sugars may be reduced to the corresponding alcohols by hydrogen and platinum black. Stieglitz has studied the electron theory of valence as applied to organic compounds.

Krase and Gaddy have investigated the formation of urea from ammonia and carbon dioxide. The chemical characteristics of urea adapt it to many uses in the arts, in varnishes, as a stabilizer in explosives, in transparent photographic films. If it were possible to produce it cheaply enough it would make an excellent fertilizer. Ammonia and carbon dioxide were

passed into absolute alcohol according to Mente. The ammonium carbonate produced was sealed in hard glass tubes and heated to the proper temperature. A small scale apparatus for manufacturing urea was then constructed and the preparation of carbamate on a larger scale studied. It is evident that absolute alcohol cannot be used in large operations. It was found that by mixing the gases in proper proportions and passing into a cooled receiver with scraper the carbamate could be prepared in quantity. This was then heated in an autoclave and the melt distilled in a stream of carbon dioxide to carry off the unaltered ammonium carbonate which was used over in another operation. The yield was 40 per cent urea and the results obtained justify further investigation of the process for technical operation.

Drying oils from petroleum for use in place of linseed oil in the manufacture of paints have been the subject of investigation by Gardner and Bielouss. They used for their purpose a fraction known as nonviscous neutral oil. This contains hydrocarbons from $C_{17}H_{34}$ to $C_{24}H_{50}$. This material is chlorinated until it has increased in weight about 15 per cent. It is then dechlorinated by simply heating to 250 degrees. The chlorine is eliminated as hydrochloric acid and the remaining oil it is believed will ultimately find wide commercial application.

William H. Scheel finds that the addition of about 1 per cent of lime made from coral to rosin gives a clear transparent varnish which cannot be obtained from either oyster shell lime or that made from limestone. The product so obtained is used in the manufacture of cheap varnish.

S. Kaye finds that the addition to paper stock during the beating of a small proportion of rubber latex reduces the power required and also the time needed. It appears also to improve the strength and quality of the paper.

Synthetic tannins or "syntans" are condensation products of formaldehyde with sulfonated cresols and other aromatic substances. They are finding increased use in the tanning industry. The synthetic tannins are described in a new book by Georg Grasser. This book is however a translation of a not very recent German text and is devoted almost entirely to the products of the Badische Anilin und Soda Fabrik.

Thomas has described the vegetable tannins, their sources, preparation and uses in a valuable summary which contains also a set of useful references to original sources of information.

Careful studies of the phenomena of explosion as applied to the automobile are under way. Midgley and Boyd find that the addition of very small quantities of the ethyl derivatives of tin, selenium, tellurium and lead to the gasoline prevent "knocking." The amount needed is least with lead tetraethyl which is 70,000 times as effective as benzene. Tellurium ethyl comes next being 3,000 times as effective as benzene.

In another paper entitled "Can we Afford the Ford?" G. G. Brown asserts that the Ford car averages 17.5 miles per gallon of gasoline used. Compared with other cars it should give 24 miles. One cause of this inefficiency is the present carbureting system, which can be so

improved that the average Ford driven under average conditions, will give 25 miles per gallon and operate as economically as more expensive cars. If this one improvement were applied to all Ford cars in this country, 400,000,000 gallons of gasoline would be saved annually.

Jameson, Drummond and Coward have shown that the diatom *Netschia closterium* is able to synthesize vitamin. A. Coward finds that this vitamin contained in fish oil is derived from unicellular marine plants. Drummond and Zilva have spent several weeks in Norway studying the cause of the variations in quality of cod liver oil. They describe the methods of catching the cod, the methods of preparing the oil and its various grades.

In the old method the livers were thrown into a barrel and allowed to decay, the oil rising to the surface. This was skimmed off and had an objectionable odor and taste due to the presence of products of putrefaction. In 1853 Möller introduced the steaming process which gives a much less objectionable product. This and the steam jacketed pan process are now in almost universal use except where the catch is too small to admit of its use, and here the old rotting process is still used, producing an inferior oil not used in medicine. The content of vitamin seems to be very nearly independent of the method of preparation but depends more upon the food of the fish which varies somewhat in different places and seasons. The oil is refined by chilling and pressing to separate stearine. It is suspected that its valuable medicinal properties may be due quite as much to the presence of large amounts of highly unsaturated fatty acids as to its vitamin content. These oxidize readily in air, and in some cases highly elaborate methods are used in preparation to avoid this oxidation which gives an unpleasant taste to the oil.

McLeod and Gordon have found that *Pneumococcus* is able to form hydrogen peroxid which inhibits its growth; this is true also of many streptococci.

Gardner, King and Powers find that at 16 degrees C., eight-inch trout consume about one-sixth of their weight of oxygen per hour, while goldfish use only one-twentieth.

H. B. Harvey has grown wheat, oats, barley, rye, potatoes, buckwheat, lettuce, beans, peas, clovers, radishes, flax and a number of common weeds from seed to seed entirely in artificial light using a tungsten filament, nitrogen filled lamp.

Until recently it was supposed that only chlorophyll in presence of sunlight could decompose carbon dioxide and liberate the oxygen. It is now known that with light of 200mμ wave length it may be decomposed, the energy absorption of one molecule of CO₂ being 150,000 calories. The products are oxygen and formaldehyde, the latter polymerizing. In the plant it is believed by E. C. C. Baly, that: (i) Chlorophyll A + H₂CO₃ + light → Chlorophyll B + CH₂O. (ii) Chlorophyll B + Carotin → Chlorophyll A + Xanthophyll. (iii) Xanthophyll + light → Carotin + Oxygen.

The formaldehyde so formed was very reactive and was probably CHOH. It polymerized rapidly to a mixture of carbohydrates, in which hexoses are found and evidence of the

formation of more complex substances is not wanting. In the presence of a nitrite it is converted into formhydroxamic acid, and hence into amino acids and a mixture of cyclic bases in which pyridine, coniine and glyoxaline have been detected. The active (energised) forms of the amino acids condensed with the cyclic bases to give substituted amino acids, and these were the immediate sources of the proteins.

In opening the discussion on photosynthesis at the Hull meeting of the British Association for the Advancement of Science, of which the above forms a part, Dr. F. F. Blackman said that there were numerous lower plants which obtained all their carbon by the reduction of carbon dioxide in the dark without the intervention of radiation, and synthesized all their organic compounds from that source.

In the second place, the seedlings of many plants at a stage when they have developed chlorophyll to a full green color might be quite incapable of reducing carbon dioxide in light, and gave out as much of that gas from respiration in light as in dark. Some other component or property lagged behind the chlorophyll in its development and the slow, steady rate of its development was the same in darkness or light.

A third point of interest was the efficiency in golden leaved varieties. The amount of chlorophyll might be as low as 4 per cent of the normal green form, and yet the reduction be as great as in green leaves. The golden leaf needs more light, however, than the green leaf to carry out the same rate of reduction.

A fourth point was the necessity of a high temperature.

Fifth, it had been found that phenylurethane depressed the rate of photosynthesis, with complete recovery on its removal. He was therefore of opinion that the chloroplast contained an active system of several components related together by a complex organization.

It is evident from the above that considerable diversity of opinion exists as to the mechanism of photosynthesis in plants, and that much further experimentation is needed before they can be reconciled, but the progress recently made indicates that this baffling problem will probably be solved in the near future.

Furfural or furfuraldehyde is now a commercial product, being made on a large scale with the production steadily increasing. The history, methods of production and uses of this substance are described by Miner, Trickey and Brownlee. They suggest the preparation by boiling oat hulls with steam and acids in large rotary digesters. Oat hulls are produced in a single plant to the extent of 200 tons in a single day and theoretically should give 20 per cent furfural. It may also be produced in quantity from corncohs. Considerable quantities of furfural are used in the manufacture of artificial resins by condensation of furfural with phenol and other aromatics. Varnish resins have been prepared, and furfuramide is believed to have accelerating properties in rubber vulcanization. Dyes and anaesthetics, antiseptics and germicides have been prepared and it has been found to be an excellent solvent for nitrocellulose and the cellulose acetates. It is miscible in all proportions with China wood oil.

Stearic acid is slightly soluble in cold furfural and easily in hot, and oleic acid is readily soluble at 25 degrees C. This paper concludes with a bibliography of the subject.

Analytical.—The membrane filter of Zsigmondy and Bachman has been applied to new determinations by Gerhart Jander. The method of electric conductivity has had further extension at the hands of J. M. Kolthoff and others, and Erich Muller has written a book about it. It has been shown that copper mattes from the same mine may be compared by determining their specific gravity which gives a rapid method of determining their value.

The sampling of copper ores has been carefully studied by Demond and Halferdahl. S. Arrhenius describes a method of using the centrifuge in analysis. Taylor and Taylor have described an apparatus by which the amount of carbon monoxid in a gas may be automatically and continuously determined and recorded. This apparatus may also be used in any case where two or more fluids may be mixed in regulated volume. The determination is based upon electrolytic conductivity, temperature rise, etc. Gutbier, Huber and Schieber have described a rapid dialyser consisting of a barrel shaped frame made of glass rods or other suitable material. Over this a membrane is drawn and the sack thus formed is suspended in a container having a tubulure at the bottom by means of which water is passed in. This water may be withdrawn by a siphon. In order to hasten the dialysis the membrane sack has a stirrer suspended in it.

It has been found that alumina is an excellent absorbent for water vapor, and it is proposed to use it in drying tubes in place of calcium chlorid, which it exceeds in attraction for water vapor.

Selvig and Ratliff have studied mine water and methods for determining its constituents accurately; and Parr has described in the *Journal of Industrial and Engineering Chemistry* for August, p. 681, a short method with apparatus for the ultimate analysis of coal suitable for the use of engineers in boiler testing.

Scales and Marsh have applied the beam of light from the electric arc, first used by Tyndall, to the investigation of soil suspensions.

Parsons and Wilson propose a new method for the determination of color in petroleum distillates, in which the depth of standard color solution necessary to match the sample in the Duboscq colorimeter is determined.

Burdick describes a simple method of determining the oxids of nitrogen in gaseous mixtures by washing with alkali: the oxids are then determined by titration with potassium permanganate.

Nelson and Senseman have found an accurate method for the determination of the amount of anthraquinone in mixtures containing phenanthraquinone, anthracene, phenanthrene, phthalic anhydride and phthalic acid. The anthraquinone is first reduced to red oxvanthranol by means of zinc powder in 5 per cent sodium hydroxid. The solution is filtered in vacuum and titrated with standard potassium permanganate.

EDWARD HART,
Professor of Chemical Engineering, Lafayette College.

CHEMISTRY, Federal Bureau of. The activities of the Bureau of Chemistry for 1922 fall into three groups which may be designated as (1) the application of chemistry to the production and utilization of agricultural products, (2) research in agricultural chemistry, and (3) the enforcement of regulatory statutes.

Agricultural Chemical Technology.—One of the results of work in the first group was a method to produce furfural commercially from corn cobs at a cost that makes it practical to use it as a low-priced substitute for formaldehyde in the manufacture of synthetic resins and as an intermediate in the dyestuffs industry. There have also been obtained from corn cobs acetic acid and an adhesive that can be used in the manufacture of pasteboard boxes and may prove useful in the manufacture of coal briquettes.

The invertase method of making cane sirup developed by the bureau was used commercially during the sirup season of 1921-22 with excellent results and for the first time Southern producers were able to put on the market a sirup that will not crystallize or readily ferment. In order to insure a product of uniform quality and to extend the market, a central blending plant is being erected by Texas sirup producers at Lufkin, Texas, and the bureau has been asked to aid in the solution of the technical and chemical problems involved in standardizing the sirup sent in by the different producers.

The invertase method has also been applied in the manufacture of a high density maple sirup and cane sugar sirup mixtures and patents for the processes have been applied for. A process has also been worked out for making a soft cream center for chocolate creams, a method for which has long been desired by the confectionery trade.

During the year a beverage having the stimulating quality of tea and coffee has been prepared from the cured leaves of the cassina plant which grows in great abundance along the south Atlantic and Gulf coasts. An experimental plant has been in operation during the past summer to demonstrate the possibilities of curing cassina leaves on a large scale and the results achieved indicate the feasibility of the project. Palatable carbonated beverages of three types have also been prepared with cassina extract as the base.

A number of tests on the wearing qualities of leather have demonstrated the greater serviceability of certain types. Detailed instructions for making chrome tanned leather on a small scale were prepared for which there was a great demand, resulting in the issuance of a department circular on the subject.

In collaboration with manufacturers, mixed fertilizers have been prepared on an experimental commercial scale from concentrated wool

wash water and the fertilizers have proved satisfactory for promoting the growth of wheat. A good grade of anhydrous lanolin has been obtained from solvents used in extracting certain grades of wool.

A process for which a public service patent has been issued outlines a method to produce rosin esters for varnish manufacturers. A method for detecting and estimating the quantity of coal-tar adulterant in turpentine has been devised. The work on the waterproofing of fabrics has demonstrated that the addition of pigments to waterproofing materials is beneficial since they reduce the injurious effects of solar light without reducing water resistance.

Control methods to minimize the danger of explosions in grain elevators and industrial plants have been developed and their efficiency demonstrated. Fans designed for explosion control in threshers have also been of value in cleaning grain and preventing wind dissemination of smut spores.

Reports on the utilization of cull and surplus citrus fruits in California show that several companies are manufacturing various commodities by methods devised by the Bureau. The price of culls has greatly increased by reason of the increased demand for them.

Aid in the development of a dye industry in the United States was an important project. A new process for the manufacture of indigo has been so perfected that a good quality can now be obtained at a lower price. Improvements have been made in the preparation of photosensitizing dyes which are used in aerial and astronomical photography.

Synthetic thymol has been made from cymene, a waste product in the paper industry, and patent for the process has been applied for. This drug is used as an antiseptic but more widely as a specific in the hookworm disease. The imported product comes from India and is sold for \$4.50 a pound but the synthetic product can be made to sell for considerably less.

Research in Agricultural Chemistry.—A synthetic apple oil with the aroma of ripe apples is another achievement attained by research chemists. This preparation has in it no substance that does not naturally occur in the apple and is especially suitable for flavoring cold drinks and ice cream.

In its research work on the nutritive value of feeds the Bureau of Chemistry learned that some feeds do not contain the amino acids that are absolutely essential for normal growth and that this deficiency can be supplied by other proteins. For instance, the protein of corn is deficient in lysine and tryptophane but by adding to corn the correct proportion of certain other proteins, the mixture will be found adequate for growth, and the feeding value and use of corn increased.

Research work on apple pomace and apple pectin pulp shows them to be of value as cattle feed and it has also been found that the 2,000 tons of tomato seed annually discarded in the tomato pulping industry may be utilized as cattle feed.

Progress has been made in developing insecticides to exterminate the pests most destructive

to farm crops and also to control insects infesting grains in storage and in transit.

Enforcing Pure Food Laws.—In enforcing the Food and Drugs Act the Bureau has checked the practice of selling vinegar made from dried apples as cider vinegar. A number of seizures of flour containing excessive moisture have been made. The shipment to Eastern markets of frozen oranges from California was prevented, the extensive misbranding of feeds as to percentages of protein, fat, crude fiber, etc., has been checked. Chloroform unfit for anesthesia purposes has been removed from the market; a larger number of eggs are being candled before shipment; commerce in oysters from polluted beds has been checked and sanitary conditions improved. The adulteration of scallops by water has been practically discontinued and a marked improvement has taken place in the crabmeat industry, the product formerly being misgraded and packed short weight.

Importations of teas are watched under the Tea Act which is enforced by the Bureau and a number of rejections of Chinese green teas were made during 1922.

WALTER G. CAMPBELL,

Acting Chief, United States Bureau of Chemistry.

CHENEY, John Vance, American author and poet: b. Groveland, N. Y., 29 Dec. 1848; d. San Diego, Cal., 1 May 1922. He was graduated from the Genesee Academy, Genesee, N. Y., at the age of 17, and was appointed assistant principal there two years later. He practiced law in New York from 1875 to 1876. He was librarian of the Free Public Library, San Francisco, 1887-94 and of the Newberry Library, Chicago, 1894-1909. He was a member of the National Institute of Arts and Letters. He published: 'The Old Doctor' (1881); 'Thistle-Drift' (poems) (1887); 'The Golden Guess' (essays) (1892); 'That Dome in Air' (essays) (1895); and many books of poems. He was editor of 'Wood Notes Wild' by Simeon Pease Cheney (1892); 'Caxton Club Scrap-Book' (1904).

CHENOWETH, Alexander Crawford, American engineer: b. Baltimore, Md., 5 June 1849; d. New York City, 13 April 1922. He was a son of the Rev. George Davenport and Frances Ann Crawford Chenoweth. He received his academic education at Dickinson College, where he was graduated in 1868 with the degree of A.B., and from which he received the degrees of M.A. in 1869 and that of LL.D. in 1908. He received his technical training at the Rensselaer Polytechnic Institute, Troy, N. Y. In 1870, Mr. Chenoweth joined the engineering force of Prospect Park, Brooklyn, N. Y., and in the following year became assistant engineer to the Middletown-New Haven Railroad Company. In 1872 he was connected with the Brunswick and Western Railroad of Georgia as assistant engineer. For a time he also served under General Greene in the Public Works Department of the city of Washington. In 1882 he was contractor for the dock and railway work of the West Shore Railroad and in 1884 was consulting engineer to General Prado, President of Peru. In the latter year he prepared the foundation on Bedloe's Island for the Bartholdi Statue of Lib-

erty in New York Harbor. In 1885 he was appointed assistant engineer of the Croton Aqueduct Commission, and from 1889 to 1895 acted as resident engineer of the aqueduct, resigning to undertake construction work for the government at Sandy Hook. He invented the Chenoweth steel concrete pile for pier and foundation work and the Chenoweth reinforced concrete revetments for maintaining the banks of the Mississippi, Missouri and Colorado rivers. He was president of the Chenoweth Revetment Company. At Inwood, on Manhattan Island, he discovered a village site of prehistoric Indians, from which was excavated the collection of implements now in the Museum of Natural History. He was awarded the John Scott medal by the city of Philadelphia in 1889 for improvement in placing electric conductors in subways and also was awarded the Edward Langstreth medal by the Franklin Institute of the same city. Mr. Chenoweth was a member of the New York Academy of Sciences; of the Society of the War of 1812, and served in the Seventh Regiment of the State National Guard.

CHEWING GUM, Manufacture of. Under the date of 29 Jan. 1923 the Department of Commerce reported that there were 50 establishments engaged in the manufacture of chewing gum in the United States in 1921, which turned out products valued at \$38,865,000, as compared with products valued at \$51,240,000 turned out by 57 establishments in 1919 and products valued at \$17,160,000 turned out by 58 establishments in 1914. In addition, establishments manufacturing other products of chief value reported the production of chewing gum to the value of \$2,190,000 in 1919 and \$83,000 in 1914. The corresponding figures for 1921, it was stated, were not available at the time this report was issued. Persons engaged in the industry, including firm proprietors, salaried employees and wage earners, numbered 2,578 in 1921, 4,056 in 1919 and 2,689 in 1914. Salaries and wages paid out amounted to \$3,343,000 in 1921, \$4,527,000 in 1919 and \$1,648,000 in 1914. Materials used cost \$19,908,000 in 1921, \$25,202,000 in 1919 and \$7,322,000 in 1914. Of the 50 establishments which reported products valued at \$5,000 or more in 1921, 10 were located in New York, eight in New Jersey, five each in Illinois and Ohio, three each in California and Massachusetts, two each in Kentucky, Missouri and Tennessee, and one each in Delaware, Indiana, Maine, Maryland, Michigan, Nebraska, Pennsylvania, Rhode Island, Texas and Virginia.

CHICAGO OPERA. See MUSIC.

CHICAGO, University of, a non-sectarian co-educational institution, founded 10 Sept. 1890 and located at Chicago, Ill. In 1922-23 it had a faculty of 375 members, 13,000 students, property valued at \$49,600,000 and an income of \$3,376,076. Ernest DeWitt Burton, D.D., is president.

CHICKENS. See POULTRY AND EGGS.

CHILDERS, Robert Erskine, Anglo-Irish Radical leader: b. England, 25 June 1870; executed in Ireland, 24 Nov. 1922. He was the son

of Robert Caesar Childers of England, a great Oriental scholar and author of the first Pali dictionary. His mother was Anna Barton of County Wicklow, Ireland. He was connected with Ireland from his earliest years, and had made an exhaustive study of Irish conditions. He was educated at Haileybury and Trinity, Cambridge. In 1898 he entered the British Civil Service as a clerk in the House of Commons, remaining there until 1910, when he gave up his position and prospects in order to be free for political work and writing as a Liberal and especially in the cause of Irish freedom. As a young man he had been a Unionist and Imperialist, but later changed to a Liberal and Nationalist. He wrote and spoke much for Irish Home Rule in the years 1910-14, and in 1912 published the 'Framework of Home Rule,' which has been recognized as a very able work. He first came prominently before the public in Dublin in connection with the gun-running at Howth, July 1914, at which time he was still in the British service, where he remained until the Irish convention of 1918, of which he acted as secretary. He had served during the South African War and in the World War with the Royal Naval Auxiliary Service from January to May 1916 and was awarded the Distinguished Service Cross. Ever since the peace negotiations in London in 1921, Childers had been one of the most intelligent and subtle opponents of the Irish Free State. He was tried by a military court at Portobello Barracks, Dublin, on 17 Nov. 1922, on the charge of having in his possession, without proper authority, an automatic pistol when apprehended by a party of National troops on 10 November at Annamoe House, County Wicklow. He was found guilty and sentenced to death. The execution was carried out at 7 o'clock in the morning of 24 Nov. 1922 at Beggar's Bush Barracks, Dublin. Childers was the real author of the famous 'Document No. 2,' which was attributed to de Valera, and which contained the alternative oath. (See IRELAND, subsection *Political History*.) He published 'The Riddle of the Sands' (1903); Volume 5 of 'The Times History of the War in South Africa'—his most important work (1907); 'War and the Arme Blanche,' with an introduction by Lord Roberts (1910); and 'German Influence on British Cavalry' (1911).

CHILDREN'S BUREAU, Federal. The Children's Bureau of the United States Department of Labor completed in 1922 its 10th year of service. Created by Act of Congress of 9 April 1912 and directed to investigate and report upon "all matters pertaining to the welfare of children

and child life among all classes of our people," it was the first public agency in the world whose function was to consider as a whole the problems of childhood. Similar bureaus have since been established in Belgium, Czechoslovakia, Germany, Russia, Poland and Yugoslavia, and it is reported that one is being organized in Chile.

Health of Children and Mothers.—The Bureau has been able to make only a beginning in the vast field of social research assigned to it. Infant mortality was chosen for its first inquiry, and a series of studies in 10 industrial cities was directed toward ascertaining the economic and social factors coincident with high infant mortality rates. Studies of the care available to mothers and babies in typical rural communities of 12 States were also made. As a result of the information thus obtained and analyses of available statistical data, the need for a national program for the conservation of maternity and infancy became evident, and the passage of the Maternity and Infancy Act in November 1921 has enabled the Children's Bureau to co-operate with the States toward this end.*

That the health habits formed by children of pre-school age and the kind of food provided for all growing children are of fundamental importance has not been generally appreciated. Two nutrition studies made by the Children's Bureau, one in a mountain county of Kentucky and the other in Gary, Ind., have shown the fundamental and immediate importance of education in the essentials of child care—the food requirements of children and the methods of preparing suitable meals for them and also their needs with reference to sleep, fresh air and cleanliness. The rapid development of State interest in child hygiene is evidenced by the increase from one to 46 during the last decade in the number of States that have special bureaus or divisions dealing with child health. During the year 1922 such bureaus were established in eight States.

Child Labor.—The year 1922 marked a turning point in the struggle to secure effective limitation of child labor. By the decision of the United States Supreme Court rendered on 15 May in the case of *Bailey and Bailey v. The Drexel Furniture Company*, the second attempt of Congress to set up national minimum child labor standards has been nullified. The first Federal child labor law, held unconstitutional in 1918 nine months after it became effective, was the result of 10 years of efforts to secure a Federal law which should remedy the situation caused by the great diversity in State laws. This law closed the channels of interstate and foreign commerce to the products of child labor. The second law, enacted in 1918, was based upon the taxing power of the Federal government, and levied a tax upon the net profits of industries employing child labor. In holding unconstitutional both laws the court seems to have made the issue clear; either the plan of a Federal minimum must be given up and reliance must be placed solely upon the States, or a movement must be pushed for the adoption of a Federal amendment definitely giving to Congress the power to pass a child labor law.

*The provisions of this act are summarized in another Article.

The returns of the 1920 census, taken at the beginning of a period of industrial depression and with the Federal child labor tax law discouraging their employment, show fewer children under 14 and under 16 gainfully employed than did the census of 1910, but the decline is much less than it should be.† Over a million children (1,060,858) between the ages of 10 and 16 or almost one-tenth of the total number of children of that age in the country were reported in 1920 to be "gainfully employed." Children under 14 who were gainfully employed numbered 378,063. The census gives no information as to gainfully employed children under the age of 10 years, but it is known that there are many, especially in such occupations as agriculture and street trades.

Three-fifths of the children reported to be employed (647,309 or 61 per cent) were engaged in agriculture, chiefly as farm laborers; 17.5 per cent (185,337) were employed in manufacturing and mechanical industries, canneries and workshops. Over 80,000 children were employed in clerical occupations, 63,000 in trade, and 54,000 in such occupations as domestic service. The proportion of children who were gainfully employed ranged from 3 per cent in three Pacific Coast States to 17 per cent in the east south central States comprising Kentucky, Tennessee, Alabama and Mississippi.

The 1920 census figures showed an apparent decrease since 1910 of 46.7 per cent in the number of children at work. A considerable part of the decrease, however, was probably more apparent than real. The change in the census date from 15 April 1910 to 1 Jan. 1920 undoubtedly affected the proportion of children reported as engaged in farm work and perhaps in other seasonal occupations. The beginning of the industrial depression must have had an effect on the returns. That part of the decrease which is real is doubtless due chiefly to the enactment and strengthening of legal regulations. Since the 1920 census was taken the protection of the Federal child labor tax law has been withdrawn.

During the decade 1910–20 in at least half the States the minimum age laws were strengthened either by raising the age or by increasing the number of occupations to which the law applied, or in both ways; and in many States these measures were supplemented by raising the educational, physical, or other requirements which must be met before a child can go to work. With respect to hours of work, night work and compulsory school attendance, advances were made in many States, and the administrative provisions of child labor laws were strengthened. Laws providing for part-time school attendance of working children were passed in 22 States.‡ Further changes were made in 1921, and in 1922, a year in which only eleven State legislatures met in regular session, legislation relating to compulsory education or child labor was passed in six States. Nevertheless, at the time the Supreme Court decision of 15 May 1922 was rendered, only 13 States—Alabama, Connecticut,

‡ U. S. Children's Bureau: *Child Labor in the United States. Ten Questions Answered.*

Illinois, Indiana, Kansas, Kentucky, New York, Ohio, Oklahoma, Oregon, Tennessee, West Virginia and Wisconsin—measured up in all particulars to the standards of the Federal laws.[§]

Both the first and the second Federal child labor law sought only to establish a minimum national standard. State laws that were higher were still operative and were enforced by State machinery. Since the last Supreme Court decision was rendered a number of proposals for an amendment to the Constitution which would give Congress power to prohibit or regulate child labor have been introduced. A resolution proposing such an amendment, which would give Congress power to legislate and would also preserve to the States their right to regulate child labor, was reported favorably by the judiciary committees of both Houses of the 67th Congress. The submission of an amendment is being advocated by representative organizations of women, trade unions, the National Consumers' League, and the National Child Labor Committee.

Although three-fifths of the nation's working children, according to the 1920 census, are employed in agriculture, rural child labor has been without effective regulation. During 1922 reports have been written of field studies made by the Children's Bureau in beet-growing areas of Michigan and Colorado and in cotton-growing areas of Texas. In co-operation with the children's code commission of North Dakota a study of child labor and school attendance was made in that State, and surveys of the farm work of children and mothers in the truck-farming areas of three States—New Jersey, Maryland and Virginia—have been completed. In all these studies it was found that farm work for children means meager educational opportunities in both spring and autumn. In the truck-farming areas studied large numbers of family groups, chiefly from nearby industrial centers, were found. The children suffered from unhealthy living conditions in overcrowded camps and from absence from school and dangerously long hours of work.

State Child Welfare Commissions.—Since 1911 more than half the States, through officially appointed child welfare or children's code commissions, have been engaged in eliminating inconsistencies in their laws relating to children and determining what improvements in law or administration were necessary. During 1922 11 States have had such commissions, including one—Georgia—whose commission was appointed in December 1922. The Virginia commission reported to the legislature of 1922 and a total of 18 of 28 measures recommended were passed.

The Children's Bureau has kept in touch with these commissions and has assembled material for several. At the request of the North Dakota commission a series of studies was undertaken in that State relating to child labor in cities and in rural districts, child dependency, and neglect, delinquency, juvenile courts, mothers' pensions,

children handicapped physically or mentally, and other problems relating to children in need of special care. Similar studies, with the exception of those concerned with child labor, were made in South Dakota at the request of the child welfare commission of that State. In both these States with predominantly rural populations the need for development of the child-caring and protective work in rural and small-town communities was evident. Provision for State supervision over child-caring agencies and institutions and insistence upon proper standards of investigation and constructive work with families before the children were removed would have saved many from becoming wards of agencies and institutions.

Development of State and County Organization for Child Welfare.—The child welfare commission movement has indicated a growing sense of responsibility on the part of the State for the welfare of children. In more than half the States, bureaus or divisions dealing especially with dependent, neglected, or delinquent children have been organized, either as independent administrative units, or in State departments of public welfare or charities. In a number of States, including Arizona, Connecticut, Missouri, Nebraska, Pennsylvania and Wisconsin, such bureaus were first established during 1921 or 1922.

As State supervising and administrative work has been developed, the need for effective local action in co-operation with the State board, and directed especially toward preventive and reconstructive work, had become evident. Recent State plans for children's work include provision for public county organization in the form of a "county board of child welfare" or "county board of public welfare," with a county superintendent who is the executive officer of the board. Alabama, Georgia, Minnesota, Missouri, North Carolina, Pennsylvania and Virginia, are among the States in which public county organization for child care is being developed. The Children's Bureau has recently issued a bulletin on County Organization for Child Care and Protection, in which are described, by those in large measure responsible for their development, the methods in use in five States.

Economic Basis of Child Welfare.—The infant mortality studies made by the Children's Bureau demonstrated conclusively the relation between low earnings and high infant mortality rates. During the winter of 1921-22, the attention of the bureau was directed to another economic problem closely related to child welfare—that of unemployment.

Two studies made in a Middle Western and an Eastern city revealed to some extent the lowering of standards of care that results from a period of industrial depression. Comparison of the average monthly receipts during unemployment with the family income while the fathers were regularly employed, showed that half of a group of 203 children belonged to families in which the average monthly income had been reduced more than one-half. In one of the cities studied, a budget estimate of the cost of living had been prepared by a large manufacturing firm. For 45 out of 90 families in which comparisons were made, the average monthly

[§] These standards specified for employment in mills, canneries, workshops, factories, or manufacturing establishments, a minimum age of 14 years, an 8-hour day and a six-day week for children between 14 and 16, and no night work for children of these ages between 7 P. M. and 6 A. M.; and for employment in mines or quarries, a minimum age of 16 years.

receipts from all sources, including relief during the unemployment period, were less than 50 per cent of this budget estimate. Gainful employment of the mothers outside the home, undertaken in many of the families studied as a result of the unemployment of the father, deprived many young children of their mothers' care.

Child Dependency and Neglect.—The conservation of home life through public aid to dependent children whose fathers are dead, have deserted, or are incapacitated, has become a generally accepted policy, in theory at least. By 1921, 40 States had adopted legislation providing for such aid, and in 1922 the Rhode Island legislature made an appropriation to be used for study of the need for such assistance, as a basis for action by the next legislature. There is, however, much variation in local methods and standards of administration. A general survey of administrative practices and nine intensive studies in a number of communities have been made by the Children's Bureau. The report of these studies shows the need for consideration of the standards of living which must be maintained if the welfare of the children is to be promoted.

A study of the work of several of the leading child-placing agencies is being made by the Bureau's Social Service Division, in order to secure information regarding the best methods in use. Closely connected with this study is one being made by the hygiene division of methods of health supervision of dependent children.

The care of children born out of wedlock has been the subject of several of the bureau's studies. In August, 1922, an important step in the movement for the better legal protection of such children was taken by the National Conference of Commissioners on Uniform State Laws, which in 1920, at the request of the Children's Bureau, undertook the task of drafting a Uniform Illegitimacy Act. At the 1922 meeting, the draft, presented by a committee of which Prof. Ernst Freund, of the University of Chicago Law School, was chairman, was approved and recommended to the States for adoption. The bill provides that the parents of a child born out of wedlock owe it "maintenance, education and support," a duty not imposed by the common law nor by the laws of many States. The father is made liable for the expenses of the mother's pregnancy and confinement.

Children's Year in Porto Rico.—The first of the Bureau's studies in insular possessions were made during the year ending in May 1922, which was designated "Children's Year" in Porto Rico. The survey combined a study of conditions affecting the welfare of children on the island and means of improving and developing activities for children by enlisting co-operation of existing agencies and by bringing the island into closer contact with the child welfare resources of the United States. Various continuing activities were organized.

International Movements for Child Welfare.—Common interest in the welfare of children brought together in August, 1922, representatives of the nations of the American Continent in the third Pan-American Child Welfare

Congress, at which common problems were discussed. The International Association for the Promotion of Child Welfare, organized in 1921 with headquarters in Brussels, has been active during the year and provides a means of interchange of information and points of view. The International Labor Office, with headquarters at Geneva, has continued its interest in child labor. By November 1922, one or more of the draft conventions with reference to the work of children and young persons recommended by the first, second and third International Labor Conferences held in 1919, 1920 and 1921, had been adopted by Bulgaria, Czechoslovakia, Estonia, Great Britain, Greece, India, Italy, Roumania, The Netherlands, South Africa, Sweden and Switzerland. In October 1922, the chief of the Children's Bureau was designated by the Department of State, with the approval of the President, to co-operate with the Advisory Committee on Traffic in Women and Children of the League of Nations, in an unofficial and consultative capacity, and under reservation of any binding effect upon the United States of any recommendations that may be made by the committee. The work of the committee is directly related to the field of the Children's Bureau, which has made several studies dealing with the prevention of delinquency and the care of the girl who has become delinquent. See also MATERNITY AND INFANCY ACT, FEDERAL.

Valparaiso.....	1,775	320,388
Magallanes Territory.....	65,355	28,960
Total.....	289,829	3,754,723

The principal cities are: Santiago (507,296). Valparaiso (182,242); Concepcion (66,074);

Iquique (37,421); Antofagasta (51,531); Talca (36,078); Vina del Mar (33,441). The majority of the inhabitants are of European origin and their business and fighting qualities have earned them the sobriquet of "The English of South America." The aborigines belong to three great divisions: the Araucans, who dwell on the Andean slopes and valleys and who long disputed the mastery of the country with the white men; the Fuegians, who are mostly nomadic and live in the extreme southland, and the Changos, who live in the north and are mostly of the laboring class.

Education.—Education is free and compulsory. In 1922, there were 3,238 public schools of primary grade with a registration of 347,489 pupils and 7,500 teachers; 429 private primary schools with 991 teachers and 54,875 pupils. There are 292 secondary schools with 52,886 pupils and about equally divided between public and private schools. There are 15 public normal schools with 2,206 students and 11 commercial schools with 3,000 pupils and 176 teachers. Agricultural, engineering and other professional schools are established in sufficient number to care for the needs of the country. Higher education is provided by the National Institute of Santiago, the University of Chile and the Catholic University. The State University has a faculty of 358 and a student body of 4,502; the Catholic University has 614 students and a faculty of 116. In 1920 so-called industrial universities were established at Concepcion and Valparaiso. In 1920 the republic spent \$7,918,295 on primary, secondary and normal training.

Religion.—The Roman Catholic is the state religion but all denominations are permitted and protected. The Roman Church has one archbishop at Santiago, three bishops and four vicariates apostolic.

Production and Industry.—Chilean territory differs greatly from north to south. There

were in 1922 96,000 farms. The acreage and production of the principal crops in 1920 are shown in above table.

The production of wheat, barley and oats declined in 1921 to 312,853 tons wheat, 58,618 tons barley and 19,706 tons oats. Dairy farming has been extended in recent years and the raising of sheep has become a very profitable venture in Patagonia and in Tierra del Fuego. There are in the Republic 2,163,141 head of cattle, 4,500,196 sheep, 459,606 goats, 291,431 swine, 42,019 alpacas, 51,411 mules and 391,718 horses.

Mining, however, is the chief industry of the country and the mining region is in the northern provinces. Chile is the second largest producer of copper in the world. The minerals obtained are gold, silver, cobalt, and manganese while the non-metallic minerals are coal, nitrate, guano, salt and borate. Nitrate of soda is the country's chief article of export, being sent out of the country at the rate of 2,750,000 metric tons yearly. Coal production is on the increase and is now about 1,500,000 tons yearly. In 1922, nitrate exports were below normal, being only 400,000 metric tons for the first seven months of the year. The total stocks of nitrate in Chile on 30 June 1922 were reported at 1,607,000 metric tons. Copper mining in 1922 felt the impetus of stronger prices abroad, with the result that both American and locally-owned mines intensified production. Evidence of the betterment was reflected in the exports of refined copper during the first seven months of 1922 which totaled 70,000 metric tons, or nearly double that of the year previous.

Manufactures.—The last industrial census reported 2,871 manufacturing establishments of factory grade, giving employment to 71,464 persons, using materials valued in the raw state at 517,832,812 gold pesos and turning them into a finished product valued at 905,151,651 gold pesos.

Commerce.—Both imports and exports increased in 1922. Although the imports were still generally below the level of 1921 by the end of July, the customs collections from imports during that month rose to 40 per cent above those of the preceding month of June. In 1920 the total foreign trade of the republic amounted to \$465,000,000, of which \$293,000,000 represented exports. The products of the mines, live stock and agriculture formed the great bulk of these exports, while textiles, chemicals, metals, foodstuffs and machinery formed most of the imports. In the same year the United States was the largest purchaser of Chilean goods and also furnished more of the imports than any other country.

Chilean Telegraphs and Telephones in 1920.—The annual report of the Chilean state Telegraphs and Telephones for the year of 1920 is summarized as follows:

CROP	Acreage	Yield (long tons)
Wheat.....	1,192,722	542,039
Barley.....	127,325	80,372
Oats.....	65,190	37,590
Indian corn.....	62,662	36,727
Beans.....	113,875	45,957
Peas.....	28,202	11,441
Lentils.....	4,827	1,670
Potatoes.....	76,480	282,414
Grapes.....	218,000	26,022,416 gallons wine

is an arid zone in the north, the central part of the republic is well adapted to agriculture and the south is mostly under forest. There are about 42,000,000 acres of agricultural land, 9,500,000 acres of forest, and 18,000,000 acres of pasture land in the republic. There

NAME OF SERVICE	Number of employees	Number of offices	Kilo-meters of line	Kilo-meters of wire	Number of calls or messages	Number of words
State telegraphs.....	1,426	374	15,789	29,715	4,388,000	67,539,000
State railway telegraphs and telephones.....	662	422	17,996			
Telegraphs privately owned.....	1,818	245	10,376	21,632	5,335,112	106,746,571
Telephones privately owned.....	1,295	444	83,654	153,856		

The privately owned telephone companies had 24,495 subscribers, divided among 12 different companies. The total receipts were 6,469,037 pesos currency, and the total expenditures 4,109,078 pesos.

Railways, Etc.—There were in operation in Chile in 1922, 5,403 miles of railway, of which 2,270 were the property of private owners and 3,133 miles the property of the state. Electrification of the railways began in 1921 and progressed throughout 1922 although slowly because of the general depression and stagnation in world trade which was reflected in government revenue and in government projects. It was decided to begin the construction of locomotives in Chile. This work was begun during the year, but being in its infant stage, this industry is yet unable to meet the natural demand.

Army and Navy.—Military service is compulsory for all citizens from the age of 18 to 45 years. Active training begins at the 20th year and lasts one year. The total armed strength of the land armies in 1922 was 23,176 officers and men. The military budget the same year was about \$11,430,000.

The navy has one dreadnought, one pre-dreadnought, two armored cruisers, four protected cruisers, fourteen destroyers, six submarines and three torpedo boats.

Finance.—On 31 July 1922, the amounts of paper currency outstanding was reported to be 265,585,000 pesos as against 290,000,000 a month before, and 324,600,000 at the beginning of the year. About 30,000,000 paper pesos of the 135,000,000 paper pesos loan was reported in August as being placed with the local banks, the balance to be secured abroad. The budget for 1922, passed by the Congress late in August, provided for disbursements of 74,000,000 gold and 349,000,000 pesos paper. It was deemed unlikely that the revenues for the year would reach the anticipated expenditures. However, the customs collections showed a healthy trend, amounting for the month of July to 7,500,000 pesos gold. The foreign debt of the nation amounts to \$135,670,560 and the internal debt to \$33,160,106. The national budget for 1923 amounts to 58,000,000 gold pesos and 287,000,000 paper pesos. Paper money in circulation on 31 August was 267,000,000 pesos.

The Chilean national debt includes dollar and sterling loans to the government of the republic and to municipalities whose bond issues were guaranteed by the national government, also internal funded debt. The following table shows the total debt with details of the loans contracted in the United States, reduced to American dollars:

	Outstanding
1922 7 per cent National City Co.....	\$18,000,000
1921 8 per cent Blair & Co.....	10,080,000
1921 8 per cent Blair & Co.....	9,500,000
1921 8 per cent railroads, Guaranty Trust Co.	21,900,000
1915 6 per cent Valparaiso, Guaranty Trust Co.....	240,600
Total of dollar loans outstanding.....	\$59,720,600
Sterling loans to national government (£35,836,108).....	174,376,499
Sterling loans to municipalities (£1,023,487) ..	4,980,287
Total of foreign debt.....	239,077,386
Internal funded debt (100,418,322 gold pesos) ..	36,652,688
Total national debt outstanding.....	275,730,074

The government mortgage bank (Caja de Credito Hipotecario) has outstanding bonds to the face value of 772,869,100 paper pesos, equivalent at exchange 25 cents to the peso to \$194,967,275. At this rate of exchange, holdings in the United States may be estimated at \$10,000,000. These bonds are not specifically secured by the national government, but the bank is exclusively a government institution. A parcel of 1922 8 per cent internal bonds, aggregating 10,000,000 paper pesos, was sold in the New York market by Kelley, Drayton & Co. The value is about \$2,500,000. It is estimated that about 20 per cent of the sterling debt is held in the United States, or about \$35,871,000. Thus the total value of Chilean bonds held in the United States may be estimated at \$108,000,000.

Government.—The executive power is vested in a President who is chosen for a term of five years through electors who themselves are chosen by popular vote. A President is not eligible for re-election. The National Congress consists of two chambers—the Senate and the Chamber of Deputies. The Senate has a membership of 37 elected by popular vote for a term of six years and by provinces. The Lower House has 111 members elected for terms of three years, there being one representative for every 30,000 of the population. Electors must be 21 years of age and be able to read and write. The President is assisted in his functions by a Council of State of 11 members, of whom five are nominated by the President and six are chosen by the National Congress. He is also assisted by a Ministry of six departments. The head of a province is called the Intendente and the departments, as the provincial subdivisions are called, are ruled by Gobernadores. The departments are further divided into municipal districts over each of which there is a council of nine members elected by the voters of the district for terms of three years.

History.—As Chile is one of the few South American countries where peace is maintained without fear of overshadowing revolution, a steady progress has been kept up for many years. As she, together with the Argentine, remained neutral during the World War, her trade and commerce attained, during that period, remarkable proportions. The natural reaction began in 1920; but the fall of 1922 saw a return to normal. The government continued the policy of improving the ports, reorganizing the army and building up the war and mercantile fleets. Special attention was paid to the latter with a view to increase the volume and effectiveness of the coast trade, which was quickened toward the close of the year. But the earthquake of November 1922 badly damaged the ports. The government took advantage of this to further improve some of them while making the necessary repairs occasioned by the earthquake and to lay out extensive plans for further improvements. The above-mentioned earthquake, the most disastrous which Latin-America has seen in many years, laid in ruins several Chilean towns; and huge tidal waves engulfed the ports of the disturbed region; Copiapó, an inland city of considerable size, was leveled to the ground. Here, as in other towns visited by the earthquake, hundreds of people lost their lives; and

to this holocaust the ocean added its share of victims. The port of Chanaral was swept out of existence. Owing to the low price of salitre, Chile's chief export, the general export business of the country decreased; but, in compensation, new markets were found in China and Japan, both of which largely increased their commercial relations with Chile, taking a part of the overplus of salitre left on the market by overbuying in Europe and unrestrained speculation. Copper began to get on its feet again and large shipments were made to Great Britain, Germany and the United States. The tendency of the year showed Great Britain again entering strongly into the Chilean market and conquering her pre-war supremacy. While Chile is one of the best provided of the South American countries with railways, having one long line extending throughout practically the whole length of the republic, and numerous short feeders running to the Pacific coast and to the mountains, yet the year saw additional short branches built for the encouragement of commerce and trade and the more facile exploitation of the less accessible mining regions and the salitre country.

Much foreign capital entered Chile in 1922, largely from the United States and Great Britain, both of which made extensive investments in copper mines, of which they now have the control. Immigration began to show signs of quickening, the immigrants being, for the most part, people from European countries with sufficient means to help themselves; and these brought further capital into Chile. Working in conjunction with Peru, Chile made an attempt, in 1922, to settle the disagreement between the two nations over the three provinces Tarata, Tacna and Arica, the ownership of which has been in dispute since 1883. Early in the year the ambassadors of both countries got together and, after considering the question at length, finally agreed to ask the President of the United States to arbitrate the matter. The latter invited the two nations concerned to send representatives to Washington. This was done and a provisional agreement looking to a final settlement of the question was reached. Submitted to the respective legislatures of Chile and Peru this preliminary agreement was sanctioned in the fall of 1922.

CHINA, a republic of eastern Asia on the Pacific Ocean. Its area is 3,913,560 square miles and the population numbers 325,000,000, according to the most conservative estimates. Peking is the capital. For president and cabinet officers see **RECENT HISTORY** section of this article. The republic is divided into eighteen provinces of China proper and the new territory of Sinkiang, the dependencies of Manchuria, Fengtien, Heilungkiang and Kirin, and Mongolia and Tibet. The population figures given above are the Rockhill estimate which is much lower than that of the Chinese Maritime Customs which in 1920 gave the huge total of 420,000,000 for China and Manchuria. Peking, the capital, has a population of about 1,000,000, of whom 4,000 are foreigners. In the entire Republic there are, according to the estimates of the Chinese customs authorities, 326,969 foreigners, including 153,918 Japanese and 144,413 Russians. The next largest foreign groups were the British of 11,082 and the American of 7,000.

Agriculture.—Agriculture is a most important industry in China which is a land of small farmers who might even be termed horticulturists because of the intensive cultivation they give their diminutive plots. Fruits and vegetables are grown in the most expert fashion. The crops vary according to the latitude, wheat, corn, barley and other cereals being chiefly grown in the north while cotton, rice, sugar, tea and indigo predominate in the south. China is the world's third largest producer of cotton, yielding precedence in this crop only to the United States and India. China's cotton crop in 1920 was 6,696,612 piculs of 133½ pounds. Over 500,000 acres are planted to tea in the south and west. Exports of tea have suffered a decline in recent years and in 1920 amounted to 1,305,906 piculs of 133½ pounds. Silk production is carried on on a large scale, China furnishing 30 per cent of the world supply. The latest reports show a yearly crop of 73,078,709 piculs. Hogs are raised throughout the country and their bristles figure large in the exports. There are no statistics available relative to the supply of livestock.

Mining.—China has extensive coal deposits and in every province it is mined. The annual output of coal is 19,000,000 tons. Iron ore is also plentiful and in several places is found in conjunction with coal. The Shansi iron industry is the oldest in the world. There is a rich copper deposit in the province of Yunnan. There are 100 oil wells in operation mostly along the upper Yangtse. Antimony is exported, China furnishing over half the world supply. Tin, gold, lead and bismuth are also worked. Most of the mining is conducted along primitive lines but in recent years modern methods have been introduced especially in the coal districts and at present about half of the coal mined is according to modern systems.

Commerce.—Of the internal trade of China it is impossible to give accurate statistics or even an estimate which might be regarded as approximately correct. Regarding the external or foreign trade it is possible to render accurate figures.

To make any discussion of comparative Chinese trade figures for recent years of value, two important facts must be kept in mind: (1) The abnormal rise in the price of silver, China's currency, and (2) the fall in commodity prices in general in combination with the fall in the price of silver relative to gold. Whereas values quoted in silver through 1919 and part of 1920 unduly magnify the values given, those from that date forward tend to lessen the real comparative value.

The table on the following page shows the value of the leading articles imported directly into and exported directly from China in 1913, 1920 and 1921. (The average value of the haikwan tael was about 73 cents in 1913, \$1.23 in 1920, and 76 cents in 1921.)

Communications.—There are numerous canals and navigable rivers and a large portion of the internal commerce of the country is carried over them. Many of the canals are over a thousand years old. The roads are numerous but from a modern viewpoint they are little better than dirt paths; yet a vast trade is carried on by these. Improved roads

are few. China has about 7,000 miles of rail-ways of which 2,000 are in Manchuria. About 2,000 miles are under construction. All the railways are subject to the ministry of communications, with the exception of 773 kilo-meters which are privately owned.

The Chinese government bureau of informa-tion reports that operations of the Chinese rail-ways in 1921 resulted in a net income of \$23,712,000. This compares with a net income after charges of \$40,788,000 for the previous year. Operating revenues totaled \$95,218,000 in 1921, as against \$91,444,000 in 1920.

The following table gives a comparison of earnings of the Chinese government railways in 1921 and 1920:

RAILWAY	Operating revenues	Net income
Peking-Hankow.....	\$24,500,000	\$7,000,000
Peking-Mukden.....	25,484,000	12,050,000
Tientsin-Pukow.....	16,780,000	3,661,000
Peking-Sulyuan.....	5,109,000	1,025,000
Shanghai-Nanking.....	6,921,000	1,685,000
Shanghai-Hangchow-Ningpo.....	3,259,000	113,000
Canton-Talyuan.....	3,334,000	1,634,000
Taokow-Chinghua.....	695,000	256,000
Honan-Kaifeng.....	2,017,000	1,273,000
Kirin-Changchun.....	2,763,000	809,000
Chuchow-Pinghsiang.....	611,000	37,000
Canton-Kowloon.....	1,287,000	316,000
Changchow-Amoy.....	34,000	144,000
Changsha-Wuchang.....	1,672,000	2,262,000
Ssuningchich-Tsenkiatun.....	752,000	321,000
Total, 1921.....	\$95,218,000	\$23,712,000
Total, 1920.....	91,444,000	40,788,200
Increase.....	\$3,774,000	\$17,076,000

The report states that the decrease in net earnings in 1921 as compared with 1920 was due to the unfavorable rate of exchange and the high rate of interest.

There are 50,000 miles of telegraph lines which connect all the chief cities of the country and also connect with the lines of adjoining countries. There are also wireless stations both telegraph and telephone, some of which have a range of 1,000 miles. The chief cities have individual telephone systems which are being

connected up by the government for purposes of long distance communication.

The postoffice service is well organized. There are 11,000 postoffices in operation the revenue from which in 1920 was \$13,000,000 and the expenditures for maintenance slightly less than \$11,000,000, leaving a surplus of \$2,212,069. Foreign postoffices, except those in leased territories, were withdrawn 1 Jan. 1923.

Banking.—Modern systems of banking were unknown in China until a comparatively recent date. Banking, as we know it, began after the suppression of the Tai-ping rebellion, but it was not until the opening years of the present century that the present system was introduced. In 1902 was established the Ta Ching Bank with a capital of 4,000,000 kuping taels, afterwards increased to 10,000,000 taels. Four years later the Bank of Communications was founded and since then new banks have been founded frequently so that at present there are 123 banks with 312 branches. These banks have an aggregate capitalization of \$350,000,000. There are 400 savings banks and about 100 postal savings banks.

Finance.—The official estimates place the revenue at 495,000,000 kuping taels annually and the expenditures at approximately the same amount. The revenue on the foreign trade is collected by the Chinese Maritime Customs which pays it into specially designated foreign banks from which allotments are paid on the foreign loans secured on the customs revenue and the Boxer indemnity similarly secured. For changes in the tariff schedules and other financial and fiscal matters see RECENT HISTORY section of this article.

Boxer Indemnity. With partial decisions already made as to the disposition of outstanding balances on the Boxer indemnity account, there has been much discussion in the Far East regarding the future policy to be adopted by the powers with regard to this question, which has such an important bearing on Chinese governmental finance. There have been announcements

outstanding indemnity to refinancing the Banque Industrielle de Chine. The above table, compiled by the Far Eastern Division of the Department of Commerce, is a statement of the status of the Boxer indemnity account on 1 Dec. 1922, gathered from official Chinese sources, the conversions to United States currency being made at current rates of exchange on that date. The Boxer indemnity payments were suspended on 1 Dec. 1917, and resumed on 1 Dec. 1922.

Religion.—Buddhism, Confucianism and Taoism are the three great religions of China. Of these Confucianism is mostly a philosophic moral code without ritual and ceremonial. Most Chinese practice the tenets of all three religions. There are about 10,000,000 Mohammedans, 1,994,483 Roman Catholics attended by 963 Chinese priests and 1,365 European priests, and 618,601 native Protestant Christians served by 1,275 ordained clergymen. There is also a Russian Orthodox mission with 6,000 Chinese converts and 20,000 Russian followers and a colony of Chinese Jews in the province of Honan.

Education.—The new educational movement which had its inception in 1905 received a tremendous impetus with the establishment of the republic and the demand for Occidental learning owing to the ever increasing intercourse with Western peoples. There are at present in China 125,000 primary schools, divided into the so-called lower and higher primary. There are industrial schools also of two grades offering technical and vocational courses. These schools number over 400. There are three government universities and four supported by private funds. In addition there are 531 technical schools of higher grade attended by 32,275 students. It is proposed to make primary education free and compulsory as soon as internal conditions permit. For medical education in China, see ROCKEFELLER FOUNDATION.

Courts.—The system of justice has been reorganized in recent years. Civil, criminal and commercial codes based largely on Continental models are being put in force and the old system of torture and extortion has disappeared forever. There are 90 higher courts and 102 district courts at the head of which is the supreme court and procuratorate-general. The jury system was introduced in 1912. The United States and Great Britain maintain special courts in China but in view of the agreements made at the Washington conference in 1921-22 it is probable that these courts will be discontinued in the future. The prison system also has been reformed since the advent of the republic and there are now 48 modern prisons in the country.

Recent History.—Three leaders—Chang Tso-lin, Wu Pei-fu, and Sun Yat-sen—stand out prominently in recent Chinese history among a host of meaningless names. All three profess irreproachable sentiments. All insist upon one united government, and in different degrees proclaim the necessity for a parliamentary basis. Each of these men, however, represents elements that seem to be incompatible with each other. Nor is it clear how far each of them is sincere in his professions.

At the outbreak of the revolution the Manchus employed Yuan Shih-kai, whom they had previously broken because of his growing power, to organize resistance, and that worthy paid off

¹ Funds to be used partly for Sino-French educational purposes and partly for refloating the Banque Industrielle de Chine. ² Remittance for purposes mutually beneficial to China and Great Britain now under discussion. ³ Remittance for purposes mutually beneficial to China and Japan now under discussion. ⁴ Remission proposed. ⁵ No exchange available.

from both British and Japanese quarters that some modification of the procedure followed by the United States (remitting part of the indemnity funds, which was used subsequently by China for educational purposes) may be adopted by them. An agreement has been signed devoting a large part of the French portion of the

old scores by selling them and engineering himself into the position of president of the new republic. No sooner was Yuan established, largely through the reorganization loan of £25,000,000 provided through the instrumentality of the foreign powers in 1913, than he decided to restore the Throne with himself as occupant. A rebellion broke out in Yunnan, which the Japanese, disgusted with Yuan because he did not concede the whole of their preposterous XXI Demands in 1915, financed and otherwise assisted. The monarchy movement was defeated and Yuan died of overwork and disappointment, in one way a great loss to his country, for he stood head and shoulders above his fellows, though sorely misguided in the policy that ruined him.

There remained after the death of Yuan two principal elements, the revolutionary party in the south, in military control of several provinces, and the old northern army organized under the Manchus and officered by men of the old school. The heads of this army retained control of the Northern provinces, and in themselves represented the spirit of Manchu rule. They recalled the parliament dismissed by Yuan, but soon quarreled with it, thereby definitely splitting the country into what was thereafter called North and South. The North sought to conquer the South, but after two campaigns, mostly conducted in Hunan, failed decisively, principally because the northern army was divided into two factions, called Anhui and Chihli, and was not united in its efforts.

It was during this period that the Japanese lent enormous sums to the northern government in the expectation that success would be achieved and attributed to the assistance of Japan.

During 1918 and 1919 all endeavors to effect a settlement between North and South failed, but neither side was able to resume the struggle, the North because Japanese supplies had run dry, the South because it was financially exhausted. In the South there was the Canton military government, representing the provinces of Kwangtung, Kwangsi, Yunnan, Kweichow and Szechuan.

The government, indeed, was under the thumb of Japan, partly because of the outstanding debts, and partly because without Japanese countenance it was liable to collapse.

At this period entered into politics Brigadier-General Wu Pei-fu, protesting against the selling of the country to the Japanese. This officer commanded a division in Hunan, peacefully confronting the southern army during two years of armistice. He had been steadily increasing his forces, and though originally in command of one division, in 1920 his troops aggregated about four divisions. His superior officer was Tsao Kun, Tuchun of Chihli, and head of the Chihli faction.

The Pekin government was controlled by the Anhui party, largely transfused into the Anfu club. In the summer of 1920 Wu Pei-fu moved north into Chihli province with the avowed object of destroying the pro-Japanese government. In one attack he defeated the Anfu army near Pekin, and it is significant that the forces armed, equipped, and paid with Japanese money,

and trained by Japanese instructors, melted away at the first onset, a sad blow to the Japanese general staff, whose policy of years was utterly confounded.

Wu Pei-fu probably would not have ventured upon his crusade but for the fact that Chang Tso-lin, Tuchun of Fengtien province in Manchuria, took the Chihli side in this affair and brought troops into the field which took a minor share in the operations. After the victory, however, it was Chang Tso-lin who occupied Pekin and reformed the government.

From this time onward Chang Tso-lin and Wu Pei-fu were political rivals. Chang Tso-lin was promoted Inspector-General of the three Manchurian provinces of Fengtien, Kirin, and Heilungkiang, and Wu Pei-fu was awarded a minor appointment. Chang Tso-lin occupied Pekin with a division and stationed two brigades in the near neighborhood. Wu Pei-fu retired to a camp at Loyang, near the point where the Pekin-Hankow Railway crosses the Yellow River. Chang Tso-lin's career indicates that he is an autocrat by temperament.

Wu Pei-fu all along advocated a national convention and government on a popular basis. His ambition was to make his country strong enough to resist Japanese aggression. Chang Tso-lin, on the other hand was compelled to bow to the Japanese, who were dominant in South Manchuria after the Russo-Japanese War. Since the assertion of his power in Pekin Chang Tso-lin repeatedly reformed the government, without successful result. Liang Shih-yi, whom he appointed premier in December 1921 was driven to take leave by the threats of Wu Pei-fu.

Far away in South China is Sun Yat-sen, temporarily president early in the revolution and until August 1922, with intervals, leader of the southern government. The Canton military government broke up in 1920, and the five provinces concerned drifted apart.

Next year, however, Sun Yat-sen, assisted by General Chen Chiung-ming, a product of the revolution, recovered control of Kwangtung, and formed a new government at Canton, without the adherence of the other four southern provinces. Kwangtung then successfully fought the adjoining province of Kwangsi, thereby giving Canton control of both provinces. Sun Yat-sen then projected the invasion of the North. He professed to have the adherence of Yunnan, Kweichow, and Szechuan in this enterprise, but there was so much confusion in those provinces that it is difficult to believe them capable of pursuing any external policy.

Sun Yat-sen naturally endeavored to get into touch with Wu Pei-fu with a view to jointly opposing Chang Tso-lin. The two were never able to come to terms, and Wu Pei-fu, by crushing a Hunan movement inspired by Canton, incurred the enmity of Sun Yat-sen. Sun Yat-sen therefore found Wu Pei-fu blocking his road to the North. Chang Tso-lin, on the other hand, perceived in Wu Pei-fu an obstacle to his own domination of the North.

Chang Tso-lin and Sun Yat-sen, therefore, were supposed to have allied themselves at the end of 1921 with a view to destroying Wu Pei-fu. Chang Tso-lin's movement of troops into Chihli forced Wu Pei-fu to bring his troops

away from the Hunan-Hupeh border at Yochow to his base at the Yellow River.

Wu Pei-fu thus had Sun Yat-sen at his back and Chang Tso-lin in front, and at the beginning of 1922 it remained to be seen whether he would advance and give battle to Chang Tso-lin or succumb to pressure being put upon him.

Observers did not have long to wait for on 18 Dec. 1921, the cabinet at Peking was forced to resign through pressure exerted to that end by Gen. Chang Tso-lin, the powerful leader of Manchuria who had arrived in the capital a few days previously. The general had disposed his troops in and around the city and his dictation was at once obeyed. He set up a so-called strong cabinet, which took office on 25 Dec. 1921. This cabinet was made up as follows:

Liang Shi-Yi, Premier; W. W. Yen, Minister of Foreign Affairs; Chang Hu, Vice-Minister of Finance; Pao Kwoi-Ching, Minister of War; Li Ting-Hsing, Minister of the Navy; Yeh Kun-Cho, Minister of Communication; Wang Chung-Hui, Minister of Justice; Chi Yao-Shan, Minister of Commerce; Kao Ling-Wei, Minister of the Interior; Huang Yen-Pei, Minister of Education.

According to General Chang, his motives were to have a new constitution adopted which would be more suitable to the temperament of the Orient than the existing constitution; the betterment of the financial situation through the ousting of incompetent or patently dishonest officials and a general program of reform. The authority of the new cabinet was soon challenged in South China, where the government at the beginning of the year issued an order for the arrest of the Premier as a traitor. The chief opposition, however, came from Wu Pei-fu, the Inspector-General of the provinces of Hunan and Hupeh, who charged the new cabinet with being the tools of the Japanese. On 15 January he sent an ultimatum to Premier Liang demanding his resignation and that of his cabinet within three days and threatening to publish further charges if this demand was not complied with within five days, and to march on Peking if Liang took no action within seven days.

Liang, the Premier, met the ultimatum with defiance and civil war became imminent. In view of the threatened hostilities the United States, on 16 January, placed an embargo on shipment of arms and ammunition to China. Later in the month the Chinese President announced that he had granted a leave of absence to the Premier and had appointed Dr. W. W. Yen as acting Premier. The financial situation continued to harass the government. The consortium loan of 14,000,000 taels was secured by the salt revenues, while the Japanese loan was being liquidated in monthly installments from the salt surplus. Various complications reduced the available funds raised by the consortium loan to 6,000,000 taels, a sum insufficient to meet the payment of back salaries due to government officials. About 1 March it developed that Gen. Chang Tso-Lin sought an alliance with the government of Sun Yat-Sen at Canton, the avowed enemy of the Peking government.

Relations between Chang and Wu became more and more strained and civil war soon was seen to be inevitable. The latter remained entrenched in Hunan awaiting the attack of the troops led by Chang and moving from Tientsin and Shantung. Fighting being expected in Chihli and Hunan, many wealthy Chinese sought safety in the foreign concessions at Tientsin. The fighting began with preliminary skirmishes on 26 April, followed by a general engagement the next day. General Chang directed the operation of his troops in person from Chut Liang-Cheng, about 15 miles east from Tientsin, while General Wu was about 50 miles to the south of Peking directing an attack on Lang Fang. A fiercely contested battle ensued for the possession of Machang. Wu's forces were temporarily checked in some quarters but reinforcements were brought up and the tide of battle turned. By 29 April the fighting had reached Changtsin-tien, 12 miles southwest of Peking. In the latter city the gates had been closed and the government had been warned by the foreign legations that the fighting must not be extended to the city. On the last day of April the fighting front extended from Machang westward to Paoting-fu and thence north to Changtsin-tien. The cannonading ceased on the morning of 2 May and by the 4th it was definitely learned that victory rested with General Wu. The bodies of over 2,000 soldiers lay on the battlefield and thousands of the troops of Chang were dispersed to the hills. On 5 May the victory of General Wu was recognized by Peking and the guard of General Chang was disarmed within the capital. President Hsu recognized the control of Wu and on the following day he issued deposition orders against Chang as Inspector-General of Manchuria. Wu made no attempt to enter the capital and intimated that he wished the President to remain in office at least temporarily. Wu also gave each prisoner of war a sum of money for his expenses home. Wu retained his organization intact, fearing the possibility of an attack by Sun Yat-sen from the south. The latter had remained very inactive during the struggle. General Wu continued at this headquarters at Paoting-fu, evolving plans for the unification of the whole country. His problem was complicated by the nature of the resistance offered by General Chang who appeared unwilling to accept defeat. The latter was furious at the presidential decree of 6 March, dismissing him from his post as Inspector-General of the three Manchurian provinces and issued a declaration of independence on 13 May repudiating all allegiance to the President and setting up an independent government of his own. He proclaimed his readiness to enter into treaty engagements with the powers and to protect foreign lives and property. This pronouncement perturbed the Peking Government and caused some uneasiness to the foreign legations. Chang next seized the postoffice receipts and the customs, salt and other revenues at Mukden and deposited them in his own treasury as an earnest of his intention to set up a government of his own. On 21 May the Peking Government denounced Chang as a rebel and traitor. General Wu persisted in his determination to

drive Chang out of China and at the same time pursued his plans for pacification. To the latter end he forced the resignation of President Hsu on 2 June. General Wu next brought pressure to bear on the President of the South, Sun Yat-sen, in order to force his resignation also and in this way pave the way for a unification of the country. Between Dr. Sun and General Chen Chiung-ming, the Canton Military Governor, there had arisen a quarrel which paralyzed the activity of the former. Toward the end of May, Sun's position was rendered serious by the fact that the troops of General Chen were between him and Canton and the latter had demanded Sun's resignation. A partial reconciliation was announced on 3 June and at the same time it was stated that Sun Yat-sen had re-entered Canton. The Pekin Cabinet now invited Li Yuan-hung, former President of China, to take over the presidency and the latter signified his willingness on condition that Dr. Sun resign his office as head of the southern rival government. Sun refused to step aside, contending that the Canton government was the legal government of China. His personal influence was sufficient to hold in Canton many of the members of the old Parliament and to induce these men to continue their support of him. Li Yuan-hung arrived in Pekin on 10 June and assumed the presidency. In a proclamation issued the same day he said that his decision had been influenced by pledges of support from Chang-Tso-lin, from a large group of the Canton Parliament and from Gen. Chen Chiung-ming. The first act of the new President was to appoint Dr. Wu Ting-fang to the office of Premier. The new alignment of supporters of the President left Dr. Sun in isolation and he had further to meet the stern demand of General Wu that if Sun continued to oppose the unification of the country on a constitutional basis he (Wu) would lead his forces against him and crush him as he had just crushed Chang in the North.

Wu Ting Fang, however, remained faithful to Sun and the appointment was rescinded by the President. Wu Ting Fang died on 23 June, just as Sun Yat-sen was overthrown, together with his government. The Pekin Cabinet was reorganized with Dr. Yen as acting Premier; Tan-Yen Kai as Minister of the Interior; Gen. Wu Pei-fu as Minister of War; Chang Kuokang as Minister of Commerce, and Huang Yeng-Pei as Minister of Education. The other ministers were held over from the former regime. Wu Pei-fu declined to take office and the Vice-Minister took charge provisionally. Gen. Wu Pei-fu continued his campaign against Gen. Chang Tso-lin, winning a battle after a fierce encounter at Shanhaikwan and driving Chang's forces further back in the direction of Manchuria. Chang sued for an armistice which was arranged for 16 June. On the same day the three Manchurian provinces proclaimed their independence and made Chang Commander-in-Chief. Hostilities ceased on 20 June with Chang's forces withdrawn into Manchuria in accord with the terms of the armistice. Meanwhile in South China the quarrel of Dr. Sun with Gen. Chen Chiung-ming proved fatal to the former and the latter's troops captured

Canton on 17 June. Sun took refuge on one of his war vessels off the coast and bombarded the defenceless city of Canton, killing over 1,000 persons. Dr. Sun Yat-sen strove to regain his power in the South. His forces on 12 July took the Macao forts, two miles from the city down the West River. A sally by him four days later near Shiukwan, 150 miles north of Canton, was stopped by the troops of General Chen, numbering about 14,000 and sent north from Canton along the railway. On 20 July it was reported that Sun's forces had been completely routed and hundreds slain. Toward the end of the month it was seen that Sun was waiting for his northern Kiangsi troops to reach Canton and join up with his southern forces. Chen, however, managed to prevent this junction and finally at the end of July met up with 25,000 Sun troops in a frontal attack at Shiukwan. Sun's troops were defeated after a stiff battle, losing 2,000 rifles, 21 machine guns and 9 cannon to Chen and leaving 3,000 killed or wounded on the field. Sun's army retreated broken and demoralized to Kiangsi Province and Sun fled to Shanghai on 9 August. In the closing days of July agents of General Wu, who had been sent into Manchuria, reported that Gen. Chang Tso-lin was making extensive preparations just outside the Great Wall; had established three defense lines, the first at Shanhaikwan, second at Wanchitun and a third line at Sulching. Chang also was reported as having concluded an alliance with Tuan Chi-jui, the former leader of the pro-Japanese Anfu Party, ousted from Pekin the year before. Chang having consolidated his forces and made himself virtual dictator of Manchuria, issued a formal declaration of independence on 1 August, notifying all foreign consuls in Pekin that all questions concerning Manchuria must be referred to him, and refusing to recognize all agreements made with the Pekin Government. At this juncture Japan demanded of the Pekin Government that it put a stop to the incursions of bandits across the Manchurian-Korean frontier. On 1 August the Parliament met at Pekin for the first session in five years. The drafting of a permanent constitution was on the agenda. Stormy scenes marked the opening session over the attempt of the speaker, Wu Ching-lien, to have the five-year lapse considered as a recess. This was felt as a move to ignore and invalidate the acts of the members of the Southern minority who had met in Canton in 1921. Spasmodic outbreaks in the provinces further harassed the Pekin Government. The situation, already somewhat gloomy, was made worse by the typhoon and tidal wave that swept over Swatow on 2-3 August, causing 50,000 deaths and rendering 100,000 people homeless. The situation was relieved through the program issued the middle of August by Sun Yat-sen, in which he advocated the assembling and functioning of Parliament free from all outside influences, self-government for the provinces, abolition of the system of provincial government by the Tuchuns or military overlords and the turning of the lawless provincial armies into labor battalions. General Wu approved the program on 21 August and soon afterward the President,

Li Yuan-hung, invited Dr. Sun to Peking to aid in the task of reconstruction. Dr. Sun in his reply signified his willingness to co-operate. Civil war, however, was being waged in the Canton region by General Chan and anti-Christian propaganda was said to form part of his plans. In Manchuria, General Chang remained at bay and his massed forces obliged General Wu to keep himself in readiness to repel any attack that might develop from that quarter. The Peking Government was virtually bankrupt as the result of the internal strife and based all its hopes in conciliation with the figure of the former President Sun Yat-sen as the dominant one of the situation. A new Cabinet, headed by Dr. Wang Chung-hui, assumed office on 20 September with Dr. Wellington Koo as Foreign Minister. On 8 October Gen. Hsu Shuh-chen, a leading member of the pro-Japanese Anfu Party, established an independent military government at Yengping, Province of Fukien. National troops were at once dispatched against him and on 12 October he was defeated by these at Shiukow. With the reassembly of the Chinese Parliament on 11 October the members divided into several factions and there was little opportunity of effecting the necessary reorganization of the finances and of passing other measures vitally necessary to the pacification and unification of the country. The chief issue appeared to be the alternative between unification of the country through the establishment of a strong centralized government and a federal system leaving the provinces for the most part autonomous. General Wu opposed emphatically any form of federalism. Foochow was captured in October by the troops of Hsu Tsung-chi and a revolutionary government established. American, British and Japanese naval guards were at once landed for the maintenance of order. Troops under the orders of the Peking authorities were dispatched from the Province of Kwantung to check the southward advance of the rebels from Foochow. With the withdrawal of the Allied troops from Siberia the Government of the United States relinquished its share in the control of the Chinese Eastern Railway. The formal notice of this act was conveyed in a note from the American Secretary of State presented to the Chinese Government on 31 October by Minister Schurman. After protracted negotiations China and Japan on 5 December completed settlement of the Shantung controversy as outlined in the terms of the Washington Treaty. China agreed to pay Japan 40,000,000 yen for the Shantung Railway. The payment to be made in 15-year Chinese treasury notes, bearing interest at 6 per cent. In addition, China pays Japan 16,000,000 yen for all public properties located in the Kiaochow district. The civil and military administration was turned over to China on 10 December, while the Shantung Railway was transferred to Chinese authority on 1 Jan. 1923. China, as a direct result of the Washington Conference, thus regained control of territory which she lost when it was seized by Germany in 1898.

CHINA TRADE ACT, a law approved by the President of the United States 19 Sept. 1922 under which the stock of corporations directly engaged in commerce in China is exempt

from Federal income taxation provided that such stock is held by Chinese or American stockholders, resident in China; and provided, further, that the amount of money so exempted is distributed annually as a special dividend to such stockholders. The act, for the first time, places American trade in China on an equality with that of Great Britain, France and Japan. To obtain the benefits of the act, the concerns must be organized in the District of Columbia for the specific purpose of trading in China. Applications for registration under the law should be addressed to the Assistant Registrar, China Trade Act, Department of Commerce, Washington, D. C.

Applications for Certificate of Incorporation. An application for a certificate of incorporation as a China Trade Company must be signed and sworn to before a notarial officer of the United States, or of any State, by a majority of the incorporators and must set forth the following information: (1) Date of application; (2) place of application; (3) name and address of resident incorporator; (4) whether the application is for an original or extended certificate; (5) names and addresses of incorporators; (6) the reason, if any, for the failure of any incorporator to sign; (7) nationality of each incorporator by name; (8) in case of naturalized citizens, a certificate of naturalization must accompany the application for each incorporator so naturalized; (9) a statement as to the manner and extent the proposed corporation will aid in the development of markets in China for goods produced in the United States; (10) names and nationalities of stockholders with number of shares subscribed to by each; (11) minutes of meeting adopting articles of incorporation; (12) certificate by secretary of meeting regarding adoption of articles of incorporation with certified copy of articles of incorporation signed and acknowledged by incorporators; (13) signatures of incorporators. Copies of the certificate when issued must be filed with the American legation at Peking, and with the Consular officers for the districts in which the company's main and branch offices or agencies in China are situated.

Registration Fees.

Section 17 (B) of the Act provides that the registration fees for China companies shall accompany each application (except that for property value which will be payable before certificate is issued), and shall be as follows:

Certificate of registration (as provided in section 5).....	\$100
Certificate of property value (as provided in section 8).....	300 Maximum 25 Minimum

(Fees based on value of property and investigation necessary in each case)

Certificate of amendment to articles of incorporation or authority for dissolution (as provided in section 10)..... 100

The fees shall be payable in United States gold either in Shanghai, China, or in Washington, D. C., and shall be collected by the registrar or secretary and turned over to any designated disbursing officer of the United States Treasury Department and handled by him in accordance with section 17 of the Act.

Certificate of Property Value. Section 8 provides that the certificate of property value shall contain the following information signed and properly sworn to before a notarial officer of the United States or any state: (1) Date of certificate; (2) name of owner of property; (3) exact description and location of property with list or schedule; (4) cost of property at date of purchase; (5) present liens or mortgages on property; (6) statement of present value supported by statements of two other persons verifying same with reasons for knowledge of value; (7) signatures of three persons under oath.

Certificate of Amendment of Articles of Incorporation or Authorization for Dissolution or Extension. The certificate of amendment of articles of incorporation or authorization for dissolution or extension as provided for in section 10 (C) shall contain the following information signed by a majority of the directors and properly sworn to before a notarial officer of the United States or any State by the secretary of the meeting: (1) Date of certificate; (2) date of meeting authorizing action; (3) total number of stockholders; (4) total number empowered to vote; (5) number of stockholders attending meeting; (6) number of stockholders voting for action; (7) signature of above majority of directors and secretary of the meeting.

Annual Reports. Section 12 (A) provides that the annual report of companies operating under this act shall be for the year ending December 31st and shall consist of the following, subscribed to under oath by the secretary of the corporation: (1) Minutes of the stockholders' meeting approving the balance sheet for such fiscal year; (2) a certified copy of the balance sheet (as per specified form); (3) a detailed statement of profit and loss (as per specified form); (4) a statement of the distribution of profits; (5) changes in list of stockholders during the year.

Inspection of Accounts. Section 12 (B) provides that application for inspection of reports, certificates, certified copies of applications, etc., may be made to the secretary or registrar and, upon approval, the applicant may inspect the papers specified. Such applications shall contain the following: (1) Name of company or companies registered; (2) list or titles of papers desired for inspection; (3) reason for desiring to inspect same; (4) certificate under oath that information will be held strictly confidential and not for publication or dissemination; (5) signature of applicant and name of company (if any) which he represents.

Appeals from Decision of Registrar. The Act provides for strict supervision over the activities of companies operating under it and the regulations carry out these provisions by laying down definite rules of procedure regarding appeals from the decision of the registrar to the Secretary of Commerce, as follows:

Appeal from Decision of Registrar. Section 3. (1) Appeal from any decision of the registrar may be made direct to the Secretary of Commerce, but only after due notice of the appeal has been filed with the registrar by the person appealing. No action shall be taken by the registrar pending the secretary's decision. (2) A transcript of the record in each particular case of any controverted question, together with a copy of the registrar's decision must accompany the appeal, with a certificate signed by the registrar that such transcript and decision are correct copies. (3) In case of any dispute on the above, resulting in the failure of the registrar to sign such certificate, he shall submit his reasons in full with supporting documents to the secretary. The person making the appeal may do likewise, provided his statement is submitted under oath. (4) The decision of the secretary will be communicated in writing independently to both the registrar and the person appealing as soon as practicable.

In view of the approval of the above-mentioned act the following tabulation of foreign firms and persons doing business in China is of especial interest. It was compiled by the United States Department of Commerce from what it asserts are "supposedly reliable" sources in Shanghai:

	1914		1920		1921

CHINESE TREATIES. See WASHINGTON CONFERENCE.

CHIROPRACTORS. According to Dr. B. J. Palmer, president of the Palmer School of Chiropractic, Davenport, Iowa, there were between 13,000 and 15,000 chiropractors in the United States in 1922 and one or more in each of 19 foreign countries. The number of students enrolled in the various chiropractic schools is over 8,000 annually, asserts Dr. Palmer. Chiropractors have been licensed in several States and a number of States have chiropractic

laws and examining boards. Among the latter are Arizona, Connecticut, Florida, Georgia, Idaho, Maryland, Minnesota, Montana, Nebraska, New Hampshire, North Dakota, North Carolina, Kansas, Oklahoma, Oregon, Iowa, South Dakota, New York, Arkansas, Vermont, Washington and New Mexico. There are several competent schools of chiropractic. The Palmer School is the oldest and largest. Other modern schools listed by Dr. Palmer are the Missouri Chiropractic College, the Canadian Chiropractic College, the Eastern College of Chiropractic and the Texas Chiropractic College. Consult the article 'Chiropractic in the Encyclopedia Americana, also: Firth, J. N., 'Chiropractic Symptomatology,' Palmer, B. J., 'The Science of Chiropractic' (Vols. I, II, III, IV, V, VI). CHOLMELEY-JONES, R(ichard) G(ilder), formerly director of the United States Bureau of War Risk Insurance: b. New York City, 8 Oct. 1884; d. there, 21 Feb. 1922. He was educated in the public schools of his native city, under private tutors, and at the Wharton School of Finance and Commerce of the University of Pennsylvania. From 1899 to 1903 he was in the insurance business; from 1903 to 1917 he was in the employ of the Review of Reviews Company, the last seven years as advertising manager. Following the entrance of the United States into the World War, he reorganized the work of the recruiting committee of New York City under the Mayor's Committee of National Defense in September 1917 and thereafter, at the request of the Secretary of War, organized the sale of the second Liberty Loan bonds throughout the United States army, bonds to the amount of \$86,000,000 being disposed of. After being twice rejected for military service, the government, recognizing his ability as an organizer, in November 1917 commissioned him captain in the Adjutant-General's department and sent him to France to assist in organizing the War Risk Section of the American Expeditionary Forces of which he soon was made chief. Subsequently he was promoted to lieutenant-colonel and on 5 Feb. 1919 he was honorably discharged. Upon his return to America, he was called to Washington by the Secretary of the Treasury and on 19 May 1919 he was made director of the Bureau of War Risk Insurance. He held the position for almost two years and then resigned to become vice-president of the Finance and Trading Corporation of New York City with which he was still connected at the time of his death. He was author of the article WAR RISK INSURANCE in the Encyclopedia Americana.

CHRISTIAN CHURCH. The year 1922 being the year of the Quadrennial Convention of the Christian Church, several changes were effected in the interest of denominational cohesion and effectiveness. The general corporate body hitherto known as the American Christian Convention was changed at this Quadrennial Convention, held in Burlington, N. C., in October, to the General Convention of the Christian Church. The Christian Publishing Association was also merged into this body, retaining its former name and function only for the sake of corporate convenience. The Boards of Education, Sunday School and Christian Endeavor were merged into one board known as the Board of Christian Education which will administer jointly the interests formerly cared for by the three separate departments. The Women's Board for Home Missions and Women's Board for Foreign Missions were also merged into a single organization. The various boards of the Convention were constituted a General Board of the Christian Church with regular annual meetings.

During 1922 a new college was founded at Wadley, Ala., known as Bethlehem College. Another orphanage located at Carversville, Pa. was added to the list. A new periodical *The Journal of Christian Education* was launched. A Department of Evangelism was organized with a secretary, executive secretary and field workers. A special effort for the increase of funds for ministerial relief and sustentation was inaugurated. This will include an enlargement of the plant and added equipment to the aged ministers' home.

The Home Mission work was strengthened by the addition of a number of field secretaries covering the territory of the Church in the United States and Canada. A program of centralization in both city and country efforts was inaugurated by the Home Mission Board. Every department of the church showed an increased income for the year, the Forward Movement collections having reached 92 per cent of the total amount due on pledges. The Foreign Mission Board is undertaking a new field in China and will probably enlarge the scope and character of its work in Latin-American territory. The Forward Movement having completed its campaign, in operation since January, 1918, reduced its efforts by merging the activities which it created with the general and established agencies of the Church. It will continue its organic existence through 1924 in order to collect maturing pledges and otherwise supervise the interests which it has had in charge. The Commission on Christian Unity during the year made overtures to all evangelical denominations to unite. This effort has met with certain favorable responses and negotiations are being encouraged for organic union with bodies of similar faith and polity.

The Church has inaugurated a financial campaign for various phases of educational work in its colleges, the fund raised to be \$1,425,000. A system of summer schools for religious workers has been worked out and put in operation, much of it having been completed during 1922. By this plan ministers and laymen will be gathered together at various centers for specific instruction during the summer months.

The statistics of the Church as compiled for 1922 are as follows: Church members, 102,042; Church organizations, 1,208; Ministers, 942; Sunday-Schools, 1,159; Sunday-School Pupils, 94,099; Members Christian Endeavor Society, 7,032.

The periodical publications of the Church include: *The Herald of Gospel Liberty*—Dayton, Ohio, *The Christian Sun*—Richmond, Va., *The Christian Missionary*—Dayton, Ohio, *The Christian Vanguard*—Drayton, Canada, *The Journal of Christian Education*—Dayton, Ohio, and six Sunday-School and five educational publications of smaller circulation. Periodicals are also issued by the Afro-Christian Convention for circulation among the colored constituency.

F. G. COFFIN,
President.

CHRISTMAS ISLAND, an island annexed to the British colony of the Gilbert and Ellice Islands in November 1919, situated 200 miles to the southwest of Java. It has an area of 42 square miles and a population of 2,293. Phosphate of lime is the chief product of the island and most of the inhabitants are employed in the phosphate workings. The exports of this commodity in 1921 amounted to 56,700 tons.

CHURCH OF THE NEW JERUSALEM, a body of Christians founded on the writings of Emanuel Swedenborg and often called "Swedenborgians." The Church is represented in the United States by 90 ordained ministers and 6,586 communicants. It maintains three educational institutions and has 96 church edifices in the United States and Canada. The Church supports active and growing missions in Japan, the Philippines and in several places on the Continent of Europe.

CHURCH PEACE UNION. See PEACE AND ARBITRATION, INTERNATIONAL.

CHURCHES IN THE UNITED STATES, Statistics of the. The very serious effects of the war on the churches in other countries than the United States and Canada prevent at present a general survey of religious statistics by communions represented in various parts of the world. We must wait until more settled conditions in Europe permit complete reorganization of religious bodies separated from the state. New churches are apparently being formed in Czechoslovakia and other principalities to which the results of the war gave the right of self-determination, and definite statistical returns are not yet available.

In the United States the body of churches went down almost to defeat in the year 1919, and many of the leading denominations reported actual decreases in members. The aggregate gain for the whole list was the smallest perhaps ever reported—56,301. This was somewhat more than one-third of the net gain of the previous year, 154,320. The Methodist Episcopal Church, the largest Protestant body, had a net loss in 1919, in the United States alone, of nearly 70,000 members; the Northern Baptist Convention of 35,000 and the Presbyterian Church (Northern) of more than 32,000. One reason for these heavy losses was an extraordi-

nary increase in the number of deaths, in part of soldier members. Those reported by the Methodist Episcopal Church, leaped from 35,629 in 1918 to 71,677 in 1919. Other causes were due to the fact that many churches were pastorless and regular church work was greatly reduced.

The general resumption of church activities told a different story in 1920, when the gains rose to 814,000, a fourteen fold increase. Those for 1921 were still larger, aggregating over 1,000,000, in which nearly all the denominations shared. The total net gain in the 10 years ending with 1920 was 7,006,787 which, on a basis of 35,245,296 in 1910, indicates a percentage of slightly less than 20, to be exact, 19.88 or somewhat under 2 per cent a year. The gain in the first six years of the decade, down to and including 1916, before the United States entered the war, was 4,642,515, or 13.17 per cent, or 2.19 a year.

By groups the distribution of the aggregate of 44,663,684 communicants, or members, in 1922, is as follows:

Adventists	5 bodies	139,277
Baptists	14 "	8,303,824
Catholic, Roman	3 "	*15,568,099
Catholic, Eastern Orthodox	9 "	625,944
Disciples of Christ	2 "	1,552,713
Congregationalists	1 "	848,318
Jewish congregations	1 "	1357,135
Friends	4 "	118,083
Latter-Day Saints	2 "	587,570
Lutherans	18 "	2,443,016
Mennonites	12 "	85,032
Methodists	15 "	8,270,704
Moravians	2 "	25,254
Presbyterians	9 "	2,401,267
Protestant Episcopal	2 "	1,129,613
Reformed	3 "	522,161
United Brethren	2 "	385,861
Other bodies:		
Evangelical Synod (formerly German)		290,782
Evangelical Church (Methodistic)		217,189
Christian Church		94,153
Unitarians		71,110
Universalists		59,650
Salvation Army		52,291
Pentecostal bodies		64,221
Dunkards, 4 bodies of German Baptists,		142,485
(Plymouth) Brethren, (River) Brethren,		
Churches of the New Jerusalem, Catho-		
lic Apostolic, Scandinavian Evangelical,		
3 bodies, Spiritualists, etc., etc.		

* Not "population," but estimated communicants.

† Embracing only heads of families.

All religious bodies have an aggregate of 238,568 churches, and 202,455 ministers. The increase of the latter in 1922 was 4,012 of the former, 2,445. The above statistics are confined to the territory of the United States alone, omitting millions of members in missionary and other lands.

The largest single denominations having half a million or more members are:

1. Roman Catholic	15,568,099
2. Methodist Episcopal	4,085,016
3. National Baptist Convention	3,426,506
4. Southern Baptist Convention	3,339,188
5. Methodist Episcopal Church, South	2,362,598
6. Presbyterian (Northern)	1,720,538
7. Northern Baptist Convention	1,281,764
8. Disciples of Christ	1,234,776
9. Protestant Episcopal	1,118,396
10. Congregational	848,318
11. Lutheran Synodical Conference	769,296
12. United Lutheran	784,925
13. African Methodist Episcopal	651,760

Those having less than 500,000 members and 250,000 or more are:

Latter Day Saints (Mormons)	492,205
African Methodist Episcopal Zion	490,280
Presbyterian (Southern)	411,825
United Brethren	366,060
Jewish	357,135
Colored Methodist Episcopal	351,404
Reformed in United States	334,526
Churches of Christ (Disciples)	317,937
Evangelical Synod	290,782
Norwegian Lutheran	284,690

One hundred and fourteen of the denominations, more than one half of the whole number, have less than 50,000 members, ranging from 145 up to 49,184.

H. K. CARROLL,

Author of "The Religious Forces of the United States."

CHURCHES IN THE WORLD WAR.

The churches of the United States in the period of the European War, with patriotism not exceeded by any other organizations, co-operated enthusiastically with the government in its vast measures of preparation and prosecution, supporting unitedly the appeals for the great popular loans on bond issues; the campaigns of the Red Cross for funds for its helpful work; and of the Young Men's Christian Association, the Knights of Columbus, the Salvation Army and similar organizations. Many ministers left their churches and went to the scene of conflict as chaplains, as welfare-workers, and as helpers in other capacities in camp, in field, hospital, etc. After the armistice it was found that the war activities had absorbed so much of the time and strength of the ministry that regular church work had been greatly reduced. The outcome appeared in the very small net gain of members of the various denominations in the year 1919, the culminating year of the war. Many of the larger denominations reported actual decreases and but few had more than enough accessions to make good the losses by death and other causes. These losses were naturally heavier than usual. The international conflict, however, brought the various religious bodies — Protestant, Catholic, Jewish in closer sympathy than ever before, and for the first time in history the distances between diverse faiths were so bridged that co-operation in a public appeal for funds for war-relief work became an established fact, and Christians and Jews worked like brothers side by side. For the moment their differences were in abeyance, following the example of the nations of the Entente, who pooled their resources that they might roll back the common foe.

The losses sustained by the churches of Great Britain and her colonies, and by those of the participating countries of Europe were, of course, exceedingly heavy. The awful carnage of millions upon millions, decimated religious populations in Belgium, France, Italy, Germany, Austria, Hungary, Russia and other countries, and left the churches prostrate. The recovery will necessarily be a gradual one. In Russia, a government apparently unfriendly to religion has complicated the situation; but in the Orthodox Church, freed from the rigid control of the former imperial régime, an attempt to popularize

the Orthodox faith is being made and a conference has been called to promote what may be called a reform movement, particularly for the benefit of the peasantry whose religious instincts are deep and strong. Representatives of other churches have been asked to attend the conference at Moscow in an advisory capacity.

Cessation of Divisive Influences.—Religious controversy between denominations in the United States, which was quite intense in the last century, has after a period of gradual cessation, almost entirely disappeared. Fierce dispute between Catholics and Protestants, between various Protestant bodies over particular doctrines and practices, as between Arminianism and Calvinism, as to the proper mode and subjects of baptism, etc., have gone into history and by common consent, ceased generally to be topics of sermons and addresses. The tendency, on the contrary, is strong toward co-operative effort for common purposes, as for example, in the Federal Council of the Churches of Christ in America, in which most of the leading Evangelical churches are associated.

Failure of the Inter-Church World Movement.—A movement in which Baptist, Congregational, Methodist, Presbyterian and Reformed and other bodies were associated, known as the Inter-Church World Movement was formed a few years ago with the objective of a united appeal for funds for missionary, educational and other like purposes. It was to be a united "drive" for hundreds of millions of dollars, like those which appealed to the nation for war objects. The Methodist Episcopal Church had set as a goal for the centenary of the organization of its missionary society in 1919, the raising of a hundred millions, or more, in five annual payments, for its missions, home and foreign, and this daring project suggested the formation of the Inter-Church World Movement. Preparations for the joint appeal for the largest sum ever before asked for religious purposes were begun on a large scale; but the enterprise failed disastrously in its financial appeal, saddling the various denominations which had given guaranties for its expense with some millions of dollars of deficit.

Separate denominational campaigns, however, were successfully carried forward resulting in an immense advance in missionary enterprise, home and foreign, the increase of endowments of denominational schools and colleges and the strengthening financially of the general work of the Churches.

A Federal Union of Churches.—While the leading Evangelical Churches were still under the intimate fraternal feeling which the co-operative efforts of the war had deepened and strengthened, the General Assembly of the Presbyterian Church (Northern) proposed a Conference to inaugurate a movement for the bringing of the Churches together in a compact which might lead to the complete merging of many of them. An *ad interim* committee was the outcome of a conference held at Presbyterian headquarters in Philadelphia which worked out a plan of union on the basis of the Ecumenical Creeds and modeled as to its ecclesiastical construction on the federal system of the United States government. Each denomination was to

retain its name, its creed, its system of government, its usages, its peculiar methods of work, yielding gradually the supervision of its benevolent societies to a General Council of the uniting bodies, to be held biennially. Union of local churches was to be encouraged and promoted to prevent rivalry and costly competition. The plan was intended to avoid the many almost insurmountable obstacles which would be raised by an attempt to formulate an ecclesiastical system out of the many varieties now in use, or a confession for the united body. The Reformed Church in the United States (formerly German) took the necessary constitutional steps in its general and subordinate judicatories; but the Presbyterian Church, which fathered the attempt, failed to give its consent to the requisite changes in its constitution, and the easiest plan thus far devised for Christian unity awaits possible resurrection when the demand for interdenominational merging becomes more insistent.

World Conference of Faith and Order.—The General Convention of the Protestant Episcopal Church in 1910 proposed to the Christian world a reunion on the basis of Faith and Order, setting forth as a starting point for discussion what has long been known as the quadrilateral proposition of the Lambeth Conference of the Anglican Communion. Many of the Evangelical Churches entertained the invitation to join in the movement and appointed representatives to meet committees to arrange preliminaries. The outbreak of the European War interrupted conferences and correspondence; but negotiations went forward after the armistice in 1918 and a preliminary conference was held at Geneva, Switzerland, in 1920, and a date has been fixed for the proposed Conference, which is to be held in Washington, D. C., in May 1925. A Continuation Committee was appointed on which representatives of national churches of the following communions are serving: Anglican, Baptist, Congregational, Czechoslovak, Disciples, Eastern Orthodox, Friends, German Evangelical, Lutheran, Methodist, Moravian, Old Catholic, Presbyterian, Reformed and South India United. Full discussions of points at issue, held in Lambeth Palace, by a committee of 13 representing the Church of England and the Free Churches of England have resulted in an agreement for consideration of 10 points as to the nature of the Church, and of 10 points on its ministry, and 8 points as to the place of a creed in the Church. Another Lambeth Conference of Bishops has put the famous Quadrilateral in a more irenic form. The Roman Catholic Church has declined to take part in the Conference.

The Movement Toward Denominational Reunion.—The actual gains, since the war, of the movement for reunion have been considerable. Three leading general bodies of Lutherans, which had been separate for many years, were successfully merged in the United Lutheran Church in America, in October 1919, in the city of New York. These were the General Synod, the oldest, the General Council, representing a stricter confessional type, and the United Synod, South. The consolidation was accomplished without a jar and without

showing since any lines of cleavage. District synods, many of which overlapped, were merged and so were the missionary and other benevolent societies, the publishing and other denominational interests, and the staffs of officials. Three meetings of the General Council of the United body have been held, and no friction has yet appeared. The gain in efficiency, economy and power and influence has been immense.

Three considerable Norwegian Lutheran bodies were also merged, about the same time, thus reducing the number of separate Lutheran organizations by four.

Two other denominations have disappeared by consolidation—the Welsh Presbyterian Church, which has united with the Presbyterian Church (Northern) and the Free Baptist Church, which has been merged with the Northern Baptist Convention. The latter is significant of the subsidence of a former doctrinal controversy among Baptists over Calvinism. The former held to the Arminian view of free will, the latter to the Calvinistic.

In October 1922, two kindred Methodist bodies known as the Evangelical Association and the United Evangelical Church, which divided thirty-one years ago, were merged at a meeting in Detroit, Michigan, making a single body of well on to 250,000 members.

Besides these gains for unity, economy and efficiency, there are pending negotiations for union between certain bodies of Presbyterians, between the United Brethren in Christ, a Methodist body, and the Methodist Episcopal Church, South. Also between the last named and the Methodist Episcopal Church, which were separated in 1844-46 by the slavery question. The reunion of the last two denominations may be delayed a few years, but it seems quite sure to come in the not distant future. It would constitute a body of more than six and a half million communicants.

H. K. CARROLL,

Author of "The Religious Forces of the United States."

CHURCHES OF CHRIST IN AMERICA, Federal Council of the. An interdenominational body constituted by the official action of the Protestant denominations in the United States. It had, at the close of the year 1922, 29 constituent bodies. This is one fewer than in the previous year, due to the merger of the Evangelical Association and the United Evangelical Church, which during 1922 have become a single body known as the Evangelical Church (q.v.). The bodies which constitute the Council are as follows: Baptist (churches, North, National Baptist Convention, Free Baptist Churches, Christian Church, Christian Reformed Church in North America, Churches of God in North America (General Eldership), Congregational Churches, Disciples of Christ, Friends, Evangelical Church, Evangelical Synod of North America, Methodist Episcopal Church, Methodist Episcopal Church, South, African Methodist Episcopal Church, African Methodist Episcopal Zion Church, Colored Methodist Episcopal Church in America, Methodist Protestant Church, Moravian Church, Presbyterian Church in the United States of America, Presbyterian Church in the United States

(South), Primitive Methodist Church, Protestant Episcopal Commission on Christian Unity and Department of Christian Social Service, Reformed Church in America, Reformed Church in the United States, Reformed Episcopal Church, Reformed Presbyterian Church, General Synod, Seventh Day Baptist Churches, United Brethren Church, United Presbyterian Church, United Lutheran Church (Consultative Body).

Of these denominations all are full and official members by the action of their highest judicatories, with the exception of the United Lutheran Church, whose relationship is consultative, and the Protestant Episcopal Church whose connection with the Council is through its Commission on Christian Unity and Department of Christian Social Service. The total number of local churches included in the constituency of the Federal Council is 143,283; the number of clergymen is 113,823. The total communicant membership embraced within the Council is 20,042,695.

The Council as a whole consists of 400 members designated by the several denominations to act for them in co-operation with the other churches. The Council, which meets quadrennially, has an executive committee of approximately 100 persons meeting annually, and comprised also of official representatives of each of the constituent bodies. The last meeting of the executive committee was held in Indianapolis 13-15 Dec. 1922. An administrative committee, including one official representative from each of the denominations, meets monthly in New York.

The officers of the Council (1923) are: President, Dr. Robert E. Speer, New York; Chairman of the Executive Committee, Rev. F. W. Burnham, St. Louis; First Vice-Chairman, Rev. Rufus W. Miller, Philadelphia; Second Vice-President, Prof. John R. Hawkins, Washington; Chairman of the Administrative Committee, Rev. John M. Moore, Brooklyn; Recording Secretary, Rev. Rivington D. Lord, Brooklyn; General Secretaries, Rev. Charles S. Macfarland, Rev. Samuel McCrea Cavert, 105 E. 22d street, New York City.

In addition to the general task of developing and expressing the spirit of co-operation and unity among the Protestant Churches, the specialized work of the Council is carried on by a group of commissions, all under the oversight of the Council itself. The more important of these commissions, together with their officers, are:

The Commission on Evangelism (Chairman, Rev. J. Ross Stevenson, Princeton, N. J.; Secretary, Rev. Charles L. Goodell), is developing a united approach to the Evangelistic work of the churches. It gives special attention to promoting simultaneous Evangelistic movements in the larger communities on the part of the pastors themselves.

The Commission on the Church and Social Service (Acting Chairman Shelby M. Harrison, of New York; Secretaries, Rev. Worth M. Tippy and Rev. F. Ernest Johnson), is the centre through which the churches deal unitedly with social issues. Particular attention is given to the developing of better relations in industry

through conferences between employers and employees and ministers, and through a Research Department which issues a weekly information service interpreting contemporary social questions from the standpoint of Christianity.

The Commission on the Church and Race Relations (Chairman, John J. Eagan of Atlanta; Secretaries, Dr. George E. Haynes and Rev. W. W. Alexander), is helping the churches to become more effective centres in promoting co-operation and good-will between the white and Negro races in this country. It has assisted in developing inter-racial committees in several communities, and is beginning a campaign to arouse public opinion against the lynching evil.

The Commission on International Justice and Good-will (Chairman, Dr. John H. Finley, of New York; Vice-Chairman, Bishop Charles H. Brent, of Buffalo; Secretary, Rev. Sidney L. Gulick, of New York), endeavors to mobilize the Christian forces of the country to outlaw war by building up effective international agencies for co-operation in common tasks and the maintenance of peace. During the past year, attention has been directed especially to an educational campaign through the churches for reduction of armaments, and for the entrance of the United States into effective co-operation with the other nations of the world. Special committees are giving attention also to developing better relations with the Orient and with Mexico. National relief both for Russia and the Near East has been the subject of unusual efforts, and the Council had a representative in Russia during part of the year distributing relief.

The Commission on Councils of Churches (Chairman, Fred B. Smith, of New York, Secretary, Rev. Roy B. Guild), is organizing the churches of local communities for co-operative action in their own areas. From the local councils and federations of churches thus established, the Federal Council has points of contact with the country as a whole.

Other commissions deal with Christian education (Chairman, Rev. William Adams Brown), Relations with Religious Bodies in Europe (Bishop James Cannon, Jr., Chairman), Relations with France and Belgium (William Sloane Coffin, Chairman), Temperance (Hon. Carl E. Milliken, Chairman).

In addition to the national office at 105 E. 22d street, New York City, there is a Washington office with Bishop William F. McDowell as Chairman, and Rev. E. O. Watson as Secretary. There is also a Western office in Chicago, with Dean Shailer Mathews as Chairman and Rev. Herbert L. Willett as Secretary.

SAMUEL McCREA CAVERT,
General Secretary.

CIGARETTES. See TOBACCO.

CINCINNATI, University of, a non-sectarian co-educational institution founded in 1870 and located at Cincinnati, Ohio. In 1922-23 it had a faculty of 361 members, 4,298 students, property valued at \$2,597,282 and an income of \$1,030,828.69. Frederick C. Hicks, Ph.D., is president.

CITADEL, The, a State military college founded in 1842 and located at Charleston, S. C.

In 1922-23 it had a faculty of 22 members, 317 students, property valued at \$2,105,948.43, an income of \$391,869.33 and \$182,603.53 for new buildings. Col. O. J. Bond, A.M., is superintendent.

CITIZENSHIP. Under an act of Congress, approved 22 Sept. 1922, it is declared "that a woman citizen of the United States shall not cease to be a citizen by reason of her marriage after the passage of said act, unless she makes a formal renunciation of her citizenship before a court having jurisdiction over naturalization of aliens, and any woman citizen who marries an alien ineligible to citizenship shall cease to be a citizen of the United States." Two classes of women are referred to specifically in the new law which specifies what each class must do in order to acquire American citizenship: 1. An alien woman marrying an American citizen, after the passage of the law, or any woman whose husband is naturalized after the passage of the law, may become naturalized by filing the usual petition for naturalization and complying with all the requirements of the naturalization laws, except that (a) no declaration of intention is required; (b) only one year's continuous residence in the United States, Hawaii, Alaska, or Porto Rico, immediately preceding the filing of her petition, is required. 2. A woman, who, before the passage of the act, was an American citizen and lost her citizenship by marriage to an alien, may become naturalized by filing the usual petition, except that (a) no declaration of intention is required (b) only one year's continuous residence in the United States, Hawaii, Alaska, or Porto Rico, immediately preceding the filing of her petition, is required; (c) no certificate of arrival is required if, during the continuance of the marital status, she shall have resided within the United States. In other words, the effect of the law is to establish separate citizenship for husband and wife. The law raises many complicated questions, for example: Under British law a woman automatically loses her citizenship if she marries an alien. Therefore, an English woman who marries an American becomes, according to British law, an American citizen. But, also, under this same law, an American woman who marries an Englishman becomes automatically a British subject. Under the new American statute, which became a law on 22 Sept. 1922, this woman retains her American citizenship. She finds herself, therefore, a citizen of two countries. To rid herself of her American citizenship she must go to the proper authorities in the country of her alien husband. According to American law, her marriage no longer takes the place of a naturalization paper any more than does the marriage of an alien to an American now automatically make her an American citizen. She must hereafter declare her wish to become a citizen of the United States. If she does not do this, she runs the risk of being a woman without a country.

CITRUS CANCKER. See PLANT INDUSTRY, BUREAU OF.

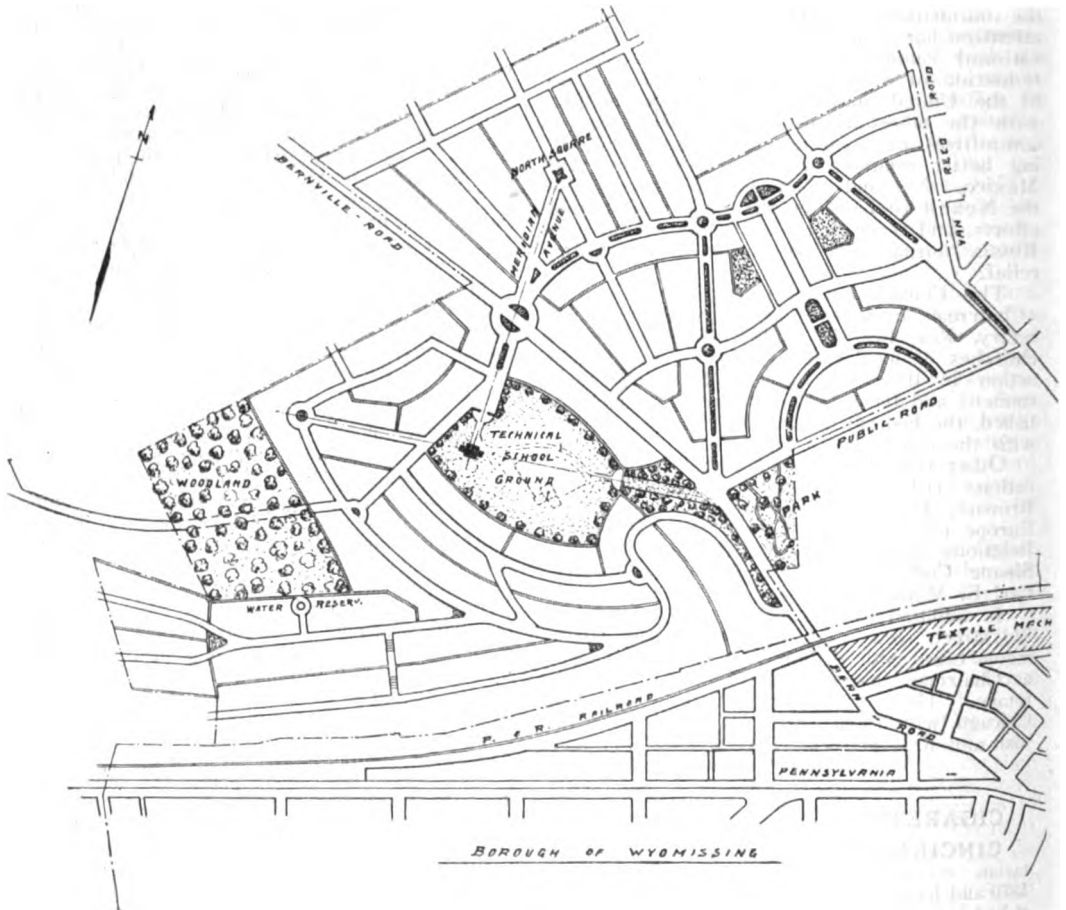

CITY PLANNING AND ZONING. Great progress has been made in the last decade in city replanning, town planning and zoning.

Most of the municipalities, which have been active in these lines, preferred zoning without city planning because these municipalities realized the great economical benefit derived from zoning. They have not as yet realized that, while zoning is but a part of the broad field of city planning, city planning may be carried out successfully without zoning, while zoning without city planning will produce many disadvantages. The originators of the art of city planning and zoning, considered zoning, like recreation grounds, a necessary part of city planning, and these pioneers never suggested the adoption of zoning without devising a comprehensive city planning program.

Many municipalities are now engaged in replanning, notably Philadelphia, Chicago, San Francisco and Seattle. However, a far greater number pay more attention to the development of suburban housing facilities for industrial workers; but unlike the European practice, these undertakings are mostly private enterprises.

005 families, or an average of 214 families per site.

However, with the termination of the war the work of practically all governmental housing undertakings stopped leaving these developments incomplete. Due to the great turn-over of labor (four times per year) manufacturing concerns realized the great benefit they would derive by providing proper homes for their employees and a large number of such concerns are active in the erection of houses for their employees and some have developments under way for 1,000 and more houses. Many of the developments are planned on the garden city program. Among these private housing developments is "Wyomissing Park" in Pennsylvania, a tract of some 500 acres, designed to house the employees of three great industrial establishments. It was started in 1916, and the results have proved so satisfactory that an additional separate tract of some 225 acres for about 1,200 houses, is now being developed.

These housing developments received a great boost during the war, with the formation of the United States Housing Corporation. Not less than 97 sites for housing developments were started by the government to accommodate 21,-

Other great American private housing developments are Roland Park in Baltimore, the County Club district in Kansas City, Saint Francis and Lake Shore Highlands, in San Francisco, and Washington Highlands in Mil-

waukee, all of which rival Europe's best municipal developments and its famous garden cities, be they publicly or privately controlled.

The greatest town planning development, now being devised, is the Palos Verdes project, covering 16,000 acres, including 14 miles of ocean shore, at the southwest corner of the Los Angeles metropolitan area. The total cost is estimated at \$35,000,000.

While private initiative and capital are solving a good part of the city planning and housing of some cities' problems, a very large number of American municipalities have adopted zoning systems, a branch of city planning. The practice of zoning as devised and introduced abroad and adopted in the United States by various municipalities is an interesting subject.

Some American municipalities have home-rule power and therefore did not need specific authority from the State legislatures to adopt zoning systems. Others have had to seek legislative permission. However in the following States zoning applying to all cities is authorized: California, Illinois, New Jersey, New York, Ohio, Oregon, Virginia and Wisconsin. In Iowa, Kansas, Louisiana, Minnesota, Missouri, Nebraska, Pennsylvania, and Texas, zoning does not apply to all classes of cities; in Pennsylvania for instance, it applies to the first class city (Philadelphia) and the second class cities (Pittsburgh and Scranton), while it does not apply to the third class cities, of which there are some 35, ranging in population of from 10,000 to 100,000. However, these third class cities are covered by the State City Planning Act and these cities are now engaged in city planning. In Connecticut, the District of Columbia, South Carolina and Tennessee, zoning acts apply only to particular cities. North Carolina, recently passed a city planning act granting zoning power to city plan commissions.

What is Zoning?—In the publication 'A Zoning Primer' issued by the Department of Commerce of the United States, the question is answered as follows: "Zoning is the application of common sense and fairness to the public regulations governing the use of private real estate. It is a painstaking, honest effort to provide each district or neighborhood, as nearly as practicable, with just such protection and just such liberty as are sensible in that particular district. It avoids the error of trying to apply exactly the same building regulations to every part of the city or town regardless of whether it is a suburban residence section, or a factory district, or a business and financial centre. It fosters civic spirit by creating confidence in the justice and stability of the protection afforded. Zoning gives every one who lives or does business in a community a chance for the reasonable enjoyment of his rights. At the same time it protects him from unreasonable injury by neighbors who would seek private gain at his expense. Zoning regulations differ in different districts according to the determined uses of the land for residence, business, or manufacturing, and according to the advisable heights and ground areas. But these differing regulations are the same for all districts of the same type. They treat all men alike."

The reasons for zoning and the benefits to be derived therefrom may be enumerated as

follows: (1) To protect and stabilize property values and investments. (2) To safeguard existing and future building investment values and to encourage building development. (3) To establish districts for homes and prevent the erection in such districts of undesirable buildings. (4) To establish districts for industrial and business establishments. (5) To prevent unnecessary congestion of population. (6) To expedite and simplify railway traffic. (7) To produce economy in city paving. (8) To provide comfort and convenience to the occupants of dwellings, offices and factories, and to reduce the cost of living.

The object of city planning and zoning is to give each person, in proportion to his or her income, the greatest value possible for every dollar expended by him or her in housing and business conveniences. That is to say, the man of small income should not be required to pay out for accommodations a greater proportion of his income than the proportion of income paid out by the man of greater means for the same quantity of accommodations. Under this scheme reference is had to the quantity not quality of accommodations. For example, the rent paid by a mechanic for a six-room house for his family should be, in proportion to his income, no greater than the proportion of income which the high-salaried manager pays for a six-room apartment for his family.

Origin of Zoning Practice.—The practice of dividing cities systematically into zones was originated in Germany in 1874 and most German cities have a large number of zones. For instance the city of Karlsruhe, with its population of 150,000 has as many as 16 zones or classifications, ranging from high-class residential sections to detached suburban home developments, and from civic centers to factory districts. Practically all European countries have adopted these plans. However, most divide their cities in fewer zones, which is the more practical plan. The city of Frankfurt-on-the-Main, so often referred to by city planners in other countries has nine zones, determined by the purposes for which the buildings in each are used. In addition there is a height regulation, which in some of the nine zones limits buildings to four stories.

When zoning was adopted in American cities, soon after the year 1900, it was applied principally to the height of buildings only. For instance, Baltimore, in 1914, restricted all buildings within a block of the Washington Monument to a maximum height of 70 feet. Previously the general maximum height of all buildings in the entire city was fixed at 175 feet. Boston, Mass., has been divided into District "A" in which no building must exceed the height of 125 feet; and District "B" where the height of buildings is limited to 80 feet. No building in either district must be more than two and one-half times the width of the street. In 1905 Indianapolis passed an ordinance limiting the maximum height of buildings facing Monument Place to 86 feet, and in 1912 passed an additional ordinance providing that no building in the entire city should exceed 200 feet in height. The original ordinance limiting the height of buildings facing Monument Place to 86 feet is still in force. In Washington, D. C., by act of

Congress, no building may be erected to exceed 85 feet in height.

American cities have adopted a comparatively primitive zoning system. With respect to zoning 'A Zoning Primer' issued by the advisory committee on Zoning of the Department of Commerce gives the following advice: "A zoning ordinance needs to be based on a comprehensive and detailed study of the precise local conditions, both present and prospective. What fits one city or town may be a bad misfit for another. There is no short cut to good zoning in any community through blindly accepting what has been done for another. The only safe path is a thorough, open-minded examination of the facts in each community as to existing uses, existing densities, and heights of buildings, the customs of the people, and the trend of affairs. In every city there are citizens and organizations having in their possession valuable knowledge of local conditions. These have a large contribution to make to those responsible for zoning, although those who have lived their whole lives in a community do not necessarily realize all that is going on about them.

"The zoning of a city requires expert professional knowledge just as the presentation of a case in court requires legal training. But just as the lawyer depends upon the layman to secure his facts, so must the professional zoning expert call upon the citizens for much of the accurate information upon which any good zoning regulations must be based.

"The practice of zoning is relatively new in America. We are feeling our way and must learn by experience. Those who have had experience tend to become expert, with broader knowledge of practices that are proving effective. These men are becoming gradually more skilled in the methods of getting at the essential facts. . . . If they possess insight and sane judgment, their advice becomes increasingly valuable.

"A zoning ordinance consists of one or more maps dividing the city into different kinds of districts; and a statement of methods of regulation to be employed in each district in regard to the use to which property may be put, the height and size of buildings, and the amount of space to be left vacant, with adequate provisions for enforcement.

"In the process of drafting a tentative ordinance, it is important, by means of full public discussion, to be sure that the ordinance is an 'application of common sense and fairness' and will 'provide each district, as nearly as practicable, with just such protection and just such liberty as are sensible in that particular district.' It is essential likewise to be sure that public opinion, as a whole will support it.

"A zoning ordinance is of value only as it is properly enforced. Because of the difficulty in making with precision the forecast on which it is based, its operation should be closely followed by those who most intimately understand the reasons for its provisions. Thus, improvements and adjustments may from time to time be made intelligently. It is to furnish in exceptional cases a means for remedying possible injustice that, in some States, provision is made for a board of adjustment or appeals.

"It is obvious from the nature of the case

that, even if a zoning ordinance were drawn with superhuman perfection, time and the natural growth of the community might show the need of modifications. The purpose of the zoning ordinance is not to stifle growth, but only to insure that instead of taking place sporadically and wastefully it shall go on in an orderly way, in response to generally recognized needs and with due notice to all concerned."

American Zoning Practice.—As stated above, the zoning regulations of most American cities relate primarily to the height of buildings while European practice goes very much more into detail, at least in Germany where zoning originated. Besides the American cities above mentioned, other cities have the following restrictions as to the limitation of the height of buildings: Chicago, 125 feet; Cleveland, 200 feet; Erie, 200 feet; Los Angeles, 150 feet; Manchester, 125 feet; Milwaukee, 225 feet; New Orleans, 160 feet; Portland, 160 feet.

New York City regulates the height of the buildings according to the Building Zone Regulation of 25 July 1916. In five districts the height of buildings is fixed according to the width of the streets at 1, 1¼, 1½, 2 or 2½ times the width of the street on which a building faces. Above these limits the buildings may continue in height by means of a set-back, as originally devised by a French architect for certain Paris buildings.

A set-back means briefly this: That if an owner wishes to carry a building to a greater height than is allowed on the street line, as, for example, above 90 feet on a 60 foot street, in a 1½ times district, he can add on an upper 30 feet, 10 feet back from the street line. He can make the set-back right from the height limit in the form of a mansard, which would slope back in a ratio of one foot horizontally to three feet vertically, or in a set-back of three and one-third feet for each of three stories, or in a set-back of 10 feet for the whole height, 30 feet; then he can set back again above the top of this set-back, provided he keeps in the same set-back plane.

In Scranton, Pa. (150,000 population), the zoning system as devised by the writer, provides for three general classifications: "Use District," "Height District" and "Area District." In the use district, buildings are classified according to the purposes for which they are used and five sub-districts are provided, viz.: Industrial zone, commercial zone, first residential zone, second residential zone and suburban residential zone. In the height district buildings are classified as suggested according to height and there are four sub-districts, viz.: A 35-foot district, a 60-foot district, a 100-foot district and a 150-foot district. In the area district limits are placed upon lots or plots of ground to be occupied by buildings, and in this classification also four sub-districts are provided, viz.: "A," "B," "C," and "D" districts.

In the industrial zone all land and buildings may be used for any industry which does not produce obnoxious odors or smoke, provided, of course, that the industry is one not prohibited by law or ordinance. Buildings used for all trades and purposes of storage, industry, com-

merce or residence may be erected in this district.

In the commercial zone, land and buildings may be used for stores, shops and studios; for offices for the conduct of wholesale and retail businesses; for places of amusement; for offices for police and fire departments, railroad stations, municipal administration, post office; telegraph, telephone exchanges; educational institutes; conservatories and dancing academies; but public garages, electric substations and car-barns can be erected and maintained only upon special permit from the city council.

In the first residential zone land and buildings may be used for high-class dwellings and apartment houses (with garages for owners' use only, so located as not to destroy the value of adjacent properties), churches, private clubs and schools.

In the second residential zone, land buildings may be used for single and multiple-family houses, tenements, lodging and boarding houses, private clubs, restaurants, stores, hospitals, sanitariums, undertaking establishments, public and semi-public institutions of an educational, philanthropic or eleemosynary nature, churches, bathing establishments, nurseries and green-houses, public garages for not more than ten cars; railroad passenger stations and the usual accessories located on the same lots with such buildings as are mentioned. Also offices for dentists, physicians, architects, engineers and other professional men can be located therein.

In the suburban residential zone, land and buildings are to be used for residences. The houses are to be set back from the street and surrounded with gardens, lawns, shrubs and trees. The plans call for winding streets according to the topography of the territory. Garages for owners' use only can be erected in the district but must be so located as not to destroy the value of adjacent properties.

Under the Scranton regulations it will be noticed that a residential building may be erected in the industrial zone, but an industrial building cannot be erected in the residential zone. All existing buildings not in conformity with the specified requirements for its particular zone, when once destroyed, cannot be rebuilt.

European Zoning Practice.—In order to obtain a broader view of zoning and regulations as to the height of buildings, the following examples regarding European cities are given. In Berlin the height of buildings varies, with some exceptions in accordance with the width of streets. The maximum height of cornice lines varies from 50 to 72 feet; although in Berlin are several streets from 100 to 190 feet wide. Above the cornice line a roof may be added, not to exceed 30 feet. These roofs, mostly mansards, may have rooms, but such rooms cannot be used for residence purposes.

In other German cities the cornice-line regulations are as follows: Bremen, 62.3 feet; Breslau, 72.2 feet; Köln, 65.6 feet; Dresden, 72.2 feet; Düsseldorf, 65.5 feet; Frankfurt-on-the-Main, 65.6 feet; Hamburg, 78.7 feet; Kiel, 72.2 feet; Leipzig, 72.2 feet; München, 72.2 feet; and Stuttgart, 65.5 feet.

Not only are the maximum and minimum heights of buildings regulated in German cities,

but also the maximum and minimum number of stories, depending, however, upon the zone in which the building stands. In Berlin and Hamburg, for instance, the majority of buildings must be either four or five stories high (in American practice the minimum height of buildings is not regulated). Throughout the state of Baden the number of stories runs from three to five in the suburban and outlying districts, three being the maximum, and in business districts, five. In München, Köln, Düsseldorf, Halle and Breslau, all buildings must be at least two stories high, but in Bremen one-story buildings may be erected. In Baden, homes in the country districts are not permitted to be over two stories in height.

In connection with the regulation of the height of buildings, German cities also regulate the height, area, cubic contents and the amount of light of each room. The minimum height of the room is generally placed at not less than 8.2 feet, while the window area must be from one-eighth to one-twelfth of the floor area. The size of rooms is regulated in accordance with classes of buildings. For instance, the regulations governing workmen's homes call for an apartment consisting of not less than three rooms—a living room, a sleeping room and kitchen. The living room is required to be of a specified size in Wiesbaden, 75 square feet; throughout Baden, 107 square feet; in Karlsruhe, 130 square feet; in Mannheim, 160 square feet; as the minimum. In the latter city the kitchen must not be less than 130 square feet in area. There are also requirements as to the total area of the rooms, which in Düsseldorf, Magdeburg and throughout Sachsen must not be less than 320 square feet.

In Paris also the height of buildings is regulated according to the width of streets, plus an arbitrary unit for additional height to the cornice line. For instance, on a street 10 metres, or 32.8 feet wide, 19.68 feet may be added; thus the maximum height of the building would be 62.48 feet. On a street 65.60 feet wide, 6.56 feet may be added; thus the maximum height would be 72.16 feet. On all streets wider than 65.60 feet (20 metres), no building must be higher than 65.60 feet. On the other hand, with narrow streets this arbitrary addition may be more than the actual width of the street; for instance, streets (alleys) from 1 to 6 metres (3.28 to 19.68 feet) the maximum height of the cornice may be 22.96 feet for the 3.28 foot street, and 39.36 feet for the 19.68 foot street. Above the cornice line may be added a mansard roof, the outline of which follows a tangent described at the elevation of the cornice line, and having a radius of one-half the width of the street, the tangent striking a line drawn at an angle of 45 degrees. These are the general and broad features for Paris regulating the height of buildings; numerous other details are in force to suit the various conditions which may arise.

In London the general limit for the maximum height of buildings is 80 feet above the sidewalk; to this may be added two stories in the roof or ornamental tower or other architectural features. Roofs must have an angle of not more than 47 degrees to the vertical

line, while for warehouses this angle may be up to 75 degrees. These laws were enacted in 1894 and still exist today. However, recent reports indicate that for buildings facing open squares or on the Thames, greater heights are under consideration.

In other European cities the heights to the cornice lines are: Edinburgh, 60 feet; Rome, 78.5 feet; Stockholm, 72.2 feet; Vienna, 82.0 feet and Zürich, 43 feet.

In the majority of German cities the proportion of ground that may be built over is three-quarters of the area of the lot. In this class are cities like Altona, Breslau, Bochum, Coblenz, Köln, Dortmund, Darmstadt, Frankfurt-on-the-Main, Görlitz, Halle, Kiel, Karlsruhe, etc. In comparatively few cities four-fifths of the lot may be covered, while in some other cities up to seven-tenths of the lot may be built over. In quite a number of cities two-thirds of the lot may be covered, for instance: Erfurt, Magdeburg, München, Hannover, Münster, Rostock, etc. In Berlin the amount of the lot that may be covered is fixed by dividing the lot into strips. The first strip, that measured back from the building line to the extent of six metres (19.68 feet) may be built up; the second strip, to a depth of 104.94 feet, may be built over to the extent of seven-tenths. Similar restrictions are in force in Cassel, Wiesbaden, etc. There are still other rules for different cities.

Zoning is Legal.—When a zoning law is properly drawn there is little doubt that the courts will support it. Enough favorable decisions have been handed down to show that the courts regard laws and ordinances regulating the use of land and the structures thereon, in accordance with the character of the district in which they are situated, as a reasonable exercise of the police power "for the public health, safety and general welfare." In fact, the courts have approved zoning whenever it was done sensibly and comprehensively. The first case arose in Boston, Mass., where two different heights for future buildings were fixed throughout the city. This was supported by the highest court of Massachusetts and the United States Supreme Court. (*Welch v. Swasey*, 214 U. S. 91.)

The next important case arose in Los Angeles, Calif., where, under the zoning plan, which divided the city into industrial and residential districts, a brickyard in the residential district was ousted, although it had been in existence for many years. Both the California courts and the United States Supreme Court held that the ouster was a proper exercise of police power. Modern zoning ordinances are not retroactive, however. (*Hadacheck v. Sebastian*, 239 U. S. 394.) As showing how far the courts will go in distinguishing between zoning districts the best case was that of the State of Ohio *ex rel. Morris v. Osborn et al.*, 22 N. P. (N. S.) 549, in which the court held that one and two-family houses were less subject to noise, litter, danger of contagion, and fire risk than multi-family houses, and that they could be placed in different districts under the police power. This case, however, was not appealed to a higher

court, and it cannot be said whether other States will follow it. In New York State the highest court has declared the zoning of New York City to be constitutional, stating that zoning can be done under the police power if done with care and good judgment so as not to be arbitrary or confiscatory. (*Lincoln Trust Co. v. Williams Building Corporation*, 229 N. Y. 313.)

FRANK KOESTER.

Advisory City Planner; Author, "Modern City Planning and Maintenance."

CIVIL SERVICE REFORM LEAGUE. National, an organization founded in 1881 for the purpose of putting an end to the so-called spoils system of making appointments to minor public offices. Its primary object is to promote administrative efficiency through a system of appointment, promotion and removal of governmental employees. The league was especially active in 1922. On 27 April it called a public meeting in Washington to protest against what its officers regarded as a serious attack by certain public officials upon the civil service system. One subject of protest was the dismissal of the director and 30 employees of the Bureau of Printing and Engraving on 31 March. However, various other happenings at Washington were generally and emphatically condemned by officials of the reform league. It disapproved in no uncertain terms certain changes inaugurated in the method of appointing first, second and third class postmasters, whereby it became permissible to select one out of the first three instead of the first name on the list in every case. A committee appointed to make an investigation recommended first: that the rule for appointing the highest man on the list, as was done before the President's order of 10 May, should be restored; second, that then an effort should be made to include presidential postmasterships in the classified civil service by act of Congress; and third, that then a subsequent executive order should require the appointment of the highest man.

The league's committee on foreign service made an investigation and report concerning appointments in the foreign service during the first year of President Harding's administration. The report showed that in the consular service there had not been a single exemption from the examination system and that in the diplomatic service the appointments made as chiefs of mission were largely of persons of experience. In the report the committee urged further executive and Congressional action on its recommendations made in 1919, particularly to increase the salary schedules in all branches of the foreign service; to improve the entrance examinations so that they may be more strictly on a merit basis; and finally, to apply the merit system to the selection of all ministers and Ambassadors, not to eliminate entirely the selection of qualified men from outside the service for important ambassadorial posts, but to insure more definitely a career in the foreign service for ambitious young men who wish to enter the lower grades and rise to the top.

The 42d annual convention of the league was held at Washington on 7 December when further protests against alleged spoilsmanship at

the national capital were voiced. At this meeting the council of the league presented its annual report in which it demanded that the Congress repeal all laws giving preference to World War veterans in Federal appointments and attacked the appointment of prohibition agents and other Federal employees. At this meeting Chief Justice Taft, of the Supreme Court, suggested that the President be given power to make all appointments to local offices without Senate confirmation. The officers of the league are Richard H. Dana, president; A. S. Frissell, treasurer; Harry W. Marsh, secretary, and Arthur B. Kimball, chairman of the executive committee. The principal office of the league is at 8 West 40th Street, New York City.

CIVIL SERVICE RETIREMENT FUND. See PENSIONS.

CIVIL SERVICE, United States. In its annual report for the fiscal year 1922, the United States Civil Service Commission stated that at the end of the year (30 June) Civil Service employees numbered 560,863 as against 438,057 on 30 June 1916 and 917,760 on 11 Nov. 1918. Of the number in the Service on 30 June 1922, 69,980 were in the District of Columbia and 490,883 outside the District. Persons examined under the Civil Service law during the fiscal year 1922 numbered 206,007; appointees numbered 62,488. Despite the large number of appointments, the number of employees was reduced 36,000 during the year.

CLARK, Charles Edgar, American naval officer: b. Bradford, Vt., 10 Aug. 1843; d. Long Beach, Calif., 1 Oct. 1922. He was appointed from Vermont to the United States Naval Academy, and was graduated in 1863. His naval career was varied. In 1863 he was ordered to the west gulf blockading squadron in the Civil War and a year later took part in the battle of Mobile Bay. He was shipwrecked off the coast of British Columbia in 1868 when the *Suswance* foundered, and through the loss of his superior officer he became commander of the 33 survivors. He organized them into a defensive party to hold off 400 Indians until he was rescued. He served on the Pacific, West Indies and Asiatic stations; was attached to the Brooklyn, League Island and Portsmouth navy yards. He was also instructor for a time at the United States Naval Academy. He spent three years in surveying the North Pacific Coast and four years in inspecting lighthouses. It was Rear Admiral Clark, who, as a captain, commanded the battleship *Oregon* on its famous voyage from San Francisco to Key West during the Spanish-American War (1898). While on board the *Oregon* he helped destroy the Spanish fleet at Santiago and was advanced six numbers in rank for distinguished services. At the age of 59 he again was advanced in rank seven numbers and promoted to Rear-Admiral. He rounded out his career as commander of the League Island navy yard; as governor for three years of the Naval Home at Philadelphia, and as president of the naval examining and retiring board. In 1905 he received the degree of LL.D. from the University of Pennsylvania, and in the same year on his 62d birthday was retired from active service.

CLARK UNIVERSITY, a Methodist Episcopal co-educational institution, founded in 1869 and located at South Atlanta, Atlanta, Ga. In 1922-23 it had a faculty of 20 members, 517 students, property valued at \$550,000 and an income of approximately \$60,000. J. W. Simmons is president.

CLARK UNIVERSITY, a non-sectarian institution founded in 1887 and located at Worcester, Mass. The undergraduate department is for men only, but the graduate department is co-educational. In 1922-23 it had a faculty of 34 members, and a total student enrollment of 540, 206 in the undergraduate department, 161 in the graduate department and 173 in the summer school. No figures given as to the value of the institution's property or its income. Wallace Walter Atwood, Ph.D., is president.

CLARKE, Alfred, Anglo-American inventor and mechanical engineer: b. Leicester, England, 4 June 1849; d. Walpole, New Hampshire, 1922. He was educated in the public schools of Leicester and in the department of science and arts at South Kensington, London. He came to America in 1874 and was chief engineer of the Bradley Fertilizer Company at North Weymouth, Mass., 1876-77; and superintendent of the Kitson Machine Company of Lowell, Mass., 1877-85. While connected with the last mentioned concern he invented improvements in cotton machinery which are now used in every cotton mill in the world. He was general manager of the Prospect Machine and Engine Company of Cleveland, Ohio, 1885-87. In association with Arthur E. Childs, Mr. Clarke founded The Light, Heat and Power Corporation of Boston, which led to the formation of the Massachusetts lighting companies, owning some 27 gas, electric light and power companies in that State. Mr. Clarke was made president of the company, retiring in 1915. He was a director of the American Investment and Securities Company, the Columbia National Insurance Company, the Massachusetts Trust Company and the Hotel Somerset Company. He was a member of the American Society of Mechanical Engineers, the Society of Arts, and of various Masonic bodies. He was the engineer who installed the great telescope at the Lick Observatory in California.

CLARKE, John Hessin, American jurist: b. Lisbon, Ohio, 18 Sept. 1857. He was graduated from Western Reserve University in 1877, was admitted to the Ohio bar in 1878 and practiced in Lisbon until 1880. He then removed to Youngstown, practiced law there in 1880-97 and in Cleveland in 1897-1914. In 1914-16 he was United States district judge, northern district of Ohio. He was appointed by President Wilson to succeed Charles E. Hughes, when the latter resigned from the United States Supreme Court in 1916 to accept the Republican nomination for President. After six years of service as an associate justice of the Supreme Court, Justice Clarke resigned on 18 Sept. 1922, his reason expressed being the desire to devote himself to "some public causes in ways in which I cannot serve them while holding office." Justice Clarke was long associated politically with Newton D. Baker, former Secretary of War, and it was upon Mr. Baker's recommendation that President Wilson appointed him Federal judge for the

Cleveland district in 1914 and two years later to the Supreme Court. On the Supreme Bench he stood with Justice Brandeis in supporting the minority opinions in many important decisions. Justice Clarke is a progressive Democrat and championed and campaigned for many liberal policies when they were considered almost revolutionary. In 1903 he was unsuccessful candidate for United States senator against Mark Hanna; and in that campaign he was one of the first political advocates of the direct election of United States senators by the people. He also advocated two-cent fare for railroads; independence for the Philippines; publicity of campaign expenditures; and home rule for cities. In 1914 he was a candidate for senator, but withdrew. He was a staunch supporter of President Wilson and the League of Nations, and recently in an address at Cleveland, advocated cancellation of the Allied debt to this country.

CLASSICAL LITERATURE AND SCHOLARSHIP. See PHILOLOGY.

CLAY. Varieties of clay available for the manufacture of clay products are widely distributed and there are clay-working plants in every State of the Union. In the following statistics only clay that is mined and sold as clay is included. The quantity thus sold is small compared with the total output and includes mainly clay used for making high-grade pottery and tile, and refractory products. The general business depression that set in late in 1920 had a marked effect on the clay-mining industry in 1921, the output decreasing 45 per cent and the value 48 per cent as compared with 1920. Fire clay, which showed the largest output in both quantity and value decreased 49 per cent in quantity and 52 per cent in value as compared with 1920. Imports and exports of clay decreased in even greater proportion than domestic production. In 1921 the total clay mined and marketed in the United States of all varieties aggregated 1,716,746 short tons, valued at \$6,025,300, as compared with 3,116,212 short tons valued at \$11,614,288 in 1921. This total included in 1921, 1,195,861 short tons of fire clay valued at \$3,560,373; 162,726 short tons of kaolin and paper clay valued at \$1,579,163; 54,014 short tons of ball clay valued at \$354,565; 4,608 short tons of slip clay valued at \$14,841; 86,574 short tons of stoneware clay valued at \$184,540; and 212,963 short tons of miscellaneous varieties valued at \$331,818.

New Jersey led all other States with an output valued at \$1,049,748, followed by Missouri with an output valued at \$938,135 and Pennsylvania with an output valued at \$895,394. Georgia was fourth with clay products valued at \$400,215; Florida fifth with \$388,751 and California sixth with an output valued at \$341,288. In 1921 47,445 short tons of clays were exported from the United States valued at \$361,428. In the same year 208,915 short tons valued at \$1,974,685 were imported. Kaolin or china clay led all other varieties with imports of 162,906 tons valued at \$1,546,285. The exports included 23,666 tons of fire clay valued at \$177,979.

CLEMENCEAU, Georges. See FRANCE, subsection HISTORY.

CLEMSON AGRICULTURAL COLLEGE, a State educational institution for men, founded (Act of Acceptance) 1889 and located at Clemson College, S. C. In 1922-23 it had a faculty of 79 members, 1,463 students, property valued at \$2,045,920.78 and an estimated income of \$383,343.64. Walter M. Riggs, LL.D., is president.

CLIMATE. See METEOROLOGY.

CLOTHING INDUSTRY. This industry is nearly evenly divided between men's and women's clothing manufacture. Its general condition at the opening of 1923 was encouraging; the one factor against probable high records is found in the maintenance of high costs. Prices have not gone down since the war as much as in many other lines. General costs rose during the war 80 per cent and wool rose 110 per cent. The last official figures are of 1921 census, when 4,543 manufacturers of men's clothing handled \$147,551,000 of materials, and produced goods valued at \$933,249,000. Of the \$249,011,000 paid in salaries and wages, the wage workers got \$201,365,000. In women's clothing in 1919 there were reported 7,711 concerns, with \$391,000,000 capitalization, handling \$678,000,000 of materials, and producing \$1,209,000,000 worth of goods. Though the women's clothing product was slightly greater, they paid only 30 per cent of the tax turned in by the makers of men's clothing. Salaries totaled \$254,000,000 of which the wage workers got \$195,000,000. In 1922 it is believed that the total valuations are perhaps 10 per cent below the census year.

Within the past few years the trades unions have greatly strengthened their positions in the clothing industry. The Amalgamated Clothing Workers of America nominally covers the United States and Canada for men's clothing, but in reality its total of 150,000 members is nearly all found in the following cities: New York, 50,000; Chicago, 40,000; Rochester, 12,000; Baltimore, 8,000; the remainder being in Philadelphia and very many smaller cities. The women's clothing branch of the industry is represented among the workers by the International Ladies' Garment Workers, with some 50,000 members. Smaller organizations are the Hat and Cap Workers Union and the Needle Workers Union. The two larger organizations named have in a large degree done away with sweatshop work in the cities cited, have raised the level of wages and shortened hours, the 44 hour week being prevalent. The Amalgamated has given \$200,000 to the Russian Relief Fund, and gave \$100,000 to the steel strikers. The International Ladies' Garment Workers gave \$50,000 in 1922 to the striking miners, and pledged another \$50,000. The Amalgamated has agreements with the employers' organizations, for arbitrating differences, and so far the system works well. When there is a difference an "impartial chairman" is chosen by both sides, and under his direction the matter is thrashed out.

Because clothing manufacture is a seasonal business, there is more or less distress from unemployment. To reduce this to a minimum the Amalgamated Workers are now concentrating on an effort to establish a system of unemployment insurance, premiums to be paid for by the

bosses, so that there shall be a financial inducement to employers in the trade to keep their men on the payrolls as many months as possible. This experiment is being seriously discussed, and its development will be watched with interest by other trades.

CLOVER, Red. See PLANT INDUSTRY, BUREAU OF.

CLOVER SEED. In its final report for the year, the United States Department of Agriculture estimated the 1922 clover seed crop of the United States at 1,875,000 bushels, valued at \$18,905,000, compared with 1,538,000 bushels valued at \$16,529,000 in 1921 and 1,944,000 bushels valued at \$23,227,000 in 1920. The acreage harvested during the three years was as follows: 1922, 1,126,000; 1921, 889,000; 1920, 1,082,000. Illinois with 315,000 bushels led in production. Michigan came second with 240,000 bushels; Wisconsin, third with 229,000; Ohio, fourth with 227,000 bushels; Iowa, fifth with 224,000 bushels and Minnesota, sixth with 151,000 bushels. In 1921 Ohio led with 206,000 bushels, while Illinois was second with 200,000 bushels. In 1920 Illinois led with 333,000 bushels and Wisconsin was second with 327,000 bushels.

COAL. Notwithstanding the strike of more than 500,000 union bituminous miners which lasted approximately five and a half months beginning 1 April, the total bituminous coal production of the United States for the year 1922 was 407,894,000 net tons (Geological Survey figures) as against 415,921,950 during 1921. The anthracite production for the same period was estimated at 52,485,000 net tons, as against 90,473,451 in 1921. To these figures should be added beehive coke, 8,030,000 tons for 1922, as against 5,588,000 tons the year before.

The reduced coal production of the United States in 1922 as shown above, existed almost wholly in the anthracite field, where it fell off 39.2 per cent. The bituminous reduction was only 1.9 per cent, these being Geological Survey estimates. The consumers who had to do without anthracite fell back on bituminous, so that the shortage in this appeared more acute than it really was. The coal supply in the Eastern States was helped out by the importations of British coal, which appeared in New York in July, and was a helpful factor for many weeks, continuing in reduced quantity throughout the year.

The chief disturbing factors in the coal situation during the year were the strike above referred to which was called by the United Mine Workers and the Railway Shopmen's strike which began 1 July. The coal strike brought about a complete suspension of mining in both the anthracite regions and in those bituminous regions where union labor was exclusively employed. While the shopmen's strike tremendously interfered with the movement of coal and was mainly responsible for the coal shortage in certain communities later in the year, because when production returned to normal railway equipment shortage existed.

While there had been numerous strikes in bituminous and anthracite fields in former years, never until 1922 did the United Mine Workers decree a simultaneous strike in both

fields. With certain exceptions, the non-union miners continued working during the strike and shortly after its beginning, were producing as much as 5,500,000 tons a week or more than 50 per cent of current needs. This production coupled with the fact that in anticipation of the strike consumers had stored large stocks of coal before the strike started, enabled the country to get along for several months with but little inconvenience.

Six weeks after the strike began, a buying wave drove the price of spot coal at non-union mines up to an average of \$3.67 per ton. Back in 1920, when production totaled 10,000,000 tons a week, prices had risen to from \$11 to \$12.50 at the mines. It was, therefore, considered essential by the Federal authorities, when the 1922 rise in prices started, to at once take steps to prevent a repetition of what had taken place in 1920. Consequently, on 15 May, Secretary Hoover of the Department of Commerce called a conference of the leading operators in the non-union producing fields and preliminary discussion resulted in the determination to organize the needed restraint and to call a general meeting of operators on 31 May. The effect of this move was reflected in a drop of from 60 cents to \$1 a ton in the price of coal. At the meeting of 31 May it was agreed that coal prices should not be advanced beyond the Garfield prices plus a reasonable allowance in each district for the differences in wage scales and cost which had ensued since the war. The prices agreed upon varied from \$2.20 to \$3.50 at the mine. Approximately 85 per cent of the producing districts agreed to the arrangement and the price of spot coal in these areas was held to an average of under \$3.25, whereas in the districts which had refused to enter the agreement prices rose to as high as \$10 per ton at the mines. At the end of July some districts withdrew from the agreement, although about 65 per cent of the non-union operators adhered to it until 15 August when the strike was settled and the agreement automatically expired. Notwithstanding the fact that, as indicated, certain districts refused to enter into the agreement, the average price of spot coal for the entire period of the strike was kept down to \$3.70 while the average price of contract coal was about \$2.60. When the agreement expired, prices again started to advance, some mines charging from \$7 to \$10 per ton, the maximum average being for a few days about \$6.66 per ton. On 18 August the President asked Congress for legislation to enable the Federal government to co-operate in a more practical way with the States to control distribution and prices. A buying strike followed and prices again receded. On 22 September, Congress passed an act giving the Interstate Commerce Commission the right to establish priorities and embargoes against persons charging profiteering prices from the mines in interstate coal and providing for the appointment of a temporary Federal fuel distributor. This office was filled on the same day by the appointment of Conrad E. Spens, vice-president of the Chicago, Burlington and Quincy Railroad. He took the place of H. B. Spencer, who, since 26 July, had been serving by appointment of the President as voluntary fuel distributor. Several States, likewise, appointed fuel distributors, who

devoted their energies to securing coal for householders at reasonable prices. Congress also authorized the appointment by the President of a coal fact-finding commission of seven members and on 10 October the executive named the following commissioners: John Hays Hammond, chairman; Thomas Riley Marshall, former vice-president of the United States; Judge Samuel Alschuler of Chicago; Clark Howell of Atlanta; George Otis Smith, director of the United States Geological Survey; Dr. Edward T. Devine of New York, and Charles P. Neill of Illinois. In its first report to Congress made 15 Jan. 1923, this commission stated that wide-spread profiteering, over-development of the mining industry and recurrent strikes during the last few years are responsible for the high coal prices. It issued the warning that unless the industry reforms itself through the elimination of strikes and surplus miners Federal regulation will be necessary. "Whatever the cause or the merits of the labor controversy," said the report, "indefinite repetition of these crises in production and distribution would be intolerable. Industry and home alike must be freed from the menace of constant interruption of the coal supply." The report which is to be supplemented by a later report went on to state that the number of miners has increased in the last few years until it is now 200,000 in excess of demands. The present number, it was stated, is sufficient to mine 800,000,000 tons a year or about 250,000,000 tons more than the largest production this country and foreign markets have ever been able to absorb. The car supply, it was stated, had been virtually adequate for some months and the railroads had been moving a supply that under normal winter conditions would far exceed the demand. "Collective bargaining," says the report "should rest upon reason rather than force. American law and public opinion recognize the right to organize into unions and the right to work without let or hindrance. There has been profiteering in the sense that grossly exorbitant profits have been taken at times by many operators, brokers and retailers." The commission stated that in a later report it would attempt to reveal these profits and the earnings of the miners. The strike of the union coal miners was settled by what is known as the Cleveland agreement which provided that the men should return to work at the old rate of pay and that this agreement should continue in effect until 21 March 1923. On 24 Jan. 1923 this agreement was extended until 1 April 1924 by a joint understanding of the bituminous operators and union miners in Ohio, Indiana and Illinois, which produce 36 per cent of the nation's tonnage and it was predicted that it would be extended in other fields.

The soft coal miners lost approximately 20 weeks during the year, but there were large stocks on hand at the beginning of the strike (approximately 75,000,000 tons) the shortage of bituminous was more of a scare than a reality especially when coupled with non-union production of about 5,000,000 tons weekly. The hard coal strike lasted 162 days, and not only created a severe shortage of anthracite, but sent the prices bounding upward, despite governmental cautions and edicts.

The figures of coal production require to be modified by considering the importation and exportation of coal, to arrive at what coal was available for domestic consumption. For various reasons coal has to be exported at certain times and places, even when the home supply is curtailed. In 1922 the exportation was reduced about 60 per cent, and the importation more than doubled, while the bunker coal, with which outgoing vessels are laden for running their boilers, and which is not figured as exported, was reduced fully a half. These conditions added about 15,000,000 tons to the coal supply of the United States for the year just closed. The importation was almost wholly bituminous, the anthracite factor being only about 2½ per cent of the total. In 1921 this coal importation totaled about 800,000 gross tons, and in 1922 rose to about 3,500,000 gross tons. Two-thirds of this came from the United Kingdom, and most of the remainder from Canada. Nevertheless we sent more coal into Canada than Canada sent to the United States. The importations from the United Kingdom began in July, being promoted by the high prices ruling in New York, and were heaviest during July and August, reducing gradually as prices lowered. That which came over during the strike period brought from \$6 to \$7.50 per gross ton.

There are (in 1923) nearly 9,000 coal mines in the United States, some 3,500 wholesalers, and 38,000 retailers of coal. In addition, 180 railroads find coal carrying a large part of their business, and there is extensive shipping of coal on the Great Lakes, and from every seaport. Three-quarters of a million men are employed in coal mining, nine-tenths of them working underground. Their work is irregular because coal mining is a seasonal industry. Coal is so bulky that consumers do not want to store for many months ahead of their needs. In the anthracite industry of the United States \$430,000,000 of capital is invested, while \$1,900,000,000 is invested in the production of bituminous coal and coke.

The Geological Survey's estimate, in net tons, of the 1922 coal production of the United States by States was as follows: Alabama, 16,100,000; Arkansas, 950,000; Colorado, 10,004,000; Illinois, 59,100,000; Indiana, 17,330,000; Iowa, 4,600,000; Kansas, 3,100,000; Kentucky, 40,100,000; Maryland, 1,100,000; Michigan, 940,000; Missouri, 2,700,000; Montana, 2,400,000; New Mexico, 3,100,000; North Dakota, 1,180,000; Ohio, 26,500,000; Oklahoma, 2,800,000; Pennsylvania (bituminous) 105,000,000, (anthracite) 52,485,000; Tennessee, 4,600,000; Texas, 1,000,000; Utah, 4,864,000; Virginia, 11,100,000; Washington, 2,400,000; West Virginia, 81,000,000; Wyoming, 5,800,000; other States,—Alaska, California, Idaho, Georgia, North Carolina, Oregon and South Dakota —126,000. Total bituminous, 407,894,000; total anthracite, 52,485,000; grand total, 460,379,000.

The householder naturally thinks of the coal industry largely in terms of his own costs, especially in the Eastern States, where the use of anthracite coal has become a habit. Yet this retail business is really the small end of the industry. The 38,000 retailers do handle two-

thirds of the anthracite production, which is normally over 80,000,000 gross tons, but they sell only 14 per cent of the very much larger bituminous production of the country. The railroads are themselves the greatest users of bituminous coal, consuming 29.8 per cent of the bituminous and 5.9 per cent of the anthracite normally produced. Then there are the steamships, the gas and electric light and power companies, and various large industries. In all there are in the United States 90,000 buyers who order coal in carload lots.

No other common standard commodity is subject to such instability of price as coal, the cheaper kinds selling as low as \$2 a ton at the mines, and the best anthracite commanding \$14 to \$18 a ton retail in some localities. Even large buyers had to pay three times as much for bituminous at the peak of the coal strike, as it could have been bought for in March and April.

Because of the over-development in the bituminous mines, coal is taken out during only 70 per cent of the working days of the year. There are also strikes and car shortages that cause irregular shutdowns. The workers contend they have a hard time making a living. The average American miner's output is almost four gross tons per working day, which is said to be about double the output of workers in the mines of Europe. The difference is due to the improved coal-cutting machinery used in the United States mines. During the first three months of 1922 the spot price of bituminous coal at the mines averaged \$2.15 a ton. In March when large consumers began to buy for stock it stiffened to \$2.25, but fell off to \$2.06 the first week in April. During this first quarter consumers' stocks are believed to have increased about 15,000,000 tons. Production had ranged from 7,476,000 tons during the first week in January to as high as 11,448,000 tons in the second week of March. Then came the strike, coupled also with the usual seasonal dullness, and production dropped to 3,835,000 tons in the first week of April. The weekly range was between that figure and 6,736,000 tons (produced during the week ending 26 August) until it jumped to 9,359,000 tons during the week ending 2 September. From that time on it ranged up to as high as 11,215,000 tons for the week ending 18 November. British coal began to come into New York when the price was close to \$7 a ton and helped to keep the figure down. After 18 November production continued throughout the remainder of the year at about 10,000,000 tons per week, this serving to bring the year's bituminous total near the usual figures. The January 1923 production was high.

The United States Census of Manufactures for 1919 reports a more normal year of the coal industry, and its totals are given here for comparison. The official figures are in short tons, and therefore about 11 per cent higher than when figured in gross tons. The total production was 5.24 tons per capita, or 548,596,000 short tons, of which 460,426,000 was bituminous and 88,170,000 anthracite. The total value of the product was \$1,510,062,000, of which \$81,665,000 went in salaries, and \$892,-

890,000 was paid in wages. The workers are thus shown to have received 59 per cent of the value of the coal at the mines, but they had to pay for certain tools and supplies.

Almost all the anthracite coal is mined in Pennsylvania, which is also the largest producer of bituminous, 150,000,000 tons in the census year. West Virginia followed with 79,000,000, Illinois 60,000,000, Ohio 35,000,000, Kentucky 30,000,000, Indiana 21,000,000, Alabama 16,000,000 and Colorado 10,000,000. The production per wage earner in 1919 was, in short tons — anthracite 592 and bituminous 844. For every quarter of a million tons mined there is one miner killed, the average fatalities being over 2,000 per year.

The foreign trade of the United States in coal has been fairly regular since the close of the Great War. We import annually about 1,250,000 long tons of bituminous coal and export 20,000,000 tons, but in 1920 our exports rose to 34,410,033 tons, only to fall in 1921 to 20,652,000 tons and then in 1922 dropped to 11,083,000 tons. The anthracite export has been normally 4,500,000 long tons, and the importation of anthracite has been very small and irregular. Anthracite exports in 1922 totaled 2,365,187 (2,296,830 to Canada) tons valued at \$25,350,677. The following table compiled by the *Black Diamond* shows exports of bituminous coal, in gross tons, from the United States by calendar years, for the past 10 years:

YEAR	Canada	Overseas	Total
1913.....	13,496,190	4,490,567	17,986,757
1914.....	9,170,901	4,630,949	13,801,850
1915.....	8,354,365	8,410,492	16,764,857
1916.....	11,839,447	7,137,899	18,977,346
1917.....	16,177,571	5,107,749	21,285,320
1918.....	16,191,364	3,764,645	19,956,009
1919.....	10,669,490	7,289,024	17,958,514
1920.....	14,491,252	19,899,002	34,390,254
1921.....	11,961,366	8,691,422	20,652,827
1922.....	9,675,320	1,407,792	11,083,112

Bituminous exports in 1922 were valued at \$65,891,740, of which Canada took \$57,385,322.

Alaska has vast undeveloped coal fields, and mining has begun there in a small way. The production in 1922 was about 60,000 tons, mostly from the Matanuska and Nenana fields. The development will go on for local use, but when Alaskan high-grade coal can be mined for export is a question.

Canadian coal is nearly all bituminous, and the production in 1921 was 14,492,418 long tons, of the value of \$74,273,000. The 1922 production, not yet officially declared, will be slightly more. Most of the production is in Nova Scotia and Alberta, though the British Columbian mines turn out about 3,000,000 tons annually.

There is a large movement of coal through the Great Lakes, most of which comes to United States ports, though Canada uses considerable. Bituminous coal tonnage through the canals at Sault Ste. Marie during the summer of 1922 fell off 30 per cent. The total movement was 8,790,571 net tons, against 12,507,027 in 1921. The anthracite tonnage was only 670,447 against 2,256,128 in 1921, a decline of 70 per cent. The canals opened 17 April, and the United States canal closed 20 December, the Canadian canal 24 December. Figures on

bituminous dumpings at Lake Erie ports for the 1922 season, furnished by the Ore and Coal Exchange of Cleveland, show a total dumping of 18,522,142 tons, as compared with 22,412,380 tons in 1921 and 22,408,355 in 1920. The dock shipments of coal cars from Superior and Duluth were in 1922, 245,683 cars, as compared with 161,922 during 1921. The largest movement was in June, July and December. The anthracite shipments on the nine coal railways running from the Pennsylvania fields to the coast, were 6,420,120 tons in December, 1922, as compared with 4,635,922 during the same period of 1921.

The coal reserves of the United States and Alaska are enormous, nearly half of the known coal reserves of the world. They are estimated at over three and a half trillion tons, of which over 16 billion tons are anthracite. This latter is located almost wholly in Pennsylvania, while that State is estimated to have over a 100 billion more tons of bituminous coal underground, West Virginia is credited with as much more. At the present rate of consumption this coal should last the American people 6,000 to 7,000 years. But the rate of consumption increased 37 per cent during the decade between the 1909 and 1919 censuses.

The coal production of the rest of the world outside of the United States is believed to be normally, almost one billion short tons annually, but of late years it is of course a very uncertain quantity. Great Britain is the largest producer, though not having the largest coal fields. Her production in 1921 was only 163,265,000 gross tons, but in 1922 reached the more normal product of 259,839,000 gross tons. Germany used to produce nearly as great a tonnage, mostly from the Ruhr district. The production from that territory in 1922 was 93,298,174 metric tons.

Great Britain shipped a total of 64,198,384 gross tons in 1922 to ports all over the world, the largest buyers being France, Germany, Italy and Austria-Hungary, followed by Belgium, the Netherlands and Sweden. Thus the United Kingdom has returned to its prewar supremacy in the matter of having surplus coal for export. Germany used to be a competitor in supplying countries where the coal is not sufficient for local industry.

While the United States has shipped some coal to Europe, yet the higher cost of labor here prevents any large export supply from America.

According to the United States Geological Survey, the world's coal production in 1921 dropped back to the level of 1909, the total output being 1,120,000,000 metric tons, a decrease of nearly 200,000,000 tons compared with production in 1920. The world-wide industrial depression of the year, coupled with the strike of the British miners, were the chief causes of the decrease. The word "coal" as used by the Geological Survey includes lignite. The table given below was compiled by *The Black Diamond* and shows the world production of coal for the years 1909-21, inclusive together with the percentage produced by the United States. It was stated that the unit used was the metric ton of 2,205 pounds, the approximate

equivalent of the long, or gross, ton. However, it is not exactly the same and the editor of the publication referred to states that the translation from net to gross tons gives many of the figures an unfamiliar look.

WORLD COAL PRODUCTION 1909-1921

Year	Production (in part estimated)	Per cent produced by United States
1909.....	1,110,000,000	37.5
1910.....	1,160,000,000	39.2
1911.....	1,189,000,000	37.9
1912.....	1,249,000,000	38.8
1913.....	1,342,000,000	38.6
1914.....	1,207,000,000	38.7
1915.....	1,189,000,000	40.6
1916.....	1,257,000,000	42.7
1917.....	1,325,000,000	44.6
1918.....	1,331,000,000	46.4
1919.....	1,168,000,000	43.1
1920.....	1,317,000,000	45.4
1921.....	1,120,000,000	40.0

The figures for the years 1914-1918 in this table are revised materially from those hitherto published by the Geological Survey, to conform to more accurate reports from the countries affected by the war. They are still subject to revision.

On 30 December there was made public a tentative plan of the United Mine Workers of America for the nationalization of the hard and soft coal mines of the country. This plan, which was put forward chiefly as a basis for discussion, placed the valuation on the soft coal industry of between \$1,500,000,000 and \$2,000,000,000 while it estimated the capital invested in the anthracite fields at \$432,000,000. The Union, therefore, estimated the total cost to the government of taking over the coal fields, including \$2,000,000,000 as the value of royalty payments, at \$4,500,000,000. The plan proposed as the basis of an organization for operating the mines and fixing prices a Federal Interstate Commission of Mines at the head of which would be a secretary of mines with a place in the Cabinet. For coal mine accidents, see MINES, BUREAU OF. See also STRIKES AND LOCKOUTS.

COAL STRIKE. See COAL; also STRIKES AND LOCKOUTS.

COAST GUARD, United States. According to the annual report of the United States Coast Guard, 2,954 persons were saved or rescued by the Guard from positions of peril during the fiscal year ended 30 June 1922. The number exceeds the rescues of 1921 by 1,333. Vessels boarded during the year numbered 21,586; vessels seized or reported for violations of the law numbered 596; fines and penalties imposed totaled \$135,990; derelicts and other obstructions to navigation removed or destroyed numbered 48; value of vessels assisted (including cargoes) \$35,346,765; value of derelicts recovered and delivered to owners, \$384,550. The appropriation for the maintenance of the Guard was \$9,811,857.50; expenditures, \$9,422,251.09; appropriation for repairs to cutters, \$360,000; expenditures, \$356,313.22. Out of an unexpended balance of the 1921 appropriation for new cutters, amounting to \$36,341.96, expenditures in 1922 amounted to \$32,998.99.

COASTLAND, a northeastern part of the Kingdom of Italy, formerly a part of Austria and ceded to Italy at the close of the World

War. Its area is about 3,000 square miles. The cities of Trieste, Goritzia and Pola lie within its confines. The population numbers 900,000. See ITALY for territorial divisions, products, etc.

COCHIN, BARON Denys, French statesman: b. Paris, 1851; d. there, 24 March 1922. He was a member of one of the oldest French Royalist families. His ancestors were connected with the Council of Paris in the time of Joan of Arc; and ever since the 15th century the Cochins have been prominent in French politics. His father was the writer, Pierre Cochin, mayor of the tenth arrondissement of Paris in 1871 and préfet of Seine-et-Oise. Baron Denys Cochin conducted himself valiantly during the war of 1870 in the 8th Cuirassiers under General Bourbaki and received a medal. He became a pupil of Pasteur, then he studied law and finally devoted himself to letters. In 1881 he was made municipal counsellor of Paris. During his long Parliamentary career he participated in all the artistic, financial and diplomatic discussions of the time. In 1914 at the beginning of the World War he was elected president of the group of Deputies of Paris who went to Bordeaux at the time of the threatened German invasion. In 1916 he was under-secretary of state for foreign affairs and in March 1917 M. Alexandre Ribot gave him charge of the blockade. Baron Cochin particularly distinguished himself in 1915 when as minister without portfolio he was appointed to co-operate with Lord Kitchener in the direction of Anglo-French policies in the Near East. The decision of Greece to enter the war on the side of the Allies was largely attributed to his visit to Athens. In 1911 he was made member of the Académie Française in place of Albert Vaudal. He published a number of books, including: 'L'évolution de la vie,' 'Le Monde extérieure,' 'L'Esprit nouveau,' 'Ententes et ruptures,' and 'Quatre Français' (Pasteur, Chevreul, Brunetiere and Vaudal).

COCHIN CHINA, the southernmost division of French Indo-China. It has an area of 22,000 square miles with a population of 3,452,248, of whom about 6,300 are Europeans. Saigon, the capital, had a population in 1921 of 72,372, including 4,601 Europeans exclusive of troops. Cholon has a population of 226,537, nearly one-half of whom are Chinese.

There are 870 schools in the district with 51,452 pupils and 1,325 teachers. There are under cultivation about 4,939,000 acres. Rice is the principal crop, over three-fourths of the cultivated area being given over to this crop. Other crops are Indian corn, beans, earth nuts, sweet potatoes, cotton, sugarcane, coffee, tobacco, betel nuts, bananas, pepper and oranges. There are 420,506 buffaloes, 247,623 swine, 13,683 horses and 2,860 sheep in the region. Fishing is a major industry, giving employment to thousands in about 76,000 boats and producing about 3,000,000 francs worth yearly. Rice, fish oil, cotton, silk, hides, pepper and copra are exported. The total value of the exports was 980,777,780 francs in 1919 and the imports the same year were valued at 84,202,744 francs. In

1920 and 1921 the overseas trade declined greatly below these figures, due to the general world depression. The annual budget is balanced at 9,000,000 piastres.

COCKRAN, W(illiam) Bourke, United States Congressman: b. County Sligo, Ireland, 28 Feb. 1854; d. Washington, D. C., 1 March 1923. He was educated in Ireland and France and came to the United States in 1871. For a while he worked in a department store in New York City, thereafter he taught in a private school and later became principal of a public school in Westchester County, N. Y. In the meantime, he studied law and was admitted to the bar in 1876. He soon became prominent in New York City politics and in 1881 was a delegate to the Democratic State Convention. In 1883 he joined Tammany Hall at the invitation of John Kelly. In 1886 he was elected to Congress; again elected in 1890-92 and 1904. Mr. Cockran twice left the Democratic Party. In the campaign of 1896 he advocated the gold standard and campaigned for McKinley. In 1912 he joined Roosevelt's Progressive Party. Returning to the Democratic fold before the convention of 1920, he was nominated as Representative to Congress and elected from the 16th New York district; he was re-elected in 1922. Another public service performed by him was in 1890 when he served as a member of the commission appointed by the Governor of New York under a special statute to revise the judiciary article of the State Constitution. Every chapter in that long public career was colorful and replete with inspiring oratory. Recalling examples of that mastered art, one thinks first of his especially generous plea for the cause of Cuban Reciprocity early in the century. More widely known, of course, were his speeches against Grover Cleveland at the Democratic National Conventions of 1884 and 1892; his "sound-money" speech for McKinley (1896) in Madison Square Garden; at Chicago, in 1899, his "Gold Democrat" speech; his anti-Crocker speech in the New York City Club, 24 May 1901; his pro-Irish speech before a committee of the Senate of the United States, 29 Aug. 1913; finally, in 1920, the Peace-Treaty plebiscite appeal delivered in New York City and his speech at the Democratic National Convention at San Francisco, nominating for the Presidency the Hon. Alfred E. Smith, now Governor of the State of New York. His earnest last speech in the House, 28 Feb. 1923, contained such words as these: "There is no way by which the Government can interfere in private business except to oppress it . . . Every attempt to enrich men by law means the despoiling of some for the benefit of others."

COCOA. See FOOD STANDARDS, FEDERAL.

COCOANUTS. According to statistics supplied by the National City Bank of New York the imports of cocoanuts and coconut products into the United States during 1922 had an estimated value of \$25,000,000. This represented over 1,000,000,000 cocoanuts, practically all of which were grown on islands under the American flag. The same authority estimates the value of the cocoanuts and coconut products imported into the United States since the beginning of the World War at \$300,000,000. Most

of the cocoanuts imported during 1922 came from the Philippine Islands. Tutuila, Guam, Hawaii, Porto Rico and the Virgin Islands contributed toward the total. Coconut and coconut products come to the United States in four distinct forms; first, the nut in its natural form; second, the shredded meat of the nut; third, a much more important article, "copra" (the broken and dried meat of the nut in convenient form for transformation into oil), and fourth, the oil itself, which forms 70 per cent of the meat of the coconut and which is now, according to the *Trade Record* of the National City Bank, turned out in enormous quantities by American factories in the Philippine Islands, where many millions of American dollars are invested in the coconut industry. Of 189,000,000 pounds of coconut oil imported in 1921 the Philippine Islands contributed 164,000,000 pounds. Importations of copra in 1921 totaled 190,000,000 pounds, nearly one-half of which came from the Philippines. Shredded coconut imported in 1921 totaled 35,000,000 pounds, most of which came from the Dutch East Indies. In 1921 about 100,000,000 cocoanuts in the natural state were imported into the United States, most of them coming from the Caribbean Islands, Porto Rico, British West Indies, Panama, Honduras and the other islands fronting on the Caribbean Sea and the Gulf of Mexico. At \$300,000,000, the value of the cocoanuts and coconut products imported into the United States since 1914 is approximately five times the value of such importations during the eight years prior to 1914.

COD-LIVER OIL, Manufacture of. See CHEMISTRY, subsection *Organic and Biological*.

CODDLING MOTH. See ENTOMOLOGY, UNITED STATES BUREAU OF.

CODRINGTON, Robert Henry, English missionary: b. Wroughton, Wilts, 15 Sept. 1830; d. September 1922. Educated at the Charterhouse and Wadham College, Oxford, he lived to be their oldest alumnus and oldest of the honorary fellows of Wadham, to which honor he was elected in 1855. He was ordained at Oxford and soon went to New Zealand. There he became connected with the teaching mission staff on Norfolk Island and thither came to him the children of all the chiefs from all the islands of the Archipelago. He wrote the grammars and vocabularies of 34 languages and also recorded the folk-lore of the Melanesians and translated the Bible into their tongue. Here he became known as the "Apostle of the Pacific" and "the great missionary teacher of Melanesia." When compelled in 1887 to leave the work to which he was so greatly attached in Melanesia, he returned to England and became vicar of Wadhurst and prebendary of Chichester. For 25 years he was lecturer at Chichester Theological College. Oxford gave him the honorary degree of D.D. He was a great traveler and had visited every continent. Many famous men were his intimate friends, including Cardinal Newman, Cardinal Manning, Samuel Wilberforce, Mr. Gladstone, "Lewis Carroll" (C. L. Dodgson), John Vebke and Wordsworth. Although reaching the age of 92, he remained young in spirit. Doctor Codrington was greatly

beloved, particularly by young people with whom he never failed to be in sympathy. It is said of him that "he was the soundest of scholars, kindest of teachers, most practical of saints, most genial and tolerant of friends." His publications include: 'The Melanesian Languages' (1885); 'The Melanesians' (1891), and 'Dictionary of the Mota Language' (1896).

COE COLLEGE, a Presbyterian co-educational institution founded in 1881 and located at Cedar Rapids, Iowa. In 1922-23 it had a faculty of 45 in the liberal arts department and 11 in the music department; a grand total of about 1,500 students; property valued at \$2,034,126.91 and an income of \$229,000. Harry Morehouse Gage, LL.D., is president.

COERNE, Louis Adolphe, American musician: b. Newark, N. J., 27 Feb. 1870; d. New London, Conn., 11 Sept. 1922. After receiving an education in German and French schools, he was graduated at the Boston Latin School in 1888, studied at Harvard in 1888-89 and took a Ph.D. in 1908. Then he studied harmony and composition under John K. Paine, violin under Franz Kneisel and organ and composition under Rheinberger at the Royal Academy of Music in Munich, where he was graduated with honors in 1893. Returning to this country, he became musical director of the Buffalo Liedertafel, and Buffalo Vocal Society, Church of the Messiah, in 1894-97; and in 1897-99 he was musical director Trinity Church and Arion Club Maennerchor, Columbus, Ohio. From 1889 to 1902 he composed and studied in Europe. In 1903 he was instructor of the music department, Harvard summer session, and in 1903-04 he was associate professor of music at Smith College. From 1905 to 1907 he was engaged in research work in Harvard and New York and in composing and publishing in Germany and Denmark. In 1907-09 he was musical director at Troy, N. Y.; in 1909-10, director Conservatory of Music, Olivet College; in 1910-15, director School of Music and professor of the history and science of music in the University of Wisconsin, Madison, Wis., and from 1915 until his death, professor of music in the Connecticut State College for Women, New London. He was organist and choirmaster of the First Congregational Church, Madison, Wis., and honorary musical director of the Madison Maennerchor. He was a member of many societies, fraternities and clubs, including the Saint Nicholas (New York); Cliff Dwellers (Chicago); Harvard Musical Society; International Musical Society, and the University Club, New York City. His 'Evolution of Modern Orchestration' (1908), was accepted as a thesis by Harvard for Ph.D. He composed nearly 200 compositions of various kinds. His opera, 'Zenobia,' op. 66, was performed in Bremen in 1905-06, the first performance in Europe of an opera written by a native of the United States. Excerpts from the opera were played by the Minneapolis Symphony Orchestra in 1914, by the Chicago Symphony Orchestra and the Saint Louis Symphony Orchestra in 1915. His other compositions include: 'Hiawatha,' symphonic poem, op. 18, performed in Munich in 1883 and by the Boston Symphony Orchestra in 1894; 'Jubilee March,' op. 20, written for massed

band performances at the Chicago Exposition of 1893; 'A Woman of Marblehead,' opera, op. 40; 'Beloved America,' patriotic hymn for male voices and orchestra, op. 41; Mass in D-minor, op. 53; 'Swedish Sonata,' for violin and piano, op. 60; 'Sakuntala,' melodrama, op. 67, performed at Smith College in 1904 and at Albany in 1914; 'Dedication Ode' for orchestra, op. 82, written for and performed at the first opening exercises of Connecticut State College for Women in 1915; and he completed Rheinberger's Mass in A-minor.

COFFEE. The New York Coffee and Sugar Exchange, which makes regular reports of coffee statistics, estimated the world's crop of 1921-22 at 19,820,000 bags, of which 8,188,000 was Santos and 3,695,000 Rio. The United States took 8,946,524 bags of this, the total of which Brazil furnished 5,747,496. Europe took 9,077,591 bags. The visible supply of coffee in January 1922 was 9,262,824 bags, and at the close of the year the supply was estimated by Minford, Lueder & Co. as 8,460,550 bags. It is believed that the coming 1922-23 crop in Brazil will be unusually large, and, therefore, the tendency of prices of coffee is downward. Quotations on the New York Exchange at the close of 1922 ranged from 10.40 to 14¼ cents per pound. The highest Rio quotation for the year was in May—11¼ cents. There were no new developments in the valorization policies during the year, neither the stocks nor the policy being reported. The total world's crops of coffee, in bags of 132 pounds, for the last 10 years, beginning in 1913, are as follows: 16,373,000, 19,612,000, 17,886,000, 19,756,000, 16,691,000, 18,847,000, 13,640,000, 15,163,000, 20,283,000, 19,820,000. The United States imported during 1921, 1,340,980,000 pounds of coffee, of a value of \$142,809,000. Forty-five per cent of this came from Brazil, 13 per cent from Colombia, 8.5 from Central America, and a little from Venezuela and Mexico. During the first nine months of 1922 the importations fell off about 12 per cent in quantity, but increased 8 per cent in price. Brazil, Venezuela and Mexico, however, all shipped in increasing quantity. About 5 per cent of the importation of coffee into the United States is re-exported, some of it in the form of roasted or prepared coffee.

Consumption.—The per capita consumption of coffee in the United States for the last three years averaged 12 pounds as against 10 pounds in 1900. The wholesale value is about 12 cents a pound, although it reached the peak of 21.9 cents in 1920. About half the world's supply comes from Brazil, and we are the largest consumers, being followed by France, Holland, Great Britain and Italy in the order named. In normal years we take 42 per cent of the Brazilian crop. It is commonly called Santos coffee, from the port of shipment, and 90 per cent of it is grown in the State of Sao Paulo. Statistics of production are usually figured to 30 June of each year, thus covering the annual crop. The 1921-22 crop of Santos was officially estimated by the Department of Agriculture of Sao Paulo as 7,990,000 bags of 132 pounds. Brazil shipped out 791,534,172 pounds of coffee during the first half of 1922 of a

value of \$87,089,747, this being entirely from the 1921 crop; the 1922 crop did not begin moving until 1 September. The coffee beetle has been a great pest in the coffee fields of Africa and the East Indies, but Java growers report a discovery that is expected to greatly reduce such losses in the future. From refiners of coffee comes a report that a new method of cleaning raw coffee has been found that does not at all reduce the aroma or quality of the berries.

COFFIN FOUNDATION. See CHARLES A. COFFIN FOUNDATION.

COINS, Foreign, Values of. On page 202 will be found a table compiled by the Director of the Mint which shows the values of pure metal contents of foreign coins as proclaimed for the beginning of 1923 by Secretary Mellon of the Treasury.

COIT, James Milnor, American educator: b. Harrisburg, Pa., 31 Jan. 1845; d. Munich, Germany, 5 Jan. 1922. He received his preliminary education at Saint Paul's School, Concord, N. H., and in 1865 was graduated from Hobart College with the degree of A.B. He took the degree of A.M. at the same institution in 1868. Dartmouth College conferred the degree of Ph.D. upon him in 1881 and Hobart College the degree of Sc.D. in 1905. From 1873-75 he was manager of the Cleveland Tube Works and in 1876 he became master in natural sciences at Saint Paul's School. He was vice-rector and acting rector of the same institution, 1904-06. In 1909 he engaged in research work at the University of Munich and thereafter established in Munich the Coit School for American Boys, of which he was headmaster. He was a Fellow of the American Association for the Advancement of Science; member of the American Chemical Society and the American Social Science Association; associate member, National Institute of Arts and Letters, and various historical and patriotic societies. He wrote 'Manual of Chemical Arithmetic with a Short System of Qualitative Analysis' (1886, 1895); 'Treatise on the X-Rays and Their Relation to Medical and Surgical Sciences' (1897); 'Liquid Air' (1899).

COKE. See COAL.

COKER COLLEGE, a Baptist educational institution for women, founded in 1908 and located at Hartsville, S. C. In 1922-23 it had a faculty of 23 members, 216 students, property valued at \$750,000 and an income of \$90,000. E. W. Sikes, M.A., Ph.D., is president.

COLBY COLLEGE, a Baptist co-educational institution, founded in 1818 and located at Waterville, Me. In 1922-23 the faculty numbered 30, the student body 500. The college property was valued at \$2,000,000 and its income was \$175,000. Arthur J. Roberts, M.A., LL.D., is president.

COLD STORAGE. While the stocks of creamery butter and eggs held in cold storage in the United States on 1 Jan. 1923 were markedly less than the stocks so held on 1 Jan. 1922, stocks of frozen beef, poultry and pork showed equally marked increases, according to the Department of Agriculture. Stocks of creamery butter in cold storage on 1 Jan. 1923 were un-

VALUES OF FOREIGN COINS.

usually low, amounting to 26,941,000 pounds, compared with the five-year average stocks for that date of 51,093,000 pounds said *Weather Crops and Markets*, the official publication of the Department of Agriculture, in giving the details. The decrease during December amounted to 20,832,000 pounds, or 44 per cent of the holdings on 1 December. Holdings of packing stock butter also continued low, being approximately one-third of the five-year average holdings on 1 January. Stocks of case eggs on 1 January were 1,310,000 cases compared with 889,000 cases on 1 Jan. 1922, and the five-year average holdings of 976,000 cases. The decrease in stocks during December amounted to 1,947,000 cases, or 60 per cent of the 1 December holdings. Stocks of American cheese on 1 January amounted to 33,659,000 pounds, a slight decrease compared with the 37,291,000 pounds on hand 1 Dec. 1922, and the five-year average for 1 January of 40,316,000 pounds. Apple holdings stayed at practically the same figure as was reported for 1 December, the holdings on 1 January being 6,376,000 barrels, and for 1 Dec. 1922, 6,743,000 barrels. The holdings on 1 Jan. 1922 amounted to 5,429,000 barrels, and the five-year average holdings for that date were 5,247,000 barrels. Stocks of frozen poultry almost doubled during December, the holdings on 1 January being 100,122,000 pounds, compared with 51,781,000 pounds on 1 December. The five-year average holdings for 1 January are 88,703,000 pounds. Stocks of frozen beef on 1 January were considerably heavier than a year ago, being 91,820,000 pounds, compared with 68,495,000 pounds on 1 Jan. 1922. These holdings, however, are still below normal, the five-year average for 1 January being 212,988,000 pounds. Total pork stocks on 1 January amounted to 567,312,000 pounds, an amount considerably heavier than a year ago and slightly larger than the five-year average holdings of 566,574,000 pounds. Frozen pork holdings alone amounted to 72,214,000 pounds on 1 January, compared with 51,203,000 pounds on 1 Jan. 1922, and the five-year average of 60,789,000 pounds. Total holdings of all meats showed a gain during December of approximately 182,500,000 pounds, the total holdings on 1 January being 751,601,000 pounds. The lard holdings on 1 January were 47,705,000 pounds, compared with 47,541,000 pounds one year ago, and the five-year average holdings on 1 January of 65,657,000 pounds.

COLGATE UNIVERSITY, a non-sectarian educational institution for men, founded in 1819 and located at Hamilton, N. Y. In 1922-23 it had a faculty of 54 members, 725 students, property valued at \$1,487,256 and an income of \$277,523.42. George B. Cutten is president.

COLLEGES AND UNIVERSITIES. See articles on individual colleges and universities.

COLLINS, Michael, Irish Sinn Fein leader, member of the Provisional Government of the Irish Free State and commander-in-chief of the National Army: b. County Cork, Ireland, in 1880; d. near Bandon, County Cork, 22 Aug. 1922. His people were small farmers. He went to the school at Clonakilty, and about the age of 16 joined his sister, who was at work in the post office in London, and got a position as

sorter there. A little later he went to work for the Guaranty Trust Company's London branch, and learned something about finance, which later he used to great advantage. About this time he and 200 London Irishmen used to drill secretly at Wormwood Scrubs, a suburb of London. In 1915, at the age of 35, he went to Dublin, worked as an accountant and later as secretary to the Sinn Fein. In 1916 he fought in the rebellion as an inconspicuous soldier and was deported to Wandsworth prison and later to Frongoch internment camp. The rise of Michael Collins as an important figure in the Sinn Fein began in 1916 and in the election of 1918, when he became a member of the Dail Eireann from his home district of South Cork. He acted as secretary to a special Sinn Fein convention after amnesty was granted and in December 1918 was elected member of Parliament from South Cork, but in accord with Sinn Fein policy did not take his seat. By sheer force of character and ability he developed rapidly from 1918, serving eventually as Minister of Finance to the Sinn Fein Government; and when the Anglo-Irish treaty was negotiated it was Michael Collins who made the greatest impression in Downing Street. During the conference on the treaty in London he won the esteem of Lloyd George, Winston Churchill and Lord Birkenhead. Since 1915, Collins lived the life of a fighting man and was engaged until the close of his life in a tremendous struggle with the Republicans on one side and Northeast Ulster on the other. With the late Arthur Griffith he headed the Irish Provisional Government and served as commander-in-chief of the Free State, or National, Army. He was intensely brave and walked in the funeral procession of his co-worker, Arthur Griffith, who died on 12 Aug. 1922, although his life had been threatened. He fell a victim to the Irregulars, who wished to remove this strong figure and also because of reprisals against the shooting of Henry J. Boland by the Free State soldiers.

In the formative period of the new Irish government Mr. Collins' financial ability was conspicuous. He secured a loan from the Bank of Ireland with which he managed to tide over the Free State Government until order had been restored throughout the country and the regular collection of revenue resumed. Collins' relations with the Belfast Government were cordial and it was largely through him that the boycott against Ulster products was removed. His policy toward the Republican malcontents was one of conciliation. Its futility was proved by his own death at the hands of these extremists, but the lesson was learned and Collins' successors inaugurated a sterner policy toward the opponents of the Free State. It was largely under Collins' supervision that the new Irish constitution was drafted in such manner as to secure the economic independence of the Irish nation while observing the Anglo-Irish Treaty of 1921, both in the spirit and the letter.

General Collins died fighting, receiving a fatal wound in the head after the attacking party had been practically driven off. He had been carrying out an inspection of the National troops outposts in Southern Cork. He lost his life in the wild country that lies between Macroom and Bandon. A few days previously he

had left Dublin to visit the front in West Cork. In Cork city the inhabitants went wild with enthusiasm when he arrived. With a small party he set forth to make the tour of inspection. Meanwhile the Irregulars had formed their plans. Accompanied by members of the headquarters staff, General Collins left Cork at six o'clock on Tuesday morning, 22 August, to inspect military positions in South Cork, escorted by a light armored car and a lorry containing soldiers. The party numbering about 20, visited nearly all the posts in South Cork occupied by the National Army, including Skibbereen, Rossbarbery and Clonakilty. Towards evening the party decided to take a round-about route to Cork from Bandon. While traveling in the wild, rugged and hilly district, away from the main roads on the south side of the river Lee, the party was attacked about half-past six o'clock by 200 Irregulars without any warning. At the first fire General Collins ordered his men to take cover at the fences on both sides of the road. In a few moments the attack developed into a regular fight which lasted nearly an hour. In the last stages of the encounter, during which several Irregulars had been killed, General Collins received his fatal wound. Although mortally wounded, he still fired from the ground on which he had fallen and encouraged his men by his unflinching bravery. In a feeble voice he asked for Major-General Dalton and General Sean O'Connell; they whispered a few prayers and recited the act of contrition before the general died. His last words were "Forgive them." Collins was a dashing, handsome man, very dark, with piercing black eyes. He was a skilled automobilist and "could ride over a five-barred gate or take a Galway stone wall"—so people say. He was a great favorite in his native country and was engaged to marry Miss Kittie Kiernan of Granard, County Longford. Former Governor Martin H. Glynn thus characterizes him: "Michael Collins was a man of dash and snap, of intense convictions and determined action. He had many of the characteristics of Theodore Roosevelt. He was intensely beloved by the people of Ireland and his slayers will arouse a resentment which will come home to plague them. The men responsible for the slaying of Collins are playing into the hands of Ireland's enemies, murdering Ireland's chances to take her place among the nations of the world and are creating an excuse for England once again to assert dominion over the Emerald Isle."

COLOMBIA, a republic of South America, situated to the east of Panama and fronting on the Pacific Ocean and on the Caribbean Sea. On the land side it touches Venezuela to the east and Brazil and Ecuador to the south. In the south there is a small territory claimed by Peru. The capital is Bogota. The President to 7 Aug. 1922 was Gen. Jorge Holguin. On that day Gen. Pedro Nel Ospina was inaugurated for a term of four years.

Area, Population, Etc.—The republic has an area of 440,846 square miles with a coast line of approximately 3,100 miles about equally divided between the Pacific and the Caribbean Sea. It is divided into 14 departments, three territories or intendencias and six comisarias or

special districts. These with their capitals and populations are as follows:

POLITICAL DIVISIONS	Capital	Area, square miles	Population (census of 14 Oct. 1918)
Departments			
Antioquia	Medellin	22,752	823,226
Atlantico	Barranquilla	1,008	135,792
Bolivar	Cartagena	22,320	457,111
Boyaca	Tunja	16,460	657,167
Caldas	Manizales	7,380	428,137
Cauca	Popayan	20,403	238,779
Cundinamarca	Bogota	8,046	812,036
Huila	Neiva	8,100	183,337
Magdalena	Santa Marta	19,080	211,395
Narino	Pasto	9,360	340,765
Santander N.	Cucuta	6,255	239,235
Santander S.	Bucaramanga	17,865	439,161
Tolima	Ibague	10,080	328,812
Valle	Cali	3,897	271,633
Intendencias			
Choco	Quibdo	68,127	91,383
Meta	Villavicencio		34,071
Providencia	San Andres		5,953
Comisarias			
Arauca	Arauca		7,510
Caqueta	Florencia		74,254
Goajira	San Antonio		22,652
Putumayo	Mocoa		40,770
Vaupes	Calamar		6,355
Vichada	Vichada		5,540
Total		440,846	5,855,077

The territory of the present Republic of Panama formed a department of Colombia until it declared its independence on 4 Dec. 1903. It was not, however, until 6 April 1914 that Colombia by treaty with the United States agreed to recognize the independence of Panama and to receive therefor \$25,000,000 and certain rights and privileges in the Canal Zone. This treaty was ratified by the Senate of the United States on 20 April 1921 and by the Colombian Congress on 24 Dec. 1921.

The capital, Bogota, lies at an elevation of 8,500 feet above the level of the sea. It had a population of 160,000 in 1922. Other large cities are: Barranquilla (64,543); Cartagena (51,382); Medellin (19,146); Cali (45,825); Manizales (43,203).

Education.—There are in the republic 5,317 primary schools with 337,315 pupils, 73 secondary schools with 7,305 pupils, 28 professional schools with 2,768 pupils, 27 normal schools with 1,231 students and 34 art and special schools with 1,606 students. For higher education there are universities at Bogota (founded 1572), Cartagena, Medellin, Popayan and Pasto. The aggregate attendance at the universities in 1922 was about 2,500. The Salesian Fathers conduct several trade and vocational schools and the secondary schools are nearly all conducted by religious orders of the Catholic Church and receive state aid. Primary education is free but there are no compulsory attendance laws. The average annual expenditure of the state on education is \$1,300,000.

Religion.—Roman Catholicism is the prevailing faith of the people. This church is organized under four archbishops and 10 bishops, one of the latter having ecclesiastical jurisdiction in the Republic of Panama. Other denomi-

nations are permitted provided their doctrines do not conflict with the generally accepted views relating to Christian morals and with the law.

Production.—The coast and hot regions of the republic produce corn, sugar, sea-island cotton, rubber, cacao, bananas, fibres, tropical fruits and vegetables, while the mountains and uplands yield coffee, apples, pears, peaches, berries, potatoes, wheat, barley and other products of the temperate zone. The entire country is suitable for stock raising, the pastures in many sections remaining green the year round. Only a fraction of the country is under cultivation at present and development is slow because of the lack of means of transport. The Santa Marta district is the centre of the banana cultivation which has increased in recent years. Coffee is the chief crop, the exports of which in 1920 rose to 1,443,663 bags of 60 kilos or 132 pounds, valued at 36,328,335 pesos. The gathering of ivory nuts, the fruit of the tagua palm, from which the higher grades of buttons are made, is one of the growing industries of the country. The exports of tagua have reached as high as 6,000,000 kilos in a recent year in which their value was \$390,000. Cotton planting is on the increase, the yearly production being at present about 3,000,000 pounds. About 25,000 acres are planted to cotton. Tobacco is also grown in greater quantity every year. The rubber tree is indigenous and its cultivation has begun. There are valuable timber lands but very little reaches the export market.

In some departments, notably Antioquia, the mineral industry is well established, while the Marmato and Sucio River gold deposits are said to be equal to those of the Transvaal. Gold is found in all departments, there being over 17,000 mines worked. Copper, lead, mercury, manganese and platinum are also worked. Colombia is the greatest producer of emeralds and the second of platinum. The emerald mines are leased by the Government to private operators. The output is said to be valued at 1,000,000 pesos yearly.

There are salt mines north of Bogota which are the property of the Government. Coal is found in several sections of the country but the quantity mined has been very small. Within recent years there has been a great deal of interest in the oil fields of Colombia. Although the production of oil has been comparatively small the development work so far accomplished would indicate large quantities and of a high grade. Several refineries have been established.

The principal manufacturing industries are those for the making of cotton textiles, glass, earthenware, matches, hats, flour and sugar. The manufacture of "Panama" hats has grown to large proportions of late years. Most of the product of this industry is exported to the United States. The last industrial census showed 121 factories in the republic with an investment of \$12,500,000.

Commerce and Trade.—The external trade of the country in 1920 amounted to \$150,000,000, of which the imports represented \$90,000,000. The great bulk of the foreign trade is with the United States and the United Kingdom. Coffee, hides, bananas, gold, silver and platinum were the chief articles of export. The principal imports are foods, drugs, metals and ma-

chinery and cotton textiles. In 1921 and 1922 the external trade suffered from the general world depression and while the quantities of goods exported were considerably less than in 1920 the prices were still proportionately lower.

Finance.—The revenue for the fiscal year 1921-22 contemplated receipts aggregating 27,495,000 gold pesos and disbursements of 33,256,109 gold pesos. The external debt of the republic in 1922 amounted to 20,000,000 dollars and the internal consolidated debt to 2,848,260 gold pesos and the floating debt to 11,104,428 gold pesos.

Communications.—There are 891 miles of railways in the country. About one-half of this mileage is of metre gauge, the other half of three-foot gauge. The inland traffic is mostly by the waterways. The Magdalena River is navigable for over 950 miles and its tributary streams add 215 miles more. The roads are not very good except in the vicinity of the larger cities, but the Government is gradually extending these into the interior. There are 853 postoffices, 13,640 miles of telegraph lines.

Army.—There is a compulsory military service law. The peace strength of the army is 6,000 men and the war strength about 50,000, since every fit citizen is liable to service in war-time. There is no naval establishment.

Government.—The President is elected by direct vote of the people for a term of four years and is not eligible for re-election until four years have elapsed. There is no Vice-President, but two designados, first and second, elected annually by the Congress, succeed the President, respectively, in case of his absence, death or inability to serve. The legislative power rests in a Congress of two chambers. The Senate has 34 members, elected indirectly by the people. There are 92 members in the Lower Chamber, elected by direct popular vote. The President is assisted by eight ministers with the usual portfolios.

History.—On 24 Dec. 1921 the Colombian House approved the treaty with the United States on the Panama settlement and under the terms of which Colombia is to receive \$25,000,000, payable in five installments, as compensation for her territorial losses when the Republic of Panama was made independent. The first payment under the treaty was made by the United States on 6 Dec. 1922. Under the treaty the remaining payments will be made yearly in sums of \$5,000,000. The presidential elections were held on 12 February and the Conservative candidate, Pedro Nel Ospina, secured a majority over the Liberal candidate, Benjamin Herrera. It was the first time in 37 years that the Liberal party took part in an election, they having hitherto held aloof because of the alleged lack of guarantees. The election was held because of the resignation of President Marco Fidel Suarez in November 1921 caused by the opposition of the Congress to his policies. Jorge Holguin succeeded Suarez as provisional president and held office until the president-elect assumed office in August. During the summer months the president-elect visited the United States where he was made the recipient of many honors both official and private. The Department of El Valle defaulted in the payment of interest on the debt contracted for the improvement of the port of

Buenaventura. The creditors asked for the proceeds of liquor and tobacco taxes according to the stipulation of the loan. During the year there was some discussion as to the advisability of re-establishing the death penalty abolished by law in 1910. The Conservatives pointed out the crime wave of the past decade as the greatest in the history of the country. The Japanese government sent a complete exhibit of native Japanese products to Bogota with the purpose of furthering the trade in Japanese products and manufactures in Colombia.

The government offered the whole of the \$25,000,000 to be paid by the United States as part guaranty for a loan of 80,000,000 pesos from Blair and Company of New York, also offering in mortgage the railways to be constructed with the money. The city of Medellin approved a loan for \$20,000,000 negotiated with New York for furthering sanitation work and other public works in that municipality. In September, the American Consul at Barranquilla reported a continued business revival with a return to approximate normalcy expected by the close of the year 1922. Exports of Colombia's most important raw products were gradually increasing while the banks were extending credit cautiously. This careful financing, together with continued improvement in commercial conditions, was rapidly leading to economic stability as the year closed.

COLOMBIA-AMERICAN TREATY.

See PEACE AND ARBITRATION, INTERNATIONAL.

COLORADO, a mountain State of the United States, bounded on the north by Wyoming and Nebraska, on the east by Nebraska and Kansas, on the south by New Mexico and on the west by Utah. It has an area of 103,948 square miles, which gives it seventh place among the States in area. It has a population of 939,629, which gives it thirty-third place among the States of the Union in population. Of the total population in 1920, 11,318 were negroes, 1,385 Indians and 291 Chinese. The foreign-born population the same year numbered 116,954, including 9,584 English, 6,191 Irish, 11,992 German, 10,112 Swedish, 7,261 Canadian and 3,357 Scottish. Denver, the capital and chief city of the State, had a population in 1920 of 256,491. The other principal cities are Pueblo, 43,050; Colorado Springs, 30,105; Boulder, 11,006, and Trinidad, 10,906.

Religion.—The chief religious denominations in the order of their relative strength are Roman Catholics, Methodists, Presbyterians, Baptists and Congregationalists.

Education.—There are in the State 2,938 primary schools and 262 high schools with 8,647 teachers and an enrollment of 224,289 pupils. About \$18,000,000 is spent annually on the public schools. For higher education there are several colleges, including Colorado College, which had 600 students in 1922-23; the University of Colorado at Boulder, which had 2,320 students in 1922-23; the University of Denver, with 3,500 students in 1922-23, and the Chamberlin Observatory. In addition to these institutions, there are also agricultural colleges, normal schools and a school of mines.

Agriculture.—The soil of the State varies from the most arid to the most productive.

Irrigation is practised extensively and has made agriculture the first industry of the State, taking the lead over mining and livestock raising. The chief crops, with their acreage, yield and value, for the year 1922 were: corn, 1,145,000 acres, 18,320,000 bushels, \$12,091,000; spring wheat, 358,000 acres, 5,370,000 bushels, \$4,779,000; winter wheat, 1,262,000 acres, 16,406,000 bushels, \$14,601,000; barley, 186,000 acres, 3,534,000 bushels, \$2,085,000; oats, 185,000 acres, 4,625,000 bushels, \$2,081,000; rye, 97,000 acres, 873,000 bushels, \$576,000; broom corn, 10,000 acres, 18,000 tons, \$351,000; tame hay, 1,239,000 acres, 2,354,000 tons, \$26,365,000; beans, 81,000 acres, 405,000 bushels, \$1,782,000; potatoes, 142,000 acres, 18,460,000 bushels, \$6,830,000; apples, 4,250,000 bushels; peaches, 1,160,000 bushels; pears, 519,000 bushels, and grain sorghum, 247,000 acres, 3,705,000 bushels, \$2,594,000. On 1 Jan. 1923 there were in the State 425,000 horses, valued at \$19,550,000; 33,000 mules, valued at \$1,980,000; 253,000 milk cows, valued at \$13,409,000; 1,361,000 other cattle, valued at \$34,569,000; 2,444,000 sheep, valued at \$18,574,000, and 523,000 hogs, valued at \$5,492,000. The State has 40,748,943 acres of forests.

Mining.—Colorado produces about 10,000,000 tons of coal yearly. Colorado mines in 1922 produced, according to the United States geological survey, \$6,500,000 in gold; 6,000,000 ounces of silver, 22,000,000 pounds of lead, 3,600,000 pounds of copper, and 24,000,000 pounds of zinc, as compared with \$6,835,328 in gold, 5,631,657 ounces of silver, 19,660,466 pounds of lead, 4,153,442 pounds of copper, and 2,360,000 pounds of zinc in 1921. Average prices in 1922 were \$1 for silver, \$0.134 for copper, \$0.057 for lead, \$0.057 for zinc, as compared with \$1 for silver, \$0.129 for copper, \$0.045 for lead, and \$0.05 for zinc in 1921. The situation in the Colorado metal-mining industry during the first half of 1922 was disappointing, but there was a marked improvement as the year drew to a close, particularly when the November prices for lead and zinc warranted hope for stability of market. There was also increased interest by capitalists in investigation of the industry.

Manufactures.—According to the latest manufacturing census of the United States, \$243,827,000 are invested in manufacturing industries in the State of Colorado. There are 2,631 establishments, employing 35,256 hands. The value of all manufactures in 1920 was \$275,391,000. The chief industries are those connected with the smelting and refining of metals, iron, lead, copper and zinc.

Railways, Roads, Etc.—The State has 5,519 miles of railroads. The tourist travel is heavy, particularly during the summer months. Great improvement has been effected in recent years in the State highways, many of which are links in great transcontinental routes.

Government.—The executive power is vested in a Governor, elected for two years. The legislative power is vested in the General Assembly, consisting of a Senate of 35 members, elected for four years, and a House of Representatives of 65 members, elected for two years. Sessions of the legislature are held bi-

ennially. The Governor in 1922 was the Hon. Oliver H. Shoup, and the Secretary of State was the Hon. Carl S. Milliken. Governor Shoup was succeeded in January 1923 by the Hon. William E. Sweet, whose term expires in January 1925. Colorado sends two senators and four representatives to the Federal Congress at Washington.

COLORADO AGRICULTURAL COLLEGE, a State co-educational institution, founded in 1879 and located at Fort Collins, Colo. In 1922-23 it had a faculty of 90 members (number of students not given), property valued at \$1,250,000 and an income, for teaching purposes only, of \$425,000. Charles A. Lory, D.Sc., is president.

COLORADO COLLEGE, a co-educational institution, founded in 1874 and located at Colorado Springs, Colo. It is non-sectarian, but of Congregational affiliation. In 1922-23 it had a faculty of 50 members, 600 students, property valued at \$3,000,000 and an income of \$245,000. Clyde A. Duniway, Ph.D., LL.D., is president.

COLORADO SCHOOL OF MINES, a State institution, founded in 1870 and located at Golden, Colo. Though intended for men, women may be admitted. In 1922-23 it had a faculty of 35 members, 535 students, property valued at \$919,036.44 and an income of \$258,791.04. Victor C. Alderson, LL.D., is president.

COLORADO, University of, a State co-educational institution, founded in 1874 and located at Boulder, Colo. In 1922-23 it had a faculty of 231 members, 2,320 students, property valued at \$3,500,000 and an income of \$1,250,000. George Norlin, Ph.D., is president.

COLORADO WOMAN'S COLLEGE, an educational institution, under Baptist control but non-sectarian, founded in 1890 and located at Denver, Colo. In 1922-23 it had a faculty of 15 members, 125 students, property valued at \$199,619.05 and an income of \$40,620.65. John William Bailey, Ph.D., is president.

COLORED METHODISTS. See CHURCHES IN THE UNITED STATES, STATISTICS OF THE.

COLOSTRUM. See MEDICINE AND SURGERY, ADVANCEMENT OF.

COLUMBIA COLLEGE, a Catholic educational institution for men, founded in 1873 and located at Dubuque, Iowa. Statistics for 1922-23 show a faculty of 33 members, 630 students, property valued at \$1,000,000 and income totaling \$300,000. Very Rev. E. D. Howard, A.M., is president.

COLUMBIA INSTITUTION FOR THE DEAF, a non-sectarian co-educational institution founded in 1857 and located at Washington, D. C. Gallaudet College, founded in 1864 is the advanced department of the Columbia Institution for the Deaf. In 1922-23 the Institution had a faculty of 19 members, 132 students, property valued at \$1,000,000 and an estimated income of \$134,500. Percival Hall, Litt.D., is president.

COLUMBIA UNIVERSITY, a non-sectarian co-educational institution, founded in 1754 and located at New York, N. Y. In

1922-23 it had a total teaching staff of 1,647 members while the number of students enrolled for the winter session was 17,387. The University's assets totaled \$61,396,782.24. Income for 1922-23 not given but for year ending 30 June 1922 it was \$5,510,481.96. Nicholas Murray Butler, LL.D., Litt.D., Hon.D., is president.

COMMUNISM. While the Communist regime of Lenin and Trotzky is still firmly in Soviet Russia, there are three notable indications that Communism, as a world-wide revolutionary movement was brought to a perceptible halt during 1922. First, there is the "New Economic Policy of Soviet Russia," which, in Lenin's own words, "now includes more elements of the old (Capitalistic) economic system than has hitherto been the case." This conservative development includes a reversion from the land policy of strict socialization to the plan of peasant possession, peasants being allowed to acquire actual possession, though technically ownership remains with the State. As a result of this concession to the peasantry, Lenin was able to declare, when he appeared 13 Nov. 1922, before the Fourth Congress of the Communist International in Moscow, that "from this quarter there need be no more fear of insurrections; we may affirm that it is henceforth out of the question that the peasants should rise against us, for they have no longer any ground for serious discontent."

According to Lenin's report and those of more disinterested observers, an era of general prosperity has just begun for small industry, and the working masses are witnessing an appreciable improvement in their condition. However, the improvement realized in major industries is rather slight. This is attributed to the persistent withholding of credit to Soviet Russia. The concessions granted to foreign capital, which up to the present have had only a relative importance, have never enabled Soviet Russia to effect economies in the expenditures necessitated by the reconstruction of her major industries. According to Lenin, the reversion to State capitalism in Russia has taken on special forms: land, major industry and commerce are in the hands of the proletarian State. Only medium enterprises have been leased out.

The second important commentary on the failure of Communist propaganda to make any appreciable progress is the Communist cry for a united proletarian front; the earlier policy of the Third or Communist International had been to split up the Socialist and trade-union movements of the world and to expel the moderates from the organizations. The result of such practices was to render the revolutionary movements helpless. With the exception of England, Australia and Russia, there is no

country, perhaps, in which radical activity is as fruitful of results to-day as in pre-war days. Realizing that the success of Communism depends upon world-revolt, Communist leaders are now urging a united front upon the part of the various factions in the labor movement against "the common enemy," the capitalist class. This demand for a united front, however, is looked upon with suspicion in certain Socialist quarters and has been characterized as insincere. Already, the Norwegian Labor Party, one of the strongest members of the Communist International, has withdrawn from the Moscow group because conditions laid down at the last congress would mean, it is declared, abolition of the self-government of national parties.

The failure of Communism can also be ascribed to its inability to provide peace, bread and liberty. The Communists failed to make good the expectations of the people, and the counter-revolution set in, such as the Fascist movement in Italy, which uses the same slogans and the same incentives for the black shirt revolution as for the red.

Russia is once more "one and indivisible," this time, of course, under Communist control. Russia is red from the Baltic and the Gulf of Finland to the shores of the Pacific Ocean, a great mass of populations solidly united under leaders who have proved their power. From one end of the country to the other Russia had a new nationalism, a new army retrained, re-disciplined and re-equipped, a new social order.

In the United States there have been two noticeable developments during the past year as far as the Communists are concerned. First, a let-up on the part of state and federal authorities in prosecuting these radicals for alleged illegal activity and, second, the formation of an open and above-ground Communist organization, the Workers' Party, which is making every possible overture to the conservative trades unions for affiliation within the revolutionary fold.

Under the first heading may be listed the pardon granted William Bross Lloyd, millionaire Chicago Communist, and sixteen of his associates scarcely more than a week after they had been imprisoned for from one to five years for violation of the Illinois Anti-syndicalist Act. Ben Gitlow, New York Communist, has succeeded in appealing his sentence under the New York Criminal Anarchy Law to the United States Supreme Court and he is now out on bail. Delegates to the second national convention of the Workers' Party, held late in December in New York City, were able publicly to declare for "the dictatorship of the proletariat," and the "supplanting of the existing capitalist government with a Soviet government" without interference from the Department of Justice. Armed revolt was not included in the Workers' Party program as it is the intention of Communist leaders to keep the party working legally. Force and violence, if these are to be employed at all, will be left in the hands of the "underground" movement, the Communist Party of America, which was outlawed and driven to cover by the raids of the Federal agents in 1920.

Under the instructions from Moscow to

work for a united front, the Workers' Party attempted to gain participation in the Cleveland Conference for Progressive Political Action. The move failed, its delegates being refused seats on grounds of "un-Americanism." Nevertheless, the Workers' Party will continue to strive for an independent political party of labor dedicated to the class struggle. In the labor movement, the Communists have succeeded in forcing the resignation of a number of conservative labor leaders, particularly in the needle trades. The Trade Union Educational League, an avowedly Communist industrial organization, inspired by William Z. Foster, noted leader of the 1919 steel strike, continues to pursue its policy of "boring from within" the conservative trades unions in an effort to revolutionize both their leadership and their policies, to pave the way for the ultimate struggle of labor against capital. Foster's policy is violently opposed to that of dual unionism, exemplified by the Industrial Workers of the World; he insists that revolutionary workers should remain at all costs in the conservative unions instead of breaking away from them and thus keeping out of touch with the mass of American workers. Foster and 19 other Communist leaders faced trial early in 1923 in Michigan following arrests growing out of a secret meeting at which it is charged plans were laid to spread the advocacy of armed revolt against the United States government.

COMMUNITY SERVICE, an outgrowth of the work of War Camp Community Service. It exists because cities and towns in the United States realized at the close of the war as never before that a vigorous citizenship and a healthy community life in peace time as well as in war time were impossible unless the community were provided with adequate leadership in spare time activities, and unless it were so organized as to insure the widest possible use of this leadership and of existing recreational facilities. Community Service undertakes work in a community only in response to a definite invitation from some responsible group of representative citizens.

Upon accepting an invitation, the national headquarters of Community Service lends community organizers to a city for a brief period to help in the organization of a local Community Service committee representative of all community interests, the expense of this work being shared by the town or city. The workers also assist in helping to raise funds and in securing and installing the executive secretary, in order that the work may be permanent. The local Community Service group is entirely autonomous and self-governing, receiving its support from citizens who believe in the community's leisure-time life.

Community Service committees in helping to organize a community's recreational resources, seek to bring about:

I. The finding and training of volunteer leadership in athletics, games, social gatherings, dramatics, community music and neighborhood organization.

II. The organization of such activities as athletics and outdoor sports, vacant lot play, social events and hospitality clubs.

III. The maximum use of existing facilities such as playgrounds, gymnasiums, parks and church and club facilities.

IV. The creation of opportunities for the expression of such cultural interests as community drama, pageantry, community music and art exhibits.

V. The creation of such needed facilities as neighborhood centres, rest rooms and summer camps.

VI. The provision of educational and citizenship activities, which may be developed through public discussions, forums, educational classes and study clubs.

Community Service organizations of the character outlined were in 1922 more than 175 in as many American communities. Community Service has national headquarters at 315 Fourth Avenue, New York City. The officers in 1922 were: president, Joseph Lee; treasurer, Myron T. Herrick; secretary, Howard S. Braucher.

COMORO AND THE MAYOTTE ISLANDS, a group of five islands in the Indian Ocean off the coast of Madagascar, and since 1912 a colony of France forming the 23d province of the general government of Madagascar. The area of the group is 790 square miles with a population of 97,617. Vanilla, cacao, aloes, sugar, perfume plants, and rough lumber are the chief exports. Imports consist of cotton textiles, metals and rice. See MADAGASCAR.

COMPARETTE, Thomas Louis, American numismatist and author: b. Dekalb County, Ind., 9 April 1868; d. Philadelphia, Pa., 3 July 1922. He was educated at the University of Wooster, Ohio. In 1893 he received the degree of A.B. from the University of Michigan. In 1901 the degree of Ph.D. from the University of Chicago. He attended the American School of Antiquities, Rome 1901-02 and the universities of Halle and Berlin 1903-04. From 1893 to 1897 he was professor of Greek and Latin in the Texas Christian University at Waco, Texas. He served as assistant in Latin at the University of Missouri, 1905 and that year went to the United States mint at Philadelphia as curator of the numismatic collection. He was a member of the American Association of Museums, and the American Institute of Archeology. He contributed articles on Roman municipal and state administration and to researches in history of commerce and coinage. He compiled a catalogue of coins and medals in the numismatic collection of the Philadelphia mint, 1912-14, and wrote: 'The Debasement of the Silver Coinage Under the Emperor Nero' (1914); 'Aes Signatum' (1919); 'Descriptive Catalogue Selected Greek Coins' (1921).

CONCILIATION, Industrial. See INDUSTRIAL ARBITRATION.

CONCLAVE, the closed room or hall set aside and prepared for the cardinals when electing a pope; also the assembly of the cardinals for the election of a pope. In the early ages the election of the successor of Saint Peter was most probably restricted to the clergy of Rome. After the 4th century the people were admitted, and the emperors were often represented. The clergy resented the influence of the emperors.

The clash of interests often resulted in long delays, and sometimes in violent disputes. A decree of the Synod of the Lateran in 769 forbade the laity to have part in the election. Little by little the influence of the cardinals in papal elections waxed stronger, till in 1059 Pope Nicholas II placed power of election in the hands of the cardinals and conceded to the lower clergy and laity only the ceremony of assenting to the election. This ceremony was called "laudatio." Finally the Lateran Council in 1139 placed the matter entirely in the hands of the cardinals, and for election required two-thirds majority of the cardinals present. When Clement IV died in 1268 the cardinals met for election at Viterbo. The election and consequent vacancy of the Holy See lasted two years and nine months. The local authorities lost patience in the end and shut the cardinals in a room with orders to elect a pope at once. The action was effective and Gregory X was elected. So highly did the new pope think of the scheme of shutting up the cardinals that under him the second Council of Lyons decreed that thereafter the cardinals should assemble 10 days after the pope's death, in the city where the pope died, and shut off from all outside influence proceed at once to the business of election. As a means of preventing undue delay the decree ordered that if the cardinals came to no agreement within three days their food should be lessened and after a further delay of five days it was still more restricted. The event proved his wisdom. The next election lasted only one day.

The decree of Gregory X (known as "Ubi periculum majus") is the beginning of the idea of conclave, and there we find the word first mentioned. The fundamental principle has lasted to the present time, with few interruptions. Various changes were made from time to time till Pius X published his regulations in 1904. Pius XI completed the legislation by certain modifications during the past year.

The constitution of Pius X, known as "Vacante Sede Apostolica" and dated 25 Dec. 1904, preserves the conclave idea of Gregory X. Before the conclave begins certain formalities must be observed. First of these is verification by judicial act of the death of the Pontiff. This is done by the Cardinal Camerlingo, who is head of the papal household. This same cardinal together with three others form a committee to arrange for the obsequies of the pope and prepare for the conclave. Finally there is a "Congregatio" or meeting of the cardinals actually in Rome at which the laws governing the conclave are read, and the cardinals take oath to observe them. A commission is appointed to select and examine the officers of the conclave such as masters of ceremonies, confessors, physicians, servants of various kinds and the official marshal of the conclave. The latter since 1721 has been a member of the Chigi family.

In the meantime the date is set for the opening of the conclave, and the place is appointed and made ready. In modern times the conclave is held in the Vatican palace. A large part of the palace is walled off and divided into apartments each with three or four rooms or cells. These are occupied by the cardinal with his secretary and servant. All are sworn to secrecy.

Communication with the outside world is completely shut off, and severe penalties are meted out to violators of this rule. Cardinals may leave in case of illness, or enter if they arrive in Rome too late for the beginning of the conclave.

Only cardinals have a right to vote in the election of a pope, and all cardinals have a right to do so. Even if the pope should die during the progress of a general council the right of election is restricted to the cardinals.

The law of Pius X clearly stated that the conclave should begin 10 days after the death of the pope. It happened, however, on the death of Pius X that Cardinal O'Connell of Boston could not reach Rome in time for the conclave. And in February 1922 three cardinals from America, Cardinal O'Connell of Boston, Cardinal Begin of Quebec and Cardinal Dougherty of Philadelphia, did not arrive in time for the election. It was decided therefore that 10 days were not sufficient. Besides the new pope, and the sacred college generally, wished to show their appreciation of America and to have in the conclave the benefit of American opinion. Hence by a decree dated 1 March 1922, Pope Pius XI decided that the conclave should not begin until 15 days after the death of the pope. It is hoped this will enable the cardinals of America to participate in the election of popes in the future.

Election is by vote, which is taken by secret written ballot. Two-thirds are necessary for election. Ballots are usually taken twice a day till some one receives the number required.

When the election is complete the other cardinals do reverence to the new pope. At the election of Pius XI a feature much commented on was the blessing of the people from the exterior balcony of Saint Peter's. This was an ancient custom, but omitted since 1870 as a protest against the occupation of the papal states by the Italian government. Some considered the action of Pius XI as a renunciation of all claims to the papal states. But the secretary of the Sacred College put an end to all discussion when he officially declared (6 Feb. 1922) that the pope intended his act as a manifestation of good will to the whole world and of his hope for universal peace. CONNECTICUT, one of the 13 original States of the United States. It is bounded on the south by Long Island Sound, east by Rhode Island, west by New York and north by Massachusetts. It has an area of 4,965 square miles, which is 46th place in size, and a population of 1,380,631, which gives it 29th place in order of population. Of the total population in 1920, 1,359,585, were whites and 21,046 were negroes. The foreign born population numbered 376,513, including 22,708 English, 45,464 Irish, 22,614 German, 38,719 Russian, 80,322 Italians, 17,697 Swedish and 7,487 Scottish. Hartford, the capital, had a population in 1920 of 138,036. The other chief cities of the State with their populations are: New Haven, 162,537; Bridgeport, 143,555; Waterbury, 91,715; New Britain, 59,316; Meriden, 29,867; New London, 25,688; Ansonia, 17,643; Middletown, 22,129; Greenwich, 22,123 and Torrington, 22,055.

Religion.—The chief religious denominations in order of their strength are Roman Catholics, Congregationalists, Protestant Episcopalians, Methodists and Baptists.

Education.—Primary education is free and compulsory. It is free for all children between the ages of 4 and 16 and compulsory for all between the ages of 7 and 16. There are in the State 1,330 primary schools, with 6,195 teachers and 230,963 pupils; 78 public high schools, with 1,148 teachers and 27,426 pupils; four normal schools for the training of teachers, with 42 professors and 478 students, 11 model schools with 101 teachers and 3,677 pupils. Yearly expenditure on education averages \$16,500,000. There is an Agricultural and Mechanic Arts College at Storrs. For higher education, there are Yale University at New Haven; Wesleyan University at Middletown; Trinity College at Hartford and the Connecticut College for Women.

Agriculture.—There are in the State 22,655 farms with a total area of 1,898,980 acres, of which 701,086 acres is improved land. The total value of all farm property in 1920 was \$226,991,617. The chief crops, with their acreage, yield and value, for the year 1922 according to the final estimate of the United States Department of Agriculture were: Corn, 77,000 acres, 3,465,000 bushels, \$3,326,000; oats, 11,000 acres, 308,000 bushels, \$200,000; buckwheat, 2,000 acres, 36,000 bushels, \$50,000; rye, 5,000 acres, 100,000 bushels, \$150,000; tame hay, 323,000 acres, 436,000 tons, \$1,336,000; potatoes, 24,000 acres, 3,360,000 bushels, \$3,360,000; tobacco, 28,000 acres, 35,000,000 pounds, \$9,450,000; apples, 1,300,000 bushels; peaches, 262,000 bushels and pears, 60,000 bushels. On

1 Jan. 1923, there were in the State 36,000 horses, valued at \$4,608,000; 141,000 milk cows, valued at \$10,998,000; 38,000 other cattle, valued at \$1,121,000; 8,000 sheep, valued at \$62,000 and 45,000 hogs, valued at \$796,000.

Mining and Manufacturing.—The State produces some iron ore, granite, trap rock and lime stone. Bricks, tiles and pottery are manufactured and crystalline quartz and infusorial earth are also worked. The latest census of manufactures showed in the State 4,878 manufacturing establishments, capitalized at \$620,194,000, and employing 226,500 hands. These establishments use yearly raw materials, valued at \$288,511,000, and produced goods valued at \$545,472,000. The chief manufactures are bronze, brass and copper products, all kinds of machinery, silk goods, hardware, cutlery, electrical supplies, rubber goods, ammunition, boots and shoes, hats, typewriters, fire arms, pins and needles, clocks, paper, cannons, knit goods, woollens, lumber, clothing, steam engines and pumps.

Railroads, Roads, etc.—In the early days of the State shipping was important, but, it is now negligible, only a few coastwise lines calling at the State ports. The State has a good road system, which is utilized by many motor truck lines for the hauling of great quantities of goods and materials to the New York, Rhode Island and Massachusetts markets. There are 1,001 miles of railroad in the State and 833 miles of electric railways.

Finances, Banking, etc.—At the beginning of the fiscal year, 1921–22, the State treasury had on hand a balance of \$86,008.87. During the fiscal year, 1921–22, receipts amounted to \$20,794,735.11. Disbursements during the same period amounted to \$20,437,810.67, leaving a balance at the beginning of the fiscal year, 1922–23, of \$1,192,933.31. The estimated receipts for the period 1923–25 are \$32,977,100. State indebtedness amounts to \$16,281,100. In 1922, the assessed value of all real property in the State was \$1,962,763,631; personal property, \$4,528,760. The annual report of the State bank commissioner made public 27 Dec. 1922, showed that deposits in savings banks and trust companies in Connecticut increased \$27,850,060.11 in the year 1922, and the assets of these institutions showed an increase of \$30,658,751.96. The total of savings and commercial deposits of all State banks was \$594,277,579.19, compared with \$553,427,519.08 on the same date in 1921.

Government.—The State executive power is vested in the governor, who is elected for two years. Legislative power is vested in the General Assembly, consisting of a Senate and a House of Representatives. The Senate has 35 members and the House of Representatives has 258 members. Members of both houses are elected for two years. The legislature meets biennially in odd years on the first Wednesday after the first Monday of January.

Officials, 1922.—Governor, Everett J. Lake; lieutenant-governor, Charles A. Templeton; secretary of state, Donald J. Warner; attorney general, Frank E. Healy; treasurer, G. Harold Gilpatrick; comptroller, Harvey P. Bissell.

Officials, 1923.—Governor, Charles A. Templeton; lieutenant-governor, Hiram Bingham;

secretary of state, Francis A. Pallotti; attorney general, Frank E. Healy; comptroller, Frederick M. Salmon; treasurer, G. Harold Gilpatrick; auditors, Lewis W. Phelps and William H. Bailey.

Judiciary.—Members of Supreme Court: Chief Justice, George W. Wheeler, Bridgeport; Associate Justices, John K. Beach, New Haven; Howard J. Curtis, Stratford; Lucien F. Burpee, Hartford, and John E. Keeler, Stamford.

CONNECTICUT AGRICULTURAL COLLEGE, a non-sectarian co-educational institution, founded 6 April 1881, and located at Storrs, Conn. Statistics for 1922–23 show a faculty of 72 members (21 in the extension division, 7 connected with the experiment station and 44 resident teachers), and a student body numbering 480. The institution's property was valued at \$2,626,520 and its income for the year amounted to \$504,565. Charles L. Beach, B.Agr. B. S., is president.

CONNECTICUT COLLEGE FOR WOMEN, a non-sectarian educational institution, founded in 1911 and located at New London, Conn. In 1922–23 it had a faculty of 47 members, 414 students, property valued at \$1,750,000 and an income of \$300,000. Benjamin T. Marshall, A.M., is president.

CONSTANTINE, former King of Greece: b. 2 Aug. 1868; d. Palermo, Italy, 11 Jan. 1923. His father was King George I of Greece who died in 1913. George was the son of King Christian of Denmark and was thus brother of Queen Alexandra of England. Constantine, on his father's side, was therefore a nephew of King Edward VII and a first cousin of King George V.

Constantine's mother was the Grand Duchess Olga, daughter of the Grand Duke Constantine of Russia who was brother of the Tsar Alexander II "the Liberator" assassinated in 1881. On his mother's side, Constantine was thus a first cousin of Tsar Alexander III, whom he resembled in his heavy physique, and a first cousin, once removed, of the last Tsar Nicholas, with whom the Romanoff Dynasty came to a tragic end.

On 27 Oct. 1889, Constantine somewhat displeased Queen Victoria by marrying the Princess Sophia, sister of the German Emperor, William II. Her mother was the Empress Frederick, Crown Princess of England and eldest child of the British Queen. By marriage, then, Constantine is again a first cousin of King George V. No ties of family could have been closer than were his with the Royal Families of Denmark, Germany, Russia and Britain. But he had in his veins no drop of Greek blood. And at Athens his dynasty had been merely an imported political device.

Neither as Crown Prince nor as King did he ever take the position that the Greek throne is constitutional, as the term is understood throughout the British Commonwealth. Greece had a Prime Minister, a Cabinet and a Parliament, but Constantine was none the less unsatisfied unless he ruled. In 1897, he fought in the war against Turkey, as Crown Prince, but with only indifferent success. But in the two Balkan Wars, wherein Greece and her Allies had a

preponderance over Turkey and then over Bulgaria, he was hailed as a hero. To what extent he really contributed to the victories which Greece owed as much to other nations as she did to her own prowess, is an interesting question.

In 1913 Venizelos signed a defensive treaty between Greece and Serbia. The objective of the Treaty was a hostile and embittered Bulgaria but when the Great War broke out and Serbia was attacked, both by Austria and by Bulgaria, it was held that Greece was bound in honor to come to her assistance. This was the decision which Venizelos advised. But, on various pretexts, Constantine steadily overruled him, dismissing him from office on 5 Oct. 1915. In December, the Greeks supported the King at elections which he conducted as an absolute monarch. Had he been promised Constantinople, the King would have risked war. But, although he disapproved of the invasion of Belgium, his real conviction was that the Germans would win. He believed in the German kind of autocracy. More than that, he dreaded the German Army. He dared not face that terrible machine, acting as it would act through Austria-Hungary, Turkey and Bulgaria, on the Greek frontier. Greece maintained her neutrality.

As a nation the Greeks are easily swayed. The Allies occupied Salonica and they also had forces in Athens. On 11 June 1917, Constantine came to the conclusion that neutrality was no longer possible and he fled from the country. He took refuge in Switzerland, leaving Venizelos in command. Constantine's throne fell to his second son Alexander who accepted the constitutional advice of his ministers. But on 25 Oct. 1920, Alexander died by the bite of a pet monkey. The throne again fell vacant.

There is no doubt as to the great gains secured to Greece by Venizelos through the Treaty of Sèvres with Turkey and the Treaty of Neuilly with Bulgaria. She held Smyrna. She held the Islands of the Aegean. She held Thrace. But in November, 1920, Venizelos was defeated at the polls. On 5 Dec. 1920, much to the resentment of the Allies, a plebiscite was held on the question whether Constantine should be recalled, and as the result was in the affirmative, he entered Athens with his family on 19 Dec. 1920.

What the Greeks seem to have wanted was a cessation from foreign adventure and a spell of peace. That was their reason for ousting Venizelos and summoning a king who had tried to keep them out of war. The fatal blunder of Constantine was that, mistaking the public temper, he embarked on a new war with Turkey, the first objective of which was the complete conquest of Asia Minor and the second, the seizure of Constantinople itself.

He had against him not only Turkey but Italy and France. In his attempt to advance finally on Constantinople, he was resisted by all the Allies. His campaigns ended in irretrievable disaster, luridly illuminated by the sack of Smyrna. A military revolution broke out and on 27 Sept. 1922, Constantine fled a second time, landing in Italy and finally settling in Palermo. As elsewhere recorded, his leading ministers were promptly tried for treason and shot. The

Duke of Sparta—the King's eldest son—succeeded as George II.

Constantine's exile was brief. He was a broken man. Suffering from arteriosclerosis and nephritis, he walked slowly and with bowed head. He tried the cure at Salsomaggiore but evidently it did not avail him. The end came suddenly and was quite unexpected.

As husband and father, the conduct of Constantine was exemplary. He leaves behind him a widow and five children—King George II, born 19 July 1890 and married to Elizabeth, elder daughter of King Ferdinand and Queen Marie of Rumania; Princess Helene, born 2 May 1896 and married to Carol, Crown Prince of Rumania; Prince Paulos; Princess Irene and Princess Catherine.

Constantine's brother, Prince George is High Commissioner of Crete. Another brother, Prince Andrew, after narrowly surviving a trial for treason, visited the United States with his wife, Princess Alice, the daughter of the Marquis of Milford Haven early in 1923; His youngest brother, Prince Christopher is the husband of Anastasia, widow of William B. Leeds.

CONSUMPTION. See TUBERCULOSIS.

CONVERSE COLLEGE, a non-sectarian educational institution for women, founded in 1890 and located at Spartanburg, S. C. In 1922-23 it had a faculty of 37 members, 408 students, and property valued at \$783,963.29 plus endowment of \$462,000. Its income for 1921-22 was \$200,345.51. Robert P. Pell, B.A., Litt.D., is president.

COOPER, Duncan B., American editor: b. 1843; d. Nashville, Tenn., 4 Nov. 1922. He was an active political force in his State, though never a candidate for office. At one time he was editor and publisher of the *Nashville American*, now extinct. Colonel Cooper came into nationwide prominence in the fall of 1908 as a result of the killing of former United States Senator Edward Ward Carmack, on the streets of Nashville, Tenn., during a heated political campaign. The tragic death of Carmack at the hands of Colonel Cooper, and his son Robin, now also dead, was the culmination of one of the bitterest political fights in the history of Tennessee. At the time Carmack was editor of the *Nashville Tennessean*. Following his defeat in a Democratic primary by Malcolm R. Patterson of Memphis for the gubernatorial nomination Carmack in *The Tennessean* began a bitter editorial war on Governor Patterson after the latter's inauguration, and the name of Colonel Cooper, as one of the staunch friends and advisers of the governor, often appeared in the editorial column. Word was sent to Carmack by a mutual friend that Cooper would not countenance further public use of his name. The next day an editorial paragraph was written in which sarcastic reference was made to Colonel Cooper. The following day Duncan Cooper and his son Robin met Carmack as he was approaching his apartments in the city. Shots were exchanged and Carmack fell with a fatal wound. Robin Cooper was also shot but recovered, Colonel Cooper was uninjured. The trial that followed resulted in the conviction of both Coopers, the elder receiving a sentence of 20 years in prison

and the son a lesser term. An appeal was taken to the Supreme Court; which however affirmed the verdict in the case of Colonel Cooper but awarded the son a new trial. As soon as the decision of the court was announced, Governor Patterson issued a pardon for Duncan Cooper. Robin Cooper's case, on retrial, was dismissed for want of a prosecutor. Several years ago Robin Cooper's dead body was found in a creek, beside which was his automobile. His slayers were never apprehended.

CO-OPERATIVE ASSOCIATIONS, Farmers. See AGRICULTURE IN THE UNITED STATES, subsection AGRICULTURAL LEGISLATION; FARM BUREAU FEDERATION, AMERICAN.

CO-OPERATIVE MOVEMENT. United States.—Co-operation in the United States during the year 1922 made considerable progress in the direction of further unification of the movement. The forces of the consumers' co-operatives are being consolidated to an increasing extent through their national federation, the Co-operative League of the United States of America with headquarters in New York City. An outstanding achievement of the movement during the past year was the holding of the Third National Co-operative Congress. Delegates from 16 States, representing a membership of 70,000 co-operators and hundreds of thousands of trades unionists and farmers, met at Chicago, 26-28 October. The Congress was presided over by James P. Warbasse, president of the Co-operative League, and a member of the Central Committee of the International Co-operative Alliance. Technical information on practical co-operative problems was exchanged by the delegates, who included nationally known co-operators. There were reports and discussions on co-operative banking, accounting, legislation, the income tax, the relation of labor to the Co-operative Movement, spurious co-operation, wholesaling, etc. Managers gave reports on store management, on how to meet competition, the organization of district co-operative leagues, and other technical matters of co-operative administration.

Discussion at the Congress disclosed the fact that co-operatives in specialized fields such as housing, milk distribution, bakeries and banking, met with more success during the past year than the distributive grocery stores, attributable perhaps to the high rate of profit, and the absence of intense competition existing in enterprises of the former group. Grocery stores, operating on only a small margin of profit, and subjected to the competition of chain stores, apparently do not succeed quite so well as other co-operative activities.

The organization of a large creamery in Minneapolis, now supplying 30,000 families with \$2,500,000 worth of dairy products annually, on a strictly co-operative basis, was one of the most successful of the recent co-operative achievements. This dairy, the Franklin Co-operative Creamery Association, was opened in 1920 by dairy workers who had been locked out during an industrial dispute. With the aid of the labor unions of Minneapolis and Saint Paul, these workers organized an association which any consumer might join. They

now have a membership of 6,000 consumers. Two dairy plants are operated, and more than 100 wagons are daily employed in milk distribution. The co-operative dairy lowered the price of milk three cents a quart, thus saving the consumers of Minneapolis more than a million dollars annually. The quality of milk was improved by this consumers' dairy to such an extent that, according to the Public Welfare Commission, deaths from typhoid were practically wiped out, and infant mortality was considerably lowered. In addition to these benefits, the earnings of the business are distributed among the patrons, in proportion to their purchases.

Another co-operative dairy was established in Cleveland, Ohio, in 1922, due to the combined aid of the Co-operative League and the Franklin Co-operative Creamery. It has the highest rating in the city of Cleveland for purity of product.

A development which made considerable headway during 1921 and 1922 was the establishment of semi-co-operative labor banks. The first venture of this type was established as a national bank by the Brotherhood of Locomotive Engineers in Cleveland, November 1920. Opened with resources of \$650,000, the assets grew within two years to \$19,000,000. The bank limits the rate of profit of shareholders to 10 per cent, excess earnings being returned to depositors. This is said to be the only bank organized under the National Banking Act which returns earnings to depositors. A significant policy of this bank is its refusal to lend money to establishments known to be unfair to labor. The success of the Brotherhood of Locomotive Engineers' Co-operative National Bank in Cleveland gave an impetus to the formation of a dozen labor banks organized along the same lines. The Amalgamated Clothing Workers of America own a bank in Chicago which, in October 1922, had resources of \$1,500,000. There are banks organized, or in process of organization, in California, Pennsylvania, Alabama, Arizona, New York and other States, existing for the avowed purpose of keeping the financial power of trades unionists in the hands of institutions controlled by, or sympathetic to, labor.

A similar development is the formation of credit unions, or small mutual credit societies, which operate on a strictly co-operative basis. At the end of 1921 there were 86 credit unions in New York, with total resources amounting to about \$4,500,000, which made loans of about \$4,000,000 to needy members. In Massachusetts at the end of 1921 there were 82 credit unions, with total resources of about \$4,000,000, which had made loans to members of about \$3,000,000. About a dozen States have laws authorizing the formation of credit unions.

The co-operative construction and ownership of homes was successfully adopted by many groups during 1922. In Milwaukee, the Garden Homes Company erected 90 homes owned by the co-operative association of tenants. Hundreds of other buildings are in process of construction. In New York City there are several co-operative apartment buildings.

During 1922 the distributive co-operatives rendered great service to labor organizations involved in strikes. Miners and railroad workers were given credit or goods by co-operative societies, particularly in Massachusetts, Rhode Island, Minnesota and Illinois.

In March 1922 the last of the centralized semi-co-operative concerns, which had been warned against by the Co-operative League as an unsound development, became bankrupt. The Pacific Co-operative League of San Francisco, involving a chain of 43 stores, went into the hands of receivers. Far from regarding the debacle of this centralized concern as a blow to the movement, genuine co-operatives hailed it as a necessary house-cleaning of an element which was reflecting discredit upon the movement.

The educational work of the Co-operative League went forward during 1922. The Inter-collegiate Co-operative Society, launched by the League, for the purpose of organizing groups of students in all colleges and universities for the study of the Co-operative Movement, established its first chapter at Marquette University, Milwaukee, through the efforts of Father Joseph Reiner.

A Model State Co-operative Law was drafted by the committee on legislation of the League, for adoption by all State legislatures. The great legislative need of co-operatives is for protection against the spurious promotion concerns which falsely use the word "Co-operation" to float stock-selling schemes. To meet this need, and to secure uniform co-operative legislation, the League is conducting a campaign for the adoption of the Model Co-operative Law by every State in the Union. See also AGRICULTURE; HORTICULTURE.

The Co-operative League acquired new headquarters and moved into its own building at 167 West 12th street, New York City. The officers of the League for 1922-24 are: President, James P. Warbasse, Brooklyn, N. Y.; vice-president, A. P. Bower, Reading, Pa.; secretary, John F. McNamee, Cleveland, Ohio; treasurer, W. Niemela, Maynard, Mass.

INTERNATIONAL CO-OPERATION.

International Co-operative Alliance.—Co-operative organizations of 25 lands, representing 30 million members, are banded together internationally, through the International Co-operative Alliance. The 10th Congress of the International Co-operative Alliance held at Basle, Switzerland, in the summer of 1921, which was the first International Co-operative Congress convened since the war, laid plans for the establishment of an international co-operative bank and wholesale. Mr. G. J. D. C. Goedhart of Holland was elected president of the International Co-operative Alliance, and Mr. Henry J. May of England was re-elected general secretary. The co-operative movement of the United States is represented on the central committee of the International Co-operative Alliance by Dr. J. P. Warbasse, president of the Co-operative League. The executive committee of the International Co-operative Alliance met at Brussels in January 1922 and appointed a deputation to visit Russia

to investigate the status of the co-operative movement in that country. In March the special deputation visited Russia, reporting as a result of their investigations that the Russian movement, which from 1919 to April 1921 had been dominated by the state, was now on a voluntary basis again; that the societies now had "their own capital, their own general meetings, and their own managers." In October 1922 the executive committee of the International Co-operative Alliance met at Essen, Germany—the first international co-operative meeting to be held in Germany since the war. It was decided to designate the first Saturday of July as International Co-operators' Day. Resolutions were adopted condemning the attitude of the Fascisti toward the co-operatives of Italy; reports were received from co-operative delegations to Russia and Georgia, and the subject of international co-operative trading was discussed.

Great Britain.—The Co-operative Union, the educational federation of the British Co-operative Movement, held its 54th Annual Congress in Brighton, England, in June 1922. The 1,600 delegates represented a membership of 4,548,557, an increase of about 50,000 members over the membership of the preceding year. With their families, the co-operators represent 40 per cent of the population of Great Britain. During the past 10 years, the membership of co-operative societies grew 15 times faster than the population. For the first time in the history of the movement, the sessions were presided over by a woman, Miss M. Llewelyn Davies, as president of the congress. The congress went on record in favor of the establishment of an independent co-operative daily newspaper and a co-operative college. The political policies of the movement and the attitude of co-operative societies towards their employees, were discussed. According to the latest available figures, those for the year ending 1921,—the retail establishments of the co-operatives supplied £218,780,384 worth of goods to their members, or nearly £20,000,000 more than in 1919. While the receipts from sales in 1921 decreased 13.9 per cent as compared with the sales in 1920, the decrease was lower than the percentage of reduction in prices. In other words, the amount of business done was actually increased, although due to the decline in prices, the income was reduced. At the end of 1921 the share capital of co-operative societies amounted to £83,103,213; the stocks on hand in their establishments were valued at £40,000,000; while their reserves amounted to £10,579,989. In the parliamentary elections in November 1922, 11 candidates were in the field for the Co-operative Party, four being elected to Parliament. These representatives organized their own party caucus. Many members of Parliament elected by the Labor Party are leaders in the co-operative movement, and join the Co-operative Party representatives in issues involving the welfare of co-operative societies.

Germany.—The Central Union of German Distributive Co-operative Societies (Zentralverband deutscher Konsumvereine) now has a membership of 1,887 co-operative societies,

including local distributive societies, insurance, and wholesale federations. The societies affiliated with the federation represent a membership of 2,834,000. There are 2,400 consumers' distributive co-operatives in Germany, with 4,500,000 members. All told, there are 40,000 co-operatives of various types in Germany, half of them being credit unions. Co-operatives continued to flourish during 1921, the federated membership being increased by 120,000 over the previous year, while the number of those employed by co-operative establishments also increased. The figures for the income of both retail and wholesale enterprises show a tremendous increase, due for the most part to the decline in the value of the mark. However, it is possible to estimate the progress of the movement from the increase in the number of members. The Co-operative Insurance Society wrote more than a million policies during 1921. The German Co-operative Wholesale Society made much progress. Two new warehouses were established, bringing the number up to 10. The German Co-operative Wholesale Society has a coffee-roasting department, a spice mill, wine cellar, coffee, cocoa and spice-packing departments, soap factories, and other productive establishments, in addition to a bank. Germany ranks perhaps as high as Great Britain in the number of affiliated co-operators and in the extent to which co-operative distribution and production are supplanting the profit-system.

Austria.—The co-operative movement of this country is perhaps the only organized industrial force standing between its people and starvation. Although itself impoverished by the almost negligible value of Austrian currency, the co-operative movement is caring for the wants of between one-third and one-half the population of the country. The Central Union of Co-operative Societies, which does not represent by any means all the distributive co-operatives, had affiliated with it at the end of 1921, 704 distributive establishments, with a membership of 574,116. The Co-operative Society of Vienna alone conducts 144 distributive stores, supplying half the population. In addition, it conducts a savings bank, refrigerator plant, bakery, slaughterhouse, printing works, fuel department, and several productive establishments. Co-operative housing societies are springing up among the people as a means for coping with the shortage of homes. Observers testify to the beauty of the buildings and the great saving they effect for their co-operative tenants. Many of these groups of buildings are being erected upon what were formerly the estates of the nobility.

France.—During 1922 the private traders made a concerted attack upon the co-operative societies by attempting to secure national legislation taxing co-operative establishments upon their turnover. On 4 Dec. 1921 all co-operative societies celebrated Co-operative Day by soliciting new members. The result was a substantial increase in membership. In February 1922 there were 2,098 distributive co-operatives affiliated with the National Federation of Distributive Societies. This represents about one-half the number of societies and co-operators in France. There are approximately 2,500,000

members of co-operative societies, and the turnover of their distributive stores amounts to \$250,000,000 annually. Due to the marked financial growth of the banking department of the Co-operative Wholesale Society (*Magasin de Gros*), it became necessary in May 1922 to create an independent co-operative bank. The shares of this bank are owned by the co-operative wholesale and retail societies. The by-laws of the association provide that the profits in excess of 6 per cent on the capital are to be divided among the borrowers. The primary purpose of the bank is to provide credit for the affiliated co-operative societies.

Italy.—There are to-day about 20,000 co-operative societies in Italy of the most bewildering variety. Most of them are agricultural and credit societies; many are labor associations of masons, bricklayers, dockers, and other skilled and unskilled workers, who take contracts for construction work. There are about 6,000 co-operative stores. The societies are divided according to their political and religious affiliations. There are co-operatives of Socialists, Nationalists, Catholics, ex-soldiers, Republicans, Communists, Trades' Unionists, and Fascisti. In the past the Italian government loaned vast sums of money to the co-operatives. With the accession to power of the Fascisti, these subsidies were withdrawn, leaving the co-operatives in a tottering condition. During the year, hundreds of co-operatives were destroyed or confiscated by the Fascisti, while hundreds of other societies were prevented from effectively operating. Armed bands of Fascisti, whose operations were financed and supported by private merchants, burned to the ground co-operative societies in Ferrara, Bologna, Parma, Turin, Verona, Tuscany, Mantua, Padua, and other provinces. The International Co-operative Alliance and its affiliated members addressed vigorous protests to the Italian government for its failure to protect the co-operatives, which are dedicated to a peaceful, orderly change of the contemporary economic society.

In all parts of the world, the Consumers' Co-operative Movement made slow and steady progress in the year 1921-22.

HARRY RAPPAPOORT,

Publicity Director, The Co-operative League of the United States of America.

COPPER. The smelter production of copper in 1922, according to the United States Geological Survey, as compiled from reports of the smelters covering the actual production for 11 months and the estimated production in December, was about 981,000,000 pounds, an increase of 475,000,000 pounds over 1921. Productive work was resumed by practically all the large mining companies except the United Verde Copper Company by or during April 1922, one year from the general shutdown of the copper mines. The smelter production of copper for December, as estimated by the producing companies, was 103,300,000, or at the rate of about 1,240,000,000 pounds a year. The total production of new refined copper from domestic sources, determined in the same manner as the smelter production, was about 897,000,000 pounds, 288,000,000

pounds more than in 1921. The refinery production of new copper obtained from domestic and foreign sources, including the imports of refined copper, was about 1,398,000,000 pounds. In addition to the output of new refined copper, about 112,000,000 pounds of secondary copper was produced at the refineries, making the total output of the refineries about 1,510,000,000 pounds.

Although the new tariff act which went into effect 21 Sept. 1922, placed no duty on copper, it affected the records of the Department of Commerce, in which a line of division was drawn on 21 September, when the new tariff became effective. Up to that date the total imports of copper in ore, concentrates, matte, blister, and refined copper amounted to 363,443,226 pounds, of which 75,556,317 pounds was refined copper and 192,050,397 pounds was blister copper. The exports for the first 10 months amounted to 634,501,851 pounds.

The stocks of refined copper in the hands of domestic refineries on 31 Dec. 1922, as estimated by the refining companies, were about 277,000,000 pounds, compared with 459,000,000 pounds on 31 Dec. 1921. The stocks of blister copper and material in process of refining, in the hands of the smelters, in transit to refineries, and at refineries, on 31 Dec. 1922, were estimated by refining and smelting companies at about 352,000,000 pounds, compared with 283,000,000 pounds on 31 Dec. 1921.

The quantity of primary refined copper withdrawn on domestic account during the year was about 882,000,000 pounds, calculated as follows:

	1921	1922
Refinery production from domestic sources.....	600,000,000	897,000,000
Refinery production from foreign sources, including estimated imports of refined copper.....	411,000,000	501,000,000
Stocks of new refined copper, 1 January.....	659,000,000	459,000,000
	<u>1,670,000,000</u>	<u>1,857,000,000</u>
Exports, including unrefined black blister and converter copper in bars, pigs, and other forms, and refined ingots, bars, rods, etc.....	609,000,000	698,000,000
Stocks, 31 December.....	459,000,000	277,000,000
	<u>1,068,000,000</u>	<u>975,000,000</u>
Total withdrawn on domestic account.....	<u>611,000,000</u>	<u>882,000,000</u>

Much interest was aroused by the announcement on 16 Jan. 1923, that arrangements had been completed by the Anaconda Copper Company, the largest copper-producing concern in the world, to acquire the controlling interest in the Chile Copper Company, which is said to own the largest known body of copper ore in existence. About a year previous, the Anaconda company acquired the American Brass Company, the largest factory in the world for manufacturing and fabricating copper and brass. The financing involved in the deal whereby the Anaconda company secured control of the Chile company, amounted to \$150,000,000. Copper is finding increased use in several valuable alloys that have been developed, notably phosphor copper and manganese copper.

Copper Exports.—Official figures of the

copper exports of the United States for the first 10 months of 1922 show that the total shipments to foreign countries during that period amounted to 609,705,600 pounds, compared with 489,664,000 pounds for the corresponding months of 1921, an increase of 120,041,600 pounds. Shipments in 1922 were also 73,382,400 pounds larger than in the first 10 months of 1920, and 172,455,360 pounds greater than in the corresponding months of 1919. Shipments to Germany, the United States' best foreign customer, in the first 10 months of 1922 were 168,725,760 pounds, and if those to Holland be included, the total takings for German account were 195,784,960 pounds. The total exports to Germany direct in 1921 amounted to 233,072,479 pounds, in 1920 to 89,194,588 pounds, and in 1919 to 6,831,400 pounds. There were no shipments to Germany during 1916, 1917 and 1918. During 1913 exports to Germany were 307,150,761 pounds. In 1913 exports of copper to Germany constituted nearly one-third of the total foreign shipments.

France is the next best foreign customer for American copper. Shipments to that country during the first 10 months of 1922 were 109,621,120 pounds, compared with 98,731,640 pounds for the entire year 1921. England appears as the third largest customer, with takings in the first 10 months of 1922 of 78,438,080 pounds. Copper shipments to the United Kingdom for the year 1921 were 62,334,868 pounds. The Orient took during the first 10 months of 1922 49,029,120 pounds. Foreign consumption of copper made great strides in 1922. World consumption of copper was decidedly on the upgrade at the end of the year and the bulk of the enormous tonnage of war scrap which hung over the market had disappeared.

Copper Consumption.—At the close of 1922 the consumption of copper in the United States was estimated at 130,000,000 pounds a month, figures far in excess of all pre-war records and more than double the consumption for the corresponding months of 1921. Total consumption in the United States in 1921 was 615,000,000 pounds; in 1920, 1,250,000,000 pounds. The estimated consumption in 1922 was at the rate of 1,500,000,000 pounds though, due to unsatisfactory conditions in the early months of the year, it was felt that the final figures probably would show that the consumption for the entire year did not exceed 1,200,000,000 pounds. Automobile manufacturers are estimated to have used 108,280,000 pounds of copper while the building industry consumed approximately 150,000,000 pounds, an increase of more than 100,000,000 pounds as compared with the figures of 1921. At the close of the year 1922 copper was selling at 14.75 cents per pound. In February-March 1917 copper sold at more than 35 cents a pound. On 4 Jan. 1923 the announcement was made that the remainder of the 400,000,000 pounds of copper pledged with the Copper Export Association, to be sold exclusively abroad, would in all probability be liquidated within 90 days. This metal was pledged with the association as collateral for \$49,000,000 notes sold to investors when the organization was formed about three years previous to finance the export copper business, Europe then being unable to pay cash for metal purchased in this country. See also METALLURGY.

COPPER ORES, Leaching of. See METALLURGY.

COPYRIGHT. The copyright question received a large measure of attention during the year 1922. Efforts were made to remove the United States from the unseemly position it occupies before the world. With the exception of Russia, the United States was the only nation of first rank in 1922 that remained outside the International Copyright Union established in 1886 at Berne, Switzerland. The United States was barred from membership in the Union by the presence of certain clauses in its copyright law which ran counter to the basic principles of the Union. The chief of these is the requirement that an English work, in order to secure copyright in the United States, must be manufactured therein, whereas in the Union a single grant of copyright in any country which is a member of the Union is valid without further formality in all countries which are members of the Union. On 28 April, Representative Tincher of Kansas introduced a copyright measure in Congress which had the approval of the authors, printers, publishers and many independent authorities on copyright. This bill provided that copyright protection should be granted to authors of all countries within the Berne Convention from the moment their books are published in their own countries. American books must be deposited and registered at Washington after publication, and books from foreign countries need not be deposited. Should any American publisher arrange to publish in the United States a book of foreign origin he is obliged to deposit and register two copies of the book, the same as for an American book, and foreign editions of books can only be brought into the United States with the consent of the American owner of the copyright. Books of all foreign authorship, for which there is an American publisher, can only be brought into the country by a library or an individual and through the American copyright owner. The bill was opposed by many librarians on the ground that the chief beneficiary under it would be the international publisher. Through membership in the International Union the publisher's issues would have the protection of our laws against piracy, while by complying with the simple formality of a small fee and depositing two copies in Washington, he could qualify as the publisher of an American edition. This would render it impossible for librarians to order London books from London agents and would compel them to deal instead with the American house and to pay its price. It was alleged that those prices in the case of one large American importing house were at the average rate of 38.3 cents a shilling in 1922 when the actual value of the shilling was 22.5 cents. It was also alleged that the new act gave a chance for profiteering to the importers of books from countries with greatly depreciated currencies, notably Germany, and to a less extent, Italy and France. As the result of much consultation and discussion the Tincher Bill was modified and introduced in the Senate by Senator Lodge on 6 December and in the House by Representative Davis. The Lodge-Davis Bill

repeals the manufacturing restrictions entirely but soon after its introduction the printers disapproved of it on the ground that while they were asked to give up the protection of their industries by assenting to the repeal of the manufacturing clauses, the publishers were given equivalent protection in the case of English books. At a conference held on 22 Jan. 1923, the Authors League accepted the plan of the printers for a copyright bill omitting the section in question. This plan as developed in sections 4-7 of the substitute bill introduced by Representative Tincher on 26 Jan. 1923 removed the manufacturing restrictions from books of foreign authorship. Since the bill failed of passage in the Fourth Session of the 67th Congress the Copyright question remains in statu quo ante.

CORBETT, Sir Julian Stafford, English historian: b. Surrey, England, 12 Nov. 1854; d. Stopham, near Pulborough, England, September 1922. From Marlborough, he went to Trinity College, Cambridge, and took a first in the law tripos in 1876 and was called to the bar, Middle Temple, London in 1877. He practised until 1882, when he began to publish romances. In 1896 he accompanied the Dongola Expedition as special correspondent of the *Pall Mall Gazette*. In 1889 he published a biography of 'Monk,' in the 'English Men of Action' series. This was followed by 'Sir Francis Drake' in 1890; 'Drake and the Tudor Navy'; 'History of the Rise of England as a Maritime Power' (1898); 'The Successors of Drake' (1900); and other naval books. 'The Campaign of Trafalgar' (1910), attracted much attention and 'Some Principles of Maritime Strategy' (1911) was accepted as a text-book in the libraries of every man-of-war. In 1903 he was chosen Ford lecturer at Oxford and in 1904 was given the Chesney gold medal. His most considerable service to the Navy Records Society was his edition of 'The Spencer Papers.' He was knighted in 1917. In 1920 he was elected an honorary fellow of Trinity, Cambridge. Sir Julian wrote pamphlets on 'The League of Nations and Freedom of the Seas,' 'The Spectre of Navalism,' and 'The League of Peace and a Free Sea.' He was director of the historical section committee of imperial defense and was official naval historian of the World War, succeeding Sir John Knox Laughton. His first volume appeared in April 1920, and his second volume in November 1921, carrying the history down to the formation of the coalition ministry in May 1915, and the resignation of Lord Fisher and Mr. Churchill. He also published: 'England in the Mediterranean'; 'Fighting Instructions 1530-1816'; 'England in the Seven Years' War'; and 'Signals and Instruction 1778-94.'

CORK CUTTING. According to the Department of Commerce, 45 firms engaged in cork cutting in the United States in 1921 turned out products valued at \$12,968,000, as compared with products valued at \$16,282,000 turned out by 55 establishments in 1919, and products valued at \$7,875,000 turned out by 39 establishments in 1914. The industry includes various articles manufactured from cork, such as bottle corks, life preservers, cork board for insulation, etc.

Persons engaged in the industry, including proprietors, firm members, salaried employees and wage earners, totaled 3,154 in 1921, 4,061 in 1919 and 3,732 in 1914. Salaries and wages paid out amounted to \$3,516,000 in 1921, \$4,415,000 in 1919 and \$1,980,000 in 1914. Materials used cost \$6,773,000 in 1921, \$9,135,000 in 1919 and \$4,751,000 in 1914. Of the 45 establishments which reported products valued at \$5,000 or more in 1921, 25 were located in New York, eight in New Jersey, six in Pennsylvania, three in Illinois, two in Massachusetts and one in Louisiana.

CORN. The 1922 corn crop of the United States, as estimated by the Department of Agriculture in its final report for the year, was 2,890,712,000 bushels, as compared with the 1921 crop of 3,068,569,000 bushels, the 1920 crop of 3,208,584,000 bushels and the five-year average crop for years 1916-20 of 2,830,942,000 bushels. The harvested area for the three years mentioned was 102,428,000 acres in 1922; 103,740,000 acres in 1921 and 101,699,000 acres in 1920. The average yield per acre was placed at 28.2 bushels in 1922, 29.6 bushels in 1921 and 31.5 bushels in 1920. The average farm price of corn on 1 December of the three years mentioned was 65.7 cents per bushel in 1922, 42.3 cents per bushel in 1921 and 67 cents per bushel in 1920. The total farm value of the 1922 crop, based on 1 December prices, was \$1,900,287,000, as compared with \$1,297,213,000, the value of the 1921 crop and \$2,150,332,000 the value of the 1920 crop. In 1922, the crop had an estimated per acre value of \$18.55, as compared with an estimated per acre value of \$12.50 in 1921 and an estimated per acre value of \$21.14 in 1920. Iowa led all States in production in 1922 with an estimated yield of 455,535,000 bushels, as compared with 430,500,000 bushels in 1921 and 473,800,000 bushels in 1920. Illinois was second with 313,074,000 bushels in 1922, compared with 305,966,000 bushels in 1921 and 314,133,000 bushels in 1920. Nebraska was third with 182,400,000 bushels in 1922, compared with 207,732,000 bushels in 1921 and 255,528,000 bushels in 1920. Indiana produced 176,305,000 bushels in 1922, 169,848,000 bushels in 1921 and 195,777,000 bushels in 1920. Missouri produced 175,275,000 bushels in 1922, 182,880,000 bushels in 1921 and 212,672,000 bushels in 1920. Ohio produced 149,097,000 bushels in 1922, 155,185,000 bushels in 1921 and 172,081,000 bushels in 1920. Minnesota produced 131,307,000 bushels in 1922, 156,620,000 bushels in 1921 and 123,300,000 bushels in 1920. Texas produced 114,580,000 bushels in 1922, 156,920,000 bushels in 1921 and 142,662,000 bushels in 1920. South Dakota produced 110,038,000 bushels in 1922, 125,632,000 bushels in 1921 and 109,500,000 bushels in 1920. According to the estimates no other State produced as much as 100,000,000 bushels in 1922, although both Kansas and Wisconsin came close to the mark, the former producing 98,391,000 bushels, compared with 96,748,000 bushels in 1921 and 132,686,000 bushels in 1920; while the latter (Wisconsin) produced 98,300,000 bushels in 1922, 97,482,000 bushels in 1921 and 89,294,000 bushels in 1920. Production in 1922 in the remainder of the principal corn growing States was as follows: Kentucky, 88,060,000 bushels; Tennessee, 75,440,000 bushels; Pennsylvania, 69,212,000 bushels; Michigan, 60,716,000 bushels;

Oklahoma, 57,600,000 bushels; Virginia, 53,312,000 bushels; Georgia, 52,620,000 bushels; Mississippi, 51,065,000 bushels; Alabama, 50,932,000 bushels; North Carolina, 50,520,000 bushels; Arkansas, 45,825,000 bushels; South Carolina, 29,899,000 bushels; Louisiana, 29,002,000 bushels; New York, 28,329,000 bushels; Maryland, 25,400,000 bushels; West Virginia, 20,536,000 bushels; North Dakota, 18,700,000 bushels; Colorado, 18,320,000 bushels; Florida, 10,500,000 bushels; New Jersey, 9,912,000 bushels; Montana, 5,475,000 bushels and Delaware, 5,439,000 bushels. No other State produced as much as 5,000,000 bushels, California coming nearest with 4,176,000 bushels.

Corn Exports.—The exports of corn from the United States during the 1921-22 cereal season were 40 per cent greater than for the same period of the preceding year. During the period mentioned the exports of corn from the United States to France, Belgium, Italy and Spain were five times larger than the pre-war yearly average.

In the following table are shown the amounts of corn exported from the United States to certain specified countries during the cereal year 1921-22:

EXPORTS OF CORN FROM THE UNITED STATES.
(IN THOUSANDS OF BUSHELS.)

COUNTRIES OF DESTINATION	12 months—	
	1920-21	1921-22
Belgium.....	1,196	5,122
France.....	406	3,623
Italy.....	28	2,250
Spain.....	12	2,425
Denmark.....	5,539	6,316
Germany.....	12,560	30,530
Netherlands.....	12,753	25,032
Norway.....	93	1,247
Sweden.....	765	679
Canada.....	57,985	44,795
United Kingdom.....	13,493	27,873
Cuba.....	2,072	2,850
Mexico.....	11,592	4,013
Other countries.....	564	9,248
Total.....	119,058	166,003

During the last cereal year the exports of American corn to Europe were greater than they had been for any 12 months since 1905. During the first six months of the year Europe purchased 100 per cent more corn than was bought during the second six months of the year. The purchases of American corn by countries other than European, on the other hand, were 70 per cent greater during the second half of the year. The months from November to April are the most favorable ones for exports of corn from American ports. After that time, or during the warm months, it is considered safer to ship corn to Europe via Canada, which explains, in a measure, the heavy exports of corn to Canada during the warm months of the year. There can be no doubt that much of the corn which goes to Canada subsequently finds its way into European countries. While our exports of corn to Europe decrease in volume as summer approaches, it is noticeable that the same tendency does not hold with respect to the exports of corn from the United States to Cuba and Mexico.

World Production.—Authentic figures showing the world corn crop of 1922 were not

available, but the crop of 1921 was estimated at 3,710,000,000 bushels, compared with 3,129,000,000 bushels grown in 1917. The European crop of 1922 was estimated by the United States Department of Commerce at 326,000,000 bushels, compared with 404,000,000 bushels in 1921 and the pre-war average of 538,000,000 bushels.

Canned Corn.—Reliable authorities estimated the corn pack of 1922 at approximately 11,420,000 cases, of which about 2,870,000 cases remained unsold on 20 November. The Maryland packing exceeded 1,940,000 cases, while Illinois packing fell but slightly short of that figure. Iowa and Nebraska together packed almost 2,000,000 cases, while Ohio packed over 1,000,000 cases, as did Maine also. See also AGRICULTURE IN THE UNITED STATES.

CORN BORER, European, first found in the United States in 1917, it has so far done little damage to the corn crop except in a few sections where this grain is not of major importance. But it has occupied territory that makes it a constant menace to the great corn-growing region and its steady movement westward indicates that the insect is about to invade the area of most intensive corn production. In anticipation of the need of corn growers for detailed descriptions and information on this pest, the United States Department of Agriculture has issued Farmers' Bulletin 1,294, 'The European Corn Borer and Its Control,' by D. J. Caffrey and L. H. Worthley. The bulletin is intended to supply practical information to corn growers, corn canners, dealers in green vegetables and market and home gardeners.

"When first found in this country," said the Department of Agriculture, in a statement issued 26 Jan. 1923, "the European corn borer had occupied an area of about 100 square miles in the vicinity of Boston, Mass., and in the past five years it has spread over a total area of nearly 7,700 square miles. It is found in Eastern Massachusetts, Southeastern New Hampshire and Eastern New York, and in a narrow belt along Lake Erie in New York, Pennsylvania, Ohio and Michigan. There is an extensive infested area in Ontario, and it may be that fields on the American side of the lake were first infested by insects originating in Canadian fields. The insect is thought to have been brought into New England in 1909 or 1910 in broom corn imported from Hungary and Italy.

"Although in this country corn seems to be its favorite food, the insect also attacks other field crops, vegetables, flowers, large-stemmed grasses, and weeds. It will use any kind of corn as a host, but seems to prefer sweet and flint, with dent corn next in favor, and corn in general is preferred to any other plant grown in this country. Among the garden vegetables, celery, beets, and rhubarb are affected to the greatest extent.

"The damage to corn is done by the larvae, or borers, chiefly in the ears and stalks, but they also tunnel within the tassel, the midrib of the leaf, the brace roots, and the stubble. In addition, the young larvae often feed on the surface of the plant to a slight extent, particularly upon the leaf blades, the tassel buds, the husks and silks, and between the leaf sheath and the stalk. The injury to plants other than corn is

of the same general character as that to corn, except that in some instances special parts of the plants appear to be preferred as food or shelter. . . . There are several insects that may be mistaken for this pest, among them the corn earworm, the stalk-borer, the smartweed borer, the celery stalkworm, the lined stalk-borer, and the larger corn stalk-borer.

"The most conspicuous sign of infestation in a field of growing corn is the breaking over of tassel stalks caused by the boring of the larvae. In some fields as high as 80 per cent of broken tassels have been counted. However, as has been said before, the worms attack most other parts of the plant. The entrance openings are usually marked by collections of white or light-brown sawdust-like material."

The department has established quarantines covering the known infested areas and violations of the regulations bring on severe penalties. In a general way the principal control measures are as follows: Burn, or otherwise destroy, before 1 May of each year, all cornstalks, corncocks, corn stubble, vegetable, field and flower crop remnants, weeds and large-stemmed grasses of the previous year. Remove all remnants of leaves from rhubarb stems before marketing. Keep cultivated fields, fence rows, field borders, roadsides, etc., free from large weeds or large-stemmed grasses. Cut corn close to the ground. Cut and remove sweet-corn fodder from the field as soon as the ears are harvested. Feed direct to the live stock, place in the silo or destroy by burning. Cut and remove field corn from the field as soon as the ears are mature. Feed the stalks to live stock as soon as possible and burn or otherwise dispose of the uneaten parts before 1 May following. Shred or cut the fodder to increase its consumption. Plow under thoroughly in the fall all infested cornstalks, corn stubble, other crop remnants, weeds and similar material which it is impractical to destroy in any other manner. When necessary to adopt this practice, an attempt should be made to plow under all of the material to a depth of at least six inches. Small areas of trap crops may be planted. Other procedures are described in the department's bulletin, copies of which may be obtained without cost from the Department of Agriculture, Washington, D. C. See also ENTOMOLOGY, UNITED STATES BUREAU OF.

CORNELL COLLEGE, a co-educational institution, non-sectarian but under the auspices of the Methodist Church, founded in 1853 and located at Mount Vernon, Iowa. In 1922-23 it had a faculty of 52 members, 782 students, property valued at \$559,000 and an income of \$178,500. Harlan Updagraff, Ph.D., is president-elect.

CORNELL UNIVERSITY, a State co-educational institution of higher learning, founded in 1865 and located at Ithaca, N. Y. In 1922-23 it had a faculty of 788 members, 5,188 students and property valued at \$29,455,786.69. Its income for the fiscal year ending 30 June 1922 was \$5,543,274.38. Livingston Farrand, M.D., LL.D., L.H.D., is president.

COSGRAVE, William T., Irish statesman and president of Dail Eireann: b. Kilkenny, 1880. He received a common school education

and also received a secondary education in one of the colleges of the Irish Intermediate Board. He entered on a business career in Dublin and amassed a considerable fortune. For many years he took an active interest in politics and in 1909 he became a member of the Irish Republican Brotherhood, the secret revolutionary body in Irish politics. In 1909 Mr. Cosgrave was elected a member of the Dublin city council, and served as member of the Dublin Corporation until 1922. He took a prominent part in forwarding the fortunes of the Sinn Fein party. In 1916 his part in the fight of the Irish Volunteers was of sufficient magnitude to bring him to trial on the third day of the field-general court-martial which resulted in the execution of 15 Republican leaders. He was placed on trial 5 May 1916 and received the death sentence which was later changed to penal servitude for life. He was imprisoned until the general amnesty of 1917, when he was released on 17 June. In the autumn of 1917, Cosgrave was elected to Parliament in the Kilkenny by-election for the seat made vacant by the death of Patrick O'Brien, and soon after his election was made treasurer of the Sinn Fein. Following out the policy of the Sinn Fein he did not take his seat. In May 1918 he was selected to accompany the lord mayor of Dublin on the proposed trip to America to lay the case of Ireland's opposition to conscription before President Wilson; but the same month he was arrested and deported to England, remaining there until 1919, when he was returned to Dublin. In March 1920 he was again arrested and deported. For a time, while Lord Mayor Tom Kelly was in Wormwood Scrubs Prison, Cosgrave acted as deputy mayor of Dublin. On his return to Ireland from his final deportation, he became minister of local government in the Dail Eireann. In January 1922 he succeeded in getting adopted a plan to spend £1,000,000 on housing within the year. During the fatal illness of Arthur Griffith, president of Dail Eireann, and the absence of Gen. Michael Collins in the field against the Republicans, most of the work of the Provisional Government fell upon Cosgrave, and the death of these two leaders in August 1922 found him prepared to assume the office of head of the Provisional Government. Mr. Cosgrave at once inaugurated a stern policy against the so-called "Irregulars" or Republicans and his Government had the moral courage to arrest over 2,000 young men who were disturbing the peace of the country. Late in 1922, when the followers of De Valera initiated a policy of assassination of leaders and members of the Provisional Government, President Cosgrave countered by executing several of the rebel leaders, notably Erskine Childers and Roderick O'Connor. President Cosgrave pursued a firm internal policy and his Government weathered more than one economic disturbance in 1922. Under his guidance the new constitution of the Free State was piloted through the Dail and ratified. In December he inaugurated the first government of the Irish Free State—the Provisional Government having come to end automatically on 6 December, and he received Timothy M. Healy, the first Governor-General. At the close of the year his Government was engaged in rounding up the scattered bands of

irregulars, who were devastating the country under the guise of military operations in behalf of the republic. The most important problem awaiting solution in 1923 was the Ulster boundary question. The Bonar Law Government in Great Britain was seemingly willing to let this question go over, as it was friendly to Ulster, while the Nationalists of the counties of Tyrone and Fermanagh were clamoring for inclusion in the Free State. Strikes and other labor disturbances caused further anxiety to the Irish executive but he was fortunate in securing the moral support of the entire Irish hierarchy—ever a potent force in that country.

COSTA RICA, a republic of Central America to the north of Panama and south of Nicaragua. It has an area of 23,000 square miles and is divided into the seven provinces of San Jose, Alajuela, Cartago, Guanacaste, Heredia, Puntarenas and Limon. The population according to the present estimates is 468,373. The last census was taken in 1892. The capital, San Jose, has a population of 39,000. Other cities are Cartago (17,402); Heredia (13,885), and Limon (10,231).

Education.—Primary education is free and compulsory. There are 411 elementary schools with 32,836 pupils and 1,348 teachers. There is a lyceum at San Jose attended by 450 boys and a college for girls with an equal number of students. Other colleges are at Alajuela, Cartago and Heredia. There is a normal school at the last-named city which has over 400 students. There are in the capital faculties of law, medicine, pharmacy and dentistry.

Religion.—The state religion is the Roman Catholic but all denominations are guaranteed full liberty under the constitution. There is an archbishop and one suffragan bishop.

Production.—The two chief products of Costa Rica are bananas and coffee. About 100,000 acres are devoted to the former and the yearly production is about 9,000,000 bunches of nine "hands" and valued at \$3,000,000. Coffee production averaged in 1921 16,000 tons. Indian corn, rice, sugar and potatoes are grown mostly for home consumption. Tobacco and honey are becoming prominent among the country's products in late years. Live stock thrive in the rich pasture lands and the supply is fast increasing. The republic has 400,000 head of cattle, 66,000 horses, 80,000 swine. Gold and silver mining form the second industry of importance. The ores of these metals are for the most part on the Pacific slopes and manganese ore has come to view recently. In the republic there are 3,296 factories; many of these are establishments for the drying of the coffee beans. There are also broom and wooden-ware factories.

Commerce.—The foreign trade of the republic is mostly with the United States. Coffee, bananas, sugar, hides, gold and silver, hardwoods are the principal exports, while flour and cotton textiles form the largest part of the imports. The total foreign trade suffered a decline in 1921 and in 1922, due to the general trade depression throughout the world. It was about \$23,000,000 in the latter year, of which amount the imports were two-fifths.

Finance.—The chief sources of Government revenue are land taxes, customs dues, liquors,

railways, post office, telegraphs, etc. The total revenue in 1921-22 was \$7,875,600. In the same fiscal year the expenditures were slightly greater than this amount. The largest item of expenditure was for the public debt service, which amounted to \$1,265,430. The 1922 deficit amounted to 657,115 colones. The 1923 budget provides for estimated revenues and disbursements of 20,218,518 colones (4.50 colones = \$1.00).

Communications.—There are 402 miles of railways, part of which is state-owned and part by the United Fruit Company. There are about 35 miles of roadways suited to motor traffic. With a seacoast on both the Caribbean and the Pacific, the republic is accessible through its port of Limon on the former, from ports of the United States, Europe, the West Indies and South America. Excellent service is maintained by the United Fruit Company from Boston, New York and New Orleans. On the Pacific side, Puntarenas is the principal port and is in communication with Panama and other West Coast ports. Regular steamer service from Colon, Panama, to Limon is well established. San Jose, the capital, 104 miles inland from the Caribbean, is connected by rail with both Limon and Puntarenas.

Government.—There is universal suffrage for all males who are self-supporting and under no civil disability. The President, elected for a term of four years has executive authority. Legislative authority is vested in a House of Representatives called the Constitutional Congress, with 43 deputies, or one to every 8,000 inhabitants. Voting is public. The President is assisted by six secretaries of state, who are his appointees and are responsible to him. The President in 1922 was Don Julio Acosta Garcia, who assumed office 8 May 1920 for a period of four years.

History.—On 20 Jan. 1922 President Acosta approved a change in article 3 (relating to payment of the tax for remitting funds) of the postal treaty of 9 Nov. 1899 between France and Costa Rica. On 21 January, at San José plenipotentiaries of the United States and Costa Rica signed a treaty for the extradition of criminals, and in due course President Acosta submitted it to the Costa Rican Congress for approval. On 22 February the Senate of the United States ratified that treaty. On 28 March the Costa Rican students who were awarded the 10 scholarships given by the Mexican Government arrived in Mexico City to take up their studies. On 17 May Congress approved, and on 23 May President Acosta signed, the arbitration convention with Great Britain (dating from 12 Jan. 1912 and naming as arbitrator the Chief Justice of the United States) in the matter of the Aguilar-Amory contract concessions and the Royal Bank of Canada's payment of a check drawn by the Tinoco Administration on the Banco Internacional of Costa Rica. On 19 May was promulgated a law, immediately effective, providing for the unification of the paper currency of Costa Rica and the withdrawal from circulation of the bills of the defunct Banco Comercial. Next day, President Acosta signed Decree No. 8, establishing an office of control of expenditure of Government funds, which

should have general supervision of the Government's financial affairs. On 3 June Joaquín Aguilar Guzmán, Justice of the Court of Appeals since 1919, died in San José. The extradition treaty between the United States and Costa Rica, having been ratified by the Costa Rican Congress, was signed by the executive 12 June. On 1 July Costa Rica, by the opening of new cable facilities, was placed in telegraphic communication with nearly all American and European nations; and at the opening of the cable announcement and congratulatory messages were sent and received within a few minutes between Costa Rica and Washington. On 20 July President Acosta ratified the Pan American postal convention regarding parcel post, with its protocol, and also the Pan American convention in respect to money orders. On 14 September the *Diario de Costa Rica* stated that Great Britain had approved the convention providing for arbitration of the Royal Bank of Canada and Amory claims (that is, the Alvarado-Bennett convention, as amended by the Congress of Costa Rica). Toward the end of the year announcement was made that Mexico, as a part of its government's plan to increase friendly relations with Central America, would establish a consulate in the city of San José. And, as part of the rapprochement of the Central American states, Costa Rica established a legation in the Republic of Guatemala. See also CENTRAL AMERICAN CONFERENCE.

COST OF LIVING. See LIVING, COST OF.

COTTON. The 1922 cotton crop of the United States (exclusive of linters) was estimated by the Department of Agriculture in its final ginning report, issued 20 March 1923, at 9,761,817 bales of 500 pounds each, gross weight, or 202,183 bales below the December forecast. Each bale, it was stated, was estimated to contain 478.4 pounds of lint and 21.6 pounds of bagging and ties. With the single exception of the 1921 crop, which amounted to but 7,953,641 bales, the crop of 1922 was the smallest raised in the United States in 21 years. Production in 1920 amounted to 13,439,603 bales; in 1919 to 11,420,763 bales; in 1918 to 12,040,532 bales; in 1917 to 11,302,375 bales; in 1916 to 11,449,930 bales; in 1915 to 11,191,820 bales. The five-year average production for 1916-20, inclusive, was 11,930,641 bales. The following table shows the ginning returns for 1922-23 by States compared with preceding seasons:

	1922-23	1921-22	1920-21	1919-20
Alabama.....	819,870	579,065	670,721	716,655
Arizona.....	44,132	45,323	104,853	58,472
Arkansas.....	1,010,428	796,863	1,177,095	867,177
California.....	28,473	34,109	77,443	59,082
Florida.....	27,428	10,905	19,194	17,317
Georgia.....	735,874	787,052	1,446,577	1,678,758
Louisiana.....	345,407	278,805	388,625	303,035
Mississippi.....	985,787	812,867	897,733	950,007
Missouri.....	139,881	69,931	74,332	62,667
North Carolina.....	878,997	776,206	936,582	857,253
Oklahoma.....	637,003	481,286	1,287,689	1,002,178
South Carolina.....	517,601	754,551	1,639,470	1,462,277
Tennessee.....	385,860	301,940	313,747	301,408
Texas.....	3,125,752	2,197,644	4,130,197	2,960,335
Virginia.....	27,011	16,368	20,844	23,076
Others.....	19,544	8,715	12,673	4,935

The census estimate on the crop of 1922 compares as follows with the census estimate of

preceding crops. Figures represent bales of 500 pounds, excluding linters:

1922.....	9,761,817	1916.....	11,449,930
1921.....	7,953,641	1915.....	11,191,820
1920.....	13,439,603	1914.....	15,934,649
1919.....	11,420,763	1913.....	14,032,792
1918.....	12,040,532	1912.....	13,529,303
1917.....	11,302,375	1911.....	15,603,850

Linters.—The cotton reports of the United States Department of Agriculture do not include linters which are a product obtained at oil mills from the seed. The average annual production of linters for the five years, 1916–20, was about 7.4 per cent as much as the lint production. It would seem safe, therefore, to estimate the American linters' crop of 1922 at around 500,000 bales.

Acreage and Value.—The cotton acreage of the United States in 1922 was 33,742,000, as compared with 30,509,000 acres in 1921 and 35,878,000 acres in 1920. The average yield per acre in 1922 was 141.6 pounds as compared with 124.5 pounds in 1921 and 178.4 pounds in 1920. The total farm value of the 1922 crop, based on the 1 December prices, was \$1,192,461,000, compared with \$643,933,000 in 1921 and \$933,658,000 in 1920. The value per acre was \$35.21 in 1922, \$21.05 in 1921 and \$26.02 in 1920. The following table shows the cotton acreage, yield per acre and value of the crop per acre for the year 1922, compared with 1921:

COTTON ACREAGE, YIELD AND PER-ACRE VALUE
1922–1921.

STATE	Acreage		Yield per acre		Value per acre, basis 1 Dec. price	
	1921	1922	1921	1922	1921	1922

¹ Lower California (85,000 acres in 1921, and 122,000 acres in 1922) included in California figures but excluded from United States totals.

Boll Weevil.—To a very large extent the short American cotton crop of 1922, like the even shorter crop of 1921, was due to the ravages of the boll weevil, which now infests over 90 per cent of the cotton area of the country. Experts of the Department of Agriculture estimate the cotton destroyed in the United States by this pest in 1921 at 6,277,000 bales, while it is believed to have wrought equally as great havoc in 1922. "The economic burden of the boll weevil to cotton producers," said the Department

of Agriculture, "can be made more understandable perhaps by comparisons. For example, the picked crop of cotton lint was 7,954,000 bales in 1921, and the weevil prevented the production of 6,277,000 bales. Hence the damage to the crop was equal to 79 per cent of the harvested crop. Had the weevil been innocuous, the cotton acreage of 1921, small as it was, would have produced 14,231,000 bales of lint cotton." In the 13 years from 1909 to 1921 inclusive, the boll weevil is estimated to have destroyed 28,776,000 bales of cotton, or a yearly average of 2,214,000 bales. Assuming that this pest caused as much damage in 1922 as it was estimated to have caused in 1921, the total amount of American cotton destroyed by it since 1909 would be approximately 35,000,000 bales. The following table based on an Associated Press Dispatch and reproduced from *The Literary Digest* of 16 Sept. 1922 shows by years, from 1909 to 1921, the cotton produced, damage of all kinds to the crop and the damage attributed to the boll weevil.

COTTON PRODUCTION AND DAMAGE, 1909–1921.

YEAR	Weevil damage	All damage	Crop produced
1921.....	6,277,000	10,712,000	7,954,000

As described in a report of the United States Chamber of Commerce, the boll weevil is about one-fourth of an inch in length and one-eighth of an inch in width, or about the size of a common house fly. Coming originally from a tropical climate, it displays most remarkable adaptations to change of environment. It passes the winter in its adult state and lives entirely without food, seeking such shelter and protection as are afforded in stored cotton seeds, barns, hay stacks, fence rows, hedges, brush piles and the like. The period of hibernation depends upon the weather, and the weevil does not emerge from its hiding place until the young cotton begins to show above the ground. The insect then immediately attacks the young cotton for food. Cotton, in fact, so far as is known, is the only food of the weevil. In the effort to exterminate the boll weevil, spraying with calcium arsenate seems to have given the best result. Unfortunately this article is scarce and expensive. About 8,000 tons were used last year, and it is estimated that the demand in 1923 will be for at least twice as much. According to the United States Geological Survey, the arsenic plants in the United States have a producing capacity of 18,300 tons of white

arsenic annually, but their actual output must depend largely on the plans of the two smelting companies that contemplate reducing ores and speiss directly for their arsenic content. The present demand for arsenic amounts to about 12,000 short tons a year; whereas, the available supply in 1921 from both domestic production and imports amounted to only 6,455 tons. It is manifest, therefore, that unless the production of white arsenic is increased, the demand for calcium arsenate (which contains 40 per cent of refined arsenic) for boll weevil extermination in 1923 will exceed the supply. There was much interest during the year in the announcement that a new method of reducing the boll-weevil injury to short staple cotton had been worked out at the Florida Experiment Station. This method consists in stripping off the square in May and immediately treating the plant with calcium arsenate. On 23 Nov. 1922, the Department of Agriculture indicated its faith in the possibility of conquering the boll weevil by the Florida method, by recommending to the Association of Land Grant Colleges that experimental application of the plan be made in each of the cotton-belt States. Under boll weevil conditions, the prime necessity is to mature the largest crop in the shortest possible time. To accomplish this end, the department made a number of recommendations, concluding by saying: "If weevils are numerous at the time cotton is beginning to square, destroy all possible adult weevils either by hand picking or poisoning, as may be most practicable. It is probable that only at this stage can the molasses and calcium arsenate mixture be used effectively. When squaring begins, pick and destroy all squares from the ground and the stocks once every week or 10 days for a period of about 30 days. Then, if weevils are still numerous or if as much as 10 or 15 per cent of the squares are infested, and other conditions warrant, apply the calcium arsenate dry dust poison. In the fall, as rapidly as possible, kill all cotton stocks, preferably by cutting and plowing under. The object is to destroy the food supply and breeding places of the weevil before the hibernation period." In connection with the effort to exterminate the boll weevil see the article Entomology, United States Bureau of. While the boll weevil was largely responsible for the fact that only 9,964,000 bales of cotton were picked in the United States in 1922, there were nevertheless other contributing causes. In some places in the cotton belt, notably in Georgia, there were droughts and heavy abandonment of acreage under cultivation. Early killing frosts occurred in parts of Texas. All operated to produce a situation that is extremely alarming. One of the most interesting and illuminating discussions of the whole subject appeared in a market letter issued early in January 1923 by J. W. Jay & Co., cotton brokers of New York City.

"Fifty years ago," says the Jay review, "America was raising 3 and 4 million bales of cotton annually on 10 million acres under cultivation. A decade later production had increased to 7 million bales on 15 million acres.

The first 9 million bale crop came thirty years ago when the area planted had risen to 20 million. With the overflowing of the Mississippi river in 1897 the yield was increased to 11¼ million for two successive seasons, during which the area planted was about 25 million acres. More and more land came under cultivation and in 1904 a crop of 13 million bales was produced on about 32 million acres. In 1911 production had increased to 16 million bales on nearly 37 million acres devoted to cotton production. During the five years from 1911 to 1915, the cotton acreage averaged about 35½ million and the yield averaged 14½ million bales. During the past five years, however, the average yield has amounted to but 11¼ million bales on practically 34½ million acres. In these past five years American cotton crops have averaged only 750,000 bales more than in the five years at the end of the last century, though each year has averaged more than 9,000,000 acres under cultivation in excess of the average acreage of twenty years ago.

"As a result of the steady increase in production from the early 70's to 1915, the use of cotton expanded proportionately until consumption during the three years previous to the World War averaged 14½ million bales. Luxuries of a half century ago have become necessities so that failure on the part of the South to maintain its annual output of cotton has at length created an alarming situation in the world's cotton industry. Not only have spindles increased from 124 million fifteen years ago to 153 million in 1919, but cotton has been put to a variety of uses extremely difficult to suspend. During recent years there has been no expansion in Egyptian and Indian growths which would counterbalance this decline in production in America. Nor as regards either price or quantity is it possible to consider wool or silk as likely to furnish a way out of the difficulty. In the case of copper or steel a rising price is a sufficient incentive to production to increase the supply automatically to meet the demand. But the cotton world appears to be facing the most serious problems presented since the Civil War. Even with drastic curtailment of consumption during the current season, there is every indication that on 1 Aug. 1923 reserves will be reduced to the lowest levels of this generation.

"Twenty years ago that a remunerative price to the planter could be considered a safe guarantee of a sufficient crop, to restore the balance between supply and demand, was common reasoning. But the record of the past five seasons reveals unmistakably that no similar conclusions are warranted today. The cause of the present lack of confidence is found in the presence of boll weevil throughout the cotton belt. Though up to 1900 these insects had hardly gotten beyond the limits of Texas, each year has brought a larger and larger extension until the Department of Agriculture estimates that over 600,000 of the 700,000 square miles in the cotton producing region are now infested. Thus far no successful means of extermination have been discovered. Experiments in the use of calcium arsenate under the Bureau of Entomology and tested at the laboratory in Louisi-

ana, have shown the greatest degree of success yet obtained. But the quantity of this insecticide available for use and the amount of labor involved in using it, is such that several years must elapse before this method of counteracting the effects of weevil damage can become sufficiently general to warrant hopes of a substantial increase in the yield per acre.

"That what amounts to virtually a revolution in American cotton production has been going on the past few years, is evident from developments in the Atlantic States. In the record year of 1914, Georgia raised 2,700,000 bales and in 1911 2,800,000 bales. The Department of Agriculture estimates the Georgia yield this year at 725,000 bales. In 1914 production in South Carolina aggregated 1,400,000 bales and in 1911 1,700,000 bales. The 1922 crop is placed at 530,000 bales. What happened in Louisiana, cutting former crops in that State in half, appears to be taking place in other sections of the belt. The era of the big plantation seems to have passed, bringing a change which each year makes more apparent. Discouraged over the havoc wrought in their fields by the boll weevil, small farmers and tenants have abandoned their acres. Conditions in both the States have grown appreciably more serious the past two years. A frequent sight in the smaller towns in Georgia is the wagon with its household effects trekking through. What with abnormal vicissitudes of agriculture on the one hand and the lure of the high wages in industrial centers on the other, farming conditions are not those of fifteen or twenty years ago.

"One conclusion seems inevitable. The world must be clothed. If America is no longer equal to the task other countries will eventually discover the means of filling the gap. Experiments in cotton culture are now being made in South America, Africa and Australia, but thus far without that success necessary to encourage hopes of a supply commensurate with requirements. The South is not likely to surrender its supremacy without a struggle in which every quality of American ingenuity will attempt to overcome these obstacles of nature. The fight now being waged is attracting the attention of the entire Eastern and Western world, for since Adam and Eve left the garden, mankind has not been indifferent to raiment. The year 1923 promises, therefore, to be unique in cotton history. Last year reserves of American cotton were drawn down nearly $4\frac{1}{2}$ million bales. The current season promises to deplete them 2 to $2\frac{1}{2}$ million bales more. This makes imperative a yield of $12\frac{1}{2}$ to $13\frac{1}{2}$ million bales, or there will ensue a crisis in the world's cotton industry beyond the ability of the imagination to visualize."

World Production.—According to a report of the United States Department of Commerce, the world produced during the 1922-23 season 17,664,000 bales of cotton of 478 pounds net weight. This was an increase of 2,923,000 bales over the world crop of 1921-22 which amounted to 14,741,000 bales. In 1921-22 the United States, as shown above, produced 9,964,000 bales. British India produced 3,750,000

bales; Egypt, 1,050,000 bales; China, 1,500,000 bales; Brazil, 545,000 bales and all other countries 855,000 bales. Exclusive of Mexico, the cotton area in 1922-23 was estimated by the Department of Agriculture at 57,106,000 acres or 5,044,000 acres more than the 1921-22 area and 2,736,000 acres less than the average area for the five years, 1909-13.

Cotton Prices.—From the standpoint of the prices, the outstanding feature of the cotton industry during the year 1922 was the upward swing from about 19 cents a pound in the late spring, when the new crop was just getting under way, to a fraction more than 27 cents a pound at New York on 27 December. Not since September 1920 when the price of the staple began its long decline from 43.75 cents a pound to slightly less than 11 cents a pound in June 1921 had cotton sold at such a high price. A threatened shortage of the commodity, due to the small crop of 1922 and the still smaller crop of 1921, apparently was responsible for the sensational increase in price. The season's highest average price of middling cotton in the 10 spot markets designated in the table given below was 26.57 cents a pound, touched, as was the high point in the New York market, on 27 December. On that day both March and May future contracts on the

¹ Holiday.

New York Cotton Exchange passed the 27 cent level, March contracts reaching 27.02 cents per pound and May contracts 27.10 cents per pound. On 29 December (30 December was a holiday in nearly all markets) the average price of

middling cotton in the 10 designated spot markets was 26.50 cents per pound, compared with 26.04 cents at the close of the previous week and 18.37 cents on the corresponding day in 1921. January future contracts on the New York Cotton Exchange advanced 46 points during the week, closing at 26.42 cents. January contracts on the New Orleans Cotton Exchange advanced 45 points, closing at 26.33 cents.

The following table gives the spot quotations for middling upland cotton at New York on 29 December for each of the past 32 years.

	Cents		Cents		Cents
1891	7.75	1902	8.85	1913	12.60

1900	10.31	1911	9.25	1922	26.60
1901	8.50	1912	13.20		

Continuing its sensational upward climb, on 24 Jan. 1923 cotton (that is, actual cotton) sold on the New York Cotton Exchange at 28.63 cents a pound. On the same date, January futures sold at 28.85 cents, March futures at 28.87 cents, May futures at 29.05 cents, July futures at 28.79 cents, while October cotton futures (1923-24 crop) sold on the same date at 26.77 cents a pound, which were the maximum prices recorded up to 1 Feb. 1923.

Cotton and Cotton Cloth Exports.—According to the United States Department of Commerce, the exports of raw cotton, including linters, from the United States during 1922 totaled 6,113,813 bales, compared with 6,474,105 bales exported in 1905. Exports of cotton cloths during 1922 totaled 587,760,838 square yards, compared with 551,512,942 yards exported in 1921. The following table compiled by the Department of Commerce shows the exports of cotton and cotton cloths from the United States during 1921 and 1922:

EXPORTS OF COTTON AND COTTON CLOTHS 1921-22.

	1921	1922
Raw cotton, including linters, bales	6,474,105	6,113,813

Value	\$71,573,875	\$85,232,912

¹ Quantity stated in yards prior to January, 1922.

The largest monthly export of cotton since the war was 929,671 bales in January 1920; the smallest, 146,668, in September 1920.

Cotton cloths exported from the United States during the fiscal year that ended 30 June 1922 totaled 613,000,000 yards compared with 556,000,000 yards exported during the preceding year and 415,000,000 yards exported during the fiscal year 1914. However, despite the big increase in the yardage exported in 1922 over the 1921 exports, the value of the 1922 shipments was but \$77,000,000 against \$141,000,000 for 1921. In other words, while exports increased 10 per cent in quantity in 1922, there was a decrease in the value of these exports of 45 per cent as compared with the exports of the previous year. The average price of the cotton cloths exported in 1922 was 12.5 cents a yard against an average of 25.4 cents a yard in 1921. Increased shipments to the Orient account for the greater part of the general increase in cotton cloth exports during 1922. China alone took over 30,000,000 yards in 1922 against 12,000,000 taken in 1921, while shipments to the Philippines were 87,000,000 yards in 1922 against 43,000,000 yards in the previous year. To Asia and Oceania as a whole shipments in 1922 were 162,000,000 yards compared with 96,000,000 yards in 1921. Shipments to Europe totaled 40,000,000 yards in 1922 against 20,000,000 yards in 1921 and shipments to South America, 115,000,000 yards in 1922 against 124,000,000 yards in 1921. The one grand division which showed a marked decline in the quantity of cotton cloth imported from the United States was North America to which shipments in 1922 totaled but 239,000,000 yards against 279,000,000 yards in 1921. Practically all of this fall-off occurred in the shipments to Cuba which were but 30,000,000 yards in 1922 compared with 90,000,000 yards in 1921. The figures given are exclusive of about 50,000,000 yards for which no destination had been shown at the time this article was written. Commenting upon the foregoing figures, the *Trade Record*, of the National City Bank of New York, which supplied them, asserts that the increase in exportation which they show, notwithstanding the decline in the price of cotton goods, are indicative of the steady gains which the cotton manufacturers of the United States have made in the distribution of their products to other parts of the world. During the decade which ended with 1910 cotton cloth exports from the United States averaged a little over 400,000,000 yards a year and were but 415,000,000 yards in 1914. During the World War they showed a rapid increase, averaging about 700,000,000 yards a year during the four years ending with 1920. By that time the European manufacturers, whose production had fallen off during the war, again began to be active with the result that American exports dropped to 556,000,000 yards the succeeding year. British exports of cotton cloth are still far ahead of the exports of the United States but while those of the last-mentioned country have increased 48 per cent since 1914 those of Great Britain have declined from over 7,000,000,000 yards in 1913 to approximately 3,000,000,000 yards in 1921.

Cotton Consumption.—With an estimated average world production of 16,000,000 bales, the United States Department of Commerce in a review published 13 Nov. 1922 estimated the annual consumption of cotton at 20,000,000 bales. That is why world stocks, asserts the Department of Commerce, were 5,000,000 bales less on 1 Aug. 1922 than they were on 1 Aug. 1921, and why they will diminish 3,000,000 bales more by the end of the current cotton year (1 Aug. 1923) if consumption continues at the present rate. In the review of the cotton situation referred to the Department of Commerce said: "Up to about 1915 or 1916 the world was consuming nearly 21,000,000 bales and producing not much more, with, of course, considerable yearly variations. For four or five years both production and consumption dropped, averaging about 19,000,000 bales. For the last 18 months consumption has been going up and the world is now consuming apparently better than 20,000,000 bales, while production is low, averaging for the last two years about 16,000,000 bales. In other words, at the rate of consumption for the last cotton year, which has continued so far this year, cotton is being consumed about 4,000,000 bales faster than it is being produced. This can be shown by the carry-over. On 1 Aug. 1921 the world carried over 14,000,000 bales; on 1 Aug. 1922 a little over 9,000,000 bales. If the present rate of consumption keeps up until next August, the carry-over will be not much over 6,000,000 bales, or a little less than the annual average

ply and estimated distribution of American and all kinds of cotton (including American) for the years ended 31 July 1922 and 1923.

On 12 Feb. 1923 the Department of Commerce announced the completion, through its foreign and domestic staff, of its cotton summary for the world. This summary shows that on 31 July 1922 the world stock of American cotton was 5,123,000 bales and world stocks of all kinds of cotton (including American) were 9,536,000 bales. Adding the 1922-23 season's production of 9,761,817 bales of American cotton and 17,461,817 bales of all kinds, the result is a total supply for the season of 14,884,817 bales of American and 26,997,817 bales of all kinds. This is less by about 2,400,000 bales of American and the same amount of all kinds of cotton than the supply for 1921-22. From this total supply subtract the estimated consumption for the year 1922-23 of 12,312,000 bales of American and 20,579,000 of all kinds of cotton and the indicated carry-over on 1 Aug. 1923 is only 2,572,817 bales of American and 6,418,817 bales of all kinds. That is, the stocks of American cotton will have diminished over 6,775,000 bales and stocks of all kinds, over 8,300,000 bales within only two years, and will have reached an abnormally low total.

The trend of world supplies is shown more clearly by taking from the foregoing table the estimated world carry-over for the three years:

WORLD STOCKS OF COTTON, 1 AUG. 1921, 1922 AND 1923.

WORLD'S SUPPLY AND DISTRIBUTION OF COTTON, 1921-22, WITH ESTIMATES FOR 1922-23

ITEMS	American	All kinds
	<i>Bales</i>	<i>Bales</i>

The following table shows the world production and consumption of cotton from 1908-09 to 1922-23 (estimated), and European consumption for the same years. It will be seen that even with the increase in the last two years European consumption is only 70 per cent of the pre-war average, while world consumption is almost back to normal.

"The consumption estimates covering 1922-23 are based upon reports submitted by government representatives abroad, which gave the consumption in each country reported on, for the first four months of the season, 1 August to 1 Dec. 1922. From these consumption figures for the first four months, estimates have been made for the entire year. Due consideration has been given to general economic conditions, as well as to special conditions affecting the textile industry in each country; and if some unforeseen change does not occur, it is believed that the totals given are approximately correct. Allowance has already been made for decreases in consumption in many of the countries during the remaining months of the season; but if the price of cotton should go so high as to cause a general curtailment of mill consump-

tion, the quantities consumed for the remainder of the cotton year might fall off so sharply that the above totals would not be reached."

American Cotton Holdings and Consumption.—According to figures supplied by the Bureau of Census the cotton held in consuming establishments in the United States on 31 Dec. 1922 was 1,921,295 bales of lint and 123,104 bales of

In explanation of its method of arriving at the 1922-23 figures, the Department of Commerce says:

linters, compared with holdings totaling 1,738,138 bales of lint and 168,080 bales of linters on 31 Dec. 1921. Cotton held in public storage and

at compresses on 31 Dec. 1922 was 4,074,945 bales of lint and 38,103 bales of linters, compared with holdings on 31 Dec. 1921 of 5,206,663 bales of lint and 171,303 bales of linters. Cotton spindles active during December 1922 numbered 34,968,440, compared with 34,439,142 active in December 1921. The following table shows the monthly consumption by bales of domestic and foreign cotton (linters excluded) during the four-year period from 1919 to 1922, inclusive:

Fertilizer.—Commercial fertilizer was used on about 33 per cent of the 1922 American cotton acreage or on about 11,500,000 acres, according to data collected by the United States Department of Agriculture. An average of 249 pounds to the acre was applied, while the total amount of fertilizer used was 1,429,000 tons. This fertilizer had an average value of \$29.48 per ton, a total value of \$42,121,000. Using an average of 410 pounds per acre, North Carolina led all States in the application of commercial fertilizer to cotton. Virginia was a close second with 400 pounds to the acre, but the other States used far less, South Carolina ranking third with 280 pounds per acre.

Cottonseed and Cottonseed Products.—Statistics supplied by the Federal Census Bureau fix the amount of cottonseed crushed in the United States during the cotton year which began 1 Aug. 1921 and ended 31 July 1922 at 3,001,449 tons, compared with 4,069,166 tons crushed during the preceding year. The quantity received at the mills during the year was 2,918,102 tons, while the carry-over from the previous year was 99,821 tons. Cottonseed held at the mills on 31 July 1922 amounted to 13,880 tons. The amount of crude oil produced from 1 Aug. 1921 to 31 July 1922 amounted to 928,615,566 pounds; shipped out 934,056,333 pounds. The supply on hand 31 July 1922 was 6,897,496 pounds, against 18,762,794 pounds on 1 Aug. 1921.

The production of refined oil from 1 Aug. 1921 to 31 July 1922 was 839,783,005 pounds. The supply on hand on 31 July 1922 was 164,442,709 pounds, against 228,263,633 pounds on 1 Aug. 1921.

The output of cake meal from 1 Aug. 1921 to 31 July 1922 was 1,351,884 tons; shipped out, 1,320,799 tons. The supply on hand 31 July 1922 was 67,388 tons, against 36,303 on 1 Aug. 1921.

The production of hulls from 1 Aug. 1921 to 31 July 1922 was 835,074 tons; shipped out, 982,538 tons. The supply on hand on 31 July 1922 was 25,806 tons, compared with 73,280 tons on 1 Aug. 1921.

The output of linters from 1 Aug. 1921 to 31 July 1922 was 398,022 500-pound bales; shipped out, 481,488 500-pound bales. The supply on hand 31 July 1922 was 40,911 500-pound bales, against 124,477 500-pound bales on 1 Aug. 1921.

The yield of hull fiber from 1 Aug. 1921 to 31 July 1922 was 41,122 500-pound bales; shipped out, 38,436 500-pound bales. The supply on hand on 31 July 1922 was 34,362 500-pound bales, against 37,676 500-pound bales on 1 Aug. 1921.

The production of grabbots, motes, etc., from 1 Aug. 1921 to 31 July 1922 was 12,079 500-pound bales; shipped out, 17,177 500-pound bales. The supply on hand on 31 July 1922 was 1,522 500-pound bales, against 6,620 500-pound bales on 1 Aug. 1921.

The exports of linters for the 12 months ended 31 July 1922 amounted to 132,295 running bales, against 51,409 bales in the 12 months ended 31 July 1921.

The cottonseed produced in the United States in 1922-23 was estimated at 5,971,000 tons, valued at \$155,246,000. See also AGRICULTURE IN THE UNITED STATES; AGRICULTURE, UNITED STATES DEPARTMENT OF; ENTOMOLOGY, UNITED STATES BUREAU OF; PLANT INDUSTRY, BUREAU OF.

COTTONSEED. See COTTON.

COUDEN, Henry Noble, American clergyman; b. Marshall County, Ind., 21 Nov. 1842; d. Fort Myer, Va., 22 Aug. 1922. He served in the Union Army during the Civil War from April 1861 until July 1863, when he was honorably discharged because of a wound received in battle which destroyed the sight of both of his eyes. Thereafter he was graduated from the State School for the Blind at Columbus, Ohio, and then studied for the ministry at the Divinity School of Saint Lawrence University, Canton, N. Y. He was ordained a Universalist clergyman in 1878. In 1895, during the administration of President Cleveland, he was made Chaplain of the House of Representatives and held the office until he resigned 28 Feb. 1921. He was frequently referred to as the "Blind Chaplain of the House."

COUËISM, a theory of autosuggestion propounded by Émile Coué, a chemist of Nancy, France, after 20 years' study, in which he continued the work and experiments of Liebault, sometimes called the father of the doctrine of suggestion. Coué holds that the imagination or subconscious mind is stronger than the will, or conscious mind and that in conflicts between the two the subconscious mind is the victor. He contends that not only the moral acts of the individual but the action of every organ in the body of the individual obeys the subconscious mind. He proposes to control the subconscious mind through a form of hypnotism.

At Nancy, Coué has a sanitarium where he practises gratis. His first act is to place his patient in a passive frame of mind—there must be no will to be better, only a sincere belief that every ill, physical or mental, will be cured. To impress upon the patient the superiority of the subconscious over the conscious mind he explains that, if a plank 30 feet long and 10 inches wide is placed on the ground and the patient is

told to walk that plank he can do so without any difficulty, because he believes that he can. If the plank is then placed several hundred feet in the air and the patient is told to walk this plank, although his conscious mind realizes that this is possible, his subconscious mind is so sure that he will fall that he does fall. He illustrates to the patient that if he will concentrate on the idea of sucking a lemon his mouth will fill with saliva although the acid fruit has not been touched. That is the subconscious mind forcing an organ to obey an order which has been instilled in the imagination. The patient is then subjected to a series of hypnotic experiments, such as having him concentrate on the idea that his hands, placed together, cannot be separated; that he is going to fall, etc. Having firmly established in the patient's mind the power of the imagination over the will he is ready for the second step in his method.

The patient is told to lie down and, clearing his mind of all other thoughts, to repeat over and over in a sing-song voice "Every day in every way I am getting better and better." This is to be repeated aloud 20 times each day, preferably in bed and with a cord, knotted 20 times, in order that the repetition may be counted as mechanically as possible. The idea is then not a part of the patient's will to get better but a part of his subconscious belief that he is getting better. The subconscious mind will then direct the organs, as in the case of supplying saliva when the imagination has concentrated on sucking a lemon, to do the thing which will make the patient better. The patient who has rheumatism, concentrating on getting better each day will give his imagination the picture of himself able to walk, then able to run and the subconscious mind will direct the organs accordingly.

In every case M. Coué forbids an expression of the will to do. He holds that when the patient says "I will not be ill," the idea he gives the subconscious mind is that some organ is not functioning properly and the subconscious mind will misdirect the organ, as when the insomnia patient says "I will sleep" and, in his struggle to impose his will, becomes more wakeful. When a patient is suffering a mental or physical ill he is told to place his hand on his head, if the ill is mental; on the afflicted part if physical, and repeat mechanically "It passes, it passes," until the malady subsides.

Coué does not contend that all ills may be cured by this method, only that it will cure "if it is in any way possible." Nor does he claim to perform the cure himself; he teaches the patient how to cure himself. "Have confidence in yourself" is his slogan. He states that he is not working in opposition to the medical profession but advises his patient to go to doctors if they feel that need, but to practice Couéism as well.

The four laws formulated by Coué are: (1) "When the will and the imagination are opposed to each other, it is always the imagination which wins." (2) "In the conflict between the will and the imagination, the force of the imagination is in direct ratio to the will." (3) "When the will and the imagination are in accord, one does not add to the other but one is

multiplied by the other." (4) "The imagination can be directed."

Coué claims that Couéism can be taught children even before birth. He holds that, during the period of conception, the mother may determine not only the sex of the child but its physical and mental attributes by concentrating on the characteristics she wishes embodied in her child. He holds that this is proved by the alleged fact that Spartan mothers, concentrating on a desire to have male children who would become strong soldiers defending their state, brought forth such children, while Athenian mothers concentrated on and bore children whose mental qualifications surpassed their physical attributes.

After the birth of the child Couéism teaches that the child must be brought up on the affirmative basis of learning the thing which is good to do rather than the negative of the thing which it must not do. Before the child is able to talk he suggests that the parent repeat each night over its bed while it sleeps "Every day in every way you are growing better and better." The child is to repeat this formula for itself when it is able to talk.

In addition to the work which M. Coué does in Nancy he has numerous disciples working in other places, such as Prof. Charles Baudouin of the Institute; J. J. Rosseau of Geneva, Mme. Emile Leon and Mme. Kaugmant. On 4 Jan. 1923 M. Coué came to New York where he held a number of clinics.

DOROTHY N. BRYANT.

COURLAND, formerly a province of the Russian empire on the Baltic Coast. After the collapse of the empire in 1917 Courland was incorporated in the new Republic of Latvia. It has an area of 10,438 square miles and a population of 811,718. Mitau is the chief city but Libau is the chief seaport and the largest city. See LATVIA.

COURT OF INTERNATIONAL JUSTICE, Permanent. See PEACE AND ARBITRATION, INTERNATIONAL.

COUZENS, James, American public official: b. Chatham, Ontario, 26 Aug. 1872, the son of James J. Couzens, a soap maker of Chatham. After a little education in the high school he became news agent on the Erie and Huron Railroad, selling papers, candy and cigars on the trains and during his spare hours studied telegraphy. At the age of 18 he obtained employment in Detroit as a car checker, which position he held seven years. He then went to Toledo and was employed in the offices of a coal company and in 1898 returned to Detroit and was employed in the offices of a coal company there. In 1903, when he was earning \$1,800 a year as a clerk he borrowed some money and invested \$2,500 with the Ford Motor Company, assisting in the organization of the firm and taking the position of bookkeeper. Soon he became sales manager, next general manager and treasurer, and finally vice-president and treasurer. In 1915 Mr. Couzens severed his connection with the Ford Motor Company in America and became vice-president of the Ford Motor Company of Canada. He resigned in 1916 and sold all his holdings in both the American and

Canadian companies, amounting to \$30,000,000. In 1918 he became mayor of Detroit. His campaign for mayor was spectacular. He pledged himself to settle the street car question by giving Detroit the ownership of its car lines. He was successful and thus settled a municipal fight that had continued for 25 years. In 1922 Mr. Couzens was appointed by Governor Groesbeck United States senator to fill the unexpired term of Senator Truman H. Newberry, who had resigned. He has made many large gifts to charitable and philanthropical objects. The largest was given in 1922, \$5,000,000 for a children's hospital for free treatment of the State's crippled children. He also contributes \$100,000 a year to Detroit's community fund. He is a Republican.

COWS, Milk. See AGRICULTURE IN THE UNITED STATES.

COX COLLEGE, a non-sectarian institution for women located at College Park, Ga. It was founded in 1842. In 1922-23 it had a faculty of 22 members, a student enrollment of 188, property valued at \$500,000, and an income of \$40,000.

CRAFTS, Wilbur Fisk, American clergyman and reformer: b. Fryeburg, Maine, 12 Jan. 1850; d. Washington, D. C., 27 Dec. 1922. He was the son of a Methodist preacher of Puritan ancestry. He was graduated from Wesleyan University in 1869 with the degree of A.B., receiving in 1871 the degree of A.M.; and was graduated from the divinity school of Boston University in 1871. He received the degree of Ph.D. from Marietta College in 1896. The first eight years of his ministerial career he spent in his father's church, changing to Congregationalism in 1880, and in 1883 entering the Presbyterian ministry, where he remained thereafter. He was pastor successively at Stoneham, Haverhill and New Bedford, Mass.; Dover, N. H.; Chicago, Brooklyn and New York. After 1871 he was very active in Sunday school work. He founded the American Sabbath Union in 1889; lectured throughout the United States as its field secretary 1889-90; in 1895 founded and for 28 years was superintendent of the International Reform Bureau. He was chief editor of the *Christian Statesman*, 1901-03, and of the *Twentieth Century Quarterly* from 1896 until the time of his death. He was widely known as a reform leader because of his activities on behalf of Prohibition and similar movements. He averaged six lectures a week, delivered in 29 different countries, and wrote a book a year, most of which were on religious topics. He was official chairman of the United States delegates to the International Congress on Alcoholism, London in 1911; United States delegate to Purity Congresses, 1915, 1916; member of Union National Committee to frame the amendment for constitutional prohibition in 1915 and 1916; member of the Presbyterian Social Service Committee; and a member of the United Committee of War Time Activities, 1917. He wrote 'Through the Eye to the Heart' (1873); 'Trophies of Song' (1874); 'Successful Men of To-day' (1883); 'History of National Prohibition' (1920); and many others on the bible and Sunday school work.

CRAIG, Alexander Righter, American physician: b. Columbia, Pa., 31 July 1868; d.

Port Deposit, Md., 2 Sept. 1922. He was graduated A.B. from Franklin and Marshall College in 1890 and M.D. from the medical department of the University of Pennsylvania in 1893. He served as resident physician at the Philadelphia Polyclinic Hospital, 1893-94, practiced in Philadelphia until 1895; in Columbia, Pa., 1895-1906, then returned to Philadelphia where he practiced until 1911. That year he was elected secretary of the American Medical Association, a position which he held until his death. Doctor Craig served as a member of the Pennsylvania house of delegates continuously from 1903 to 1910 and was a member and chairman of many important committees. He was a member of the American Academy of Medicine and president thereof in 1912. He was a member also of the American Academy of Ophthalmology and Otolaryngology. Franklin and Marshall College conferred the degree of D.Sc. on him in 1920.

CRANBERRIES. The 1922 commercial cranberry crop of the United States was estimated by the Department of Agriculture at 562,000 barrels, compared with 384,000 barrels in 1921 and 449,000 barrels in 1920, all grown in the three States of Massachusetts, New Jersey and Wisconsin. The 1922 crop was valued at \$5,720,000; the 1921 crop at \$6,526,000 and the 1920 crop at \$5,514,000. The acreage was 25,000 for each of the three years. Massachusetts produced 300,000 barrels in 1922; 195,000 barrels in 1921 and 280,000 barrels in 1920. New Jersey produced 200,000 barrels in 1922; 160,000 barrels in 1921 and 133,000 barrels in 1920. Wisconsin produced 62,000 barrels in 1922; 29,000 barrels in 1921 and 36,000 barrels in 1920.

CREAMERIES, Co-Operative. See CO-OPERATIVE MOVEMENT.

CREDIT UNIONS. See CO-OPERATIVE MOVEMENT.

CREIGHTON UNIVERSITY, a Catholic institution, co-educational except in arts and high school, founded in 1878 and located at Omaha, Nebr. In 1922-23 it had a faculty of 158 members, 1,541 students, property valued at \$4,468,088.78 and an income of \$292,391.37. Rev. John F. McCormick, S.J., is president.

CRETE, or CANDIA, an island in the Mediterranean Sea formerly a Turkish possession but belonging to Greece since 1913. It has an area of 3,327 square miles and a population of 356,511. The capital Candia, has a population of 24,687. See GREECE.

CROATIA AND SLAVONIA, now a district of the kingdom of the Serbs, Croats and Slovenes, formerly a Crownland of the empire of Austria-Hungary. It extends eastward from the Adriatic to the rivers Danube and Drave. The area is 17,405 square miles and the population in 1920 was 2,715,237. The capital, Zagreb (Agram) has a population of 110,000. Being the centre of the most fertile region of the kingdom this city has within a few years become the economic centre of the nation also. For production, industry, etc., see JUGOSLAVIA.

CROKER, Richard (Welsted), Irish-American politician: b. Clonakilty, Cork, Ireland, 23 Nov. 1841; d. Glencairn Castle, County Dublin, Ireland, 29 April 1922. Succeeding to

the leadership of Tammany Hall upon the death of John Kelly in 1886, Mr. Croker, the possessor of remarkable political sagacity and a dominating personality, rapidly developed into the most powerful chieftain, in many ways, that has ever controlled the destinies of that famous New York political organization. From the obscurity of east side poverty and all that goes with it, he fought his way with his fists and his brain to the absolute dictatorship of America's most formidable political machine. In so doing he made himself, during the years he ruled Tammany, virtually the unofficial ruler of America's greatest municipality. Mr. Croker was the son of Eyre Coot Croker, the village blacksmith of Clonakilty. It is said that he was descended from Henry Croker, a major in the British army, and that another member of his family served in parliament. Be that as it may, when Mr. Croker, who was the youngest of seven children, was two years old, his parents, fleeing from a famine then sweeping over Ireland, engaged passage on a sailing vessel bound for America and took their children with them. They landed in New York and went to live in a little house on the old Bloomingdale road in a district which now constitutes a part of Central Park. Later they moved to a house in 26th Street and thereafter to another in 28th Street. The father, who, upon his arrival, had set up shop as a veterinarian seems to have been a failure as a practitioner and eventually accepted employment in the stables of the Harlem Car Company. Richard Croker's education was decidedly limited. He entered a public school in East 26th Street when he was 12 years old and quit when he was 15 without having won marked distinction for regularity in attendance. When he quit school he secured employment in the Harlem machine shops of what is now the New York Central Railroad Company. At 16 he is said to have been an expert mechanic. He helped to build and ran on its trial trip a locomotive that remained in service for many years. The beginning of Mr. Croker's rise to fame and fortune dates from about this period. Endowed with a powerful physique, an absolute stranger to fear, and the possessor of two fists which he knew well how to use, he thrashed one after another of the various fistic celebrities who resided in his section of the city. In a cellar near his home he whipped "Reddy" Flaskins and several other local fighters. He disposed of "Pat" Kelly in a saloon. He achieved his greatest pugilistic triumph in 1866 when he trounced "Dickie" Lynch, whom he met in Jones' Woods. Those were the days when New York's East Side was dominated by "gangs." The leaders of these "gangs" were brawny individuals who had won their laurels with their fists. Young Croker's fighting qualities so impressed the members of the old Fourth Avenue Tunnel gang that they soon made him their leader. That was the beginning of his political career. He next joined the volunteer fire department, "a recruiting school for politicians," and in that way made the acquaintance of Thomas F. Gilroy, the Scannells, and others whom he afterward raised to power. In 1868 he was elected a member of the Board of Aldermen, a position which carried with it a salary of \$4,000 a year. Mr. Croker always claimed that he had entered

politics as a reformer. He probably based his claim upon the fact that he was elected alderman on an anti-Tweed ticket. Afterward, however, he made peace with Tweed and received from the latter a good many political favors. Upon the expiration of his aldermanic term in 1870, he was appointed superintendent of markets, rents, and fees. When Tweed and his famous "ring" were overthrown in 1871, John Kelly succeeded to the leadership of Tammany Hall. The following year Mr. Croker formed an alliance with the new chief and in 1873 he was elected coroner. It was while holding this office that he was tried for the murder of John McKenna, a political lieutenant of "Jimmy" O'Brien, one of Mr. Croker's enemies. McKenna was shot on election day, 4 Nov. 1874, at Second Avenue and 34th Street. Mr. Croker was then leader of the 18th assembly district, and O'Brien was the leader of the anti-Tammany forces therein. Early in the morning of the election day referred to, Mr. Croker learned that a gang of O'Brien's men were driving away the men in charge and upsetting some of the booths that had been erected near the polling places in his district and from which printed tickets, showing the Tammany candidates for the various offices, were being distributed to the voters. Accompanied by some of his lieutenants, Mr. Croker started to make an investigation and soon came upon O'Brien and several of the latter's supporters. The meeting of the two leaders was followed by an interchange of superheated verbiage and in a few seconds a rough-and-tumble fight started. Suddenly McKenna emerged from the crowd which had formed a ring about the combatants and started toward them. Then a shot was fired and he fell to the ground. The fighting stopped and he was picked up and taken to Bellevue Hospital where he died a day or two later. The police department's record of the affair is as follows: "At 7:40 A. M. an altercation took place at Second Avenue and 34th Street between Richard Croker, John Sheridan, Henry Hickey, James O'Brien and John McKenna. McKenna was shot in the right side of the head; fatal wound; taken to Bellevue."

The shooting created a sensation. Mr. Croker was arrested and taken to the station house where O'Brien laid a charge of murder against him. At that time he had no money but Tammany backed him up and financed his fight. His attorneys were Harry L. Clinton, John R. Fellows and George W. Wingate. At the trial McKenna's friends swore that after the shot was fired they had seen a smoking revolver in Mr. Croker's hands. Other witnesses testified to the contrary. The jury voted 10 to two for acquittal and eventually he was set free. His friends always claimed that he could easily have established his complete innocence had he been willing to betray the guilty party and this claim was reiterated after his death in a statement given out by General Wingate in which the latter said: "Croker knew all the time who fired the shot that killed McKenna; consequently we knew. We of counsel knew that at any time we could definitely and positively prove Croker's innocence, but he wouldn't let us do it. Why? For the simple reason that he stood by his friends; he had already learned the first principle of politics. The man who fired the shot

was one of Croker's party and was standing near him, but his name has never been published or connected with the crime. But, I believe that the shooting was actually the making of Croker. Tammany Hall, of which Kelly was the leader, looked on him as a martyr and justly. Now that he is dead I am glad to tell the tale. At the same time I do not feel justified, even now, in telling the name of the man he was so anxious to protect."

Mr. Croker was re-elected coroner in 1876 and again in 1879. In 1883 he was once more a candidate for alderman and was elected by the narrow plurality of 200 votes. Shortly thereafter he was appointed fire commissioner by Mayor Edson. It was due very largely to Mr. Croker's influence that Hugh J. Grant was nominated for sheriff in 1884. Grant was elected and while in office, according to testimony given by Patrick H. McCann, Mr. Croker's brother-in-law, before the Fassett investigating committee in 1890, made a present to Mr. Croker's two-year-old daughter Florence, of \$25,000. Grant explained by saying that the little girl was his godchild. The explanation must have been satisfactory to the public. At any rate there is nothing to show that the exposure had any appreciable effect upon the political careers of either Grant or Mr. Croker.

Mr. Croker did not immediately succeed to complete control of Tammany following the death of John Kelly in 1886. At first the members of the executive committee asserted that they, and no boss, would manage the affairs of the organization. The rule of the entire committee was exceedingly brief. Out of the 24 members emerged the four strongest: Mr. Croker, Hugh J. Grant, Thomas F. Gilroy and W. Bourke Cockran. This quartet ruled for a while but within a year the other three had given way to Mr. Croker, who, from that time until 1902, with the exception of a little over two years spent in England in the '90s, governed Tammany with a rod of iron. He was designated chairman of Tammany's finance committee, the position of greatest importance in the organization. Soon after his elevation to the leadership he instituted the system under which all persons owing allegiance to Tammany were required to report to headquarters in 14th Street. There were then 90,000 men, under 35 district leaders, on Tammany's roll. Each of these leaders had fought his way to leadership, and occasionally some of them attempted to fight Mr. Croker, but he always knew what was going on and speedily stamped out insurrections. The first important nomination made by Mr. Croker after becoming chief of Tammany Hall was that of Abram S. Hewitt, and old opponent of Tammany, as the Democratic candidate for mayor against Henry George. Hewitt was elected in an exciting contest and gave New York an excellent administration. But, he refused to take orders from Mr. Croker and the result was his political undoing. Two years later, in 1888, the new boss of Tammany, with a boldness that astonished even the Croker lieutenants, turned him down for re-nomination and supported Hugh J. Grant, whose election gave New York the first straight-out Tammany mayor the city had had for a generation. Mr. Croker was rewarded by being made city cham-

berlain which position he held from April 1889 until he resigned in February 1890. Before the expiration of Mayor Grant's term, in 1890, the Fassett investigating committee brought to light, along with other more or less sensational disclosures, the facts concerning the mayor's \$25,000 gift, while holding the office of sheriff, to Mr. Croker's little daughter. In the face of this exposé, Mr. Croker astounded New York by re-nominating and re-electing Mayor Grant. Few political leaders would have had the courage to even think of doing such a thing. It was by just such manifestations of boldness, however, that he endeared himself to the Tammanyites who worshipped boldness above everything else. To this unbroken string of victories Mr. Croker added another in 1892 when Thomas F. Gilroy, grand sachem of Tammany, was elected mayor by a plurality of 76,000 votes. The same year he made, what some of his friends have referred to as one of his "few political blunders," by opposing the renomination of Grover Cleveland for President. Things went along smoothly enough thereafter until the Lexow Committee began its investigation in 1894 that resulted in the loss to Tammany of the municipal election that followed. In May of that year, while Tammany was facing one of the hardest campaigns of its career, Mr. Croker suddenly called in his lieutenants, announced that he was through with politics, resigned as chairman of Tammany's finance committee, and a short while thereafter went to England to live. For more than two years he resided at Wantage, occupying the estate known as the Moat House, and devoting the greater part of his time to his racing stable, estimated then as having a value of \$160,000. Before leaving America he invested a quarter of a million dollars in the Belle Mead stock farm in Tennessee. About a year after he surrendered his leadership of Tammany, John C. Sheehan was selected to take his place. In the summer of 1897 Mr. Croker returned to New York. At first he disclaimed any intention of resuming his leadership but in the fall after his return Sheehan was deposed and Mr. Croker once more took his place at the head of Tammany Hall. The election at which the first Mayor of Greater New York was to be chosen was then approaching. Mr. Croker selected Robert A. Van Wyck as his candidate and when the ballots were counted the results showed another victory for Tammany. Mr. Croker was then at the zenith of his power. He is said to have distributed political patronage, usually without even consulting Mr. Van Wyck, and virtually to have run the city to suit himself. He was flattered and feted by all in search of political favors. Over 1,000 of his enthusiastic admirers, at \$10 a plate, subscribed to a dinner given in his honor in 1899 and around the festal board heaped eulogies upon him. About this time the Mazet Investigating Committee began its work. It was the third investigation into New York City affairs to take place during Mr. Croker's rule over Tammany Hall. He had then amassed what was generally believed to be a tremendous fortune and the Mazet Committee spent much of its time in an effort to ascertain the sources of his wealth. Testifying before the committee, he made the admission, thereafter so frequently

quoted by his enemies, that he was "working for his own pocket, all the time, every day in the week." The close of the Van Wyck administration was followed by another political upheaval as the result of which Seth Low, a Republican running on a Reform ticket, was elected Mayor. By this time Mr. Croker had grown weary of politics and in 1902 he surrendered finally his control of Tammany Hall, quit New York, and took up his residence at Glencairn Castle, County Dublin, Ireland, where he spent the greater part of his remaining years and where he devoted himself to the breeding of race horses. It was there that he bred Orby with which he won the English Derby, the Irish Derby, the Curragh, and the Baldoye Derby in 1907. There also he bred Rhodora, Orby's half-sister, with which he won the English Guineas in 1908. Mr. Croker was twice married. His first wife was Miss Elizabeth Fraser of New York by whom he had nine children and who died in 1914. Three of his children died at an early age. Frank, his second son, was killed in an automobile accident at Ormonde Beach, Fla., in January 1905 and in May following Herbert, his third son, died on board a train between the towns of Emporia and Newton in Kansas. One of Mr. Croker's daughters married Count Louis San Martini of Naples. Within a year after the death of the first Mrs. Croker, Mr. Croker married Miss Beula Benton Edmondson whose mother belonged to the Cherokee tribe of Indians. After his second marriage Mr. Croker divided his time between Glencairn Castle and Palm Beach, Fla., where he built an unpretentious winter home which he called The Wigwam. In April 1920 two of his sons, Richard, Jr. and Howard, and one of his daughters, Mrs. Ethel White, instituted a suit in one of the courts of Florida, alleging that their father "enfeebled by age" was mentally incapable of handling his own affairs and that as a result the second Mrs. Croker had obtained control of his property through the exercise of undue influence. The court was asked to declare Mr. Croker incompetent to manage his estate, also to appoint a custodian of his property, and to issue a temporary order restraining him from disposing of any of the property involved, valued at over \$2,000,000, pending the litigation. The final outcome of the suit was a complete victory for Mr. Croker and the absolution of his wife from the charges made against her. Mr. Croker never forgave his children and gave his entire estate, estimated at the time of his death to have a value of between \$3,000,000 and \$5,000,000, to his widow. So numerous were the victories won by Mr. Croker while he was leader of Tammany Hall that he was looked upon by many as a sort of political superman. He owed his success, however, not alone to his political sagacity and his courage which often approached audaciousness, but also to the fact that he despised hypocrisy, always fought in the open and always kept his word.

CROW, William E., United States senator: b. German Township, Fayette County, Pa., 10 March 1870; d. near Uniontown, Pa., 2 Aug. 1922. He attended the country schools and

was graduated from the Pennsylvania State Normal School at California, Pa., in 1890, and later received the degree of A.B. from Waynesburg College. After serving as a teacher for two years, he became a newspaper reporter in Pittsburgh. He abandoned this field for Uniontown, where he became editor of *The Uniontown Standard* in 1894. He studied law and in 1895 was admitted to the Fayette County, Pa., bar. He had always been interested in county politics, and in 1896 was appointed an assistant district attorney. Within three years he was elected district attorney, perhaps the youngest man ever chosen to that office in Western Pennsylvania. Always a Republican in politics, Mr. Crow in 1895 was made secretary of the Republican County Committee and elevated to the chairmanship four years later. He met his first political reverse in 1902, when he was defeated for State senator. This he overcame in 1906, and from that time until his appointment by Governor Sproul in 1921 to succeed the late Philander C. Knox in the United States Senate he was continuously a member of the Pennsylvania upper legislative body. In 1913 he was made chairman of the Republican State Committee, and served until 1918. He was very successful as a political leader and was a powerful factor in the councils of his party.

CUBA, an island republic of the West Indies with an area of 44,215 square miles and a Latin population of 2,889,004. Spanish is the national language. The island is divided into six provinces, which with their populations are as follows: Camaguey, 228,913; Habana, 697,583; Matanzas, 312,704; Oriente, 730,909; Pinar del Rio, 261,198; and Santa Clara, 657,697. The white population forms 74.3 of the total, but it must be remembered that in Cuba the term "white" is very inclusive. During the great business boom following the war in Europe there was a large immigration from Spain and other countries, reaching a total of 340,000 in 1920. The chief cities are Habana, the capital (pop. 363,506); Camaguey (98,193); Cienfuegos (95,865); Santiago (70,232); Guantanamo (68,883); Santa Clara (63,151); Matanzas (62,638); Manzanillo (56,570); Sancti Spiritus (58,843); and Pinar del Rio (47,858).

Education.—As early as 1880 education was made compulsory in Cuba but the law was not well enforced under the Spanish regime. After independence was established the elementary and secondary systems were reorganized. From that time to the present education has made rapid strides in the republic, every town and rural district being supplied with school facilities and instruction of a high order. There are approximately 6,000 schools of primary grade with 8,000 teachers and a registered attendance of 338,788 pupils. There are provincial institutes for advanced or secondary education, one in each of the provincial capitals and a university in Habana with the usual faculties of arts and sciences, medicine, law, etc.

Religion.—Roman Catholicism is the religion of most of the inhabitants but freedom of conscience is guaranteed to all other forms by the Constitution.

Mining.—Cuba has always been essentially

an agricultural country, but the mineral resources have of late years attracted attention, so that the products of the land promise to be more diversified as Cuba becomes better understood. The Province of Oriente, as Santiago is now known, is the richest as regards mineral wealth, but other provinces are not far behind. The metals produced are iron, copper, manganese, gold, mercury, zinc, lead, silver, antimony. Coal, asbestos, asphalt, and petroleum help swell the list of the natural resources now being developed. The island's mining area extends over 915,000 acres.

Agriculture.—Sugar and tobacco are the chief products of this industry. The sugar plantations cover an area of 1,400,000 acres and the crop in 1922 was close to 4,000,000 tons, of which 3,960,000 had been ground before the end of August. There are nearly 200 sugar mills. Tobacco will always be an important crop due to the unique flavor that attaches to the variety coming from the area called the "Vuelta Abajo." Coffee, cocoa, the cereals, potatoes, and rice are grown mostly for home consumption, but fruit exports are increasing. Cuba now exports bananas, pineapples, oranges, grape fruit, and cocoanuts. Agriculture is profitable, for the climate and flora are both suitable, and the production of honey has resulted in an export trade now amounting to \$750,000 yearly. The land is well adapted to the raising of live stock. The absence of cold, the good pastures and freedom from pests are favorable factors. There are on the island 3,970,000 head of cattle, 760,000 horses, and 65,000 mules. Whatever manufacturing is done depends on the agricultural products, although in the large cities small factories or household industries supply local or domestic needs. Cotton is being cultivated experimentally. The sponge fisheries are also important in the region of the Isle of Pines. The forests contain the finest cabinet woods such as the cedars and mahogany and also dyewoods, gums, resins, etc.

Commerce.—Cuban foreign trade in 1921 and 1922 fell from the high levels of the war years and the succeeding period of inflated values. The island had an external trade in 1920 of nearly \$1,350,000,000, two-thirds of which represented exports. The foreign trade of Cuba for the 12 months ended 14 Nov. 1922, fell below the corresponding period of 1921 by \$489,893,811, according to Cuban customs statistics. The total foreign commerce of the Republic (exclusive of currency) dropped from \$956,554,249 to \$466,660,438 during this period. Merchandise imported into Cuba during the latter period amounted to approximately \$183,000,000, as compared with about \$562,000,000 for the preceding 12 months. Exports of merchandise for the past 12 months totaled about \$284,000,000, against an approximate value of \$395,000,000 for the previous 12 months. The balance of trade swung from an unfavorable balance of about \$167,000,000 to a favorable balance of about \$100,000,000. Merchandise exported to the United States during 1922, amounted to \$245,715,563, an increase of nearly \$25,000,000 over 1921, returned American goods amounted to over \$4,000,000 as compared with about \$2,500,000 in 1921.

Communications.—The extent of railways in the republic is 3,250 miles. This makes Cuba, in proportion to its size, one of the best served republics in America in respect to railroad transportation. The larger sugar estates have many miles of private railways which connect with the trunk lines. The republic has direct steamer connection with many ports of the United States, Mexico and Europe. Local steamers connect Cuban ports with each other. There are 750 post offices and nine wireless stations operated by the government.

Economics and Finance.—Disturbed trade conditions caused havoc with the administration and there was much unrest in 1922. The first hopeful signs of a revival appeared in the autumn due to the continued efforts of the administration to place national finances on a sound basis. The firm sugar market, notwithstanding the increase in the American tariff, was another important factor making for a better outlook, while the extension of the time limit for the re-exportation of merchandise in bonded warehouses acted as an immediate relief of importance. In July the new Cuban budget went into effect and the government expenditures were reduced to a better basis than for several years. Leaving for subsequent settlement the floating debt, the government proceeded to pay current expenses from current income. Prominent before the administration during the year was discussion of the means of retiring the current indebtedness known as the floating debt. The question practically resolved itself into the consideration of an external loan of \$50,000,000. To meet the interest and provide for the amortization of this exterior loan it was seen that additional revenues would be required. For this purpose a gross sales tax of 1 per cent was considered. The budget for the fiscal year 1922 estimated revenues at \$75,957,600. The estimated expenditures fell under this sum but in practice the revenue did not materialize and the government passed through a financial crisis unprecedented in its history. It defaulted in meeting the service of the exterior bonded debt and the unpaid arrears of the interior loan of 1917 aggregated approximately \$3,000,000. In August the floating debt (unpaid current obligations) closely approximated in amount the total annual receipts of the national treasury from all sources. (From memorandum of General Crowder, U. S. A., to the Cuban President Zayas, 21 July 1922.) The foreign debt of Cuba, according to the latest official estimate, is \$49,644,000 and the internal debt, \$38,662,100.

Army and Navy.—The peace strength of the army is 16,569 officers and men. The personnel of the navy numbers 1,050 officers and men.

Government.—Executive power is vested in a President elected for a term of four years indirectly by an electoral college and he may not serve more than two consecutive terms. The President in 1922 was Dr. Alfredo Zayas, who was inaugurated 20 May 1921 for the term ending 20 May 1925. The Senate and House of Representatives, forming together the National Congress, are the legislative power. The former consists of 24 members and the latter of 118 members. Senators are elected indi-

rectly for terms of eight years and representatives for four years by popular vote. Congress meets at the capital, Habana, twice each year, on the first Monday in April and November, each session lasting for at least 40 days. It may also meet in extra session when summoned by the President or in accordance with its own rules. The President is assisted in his executive functions by a cabinet of eight ministers with the usual portfolios.

History.—On 25 Jan. 1922 the Cuban Government requested the Government of the United States to withdraw marines from Camagüey, otherwise known as Puerto Principe. We should not overlook, in this connection, the fact that the Cuban House of Representatives had expressed, 7 Dec. 1921, its view in regard to the continued presence of troops of the United States at the place mentioned, the largest city of the interior. The marines had been sent there at the beginning of the Great War. On 7 February the withdrawal took place. On 4 March prize-fighting was legalized, under a boxing commission. To the Pan-American Conference of Women, at Baltimore, Md., 20-29 April, several groups of Cuban women sent delegates, El Club Femenino de Cuba and the Partido Nacional Sufragista being the groups named in the *Bulletin* of the Pan American Union, April 1922. On 5 May, at Habana, occurred the death of Gen. Emilio Núñez, a leading figure in the Revolutions of 1868 and 1895 (which are described in 'Encyclopedia of Latin America,' pp. 627 seq.). On 6 June, in New York City, was dedicated the Casanova School, which perpetuates the memory of Inocencio Casanova, a Cuban patriot who devoted his fortune and his energy to the cause of Cuba Libre in the Revolution of 1868. On 10 June was published the Cuban President's decree in support of the International Sanitary Conference of Montevideo and of the International Sanitary Office. One week later Dr. Carlos Manuel de Céspedes, who had been since 22 July 1914 Envoy Extraordinary and Minister Plenipotentiary of Cuba in the United States, was appointed Secretary of State by President Zayas. On 28 July the son of the American Consular Agent at Sagua la Grande was kidnapped and held for \$20,000 ransom. And on the same day, 28 July, was celebrated at Habana the 50th anniversary of the Institute of San Vicente de Paul, an asylum and trade-school founded by the Jesuits to aid the poor of Habana. On 31 July the national indebtedness was given as about \$141,500,000 (foreign debt, \$51,703,500; internal, \$39,838,900; floating debt, \$50,000,000, approximately). On 18 August the Senate of the United States voted in favor of an import duty of \$1.84 per 100 pounds on Cuban sugar, and \$2.30 per 100 pounds on sugar from other countries. On 20 August it was made known that the State Department of the United States was taking "steps to prevent further smuggling of Chinese and European aliens from Cuba." In the same month announcements were published to the effect that the Cuban Government had ceded to the María Jaén Protective Association for Tubercular Children 232,500 square meters of land on the north shore; also that the Government had appropriated \$50,000 for the Sixth Latin-American Medical Congress. On 15 Sep-

tember the 'Gaceta Oficial' published a decree of President Zayas amending the law governing the prescription, distribution, and use of narcotics. And, under date of September, announcement was made in respect to other matters: A fair will be held in Santiago de Cuba, 10-20 October, under the auspices of the 'Asociación de la Prensa de Oriente,' for the purpose of exhibiting products of national and foreign industry. The Secretary of Agriculture, providing against the spread of disease among cattle, issued orders to reopen a laboratory of the veterinary section in which preventive serums are made for gratuitous distribution among agriculturists. The Government was planning to commence, when its resources should permit, the construction of granite block pavement to support the heavy traffic on the island's roads,—the total length of which was given as 2,375 kilometers, not including the 75 kilometers on the Isle of Pines. The President issued a decree creating, as part of the Department of State, a bureau for the affairs of the League of Nations, in the same decree providing that the Cuban delegation to the League of Nations should have a permanent character. The Secretary of Government issued an order constituting a censorship committee with power to "eliminate films which teach the ways of criminals and corrupt youth." On 1 October the opening of the radiotelephone service was celebrated at the Presidential Palace, and, from apparatus installed there, President Zayas transmitted a salutation to the President and people of the United States. In October it was noted that the Government decided to accept an invitation to become a member of the International Hydrographic Commission, which will aid in the establishment of a national office for Cuba to correct the charts of islands, bays, coasts, keys, and reefs in Cuban waters. On 6 November the dispensaries of the Red Cross of Habana became accessible to the public. On 7 November a new child-welfare station was opened for the benefit of the poorer classes and unprotected children. On 19 November occurred the official inauguration of the Sixth Latin-American Medical Congress, of an International Commercial Exposition, and of the National Convention of Maternity,—all under the direction of the Secretary of Public Health. On 25-30 November were held sessions of the First Cuban National Sugar Congress. And, toward the end of the year, the following topics: Three leper patients, treated with chaulmoogra oil at the Leprosarium of San Lázaro in the town of Rincon, had been dismissed as cured, after tests made at the Laboratory of Scientific Investigations. The Secretary of Agriculture, Commerce, and Labor informed the Cabinet that a commercial mission was to be sent by Cuba to Europe, to advertise the country's resources and progress. On 5 March 1923 Maj.-Gen. Enoch H. Crowder, U. S. A., whose appointment as the first United States Ambassador to Cuba was confirmed by the Senate on 10 Feb. 1923, presented his credentials to President Zayas.

MARRION WILCOX.

CUCUMBERS. The 1922 crop of cucumbers, grown in the United States for manufacturing purposes (pickles, etc.), was estimated by the Department of Agriculture at 2,619,480

bushels, a decrease, compared with the 1921 crop of 42 per cent. A long-continued drought and smaller acreage were given as the chief causes of the low production. The average yield was placed at 50 bushels per acre compared with 71 bushels in 1921. Acreage declined from 63,220 in 1921 to 52,831 in 1922. Michigan led in production with a crop of 1,002,000 bushels, which was approximately one-half of its 1921 crop. Wisconsin grew 365,500 bushels in 1922; Indiana, 209,000 bushels; Colorado, 200,000; California, 185,000; New York, 146,550 bushels.

CULLEN, Edgar Montgomery, American jurist: b. Brooklyn, N. Y., December 1843; d. there 23 May 1922. He was educated at Kinderhook College and was graduated at Columbia in 1860. When the Civil War began he was studying in the Rensselaer Polytechnic Institute and left to enlist. He was commissioned lieutenant in the 1st United States Infantry and served until 1862, when, although only 19 years old, he was made colonel in the 69th New York Volunteer Infantry. Before he was 21 he commanded a full brigade in action. Owing to wounds he was retired and returned to the study of engineering. This he relinquished for the law, and was admitted to the bar in 1867. He became active in Democratic politics and from 1872 to 1875 was assistant district attorney in Kings county. In 1876 he was engineer in chief on the staff of Governor Samuel J. Tilden. In 1880 he was elected to the Supreme Court of New York and re-elected in 1894. He was appointed to the Court of Appeals in 1900 by Governor Roosevelt and made chief justice of that court by Governor Odell to succeed Alton B. Parker, who resigned to run for President. Only advancing age compelled his retirement and he was a Supreme Court justice in Brooklyn for 30 years. The degree of LL.D. was conferred upon him by Columbia in 1892, Union College in 1905, and Harvard in 1915.

CULVER-STOCKTON COLLEGE, a co-educational institution controlled by the Disciples of Christ, founded in 1853 and located at Canton, Mo. In 1922-23 it had a faculty of 17 members, 275 students, property valued at \$250,000, and an income of \$37,000. John H. Wood, D.D., is president.

CUMBERLAND PRESBYTERIAN CHURCH. This denomination was an outgrowth of the great revival, in parts of Kentucky and Tennessee in the year 1800, when three ministers, who because of their rejection of certain features of the doctrines of the Presbyterian Church—election and reprobation—had, in effect, been suspended from the ministry of that denomination in Dickson County, Tenn., on 4 Feb. 1810, organized themselves into an independent Presbytery which they named Cumberland Presbytery. Their names were Finis Ewing, Samuel King, and Samuel McAdow. Because of the name selected for their Presbytery these men and others who associated with them, soon became known to the public as Cumberland Presbyterians, which fact accounts for the name of the denomination. In three years the organization had

gained a sufficient number of adherents to constitute three Presbyteries, and, in October 1813, having the necessary number of Presbyteries, at Beech Church, in Sumner County, Tenn., a congregation still alive and active, these Presbyteries constituted a synod, which became known as Tennessee Synod of the Cumberland Presbyterian Church. In a "brief statement" formulated and published by the synod the points wherein Cumberland Presbyterians disagreed with the doctrines of the Presbyterian Church were set out. These points were: (1) There are no eternal reprobates; (2) Christ died not for a part only, but for all mankind; (3) All infants dying in infancy are saved through Christ and the sanctification of the Spirit; (4) The operation of the Spirit of God is coextensive with the atonement made by Christ, in such a manner as to leave all men inexcusable. Neither Cumberland Presbytery nor Tennessee Synod was ever a part of the Presbyterian Church, North or South. In 1829, at Princeton, Ky., the first General Assembly of the Cumberland Presbyterian Church convened and the body has met every year since, in the month of May, the last meeting being at Greenville, Tenn., in May 1922, at which time it adjourned to meet at Fairfield, Ill., 17-23 May 1923. In 1906 a large part of the ministry and membership of the Church became a part of the Northern Presbyterian Church, taking with them all of the general property of the denomination and a larger part of the congregational property, but the denomination was perpetuated and is trying to play a humble part in evangelizing the world. The denomination now has an organized membership of about 66,000, and an estimated unorganized, but co-operating membership, of about 20,000, with 1,273 congregations and 774 ministers. It has 11 synods, 67 Presbyteries, and congregational property aggregating in round numbers \$3,000,000. Though it lost all of its publishing interests and educational institutions as a result of the exodus from its membership in 1906, it now has a publishing house which, with its equipment, is worth \$44,000, above liabilities, and a school at McKenzie, Tenn., with a literary, business, musical and theological department and an endowment of approximately \$500,000, all of which has been created since the exodus of 1906. It has a well supported weekly paper, a full line of Sunday-school literature, denominational books, etc. It has a full complement of well organized boards and a happy and contented constituency.

J. L. HUDGINS,

Editor and Manager, Cumberland Presbyterian Publishing House.

CUMBERLAND UNIVERSITY, a Presbyterian (U. S. A.) co-educational institution, founded in 1842 and located at Lebanon, Tenn. In 1922-23 it had a faculty of about 25 members, over 600 students, property valued at \$500,000 and an income of over \$100,000. Rev. John Royal Harris, D.D., is president.

CUNO, Carl Joseph Wilhelm, Chancellor of Germany: b. Suhl, Thuringia, Germany, in 1846. He was educated in Berlin, Heidelberg and Breslau, studied jurisprudence and political science, was Assistant Attorney-General and

then Attorney-General, and in 1906 entered the Department of the Treasury of the German Government. In 1912 he was made Privy Councillor. For three years during the World War he served as economic and financial adviser and was also managing director of the grain and food organization. In 1917 he became a member of the board of directors of the Hamburg-American Line and upon the death of Albert Ballin was chosen head of that company. In 1918, 1919, 1920, he was appointed by the German Government as one of the experts in the armistice negotiations at Brussels, the peace negotiations at Versailles and the reparations negotiations at Brussels. Doctor Cuno visited the United States in 1920, 1921 and in the summer of 1922, and concluded the agreement between the Hamburg-American Line and the Harriman interests operating the United American Lines. During his last visit he was presented to President Harding by the German Ambassador and had a long interview. Doctor Cuno has been repeatedly offered the post of German Ambassador to the United States, and after the death of Rathenau was urged to become Minister of Foreign Affairs. As head of the Hamburg-American Line, he opposed Stinnes and forced his resignation from the Hamburg-American Line and several other shipping companies when Stinnes started his own line to South America in competition with the Hamburg-American Line about a year ago. In November 1922 Doctor Cuno was chosen by President Ebert to be Chancellor of Germany. He practically stands at the helm of the country to guide its destinies, to discover and forward practical constructive policies for the readjustment of his country. He is a tall blonde man, more than six feet, with a strong personality and great ability in directing team-work, and, moreover, has broad vision and determined will. His financial interests are numerous. He is a member of and chairman of the Woermann Line, German East African Line, Meat Import Company of Hamburg, Hamburg Traffic Company, Cold Storage and Transit Stock Company, Storage and Forwarding Company of Hamburg, Mineral Oil Commerce Company and German-American Oil Company. He is also a trustee of the Bavarian Lloyd, the Towing, Shipping and Salvage Company of Hamburg, the Cuxhaven Highsea Fisheries, the "Deutsche Werft" shipbuilding yard, the Middle Europe Dining and Sleeping Car Company, the Shipping Trust Company and the Universum Film Company. In a review on the European crisis he says: "What after all is the heritage the war has bequeathed to us? The productive power of entire generations has been annihilated, the purchasing capacity of entire nations reduced to next to nothing, the means of communication from country to country disorganized beyond all recognition, the world's economic activities used as a means for satisfying selfish political ends, and the spirit of international co-operation turned into its very opposite. Such is the position to-day and the document which we are forced to acknowledge to be a 'treaty of peace' has been elaborated to perpetuate it. . . . We are still far from living under peace conditions: Military and economic war measures are either still in force, or are threatened to be enforced at a moment's notice; and the *since*

qua non of the unrestricted resumption of international economic relations is to face the problem of how to secure the economic foundations on which the future of the world is to rest. Economic, and not political, considerations alone can lead to a complete disappearance of all the difficulties with which the world is confronted to-day."

CURACAO, a colony of Holland in the West Indies composed of two groups of islands nearly 500 miles apart. The larger of these in area is made up of the islands of Curacao, Bonaire and Aruba, the second of the islands of Saba, Saint Eustache and part of Saint Martin. The combined area of the islands of the colony is 403 square miles with a population of 53,702 in 1920.

The administration is vested in a Governor, assisted by a Council, composed of a Vice-President and three nominated by the Queen of the Netherlands. There is also a Colonial Council of 13 members nominated by the Queen. About 47,000 of the inhabitants are of the Roman Catholic faith, 6,000 are Protestants and 500 Jews. There are 40 schools with 7,304 pupils. The colonial revenues come from import, export and excise duties and from some special taxes. The colony produces Indian corn, cattle, pulse, beans, salt and phosphate of lime. Oil refining is an important industry. The overseas trade of the colony is about 16,000,000 guilders yearly, with imports slightly in excess of exports. The budget for the year 1922 estimated revenue to the amount of 1,302,000 guilders and the expenses at 2,723,000 guilders, the deficit to be supplied by Holland. The principal exports are sugar, rum and cocoa. About 3,000 vessels of an aggregate tonnage of 3,000,000 enter at the island ports annually.

CUTLERY. Cutlery and edged tools are classified together by the United States Census Bureau, which reports over 300 concerns in the industry, capitalized at \$69,000,000. The wage workers draw \$20,000,000 in prosperous years, but probably not over \$17,000,000 in 1922. In addition the industry pays four to five million dollars annually to salaried men. In 1919 materials to the value of \$18,218,000 were converted into cutlery and edged tools of the wholesale value of \$66,629,000. The product of 1922 is estimated as slightly over \$50,000,000.

CUTTEN, George Barton, educator: b. Amherst, Nova Scotia, 11 April 1874. He was graduated from Acadia University, which gave him the degrees of B.A., M.A. and LL.D. In 1897-98 he was pastor of Montewese Baptist Church; from 1898-1904, of the Howard Avenue Baptist Church, New Haven; from 1904-07, of the First Baptist Church, Corning, N. Y., and from 1907-10, of the Baptist Church, Columbus, Ohio. In 1922, Doctor Cutten was made president of Colgate University. Yale conferred upon him the degrees of B.D. and Ph.D. and Colgate University that of D.D. Doctor Cutten has contributed to magazines and is the author of 'The Christian Life in a Baptist Church,' 'The Case of John Kinsel,' 'The Psychology of Alcoholism,' 'The Psychological Phenomenon of Christianity' and 'Three Thousand Years of Mental Healing.'

CUYLER, Thomas DeWitt, American lawyer and railroad man: b. Philadelphia, Pa., 28 Sept. 1854; d. on train near Philadelphia, 2 Nov. 1922. He was educated in schools in Philadelphia and was graduated from Yale in 1874, studied law and was admitted to the bar. Through his father, Theodore Cuyler, general counsel for the Pennsylvania Railroad, he was early brought into contact with railroad affairs. He became counsel for a number of Scottish and English development companies that brought settlers to the West to open up new territories. In this work he spent much time in Texas, New Mexico, California and other States where railroads were being built, and acquired practical knowledge of railroad construction. In 1899 he was elected a director of the Pennsylvania Railroad and became a director of several railroads included in the Pennsylvania system, as well as of the Atchison, Topeka and Santa Fe, New York, New Haven and Hartford, Rutland Railroad, New York, Ontario and Western, Maine Central, the Long Island and others. Mr. Cuyler was counsel in the reorganization of the Asphalt Company of America and a director of the Interborough Rapid Transit Company, the Equitable Life Assurance Society, the Bankers' Trust Company, the Western Union Telegraph Company, the Guaranty Trust, the Metropolitan Trust and the United States Mortgage and Trust, the Philadelphia Savings Fund Society, the Commercial Trust Company and many other corporations, including real estate and hotel companies. In 1918 he succeeded Frank Trumbull as chairman of the Association of Railway Executives; and he spent all his time in this work, which involved continuous traveling. For the last five years his mileage was probably greater than that of any other man in the country. In all the complicated negotiations of the day he represented the railroads. He fought the Plumb plan, which he characterized as the worst form of Government ownership. When the railroads were returned to private ownership he was the spokesman in demanding as an alternative to higher rates a "liquidation of labor costs." Mr. Cuyler was also one of the most important witnesses before the Railway Labor Board in March 1921.

CYPRUS, an island belonging to Great Britain and situated in the Mediterranean Sea 40 miles off the coast of Asia Minor. It is the third largest island of the Mediterranean and for many years until 1914 was administered by Great Britain under agreement with the Sultan of Turkey. On the outbreak of war with Turkey in that year the island was annexed and since has been governed by a High Commissioner, who is assisted by an Executive Council of six and a Legislature of 18 members. The electors are British subjects, or foreigners over 21, who have established a residence for five years and who have paid the "Verghis" tax.

The area of the island is 3,584 square miles with a population of 310,808 in 1921. The chief towns are Nicosia, the seat of the government (18,461); Larnaca (10,652); Limasol (11,843), and Famagusta (6,300). Of the population about 220,000 are Christians and 55,000 are Moslems. Each race in the island has its own schools. In 1920 there were 501 Greek-Christ-

tian, 231 Moslem, 4 Maronite and 3 Armenian primary schools with a total teaching staff of 964 and a total enrollment of 42,397. There are three gymnasia, one commercial lyceum, three Greek high schools and two Moslem high schools.

In 1921 the budget was balanced at \$3,453,890. The public debt in 1922 was \$1,107,170.

Cyprus is well adapted to agriculture. It produces wheat, barley, oats, cotton, olives, fruits, linseed, wool, hides. Sponge fishing is carried on. Gypsum and marble are found in abundance. Copper and asbestos are being developed.

The imports in 1920 amounted to \$10,000,000 and the exports to \$6,500,000. The chief imports that year were beans, peas, butter, coffee, flour, fish, sugar, rice, leaf tobacco, hides, petroleum, cotton goods, fertilizers, silks, glassware and medicines. The chief exports the same year were lemons, oranges, raisins, cotton, raw silk, asbestos and gypsum.

There are 76 miles of narrow-gauge railways and 750 miles of good roadways, 245 miles of telegraph lines and telephones.

The High Commissioner in 1922 was M. Stevenson, C.M.G. The Chief Secretary was J. C. D. Fenn.

CYRENAICA. See LIBYA.

CZECHOSLOVAKIA, a republic of Central Europe, the modern history of which as a separate state dates from 1918, when it was formed from out the remnants of the old Austro-Hungarian Empire. It consists of Bohemia, Moravia, Slovakia, Silesia and Ruthenia (Sub-Carpathian Russia). The boundaries have been defined by the peace treaties following the Great European War, with the exception of a few districts in which plebiscites were held.

Area and Population.—The area of the new republic is 54,264 square miles, of which 20,106 are in Bohemia, 8,615 in Moravia, 18,933 in Slovakia, 4,903 in Ruthenia and 1,707 in Silesia. The population, according to the recent census, was 13,595,816, of whom 6,000,000 are Czechs, 3,700,000 Germans, 1,200,000 Magyars, 1,700,000 Slovaks and about 550,000 Poles and Ruthenians. The populations of the largest cities are: Prague, 676,476; Brno, 221,422; Plzen, 88,447; Bratislava, 93,329, and Kosice, 52,699.

Education.—Between the ages of six and 14 education is compulsory. There are elementary and advanced public schools, secondary Latin and technical schools, universities and higher technical schools, and trade and arts, commercial, mining, agriculture and other schools. According to the latest available data there are 13,417 elementary public and private schools, attended by 1,931,690 pupils and 1,411 advanced public and private schools with an attendance of 254,133 pupils.

Of the elementary schools 64 per cent are Czechoslovak; over 25 per cent are German; 6 per cent Magyar and the remainder Ruthenian, Polish and Rumanian. About 70 per cent of the advanced schools are Czechoslovak and 28 per cent are German, leaving 2 per cent divided between the Magyars, Poles, Ruthenians, etc. There are 60 gymnasia, 105 real gymnasia, 33 higher gymnasia, 80 real schools, 22 lycums

for females and 68 teachers' institutes. These higher schools had at the last enumeration 97,329 pupils, including 22,397 females. There are universities at Prague, Brno and Bratislava. At Prague there are two institutions of which the Czech University was founded in 1348. It has 8,770 students, of whom 1,562 are females. The German University of Prague has 3,668 students, including 394 females. The Czech University of Brno has 957 students, of whom 69 are females, and the Slovak University of Bratislava has 247 students, including 28 females. There are about 12,200 students enrolled in the technical high schools.

Constitution, Government, Etc.—On 29 Feb. 1920, the National Assembly of the Czechoslovak nation passed the Constitution of the Republic, under the terms of which the state is a democratic republic with an elected President as its chief magistrate. The National Parliament is composed of a Chamber or Lower House, the members of which, 300 in number, are elected for a six-year term, and a Senate of 150 members, chosen for eight years. The President is elected every seven years by both chambers in joint session. The President with the consent of the National Parliament may declare war; he appoints the higher officials and in general exercises all the powers of an executive. Freedom of the press and of speech are guaranteed by the Constitution and there are certain constitutional safeguards thrown about the racial minorities in the realm by which their schools are assured freedom and liberty of action. The franchise is enjoyed by all citizens, male and female, over 21 years, and all citizens over 30 are eligible for election.

Courts.—All matters affecting appeals from decisions made by state officials are handled by a special Administrative High Court. There are special courts to deal with commercial, industrial and other matters. There are 423 district courts and 37 county courts, and four high courts, one each at Prague, Brno, Bratislava and Kosice. There are in addition the Supreme Court of Justice and the Court of Cassation at Brno and a Penal Tribunal at Prague. There are three special district courts and 423 district courts.

Banking and Currency.—There are 36 commercial banks in the republic with an aggregate paid-up capital of 1,327,300,000 Czechoslovak crowns, reserve funds amounting to 607,838,000 crowns, and total deposits of over 16,000,000,000 crowns. The aggregate assets of these banks amount to 20,557,577,000 crowns. The chief credit institutions of the country are the Caisses Raiffeisen, the local agricultural credit banks, the municipal savings banks, the civil credit banks and the postal money order office. There are several joint stock banks also in each district. There is being organized a national joint stock bank with a capital of 75,000,000 francs gold, and 75,000 shares of 1,000 francs each. The president of the board of directors is appointed by the President of the Republic for a term of six years. In 1922 it was proposed to replace the krone (crown) currency by a franc currency at the rate of three kronen to one franc. The note circulation on 1 July amounted to over 11,000,000,000 kronen.

Finance.—The Minister of Finance of Czechoslovakia in October 1922 presented to the National Assembly the following estimates of the budget for 1923:

	Crowns
Expenditures:	
Ordinary.....	13,605,000,000
Extraordinary.....	5,722,000,000
Total.....	19,377,000,000
Revenues:	
Ordinary.....	17,961,000,000
Extraordinary.....	851,000,000
Total.....	18,812,000,000
Deficit.....	565,000,000

Amortization and interest payments on the state debt amount to 2,790,000,000 crowns; this includes payment of interest on the American credit as well as interest and principal on the national liberty loan. Expenditures for national defense are to be less than those for 1922 by 333,000,000 crowns, for foreign affairs, 85,000,000 crowns, and for education, 95,000,000 crowns. Capital improvement expenditures amount to 3,000,000,000 crowns, which sum is to be borrowed.

Railway profits are estimated at 746,000,000 crowns, and postal and telegraph at 282,000,000 crowns. Customs profits are estimated to be greater by 148,000,000 crowns, and the revenue from the tobacco monopoly by 57,000,000 crowns. The revenue from taxes will be decreased by 62,000,000 crowns because of a loss of 400,000,000 crowns from the turnover tax and 400,000,000 crowns from the coal tax.

The debt of the republic is divided as follows:

To the United States.....	\$57,744,750
To France.....	francs 135,051,473
To Italy.....	lire 186,000,000
To Great Britain.....	pounds 304,106
Czechoslovakia's share of the pre-war debt of Austria-Hungary.....	gold francs 1,200,000,000
and.....	crowns 4,800,000,000
Tax of liberation.....	francs 750,000,000
Internal debt.....	crowns 12,800,000,000
Loans.....	crowns 3,000,000,000
and a fourth loan the amount of which is not stated.	

The latest official statement of the debt of the new republic gave the total indebtedness as follows:

Foreign debt.....	francs 3,500,000,000
Internal debt.....	crowns 25,000,000,000

Army.—There is universal military service for men between the ages of 20 and 50. The period of active service is 14 months. In peace time the army numbers 150,000 men, but during mobilization and war all citizens from 17 to 60 are obligated to do all that is possible for the national defense.

Agriculture.—This industry is well developed and intensive crop-raising is practised. Wheat, rye, barley, oats, potatoes and sugar beets are the principal crops. Wheat, rye, barley and oats are produced in about equal quantities to the amount of 1,200,000 metric tons annually. The sugar-beet crop is the foundation of a great sugar industry, furnishing raw material to 175 factories, producing about 700,000 metric tons of sugar annually. About 5,000 tons of hops of fine quality are grown. Apples, pears, and the stone fruits are raised in large

quantities and are an important item in the country's export list. The latest live stock census listed 4,213,454 cattle, 2,015,211 pigs, 1,174,045 goats, 581,257 horses and 975,889 sheep. This is much less than the normal numbers of these herds which were depleted by the war.

Forest and Mineral Products.—About 32 per cent of the area of the republic is covered with forests, which yield annually 565,024,000 cubic feet of timber. The coal mining industry gives employment to 110,233 persons in 366 mines producing 20,000,000 tons of lignite and 11,000,000 tons of hard coal yearly. Gold, silver, copper, lead, rocksalt, graphite, garnets and iron are mined also.

Industries.—The latest industrial census listed 8,833 factories, of which 1,999 were textile mills, 1,755 glass works, 1,358 food products, 674 for furniture, 1,187 metal and machine works, 458 chemical works and 297 paper mills.

Trade and Commerce.—The foreign trade of Czechoslovakia for 1921 showed a favorable balance of 4,876,833,254 crowns, which was an increase of 691,830,453 crowns over that for 1920, according to statistics issued by the Government Statistical Bureau. In 1921 imports were valued at 22,435,356,046 crowns and exports at 27,312,189,300 crowns. If these figures are compared with those for 1920, when the imports were valued at 23,384,411,785 crowns and the exports at 27,569,414,586 crowns, there appears a decrease in the imports of 949,055,739 crowns, or 4 per cent, and in the exports of 257,225,286 crowns, or about 1 per cent. Total exports in 1922 amounted to 9,455,023 metric tons as against 9,742,725 in 1921. Total imports were 3,164,593 metric tons as compared with 3,991,174 metric tons in 1921.

Austria, Germany, France and Hungary are the principal markets for the products of Czechoslovakia, while Germany, the United States, and Austria supply most of the imports.

Transportation and Communication.—The state owns 5,105 miles of the total of 8,497 miles of railways in the country, while 3,320 miles are privately owned and 72 miles are the property of foreign states. About 1,000 miles are double-tracked, of which 801 miles are on the state railways. In the years immediately preceding the war 96,000,000 passengers and 57,000,000 tons of freight were carried annually on the main lines of railways in what is now the Czechoslovak Republic, the receipts from this traffic amounting to 588,000,000 crowns. In 1920 146,000,000 passengers and 46,000,000 tons of freight were hauled, the receipts therefrom amounting to almost 3,000,000,000 crowns.

The year 1921 witnessed a consistent growth in passenger traffic, over 159,000,000 having been carried; but freight tonnage fell off to slightly over 43,000,000 tons, the gross receipts for that year having been 3,873,499,000 crowns. It will be noted that while there was a substantial increase in passenger traffic, as compared with pre-war years, the freight tonnage was considerably lower. It was expected that this condition would continue in 1922, since the passengers carried in the first six months of 1922 numbered over 80,000,000, while the freight

traffic was only about 70 per cent of the pre-war tonnage.

Freight and passenger rates on the railways of Czechoslovakia are among the highest in Europe, it being computed that they are 13 times greater than those in Germany. There has been considerable agitation for a reduction, although the officials point out that the present basis of rates is the reason for their administration showing a surplus, as against the deficit constantly piling up in Germany. The Danube and the Elbe are important as commercial highways. There are in the republic 3,810 post offices, 2,228 telegraph offices, 54,156 telephone stations.

Religion.—There are 11,675,187 Roman Catholics, 592,699 Greek Catholics, 929,203 Protestants, 17,120 Old Catholics, 361,990 Jews and 3,051 Greek Orthodox adherents in the republic.

History.—The republics of Austria and Czechoslovakia negotiated a working agreement or entente, under which contentious questions will in future be referred to the League of Nations. The two countries promise one another mutual support in maintaining the treaties of Saint Germain and the Trianon. The agreement is for a period of five years. There was an acute housing shortage at the beginning of the year, but relief came promptly from the Government which laid out 1,032,000,000 crowns for the construction of 4,553 houses with accommodation for about 13,000 families. The Franco-American Oil Company secured from the Government a monopoly for oil prospecting and well sinking and also a trading concession for 30 years. Under the terms of the agreement a local company is to be created in which citizens of the republic will be majority stockholders.

A bill passed by the Chamber of Deputies in January forbade the sale of intoxicants of any kind to persons under 16 years of age. Persons who have reached the age of 16 may purchase wine or beer, but for other intoxicants the age limit is placed at 18 years. The same bill permits only beer and wine at all public dances. Landlords of licensed premises, their employees and representatives, and the parents or guardians of young people are responsible for the observance of the law.

An amnesty proclamation by President Masaryk in the spring set at liberty most of the Communists imprisoned as a result of the abortive uprising and strike in December 1920.

Savings bank statistics given out in April 1922 showed that 549,000,000 crowns were deposited, 358,000,000 crowns withdrawn, making a total saving for the year 1921 of 190,000,000 crowns. Premier Benes took a prominent part in the Genoa Conference. He rendered valuable assistance in arranging the preliminaries of the Conference and helped smooth out the differences between the French delegation and David Lloyd George of Great Britain.

The House of Deputies approved a British loan of \$50,000,000 for a term of 25 years at 8 per cent.

Aerial passenger service was organized during the year between the cities of Prague, Vienna and Bratislava. On 5 June a provisional treaty was signed at Prague by Czechoslovakia

and Soviet Russia and also with Ukraina. The text contains a declaration of neutrality and diplomatic and consular arrangements. Recognition was reserved for future consideration as well as the questions in regard to the property of Czechoslovakians sequestered in Russia. Citizens of Czechoslovakia are permitted to travel in Russia and to do business there.

Much trouble was experienced in June with the German Nationalists in the Parliament at Prague, the latter threatening to expel the Czech minorities from northern Bohemia. Poland concluded an agreement with Czechoslovakia in July relative to the organization of a medical service on the frontier. An economic and commercial treaty was concluded with the Ukraine and ratified in August, providing for neutrality in case of war between one of the parties and a third power and for the re-establishment of diplomatic relations. Each party to the agreement foreswore propaganda in the other's territory. The Land Reform Act passed by the Parliament provided for the taking over of 17 per cent of all fallow land, 14 per cent of meadow, 12 per cent of gardens, 12 per cent of vineyards, 17 per cent of pastures, 50 per cent of lakes and 50 per cent of forest lands. The autumn fair was well attended at Prague on 4-9 September there being 2,500 exhibitors and 200,000 visitors. The chemical industries, paper and paper pulp, glass, porcelain and ceramics were especially well represented. On 3 October Eduard Benes retired from the premiership and took the portfolio of Foreign Affairs in the Cabinet of his successor, Anthony Svehla, the leader of the Agrarian movement opposed to the Industrialists, who appeared to depend too much on Germany. In the autumn a committee of Czech noblemen was formed to contest the expropriation of their estates, alleging that the compensation allowed was but one-tenth of the real worth of the land. The Government of the Republic made a claim upon

Japan for 860,000 yen for arms and munitions belonging to the Czech troops stationed in Siberia until 1920. It was alleged that these arms had been sold to the Tschun of Manchuria, Gen. Chang Tso-lin. On 3 October the Government of Japan promised an investigation. The Foreign Minister, Dr. Benes, met the Italian Foreign Minister at Venice on 10 October to discuss the Balkan situation brought about by the reappearance of the Turk in Europe and to oppose the proposed Balkan Federation. An agreement was concluded on 31 August with Yugoslavia binding both republics to common action on international questions affecting their interests. Towards the close of the year it appeared that the policy of the new Cabinet would be the continuation of that of the former Premier. The republic is to be divided into administrative districts for facilitating internal administration, while alliance with Yugoslavia and Rumania assured the peaceful development of the nation's foreign trade. Drastic retrenchments marked the economic policy of the Government at home where the revenue was made to cover the normal expenses. The tariff policy of the Government appeared to be a modified free trade. The Land Office estimated that the larger part of the great estates had passed into the hands of the small proprietors at the close of the year. The currency situation improved throughout the year, the paper circulation being reduced by nearly 2,000,000,000 crowns in the year ended 23 September. On that date the paper in circulation amounted to 9,664,517,000 crowns. On 23 November the note circulation amounted to 9,500,000,000 crowns. The metallic reserve was 819,000,000 crowns; the total reserves, including the metallic reserve, commercial paper, foreign securities, etc., amounted approximately to 46 per cent of the circulation. The New York cable rate for one crown was \$0.03156 on 29 Nov. 1922.

D

DAHOMY, a French Colony of West Africa which reaches from the French Military Territories southward to Togoland and Lagos and Nigeria. Its coast line is only 70 miles but it stretches out to the northeast into a wide hinterland. The given area of the colony is 42,460 square miles with a population of 860,590, of whom only 600 are Europeans. Porto Novo is the seat of the government. The inhabitants are of pure negro strain and along the coast are good agriculturists. Indian corn, manioc, potatoes and yams are the chief products. Cotton is being introduced in recent years. The forest products are kernels and palm oil. Roads are being constructed for motor traffic and there is a short line of railway of metre gauge. The yearly budget of the colony averages 8,000,000 francs. Palm kernels and palm oil are the chief exports, the total value of which in 1920 was 63,650,651 francs. In the same year the imports were valued at 93,665,790 francs. Most of the foreign trade is with France but the United Kingdom also has a considerable share.

DAIRIES, Co-operative. See Co-OPERATIVE MOVEMENT.

DAIRY CATTLE. See AGRICULTURE IN THE UNITED STATES.

DAIRYING. See AGRICULTURE IN THE UNITED STATES; Co-OPERATIVE MOVEMENT and FARM PRODUCTS.

DAIRY PRODUCTS, Value of, in the United States. Dairy products in 1922, at farm prices, had a gross value of \$2,090,455,000, according to estimates by the United States Department of Agriculture. The value of dairy products in 1921 was placed at \$2,352,000,000, and in 1920, the top year in values, at \$3,018,000,000. Whole-milk sales from farms and consumption on farms comprised 65 per cent of the total value of all dairy products in 1922, and are given a value of \$1,357,000,000. In 1921 the value of such whole milk was placed at \$1,567,000,000, and in 1920 at \$1,911,000,000. Farm-made butter had a value of \$220,000,000 in 1922, compared with \$242,000,000 in 1921 and with \$366,000,000 in 1920. The 1922 value of cheese made, cream sold, butter fat sold, buttermilk, whey, and skim milk, is placed at \$513,018,000, compared with \$542,817,000 in 1921 and with \$740,736,000 in 1920. The farm price of whole milk was 19.09 cents per gallon in 1922, compared with 22.19 cents in 1921, and with 30.10 in 1920. The farm price of butter was 35.23 cents in 1922, compared with 37.16 cents in 1921, and with 54.25 cents in 1920. In the first nine months of 1922 production of all classes of condensed and evaporated milk amounted to 1,087,912,000 pounds, as compared with 1,160,644,000 pounds in 1921.

Heretofore, no estimates of the values of buttermilk, skim milk, and whey on farms have been included in the total value of dairy

products. Based on feeding value, these products had a value of \$260,600,000 in 1919, of \$230,000,000 in 1920, and of \$99,700,000 in 1921.

Exports.—The dairy products exported from the United States during the first 11 months of 1922 had a value of \$23,429,416 as compared with exports valued at \$41,264,436 shipped out during the corresponding period of 1921. Milk and cream exported during the first 11 months of 1922 totaled 181,633 gallons, valued at \$121,934. Condensed, evaporated and powdered milk exported during the first 11 months of 1922 totaled 183,550,267 pounds, valued at \$18,248,855 as compared with 276,641,680 pounds, valued at \$35,180,908 exported during the corresponding period of 1921. Germany in 1922 was the United States' best customer for condensed, evaporated and powdered milk, having taken 31,274,523 pounds during the first 11 months of the year. In the corresponding period of 1921 she took 52,796,918 pounds. Exportations to the United Kingdom declined from 71,417,489 pounds in the first 11 months of 1921 to 21,164,834 pounds in the corresponding period of 1922. During the 1922 period mentioned, Latvia took 20,754,156 pounds, Russia in Europe took 19,765,425 pounds, Cuba took 17,853,595 pounds. Exports of butter during the first 11 months of 1922 totaled 10,575,819 pounds, valued at \$3,902,937 as compared with 7,575,529 pounds, valued at \$3,079,927 exported in 1921. Aside from Cuba, Haiti and the other West Indies, Mexico was America's best customer for butter in 1922, having taken 818,172 pounds. Cheese exported during the first 11 months of 1922 totaled 4,699,246 pounds, valued at \$1,155,690, compared with 11,332,582 pounds, valued at \$2,595,620 exported in the corresponding period of 1921. Cuba took 1,269,307 pounds and Mexico took 1,241,472 pounds.

DAKOTA WESLEYAN UNIVERSITY, a Methodist-Episcopal co-educational institution, founded in 1883 and located at Mitchell, S. D. It has a faculty of 27 members, and in 1921-22 had an enrollment of 718 students and an income (college only) of \$73,891.34. Its property is valued at \$490,266.42. Edward Delor Kohlstedt, is president.

DALLAS, University of, a non-sectarian educational institution for men, founded in 1904 and located at Dallas, Texas. In 1922-23 it had a faculty of 18 members, 172 students, property valued at \$400,000 and an income of \$25,000. Dr. W. P. Barr, C.M., is president.

DALMATIA, a former crownland of Austria and since 1918 a province or district of the Kingdom of Serbs, Croats and Slovenes (Yugoslavia). Its area is 5,090 square miles and its population numbers 621,503, nearly all of whom are Croats and about 500,000 are Catholics, about 100,000 being Greek Orthodox. Zara is the capital with a population of 14,000.

Spalato, Ragusa and Cattaro are important sea-ports. After the World War disputes arose with Italy regarding the boundaries of the territory, but these were settled by the Treaty of Rapallo. The district borders the eastern littoral of the Adriatic Sea and on the east is itself bordered by Bosnia and Herzegovina.

DAMS. The Geological Survey reported in 1922 that there were 3,116 water-power plants of 100 horse-power capacity or over in the United States. As nearly all of these involve a dam, and some of them two or more dams, it follows that there are over 3,000 large dams in the country for water-power, without counting those built for other purposes. New York State leads in this development, with 1,292,000 horse-power, but this is because the Niagara equipments are figured in, and these do not involve the dams here considered. California is the real leader, with 1,149,000 horse-power, followed by Washington with 459,000, Maine with 450,000, and Montana with 344,000. The total horse-power of these plants is 27,943,000. But in the spring or flood season the total capacity rises to about 54,000,000 horse-power. Perhaps a score of the larger dams connected with this water-power development are of general interest, but one stands out from all the rest, as demonstrating a new principle in hydraulic engineering, and that is the Mitchell dam of the Alabama Power Company, not far from Birmingham, being a part of the Coosa River development. This dam has what is termed a "backwater suppressor" which actually increases the effective head of water for the turbines, the total gain depending somewhat on the amount of water flowing. The "head," or height of water that falls into the turbines or water-wheels, together with the quantity of water, determines the amount of power that is obtained for useful work. But the higher a dam is built the stronger it has to be all over, and the more it costs, so the gaining of perhaps a couple of feet head, at no appreciable cost for the equipment, is a great achievement. It is the invention of A. G. Thurlow, chief engineer of the Alabama Power Company.

At the foot of a dam is usually a pool of water, and as the water released from the turbines comes rolling on, it pushes back the water of the pool, forming a more or less permanent wave, whose effect is to raise the general level of the water in the pool, and thus to cut off something from the effective height or head of water that can be used on the turbines. Engineer Thurlow's "backwater suppressor" lowers this wave, and so leaves a greater effective working head. The energy of the spillway water is used to reduce the height of the tailwater. This improvement in dam construction is such a pronounced success, not involving added cost, that it will doubtless become standard practice. The Mitchell dam is one of the larger reservoirs of the country, being 95 feet in height, 1,200 feet long, and costing \$1,838,800. The entire Coosa River development is to cost \$11,000,000.

Another new and somewhat similar construction, for a different purpose, characterizes the new dam at Dayton, Ohio. Through dear experience the people of the locality dread the possibility of a broken dam and a flood. To relieve the pressure in the dam, in time of high

water and flood conditions, large twin conduits are provided to let out the water from near the foot of the wall. At high water it comes through these conduits with such prodigious force that the engineers reckoned it equaled six 50-car freight trains, running at 37.5 miles an hour. The problem was to check this so it would not tear to pieces everything in the vicinity. The water spilling from the conduits was led down a constantly widening channel, with a rough stepped floor and sides, so that this tremendous energy was dissipated in friction over a large area. The construction has been named a "hydraulic jump," and it is calculated that had it been in the dam at the time of the 1913 flood, it would have relieved at least 14 feet of the height of the accumulated water, and avoided the disaster.

About the year 1912, the engineering world was agog with the wonderful water-power project of the Southern California Edison Company, which developed the large water supply at Big Creek, and carried the power 240 miles to Los Angeles by means of a 150,000 volt transmission line. This superb accomplishment has already been discounted in the march of progress, and the company is reconstructing the line to operate at 220,000 voltage. The system of dams has been enlarged, and a new development begun, which will cost \$61,000,000 by the time it is completed in 1930. The horse-power developed for sale is to total 545,000, so that the cost will be \$112 per horse-power, slightly less than the average for the United States, excluding Niagara development. The largest dam of the Big Creek plant, now under way, is a multiple arch structure, 180 feet high and 2,300 feet long, the cost to be \$4,310,000. The next three in size are to cost respectively, \$2,650,000, \$2,260,000 and \$2,000,000.

California has another notable water-power development undertaken by the San Joaquin Light and Power Company. It is to include 10 dams, of a total cost of \$17,330,000. The highest of these is the Bear Division dam—325 feet by 1,385 length, to cost \$4,200,000. The largest is the mammoth Wilson dam, that has been widely written up. The concrete dam wall is 250 feet high, and 6,475 feet long, involving an outlay of about \$10,000,000. This considerably exceeds in size the famed Roosevelt dam in Arizona, and the great Assouan dam on the Nile. It is the largest in the world, though its cost is exceeded by the Ashokan dam at Catskill, N. Y., the Keokuk, Iowa, dam, on the Mississippi, the Ken-sico dam of the Croton watershed, supplying New York City, and the Assouan dam. The Keokuk dam, constructed by the Mississippi River Power Co., is the largest low-head dam in existence, and cost \$24,000,000. Though the masonry is 53 feet high, the water head is but 32 feet. It is near the Des Moines Falls, passing 200,000 cubic feet of water per second at low water and 375,000 feet at high water. The power house is to consist eventually of 30 units of 10,000 horse-power each. The territory served is Saint Louis, Alton, Hannibal, Quincy and smaller cities.

The Gilboa dam of the Catskill water supply system, in New York, is a near rival of the famed Ashokan dam. It is located on Schoharie Creek, 156 miles from the other terminal of

New York City's high pressure water system on Staten Island. It forms a lake $5\frac{1}{2}$ miles long by 0.7 wide, with an extreme water depth of 150 feet, and an average of 57 feet. The shore line is 16.5 miles and the acreage 1,145. The masonry portion of the dam is 180 feet from bedrock, and 1,300 feet long, but there is an extension of 700 feet, which is an earth dam, strengthened with a core wall. It is built with contraction joints at intervals, these being filled with copper sheeting 7 inches wide by 1-16th thick. The dam was nearly half done in the early summer of 1923, and is to cost \$7,000,000. It is designed for a 20,000,000,000 gallon service, and the excess water flows down a stepped canal that falls 150 feet to the Shandaken tunnel. This tunnel is a notable engineering feat, being 18 miles in length—longer than any of the tunnels under the Alps, though of less diameter, being 11.6 x 10.3 feet.

Other interesting dams in course of construction are the Hetch Hetchy dam, in California, where the masonry was sunk 72 feet to reach bedrock, giving an extreme height to the crest of 312 feet; the dam at McConnellsville, O.; others at Cody, Wyo., Missoula, Mont., Monticello, Utah, Paisley, Ore., and a series along the Colorado River, the largest at Glen Canyon; also a series of five on the south fork of the American River, in California. At Muscle Shoals, which has been so advertised by the Henry Ford offer, the Alabama Power Company has offered the Government to complete the large dam with an initial unit of 240,000 horse-power, and to give the Government 100,000 of this power for free use for fertilizers and munitions. Despite all the talk about spoiling the Falls of Niagara, a license has been granted for 187,500 increase of horse-power development there. In all, the Federal Power Commission has issued licenses in recent years for a total of 150,000,000 horse-power development, involving the construction of over a hundred large dams.

For irrigation purposes the United States Government completed during the War period two more great dams, making a total of six in what used to be called the Great American Deserts, meaning the region of light rainfall, extending through Idaho, Nebraska, Wyoming, New Mexico, Arizona and part of Texas. These two are the Arrowrock, on the Boise River, in Idaho, with a height of 307 feet by 1,100 length, and a storage capacity of 91,230,000,000 which cost \$4,500,000, and the Elephant-Butte, on the Rio Grande River, partly in New Mexico and partly in Texas, which is 306 feet high, by 1,674 length of masonry, and has the greatest storage capacity of any dam reservoir in the world, 759,605,000,000 gallons, yet its cost was only \$5,015,000. Two very large dams are projected in Egypt, one at Makwar, on the Blue Nile, the other 24 miles south of Khartoum, on the White Nile. A loan of £7,000,000 is being negotiated with Great Britain to carry them through.

CHARLES H. COCHRANE.

DANIEL BAKER COLLEGE, a Southern Presbyterian coeducational institution, founded in 1889 and located at Brownwood, Texas. In 1922-23 it had a faculty of 17 members, 250 students, and property valued at \$243,-

710, with endowment of \$250,000. S. E. Chandler, D.D., is president.

DANZIG, a free city, constituted under article 102 of the Treaty of Versailles, and placed under the protection of the League of Nations. The city has an advantageous situation at the mouth of the Vistula and has always been a great shipping centre. The freedom of the city was proclaimed 15 Nov. 1920 and at the same time a treaty was concluded with Poland under the terms of which Danzig and Poland constitute a single customs territory. In 1922 the Polish-German customs frontier line was extended to the Baltic, thereby making a single customs administration for the free city of Danzig and the Republic of Poland. A Constitution was drawn up under the terms of the Versailles treaty and approved by the League of Nations on 17 Nov. 1920. This document provides for a Chamber of 120 members, elected for four years and a Senate of 20 members, a President and Vice-President. The President and nine senators are elected by the Chamber for a term of six years, the Vice-President and the remaining senators are elected for the duration of the Chamber. The six-year senators are a special class known as main office senators and they may not engage in any other office or employment during their term as senators. The President supervises the entire administration. A plebiscite may be demanded by 20 per cent of the voting population. The free city has an area of 709 square miles and a population of 352,380. About 26,417 of the population are Poles. For purposes of local government the territory of the free city is organized into five cities, 69 estate districts, and 251 rural communes. The populations of the principal divisions are as follows:

Cities	
Danzig.....	194,953
Marienburg-Kalthof.....	1,791
Neuteich.....	2,395
Tiegenhof.....	2,834
Zoppot.....	18,397
Communes	
Ohra.....	12,347
Oliva.....	11,706
Praust.....	3,070
Bürgerwiesen.....	2,324
Stutthof.....	2,337
Emaus.....	2,321

There are several bathing resorts within the territory of the free city. The city of Danzig proper has 38 primary schools with 540 teachers and 24,288 pupils, three secondary schools with 46 teachers and 1,858 pupils, two girls' high schools with 1,028 pupils, three boys' high schools with 1,436 pupils, and a technical high school with 65 teachers and 864 students. The debt of the city in 1922 amounted to 43,034,647 marks. The budget is approximately 40,000,000 marks yearly. There is a large trade in grain, lumber and sugar. For an extended discussion of the new relations of Danzig consult Ashkenazy, Simon 'Danzig and Poland.' For the history and antecedents of the city see article **DANZIG** in the Americana.

DARTMOUTH COLLEGE, a non-sectarian educational institution for men, founded in 1769 and located at Hanover, N. H. In 1922-23 it had a faculty of 175 members, 2,075

students, property valued at \$3,000,000 for plant, exclusive of dormitories, endowment of \$6,000,000 and an income of about \$1,000,000. Ernest Martin Hopkins, LL.D., is president.

DASHEEN, a potato-like vegetable introduced into the Southern States from the tropics a few years ago. It is increasing in popularity and annual shipments to northern markets are estimated to be about 10 carloads. Between 2,000 and 3,000 Southern farmers, mostly in Florida, now grow the vegetable. It is said to have a flavor suggestive of chestnuts and comes on the market toward the end of November. Experiments in growing dasheen have been carried on by the United States Department of Agriculture, which also has devised numerous methods of preparing the vegetable. Although quite similar in composition to the potato, it is said to contain less water and a higher percentage of protein and carbohydrates.

DATE SCALE. See HORTICULTURE.

DAUGHERTY, Harry Micajah, United States Attorney General: b. Washington Court House, Ohio, 26 Jan. 1860. After attending the high school of his native town, Mr. Daugherty studied law at the University of Michigan from which he was graduated with the degree of LL.B. in 1881. He returned to his old home and practised there until 1893 when he moved to Columbus, Ohio, which has continued to be his home. From 1902-21 he was senior member of the firm of Daugherty, Todd and Rarey. Mr. Daugherty served two terms (1902-04) as a member of the Ohio House of Representatives. In 1920 he was campaign manager for President Harding and was made Attorney-General of the United States with a seat in the President's Cabinet on 5 March 1921. Having previously offered a resolution calling for the impeachment of the Attorney General on the ground of unfitness to hold his office, Representative Keller, of Minnesota, on 1 Dec. 1922, submitted to the Judiciary Committee of the House of Representatives a lengthy document containing 14 allegations against Mr. Daugherty. Among other charges the Keller allegations asserted the Attorney-General had refused to prosecute violations of the anti-trust laws, that he had shown favoritism toward corporate interests, including the firm of J. P. Morgan and Company, and that he had used Government detectives to shadow those who had criticised him. Hearings were begun but on the third day Mr. Keller withdrew from the case and thereafter ignored a subpoena commanding him to appear before the committee. On 9 Jan. 1923, the Committee, by a vote of 11 to 3, recommended to the House the dismissal of the impeachment proceedings. The resolution stated that the committee had made an examination touching the matters charged in proceedings against Mr. Daugherty to ascertain if there was any probable ground to believe that any part of them were true, but that "on consideration of the charges and the evidence obtained" it did not appear that there was any ground to believe that the Attorney General, has been guilty of any high crime or misdemeanor "requiring the interposition of the impeachment powers of the House."

DAUGHTERS OF THE CONFEDERACY, United. The United Daughters of the Confederacy was organized in Nashville, Tenn., 10 Sept. 1894, by Mrs. C. M. Goodlet (recognized as the founder), and was incorporated 18 July 1919 in the District of Columbia. The first convention was held in Nashville, 30 March 1895, and the last in Birmingham, Ala., 14 to 18 Nov. 1922, making the total number of annual conventions held 29. There have been 16 presidents-general, of whom 11 were alive 1 Jan. 1923. The objects of the organization are, historical, memorial, benevolent, educational, and social. Twenty prizes are offered to stimulate historical work, varying from medals to \$100 in gold. The organization holds \$99,666 in scholarships, and has invested in United States government bonds \$68,000 for scholarships for World War veterans. It has organizations in 34 States in the Union, and a chapter in Paris, France, composed entirely of French citizens with the Marquise de Courtivron, the daughter of Major-General de Polignac, as its president. There are 1,160 chapters with an approximate membership of 80,000.

The present officers are (1922-23): President-general, Mrs. Livingston Rowe Schuyler, 520 West 114th street, New York City; first vice-president-general, Mrs. Frank Harrold, Americus, Ga.; second vice-president-general, Mrs. Frank Elmer Ross, Riverside Calif.; third vice-president-general, Mrs. W. E. Massey, Hot Springs, Ark.; recording secretary-general, Mrs. William E. R. Byrne, Charleston, W. Va.; corresponding secretary-general, Miss Allie Garner, Ozark, Ala.; treasurer-general, Mrs. J. P. Higgins, St. Louis, Mo.; historian-general, Mrs. St. John A. Lawton, Charleston, S. C.; registrar-general, Miss Ida F. Powell, 1447 East Marquette road, Chicago, Ill.; custodian of crosses of honor, Mrs. W. H. Estabrook, 645 Superior Avenue, Dayton, Ohio.

Work under way 1 Jan. 1923 was as follows: Completion of the Jefferson Davis monument at his birthplace in Kentucky; the amount to be contributed, \$50,000; naming and marking of the Jefferson Davis Highway, from the Atlantic to the Pacific; the building of a memorial chapel to Gen. Robert E. Lee at Washington and Lee University, Lexington, Va.; placing of a bust of Gen. Robert E. Lee in the British War College in England; construction of an elevator in the American Memorial Hospital at Neuilly, France, placing of a tablet to a "Faithful Slave" at Harper's Ferry; presentation of portraits, one of Commodore Matthew Fontaine Maury to Naval Academy, Annapolis, and one of Admiral Raphael Semmes to the Salle d'Alabama, Geneva, Switzerland; completion of the Cunningham Memorial Fellowship of \$5,000; erection of a boulder to Jefferson Davis at Point Isabel, Texas, to commemorate his service to the United States government during the Mexican War; the giving of an annual prize to a student at Annapolis in memory of Commodore Matthew Fontaine Maury; the collection of books for foreign libraries consisting of the Bodleian, Sorbonne, and the Library of Parliament at Ottawa, to which already have been sent several hundred vol-

umes; the giving of medals to commemorate the service of the descendants of Confederate veterans in the World War; assisting the Maury Monument Association in their work of erecting a memorial to Matthew Fontaine Maury in Richmond, Va.

MRS. LIVINGSTON ROWE SCHUYLER,
President-General.

DAVIDS, Thomas William Rhys, English educator and Orientalist: b. Colchester, England, 12 May 1843; d. Chipstead, Surrey, 26 Dec. 1922. He was known throughout the world as an authority on Pali and Buddhist literature. He was educated at Brighton and at the Breslau University where he studied Sanskrit. In 1866 he entered the Ceylon Civil Service. In Ceylon he began his Buddhist studies and published a book on the coins and medals of Ceylon. He also acted as district judge. Returning to London he studied law and was called to the bar, Middle Temple, in 1877. In 1882 he became professor of Pali and Buddhist literature at University College, London, and held this chair until 1912. In 1904-1905 he was professor of comparative religion at Manchester University. He founded the Pali Text Society of which he was president; was one of the founders of the British Academy; was an officer in the India Society; president of the Manchester Oriental Society; and from 1885 to 1904 was librarian of the Royal Asiatic Society. In 1895 he established the Oriental Translation Fund and in 1890 the Indian Text Series. He delivered the Hibbert Lectures in 1881.

His books include: 'Buddhism' (1878, 23d edition, 1914); 'Buddhist Birth Stones' (1880); 'Ancient Coins and Measures of Ceylon' (1877); 'Buddhist Suttas from the Pali' (1881); 'Questions of King Milinda' (1890-94); 'Hibbert Lectures' (1881); 'American Lectures' (1896); 'Vinaya Texts' (1881-85); 'Digha Nikaya' (1890 and 1892); 'Sumangala Viladine' (1886); 'Sacred Books of the Buddhists: Dialogues of the Buddha' (1899 and 1910); 'Buddhist India' (1903; 2d edition 1905), and 'Early Buddhism' (1908). His widow, Caroline Augusta, daughter of Rev. J. Foley, Fellow of Wadham, Oxford, is also an authority on Buddhism and Buddhist literature and has published 'Buddhist Psychological Ethics' (1910); 'Psalms of the Early Buddhists' (1903-13); 'Buddhist Psychology,' etc.

DAVIDSON COLLEGE, a Presbyterian, but non-sectarian, educational institution for men, founded in 1836-37 and located at Davidson, N. C. In 1922-23 it had a faculty, exclusive of the president, of 27 members, and 555 students. The cost value of its property was given as \$450,000 and its income as \$160,000 exclusive of \$50,000 spent by the government in connection with the Reserve Officers Training Corps. Its president is William J. Martin.

DAVIS, James John, United States Secretary of Labor: b. Tredegar, Wales, 27 Oct. 1873. His father and mother with their six children emigrated to Pittsburgh in 1881. Young Davis attended the public schools at Pittsburgh and at the age of 11 began work

in the iron and steel plant at Shannon, Pa., where he learned the puddler's trade. In 1892 he worked in an iron plant at Pittsburgh, and in 1893 in a steel and tin plate mill at Elwood, Ind. Joining the Amalgamated Association of Iron, Steel and Tin Workers of America, he was elected to various offices in that organization and is still a member thereof in good standing. Turning his attention to politics, he was elected City Clerk of Elwood, Ind. in 1898, and Recorder of Madison County, Ind., in 1902. In 1906 he joined the Loyal Order of Moose, and in 1907 became director general of the order, an office which he still holds. He was chairman of the Moose War Relief Commission which visited American, French, British, Belgian and Italian battle fields early in 1918, and after the armistice returned to the battle fields of Belgium and Germany, for relief purposes. President Harding made Mr. Davis a member of his Cabinet by appointing him Secretary of Labor and he took the oath of office 5 March 1921. He was a founder of the Mooseheart, Ind., Home and School; is president of the American Bond and Mortgage Co. of Pittsburgh, and is a Mason, an Odd Fellow, a member of the Knights of Pythias, the Elks and other organizations. He is a member also of the Americus, Republican, Duquesne, and Athletic clubs of Pittsburgh and of the National Press Club at Washington. In 1922 Mr. Davis published, 'The Iron Puddles; My Life in the Rolling Mills, and What Came of It,' with an introduction by Joseph G. Cannon.

DAVIS, Robert Courtney, American army officer: b. Lancaster, Pa., 12 Oct. 1876. He was graduated from the United States Military Academy in 1898 and 26 April of the same year was commissioned a second-lieutenant in the 17th Infantry. His successive promotions were as follows: First-lieutenant, 2 March 1899; captain, 28 Nov. 1902; major, 16 Sept. 1916; lieutenant-colonel (temporary), 5 Aug. 1917; colonel (temporary), 9 May 1918; brigadier-general, National Army, 26 June 1918. On 10 Aug. 1922, President Harding nominated him to be Adjutant-General with the rank of major-general. Shortly after the United States entered the World War, General, then Major, Davis was ordered to France. He arrived there 28 July 1917 and served from that date until 30 April 1918 as assistant to the Adjutant-General, acting as Adjutant-General from 27 Nov. 1917, to 22 Jan. 1918. On 1 May 1918 he was appointed Adjutant-General of the American Expeditionary Forces and served in that capacity until his return to the United States, 8 Sept. 1919. In addition to his services in the World War, for which he received the Distinguished Service Medal, General Davis participated in the campaign against Santiago de Cuba during the Spanish-American War, taking part in the battles of El Caney and San Juan. He served in the Philippines, 1899-1901, and was cited for gallantry displayed by him in actions against the Filipino insurgents. From 1901-05 he was an instructor at the United States Military Academy; from 1906-09 he served with the Army of Cuban Pacification; from 1909-11 was aide-de-camp to Major-General Barry; from 1911-12 was adjutant at the

United States Military Academy; from 1912-13 was adjutant of the 17th Infantry, and from 1914-16 was inspector and instructor of the Philippine Scouts. In 1917 he was assigned to duty in the Adjutant-General's office at Washington and served there until ordered to France.

DAVIS AND ELKINS COLLEGE, a Presbyterian co-educational institution, founded in 1904 and located at Elkins, W. Va. In 1922-23 it had a faculty of 12 members, 275 students, property valued at \$350,000 and an income of \$35,000. James E. Allen, A.B., is president.

DAVISON, Henry Pomeroy, American banker and philanthropist: b. Troy, Pa., 13 June 1867; d. Peacock Point, Locust Valley, Long Island, N. Y., 6 May 1922. He attended school in the town of his birth until he was fifteen years of age, thereafter taught for a while, and then entered Greylock Institute, South Williamstown, Mass. When he was 19 he went to work in his uncle's bank at Troy, Pa. Two years later he secured a position as runner with the Pequonock National Bank of Bridgeport, Conn., and within three years was promoted to receiving teller. In 1891 he went to New York and secured a position as teller with the newly formed Astor Place National Bank. He was made assistant cashier in 1894, cashier in 1895, vice-president in 1898, and president in 1899 of the Liberty National Bank. At that time he was one of the youngest bank presidents in America. In 1902 he resigned the presidency of the Liberty National Bank to become vice-president of the First National Bank. When, in 1907, one of the worst financial panics in the history of the country developed, Congress sought the advice and assistance of Mr. Davison whose ability as a financier already had attracted wide attention. He was appointed a member of the Special Clearing House Committee to investigate the affairs of banking institutions and to confer with the leading financiers as to ways and means of alleviating the situation. The following year he was appointed as expert on banking to the Monetary Commission sent by Congress to study financial conditions in France, Germany, and England with a view of securing information which could be used in improving conditions in America. Singling him out as a man of exceptional ability, the late J. Pierpont Morgan, in the fall of 1908, extended to Mr. Davison an invitation to become a partner in the firm of J. P. Morgan and Company from 1 Jan. 1909. The invitation was accepted and from that time until his death he was one of the most prominent and active members of that widely-known banking concern. In 1910 Mr. Davison was chosen by a group of American bankers as their representative at the Six-Power Chinese Loan negotiations which took place in Paris. When the conference met he was made chairman by the representatives of France, Great Britain, Germany, Russia and Japan. Shortly after the outbreak of the World War, J. P. Morgan and Company became the fiscal agent for the Allies in America. Through it enormous contracts for supplies were placed, huge loans, beginning with one for \$500,000,000 in 1915, were negotiated, and tremendous disbursements were made.

Much of the work fell upon Mr. Davison's shoulders and for over two years he was one of the busiest men in America. When America entered the World War, President Wilson drafted Mr. Davison and made him chairman of the American Red Cross War Council, in which position he continued to serve at a salary of \$1 a year, paying his own expenses, until 1919 with the rank of major-general. In as much as the Red Cross was burdened with the welfare not only of American soldiers and sailors, but also had to continue its assistance to other nations, the task imposed upon Mr. Davison was enormous. One of his first acts, as head of the Red Cross, was to launch a seven days' drive for \$100,000,000 for war relief work. So efficiently was the campaign conducted that the contributions made within the time limit totaled \$115,000,000. In 1918 a second drive inaugurated by Mr. Davison brought in contributions totaling \$170,000,000. The efficiency with which the Red Cross performed its tasks during and after the war testifies, perhaps, better than anything else to Mr. Davison's ability as an organizer and executive. Honors were bestowed upon him by France, which made him a commander of the Legion of Honor, the first American to be accorded this distinction; by King Albert of Belgium who conferred upon him the Order of Leopold, the highest Belgian decoration; and by the King of Italy who made him a Grand Officer of the Crown of Italy. In May 1919 Mr. Davison was elected chairman of the Governing Board of the World League of Red Cross Societies. During the war he and Mrs. Davison turned over to the Young Women's Christian Association their former home at 12 West 51st street, New York, as a "hostess house" for service men and their friends and relatives. Besides his connection with J. P. Morgan and Company, Mr. Davison was chairman of the executive committee and a director of the Bankers Trust Company of New York which he had helped to organize, a director of the First Security Company, a director of the American Foreign Securities Company, a director of the New Jersey and New York Railroad Company, a director of the Southwestern Development Company, and a director of the Guaranty Safe Deposit Company. He was also a trustee and treasurer of the American Museum of Natural History and treasurer of the National Institute of Social Sciences. He held memberships in the Century, Metropolitan, Union League, University, Jekyl Island, Piping Rock, New York Yacht, the Links, the National Golf Links of America, and the Nassau Country clubs. In 1913 the degree of LL.D. was conferred upon him by the University of Pennsylvania.

DAWES, Charles Gates, American financier: b. Marietta, Ohio, 27 Aug. 1865. He was graduated from Marietta College in 1884 and from the Cincinnati Law School in 1886, when he was also admitted to the bar. From 1887-94 he practised law in Lincoln, Neb., and then became interested in the gas business in Evanston, Ill., La Crosse, Wis., Seattle, Wash., and other cities. Becoming interested in politics he was executive of the McKinley movement in Illinois, resulting in McKinley instructions at

Springfield Convention in 1896. He was a member of the executive committee of the Republican National Convention in the campaign of 1896; Comptroller of the Currency in 1897-1902, and since 1902 has been president of the Central Trust Company of Illinois, which he founded in 1902. He is also president of the Rufus F. Dawes Hotel Association. He was major in the engineer ranks in 1917, went to France in July 1917 as lieutenant-colonel, railway engineers, and was appointed to the administrative staff of commander-in-chief, American Expeditionary Forces. In September 1917 he was made chairman of the General Purchasing Board and general purchasing agent, American Expeditionary Forces. He also became a member of the Liquidation Commission of the Allies. In 1919 he resigned from the army and returned to the United States. He was given D. S. M.; Order of Leopold from Belgium, and Legion d'Honneur from France. Mr. Dawes is known as the organizer of the first United States Government budget and one of the foremost authorities on banking and economics in the country. He is the author of 'The Banking System of the United States' (1892), and 'Essays and Speeches' (1915).

DAWSON, Arthur, American artist: b. Crewe, England, 9 March 1858; d. Richmond, Va., 27 August 1922. He was a son of the Rev. John Godfrey Dawson and was educated at Saint Saviour's College, from which he received the degree of A.B. Thereafter he studied art at the South Kensington School where he was a medalist. He also studied under David Law and William Morris. In 1887 he came to the United States and eventually became a naturalized citizen of the country. For 10 years he maintained a studio in Chicago and while living in the city founded the Chicago Society of Artists and served as chairman of the advisory committee of the Municipal Art Society. In 1898 he moved to New York where, for a number of years, he had charge of the restoration of pictures belonging to the New York Public Library, and became the official portrait painter of the United States Military Academy. His works include portraits of John Barton Payne, Generals Tillman, Barry, Biddle and McArthur, E. H. Harriman, Dr. Henry L. Smith, of Washington and Lee University, and Dr. George L. Denny, of the University of Alabama. He was a member of the Artists' Fund Society, of New York; the Lotus Club, New York, and the Authors' Club, of London.

DAY, James Roscoe, American educator: b. Whitneyville, Me., 17 Oct. 1845, d. Atlantic City, N. J., 13 March 1923. He was graduated from Bowdoin College with a degree of A.B., in 1874, two years after he had been ordained to the Methodist Episcopal ministry. While a student at Bowdoin he served as pastor of a church in Bath, Me. (1872-74), and from 1876-78, was pastor of a church at Portland, Me. He was called to the pastorate of a large church in Boston, in 1881 and in 1883 accepted a call to St. Paul's Methodist Church in New York City. Two years later he went to Newburgh, N. Y., but returned to New York City in 1889 as pastor of Calvary Methodist Church in Harlem, where he remained until 1893 when

he became chancellor of Syracuse University. Under his administration, which lasted until 1922, when he retired as chancellor emeritus, Syracuse University experienced a phenomenal growth. To the colleges of Liberal and Fine Arts and Medicine were added schools of Law and Applied Science as well as a Teachers' College; its endowment was increased by several millions and its wealth by more than ten millions; the campus was doubled in size; the Archbold stadium, one of the finest in the country, was built; numerous buildings were added to the university group, while the student body was increased to more than 3,000. During his pastorate of St. Paul's Church, Dr. Day made the acquaintance of John D. Archbold, vice-president of the Standard Oil Company, who was one of the church trustees, and their friendship lasted until the latter's death in 1916. When Dr. Day became Chancellor of Syracuse University, Mr. Archbold became its most generous benefactor. As the result of his writings, interviews and speeches, Dr. Day earned a nation-wide reputation as a defender of great fortunes. He was a merciless critic of President Roosevelt during the latter's fight against monopolies and during the Wilson administration and after the World War, Dr. Day was frequently the caustic critic of the President and the League of Nations. His book, 'The Raid on Prosperity' was a defence of 'big business' and attracted wide attention. It was published during the Roosevelt administration and Mr. Roosevelt once referred to Chancellor Day as "the mouthpiece of big corporations in general and the Standard Oil Company in particular." The Roosevelt-Day controversy lasted for months and was exceedingly bitter. In 1904, Chancellor Day was elected a bishop of the Methodist Episcopal Church but declined the honor. Wesleyan University and Dickinson College conferred the degree of D.D., upon him in 1883. From Bowdoin he received the degree of S.T.D., in 1894; from Northwestern University the degree of LL.D., in 1896; from Cornell College, Iowa, the degree of D.C.L., in 1904 and from Syracuse University, the degrees of L.H.D., in 1915 and LL.D., in 1921.

DAY, William Rufus, ex-associate justice of the United States Supreme Court: b. Ravenna, Ohio, 17 April 1849. He was graduated from the University of Michigan in 1870 with the degree of B.S., read law in the office of Judge Robinson of Ravenna and from 1870-71 attended law lectures at the University of Michigan. Admitted to the bar in 1872, he practiced law in Canton, Ohio, was judge of the court of common pleas, 1886-90, and in 1889 was appointed United States district judge, northern district of Ohio, but resigned before taking office, owing to impaired health. In 1897 he was appointed by President McKinley Assistant Secretary of State and soon succeeded John Sherman to the post of Secretary of State, but in a few months resigned to become chairman of the American Peace Commission to Paris at the close of the war with Spain. President Roosevelt appointed him to the Supreme Court in 1903 where he remained until October 1922, when he resigned. His attention was then concentrated upon his

duties as umpire on the American-German Claims Commission. In 1898 the degree of LL.D. was conferred upon him by the University of Michigan, and in 1899 by the College of the City of New York.

DEATH RATE. See MEDICINE AND SURGERY, ADVANCEMENT OF; VITAL STATISTICS.

DEATH ROLL. See NECROLOGY.

DEBTS, Allied, European and National. See EUROPEAN DEBTS; NATIONAL DEBTS OF THE WORLD.

DEFIANCE COLLEGE, a co-educational institution under control of the Christian Church, founded in 1902 and located at Defiance, Ohio. In 1922-23 it had a faculty of 28 members, 300 students, property valued at \$718,000 and an income of \$83,000. Albert Garfield Caris, Litt.D., is president.

DE GHERARDINE, Adelbert Biart, ("King of Bohemia"): b. in France, 1867; d. Paris, June 1922. A descendant of an old noble Breton family with a brother as admiral in the French navy and a brother-in-law a prominent broker, he, nevertheless became a conspicuous figure in vagabondia. He took up his habitation many years ago in the Quartier Latin of Paris to study and remained there the rest of his life. He styled himself "King of Bohemia" and the art student world of Paris acclaimed him as such. He became one of the most picturesque figures of Paris. He was very tall and powerfully built and was a common sight in the Latin Quarter and on the Boulevard Michel, or "Boul' Miche," dressed in a rough shooting-jacket with leggings of paper tied with string and a blanket for a cape. At night he often reposed on a bench in the streets with an empty bottle or two by his side. During the World War he gave up his idle life and worked for a bookseller in the Latin Quarter. His booklet 'Thirty Years of Bohemia' (1919), now out of print, is prized by collectors.

DE HORSEY, Sir Algernon Frederick Rous, British naval officer: b. Great Glemham, Suffolk, 25 July 1827; d. Cowes, England, 22 Oct. 1922. His family of De Horsey dates from the reign of Henry II, and he was a descendant of Sir Jerome Horsey, Queen Elizabeth's Ambassador to Russia and of Major Samuel Horsey, governor of North Carolina in 1738. Entering the navy in 1840, at the age of 13 he was present at the operations on the coast of Syria in that year. In 1853 he was promoted commander and given the *Devastation*, a steam-sloop. In 1857 he was captain and during the greater part of the 18 years he held this rank, he served on the West India station. While in command of the *Brisk* he captured, after a long chase, a celebrated Spanish slave-ship, the *Manuela* with 846 slaves aboard. He was senior officer at Jamaica in the *Wolverine* during the riots of 1865, and for his services received the thanks of both Houses of Parliament. He was also senior officer on the lakes of Canada in the *Aurora* during the Fenian disturbances of 1866-67 and wintered his ship in the ice in Quebec. In 1871 he was made aide-de-camp to Queen Victoria. In 1872 he was appointed commodore in charge of the establishment in Jamaica. In 1875 he was advanced

to flag rank and as a rear-admiral became commander-in-chief on the Pacific station, with his flag in the *Shah*, which he held until July 1879. One of his chief exploits occurred in 1875 when he engaged the *Shah* in battle with the Peruvian rebel-ship *Hunscar*. This vessel had committed outrages against British subjects and British property. In the three and a half hours' action the pirate *Hunscar* was hit 70 or 80 times, but the *Shah* did not suffer, nor did the *Amethyst*, which aided her. The engagement sounded a distinct warning to the weakness of wooden-cased ships like the *Shah* in combat with iron-clads and had its influence on naval architecture. Promoted to vice-admiral on 27 Nov. 1879, he commanded the Channel Squadron in 1884-85 and on 29 April 1885 was advanced to admiral on the active list. On 25 July 1892, Admiral de Horsey retired and on 9 Nov. 1903, he was made a knight commander of the bath. Sir Algernon, who lived for many years at Melcombe House, Cowes, resigned in 1918 the chairmanship of the Isle of Wight county magistrates at the age of 90. He had been joint deputy governor of the island since 1913 and deputy lieutenant. To the last he maintained a keen interest in all naval affairs and matters relating to county administration. He frequently contributed letters to *The Times* and was the author of 'An African Pilot' and 'The Rule of the Road at Sea.' He was the oldest admiral in the British navy. Vice-Admiral Spencer Victor Yorke de Horsey is his son.

DELAWARE, a South Atlantic State of the United States and one of the 13 original States, bounded on the north by Pennsylvania, on the west and south by Maryland and on the east by the Delaware River, Delaware Bay and the Atlantic Ocean. It has an area of 2,390 square miles and a population of 223,003, which gives it 47th place both in area and population. Of the entire population, 192,615 are whites, 30,335 negroes, 51 Asiatics and 2 Indians. According to the Federal census of 1920 the foreign-born numbered 19,810, including 2,895 Irish, 1,632 Germans, 1,497 English and 4,136 Italians. Dover is the seat of the State government and has a population of 3,720. The largest city in the State is Wilmington, which in 1920 had a population of 110,168. The third largest city is Milford, with 2,603.

Religion.—The principal denomination in the order of their numerical strength are Methodists, 37,521; Roman Catholics, 30,183; Presbyterians, 6,197; Episcopalians, 4,656; and Baptists, 3,651.

Education.—Primary education is free and compulsory and separate schools are provided for white and colored children. There are in the State 446 public schools with 961 teachers and 31,135 pupils; 26 high schools with 173 teachers and 3,045 pupils. In addition, there are two normal schools, agricultural and mechanical colleges, Delaware College and Dover College for colored students. The total expenditure of the State for purposes of education averages \$1,750,000 annually.

Agriculture.—The State is mainly agricultural, about 85 per cent of the land being in farms, of which in 1920 there were 10,140, with a total area of 944,511 acres, including 653,052 acres of improved land. In 1920, the total value

of all farm property was \$80,137,614. The chief crops are Indian corn and wheat. The State produces also much fruit and tomatoes. The State is second in tomato packing and its peach crop is famous. The chief field crops, with their acreage, yield and value, for the year 1922 were: corn, 185,000 acres, 439,000 bushels, \$3,807,000; winter wheat, 109,000 acres, 1,766,000 bushels, \$1,907,000; oats, 7,000 acres, 161,000 bushels, \$92,000; buckwheat, 4,000 acres, 76,000 bushels, \$61,000; rye, 5,000 acres, 70,000 bushels, \$74,000; tame hay, 77,000 acres, 116,000 tons, \$2,204,000; potatoes, 10,000 acres, 960,000 bushels, \$672,000; sweet potatoes, 10,000 acres, 1,720,000 bushels, \$860,000; apples, 980,000 bushels; peaches, 320,000 bushels, and pears, 158,000 bushels. On 1 Jan. 1923 there were in the State 25,000 horses, valued at \$1,950,000; 9,000 mules, valued at \$792,000; 40,000 milk cows, valued at \$2,200,000; 10,000 other cattle, valued at \$290,000; 3,000 sheep, valued at \$22,000, and 43,000 swine, valued at \$473,000.

Other Products.—The oyster and other fisheries give employment to a great number of the population. The State has large manufacturing interests, most of which are centred in Wilmington. The chief industries are the manufacture of leather, gunpowder and knitted products. The capital invested in the manufacturing industries amounts to \$73,560,900. About 25,800 persons are employed in the manufacturing industries, which used raw materials in a recent year to the value of \$38,560,718 and turned out products valued at \$59,000,000. Fruit canning and tomato packing are increasing in importance.

Communications.—The State has 335 miles of railways and 158 miles of electric railways. There is an active coastwise trade, particularly with New York and Philadelphia. Steamers ply regularly between Wilmington and New York. The Chesapeake and Delaware Canal, now being widened and deepened by the Federal government, will afford after 1926 passage for large vessels from Delaware Bay to Chesapeake Bay.

Finance.—At the beginning of the fiscal year, 1922, there was a balance on hand at the State treasury of \$1,956,031.31. Receipts during the fiscal year amounted to \$6,255,635.77 and included \$1,400,000 realized from the sale of State highway bonds. Disbursements during the fiscal year 1922, amounted to \$5,897,029.32, leaving a balance at the beginning of 1913 of \$2,314,637.76. The total bonded debt of the State at the beginning of 1923 was \$6,270,785. The total assessed value of all property was \$227,070,094.

Government.—Delaware has the honor of being the first of the 13 colonies to ratify the Constitution of the United States, that act taking place 7 Dec. 1787. The executive power is vested in a Governor, who is elected for four years. The legislative power is vested in the General Assembly, which consists of a Senate of 17 members, who are elected for four-year terms, and a House of Representatives of 35 members, who are elected for two-year terms. The State sends two senators and one representative to the Federal Congress at Washington.

Officials.—Governor, William D. Denney; Lieutenant-Governor, I. Dangforth Bush; Secretary of State, A. R. Benson; Attorney-General, S. D. Townsend, Jr.; Auditor, J. Morris Harrington; Treasurer, Thomas S. Fouracre, and

Superintendent of Education, H. V. Holloway. The Legislature meets the first Tuesday in January in odd years.

Judiciary.—Members of Supreme Court, Josiah O. Wolcott, chancellor; James Pennewill, chief justice; associate judges, Herbert L. Rice, Charles S. Richards, W. W. Harrington and Richard S. Rodney.

DELAWARE RIVER BRIDGE. See BRIDGES.

DELAWARE, University of, a State co-educational institution (men and women separate), founded in 1833 and located at Newark, Del. In 1922-23 it had a faculty of 62 members, 509 students, property valued at \$1,874,449.34 and an income of \$526,526.68. Walter Hulihan, Ph.D., D.C.L., is president.

DELCASSÉ, Théophile, French statesman: b. Pamiers, Ariège, France, 1 March 1852; d. suddenly in the gardens of the Bishop's Palace, Paris, 21 Feb. 1923. His parents were peasants, living among the foothills of the Pyrenées, but they had the means to send their son to the Sorbonne, where he graduated as licentiate of letters, wrote a four-act heroic drama and an epic poem. He was acting foreign editor in Gambetta's "La Republique Francaise" and entered the Chamber of Deputies in 1889, representing the district of Foix. On the naval, foreign relations and colonial committees, he was industrious, securing the establishment of a Colonial Ministry with himself as Under-Secretary (1893) in the Ribot Government. In the Dupuy Government, he was (1894) Colonial Minister. With immense zeal, he mastered the Colonial problems of France. In 1898, he became Foreign Minister in the Brisson Cabinet, which portfolio he held until 1905. Just as Kitchener reached Khartoum and avenged what England considered to be the disgrace of Gordon's death, Major Marchand arrived at Fashoda. Unless there was to be a crisis, the Major must needs withdraw, which he did, Delcassé seeing in the affair an opening for the entente with England. Throughout the world, Anglo-French differences were cleared up,—for instance, the dispute over the Newfoundland Fisheries—and in 1904, the Entente was arranged by which Britain was to have a free hand in Egypt and France, a free hand in Morocco, which, of course, adjoined her dependencies of Tunis and Algiers. In 1902, King Victor Emmanuel visited France, which visit was returned in 1904 by President Loubet, with Delcassé. Italy agreed not to support German aggression on France and this undertaking enabled France, 10 years later, to leave her Italian frontier unprotected. The tariff war between France and Italy ceased. In 1905, it was clear that France, despite the Treaty of Madrid, intended to absorb Morocco. The German Emperor therefore visited Tangier and delivered a hostile speech. Warnings were also sent to Paris and London. France was unprepared for war and the Rouvier Government allowed Delcassé to resign. The German Chancellor, von Bulow, was made a Prince and the Conference of Algeciras followed. Naturally, Delcassé endeavored to promote good relations between Britain and Russia.

In 1911 he was Minister of Marine and in August, 1914, Delcassé returned to the French

Foreign Office. But, in 1915, he resigned owing to criticism of his alleged failure to retain the friendship of Bulgaria. When he died, it is understood that he was again working unofficially for a renewal of the entente with Britain, to which object he was ready to sacrifice some, at any rate, of France's claim to reparations.

DELITZSCH, Friedrich, German Assyriologist: b. Erlangen, Bavaria, 5 Sept. 1850; d. Langenschwalbach, Hesse-Nassau, 23 Dec. 1922. He was the son of Franz Delitzsch (1813-90), Hebraist and theologian. He was educated in Leipzig and became a professor in Leipzig in 1877; in Breslau in 1893 and was made professor of Assyriology in the University of Berlin in 1899. His lectures attained a wide popularity, and one of them delivered in 1901 and entitled 'Der babylonische Ursprung hebräischer Ideen,' was attended by Emperor Wilhelm II, who gave a large sum toward researches to be made in the territory of ancient Babylonia. This lecture produced a storm of criticism from the German Evangelicals. In 1906 he lectured in London and the United States on Nineveh and Babylon and kindred subjects. His book, 'Wo lag das Paradies?' (Where is Paradise?), in which he located the Garden of Eden in Mesopotamia, created a sensation. His other works include: 'Assyrian Studies' (1874); 'Prolegomena of a New Hebrew and Aramaic Vocabulary to the Old Testament' (1886); 'Assyrian Vocabulary' (1887 onward); 'Assyrian Grammar' (1889); 'Assyrisches Handwörterbuch' (1894-96); 'Das Babylonische Welt schöpfungsccepus' (1896); 'Babel und Bibel' (1902; Eng. trans., 1903); 'Asurbanipal und die assyrische Kultur seiner Zeit' (1909); 'Handel und Wandel in Altbabylonien' (1910); 'Kleine sumerische Sprachlehre' (1914); 'Sumerisches Glossar' (1914); a translation of George Smith's 'Chaldean Account of Genesis'; and numerous articles in 'Mitteilungen der Deutschen Orient-Gesellschaft' (1899-1913). He was also director of the Western Asiatic section of the Berlin Museum.

DENBY, Edwin, Secretary United States Navy: b. Evansville, Ind., 18 Feb. 1870. He was educated in the public schools at Evansville. In 1885 he accompanied his father, the Hon. Charles D. Denby, to China, to which country the senior Denby was the accredited Minister of the United States. Returning to the United States in 1894, Mr. Denby took up the study of law at the University of Michigan, from which he was graduated with the degree of LL.B., in 1896. He was admitted to the bar the same year and began practice at Detroit. When the Spanish-American war broke out in 1898, Mr. Denby joined the Navy and served as gunner's mate, third class, on the U. S. S. *Yosemite*. In 1903 he entered politics and was elected a member of the Michigan House of Representatives. Two years later he was elected a member of the National House of Representatives and served in Congress during the 59th-60th and 61st Congresses (1905-11). He served as a member of the Detroit Charter Commission in 1913. When America entered the World War, Mr. Denby in April 1917, enlisted as a private in the United States Marine Corps and served at the Marine Corps

training camp, Paris Island, S. C., and for a few weeks in France as an observer. On 31 Dec. 1920 he was placed on the inactive list as a major of the Marine Corps Reserve. In December 1920, he was appointed chief probation officer of the Recorder's court of the City of Detroit and of the Circuit Court of Wayne county, which position he held until he resigned in 1921 to become Secretary of the Navy in President Harding's Cabinet. In his annual report of the fiscal year 1921-22, Mr. Denby asserted that the Navy administration was entirely in sympathy with the purpose of the Washington Conference which met on 12 Nov. 1921 and which placed a limitation on naval armaments. Under Mr. Denby's administration there has been adopted a general naval policy which is, to quote his own words "To create, maintain and operate a navy second to none and in conformity with the ratios for capital ships established by the treaty for limitation of naval armaments." This policy he asserts should hold until such time as other powers by their departure from the idea of suspended competition in naval arms indicate other procedure. In 1922 Secretary Denby attended the reunion of the Naval Academy class of 1881 which was held at Tokio, Japan on 4 July. While in the Far East, he also visited Nagasaki, Peking, Shanghai, Manila and other places. For details concerning the reorganization of the Navy under Secretary Denby, see article UNITED STATES NAVY.

DENMARK, a kingdom of northwest Europe occupying the peninsula of Jutland and the islands to the east thereof. It has an area exclusive of Greenland (q.v.) of 16,600 square miles and a population of 3,267,831 in 1921. The capital is Copenhagen which has a population of 561,344. Other cities are Aarhus (74,256); Odensee (49,469); Aalborg (71,613); and Horsens (27,588). The population of the chief divisions, including the Faro Islands was in 1921:

Baltic Islands.....	1,208,008
Jutland.....	1,498,479
Faro Islands.....	21,364
Copenhagen.....	561,344

Religion.—The religious census reports 2,800,000 Protestants mostly Lutherans, 10,000 Roman Catholics and 6,000 Jews. The national Lutheran Church is governed by seven bishops. There is full and complete toleration of all denominations.

Education.—Primary education has been compulsory in Denmark since 1814. There are 4,232 schools of, primary grade with 473,000 pupils. In 1921 there were 230 technical schools with 23,000 students, 21 normal schools with 1,500 students, 81 commercial schools with 14,000 students, 78 high schools with 9,400 students, a college of pharmacy, dental college and a polytechnic institute, the last named having 1,400 students. There is a university at Copenhagen with over 100 faculty members and a student body of over 3,000.

Agriculture.—Denmark is a land of small farmers; about 80 per cent of the soil is productive and about 40 per cent of the whole is arable. In 1921 the crop acreage and production were as follows: Oats, 1,111,579 acres

(693,000 tons); barley, 628,148 acres (562,000 tons); rye, 558,795 acres (288,000 tons); wheat, 219,652 acres (278,000 tons); potatoes, 207,925 acres (1,360,000 tons). The last live stock census (July 1921) showed 2,590,903 cattle, 1,429,908 swine, 597,988 horses, 521,932 sheep and 17,803,000 hens in the kingdom. Under the law small farms may not be joined to large estates and the latter may be divided up. Tenants have full control of the land so long as the rents are paid.

Manufactures.—The industrial establishments in the kingdom number about 81,000 and furnish employment to 350,000 people. Brandy is produced by 12 distilleries in the capital to the amount of 3,500,000 litres yearly. Sugar from beets was produced to the amount of 152,740 tons in nine factories in 1920. The brewing of beer is also an important industry, the yearly output being about 3,000,000 litres, of which one-third is of the variety known as small beer.

Fisheries.—The fisheries are of the greatest importance, the value of the catch in 1920 being \$12,000,000. The fishing fleet comprises over 15,000 boats.

Commerce.—The Danish balance of trade for 1922 was even more unfavorable than in 1921, imports increasing and exports decreasing, when compared with the year before. Although the quantity of goods exported in 1922 in many instances increased over 1921, the total value of 1922 exports fell below the value of 1921 exports by 210,000,000 crowns, owing mainly to low export prices. The total value of imports for 1922 was 1,448,000,000 crowns, and of exports 1,173,000,000 crowns, thus creating an import surplus of 275,000,000 crowns. In 1921 the import surplus was only 161,000,000 crowns when the total imports aggregated 1,544,000,000 crowns and exports 1,383,000,000 crowns. The largest single item on the import list was fuel. The value of this product, although considerably larger in amount than in 1921, only reached 125,000,000 crowns, as compared with 146,000,000 crowns for the year before.

Coal and fuel were imported in the following amounts: Anthracite and briquettes, 2,839,000 tons; coke and cinders, 794,000 tons; illuminating paraffin, 76,000 tons; petrol, 52,000 tons; other non-dutiable fuel oil, 75,000 tons.

Practically all of the coal imported in 1922 came from Great Britain, Germany supplying only about 12,600 tons of anthracite, and the United States, 121 tons. Other important imports were unground grain and pod grain and fodder, comprising nearly half the total imports except fuel, groceries, drygoods, lumber, and raw iron. The chief exports were live stock, meat, butter, milk, cheese, and eggs. Butter, cheese, and milk exported were valued at 458,000,000 kroner.

Communications.—Denmark possesses a merchant fleet of 1,931 vessels of an aggregate tonnage of 1,041,048, of which 609 of 763,621 tons are steamers and 714 of 178,926 tons are motor ships. The railways have a total mileage of 2,662, of which 1,283 are the property of the state. There are 4,713 miles of improved roads and 23,000 miles of lesser roadways. There are 1,362 post-offices, 259 telegraph offices and 2,258 miles of telegraph line, 552,000 miles

of telephone wires. The State Telegraph's earnings for the fiscal year ended 31 March 1922, amounted to 14,654,000 crowns and the expenditures to 15,393,000 crowns. The deficit for that year was 739,000 crowns, as compared with over 4,000,000 crowns during the preceding year.

Finance.—The budget for the fiscal year 1922-23 estimated the revenues at \$85,485,995 and the expenditures at \$102,524,990. The largest item of expenses was the 69,000,000 kroner for education followed by 47,000,000 kroner for interest and expenses on the public debt. The budget for the financial year 1923-24 estimated expenditures of 405,000,000 crowns and revenues of 407,000,000 crowns. The expenditure side shows reductions in the estimates of yields from direct taxes and the expected surplus from state owned enterprises. No new taxation measures are attached. The completed state accounts for the last fiscal year show a deficit of 57,000,000 crowns. The surplus of the state railway for August amounted to 3,000,000 crowns; receipts from the restaurant turn-over tax during August totaled 1,683,000 crowns; and customs duties and excise revenues brought in 77,600,000 crowns for the first six months of the current fiscal year. The note circulation of the National Bank, which increased by 50,000,000 crowns during the reconstruction of the Landmansbank, dropped on 7 October to 447,000,000 crowns as compared with a circulation of 414,000,000 crowns on 9 September. The government maintains a reserve fund of \$2,500,000 for use in case of unforeseen emergencies. The public debt of the kingdom in 1921 was \$230,000,000 incurred from former deficits and from the construction of harbors, railways, lighthouses and other aids to navigation.

Army.—The peace strength of the active army is 60,000 men of all arms with 55,000 additional available on mobilization. The military budget for 1922 was \$10,000,000.

Navy.—The fleet is maintained solely for purposes of coast defence. It comprises five monitors, two old cruisers, five mine layers, 20 first-class torpedo boats and 14 submarines.

Colonies.—Greenland is the only colony of Denmark. It has an area of 46,740 square miles and a population of 14,000. The largest settlement is Sydproven with a population of 800. The trade of the colony is a state monopoly.

Government.—According to the present constitution the legislative power is vested jointly in the King and the Diet. The executive power is vested in the King who exercises it through his Ministers. The Diet, or Rigsdag, is composed of two chambers—the Landsting or Senate and the Folketing or Commons. The Folketing has 149 members elected by proportional representation from their districts. The remaining seats are granted to the minority parties. The term of the legislature is four years. The Senate or Landsting has 56 members elected for eight years by restricted suffrage. The Rigsdag meets every year on the first Tuesday in October. The State Council, which under the King exercises the executive power is made up of ten departments. The

President of the Council in 1922 was Mr. Neergaard.

For purposes of administration the kingdom is divided into 22 counties at the head of each of which is a governor. In each county is a council which supervises the municipalities, of which there are 88 with a mayor and urban council. Copenhagen has its own form of administration and forms a district by itself. The King in 1922 was Christian X, born 1870, who succeeded to the throne on the death of his father, Frederick VIII, on 14 May 1912.

History.—The beginning of the year found the Danish government negotiating a commercial treaty with Soviet Russia; the negotiations were broken off, however, after it was found impossible to come to a separate trade agreement. The greatest Danish advocate of world peace, Frederik Bajer, was mourned by the nation at his passing on 25 January. On 15 February the Danish Employers' Association declared a general lockout which precipitated the greatest labor struggle in the history of the country. The trouble began by the efforts of the employers to bring about a 20 per cent cut in wages. Negotiations were protracted for several weeks and there were 100,000 men out of employment. Railroads, street railways, shipping, telegraphs, telephones, gas, water and electric plants and bakeries were not included in the lockout. The general lockout came to an end on 7 April, and the 150,000 men then affected by it returned to work on the 10th. It was ended by a compromise although it involved acceptance by the men of the conditions laid down by the employers at the beginning of the trouble. On 5 March the court announced the betrothal of the Crown Prince Christian Frederick to the Princess Olga, the eldest daughter of Prince Nicholas of Greece, a brother of ex-King Constantine.

It became known on 16 March that Henry Ford, the American automobile manufacturer, had obtained sites in Copenhagen for the establishment of a great automobile plant.

There were manifestations of uneasiness at the aggressive tactics practised in the German part of Schleswig against those persons who favored incorporation with the kingdom of Denmark. The Danish press gave numerous instances of persecution said to be going on there against those who are in sympathy with Denmark.

In May the government introduced a measure in the Parliament for the reduction in the annual contingent of the army from 11,500 to 6,700 men. It provided also for shorter periods of training both in the infantry and cavalry arms and for the demolition of eight seacoast fortresses. By this means it is hoped to reduce the cost of the military establishment from 65,000,000 to 43,000,000 kroner annually. The main features of the old compulsory military service law are retained. The Danish-German treaty establishing the frontier line across Schleswig was ratified by Denmark in the middle of May. All parties in both houses of the legislature acquiesced in the settlement. The Danish Joint Committee for Help to War Devastated Countries reported that several thousand Austrian children had been entertained in 1921.

Relief measures were also taken in the Rheims district and in Germany. On 21 June the Italian King and Queen visited the Danish court and on the day following assisted at the ceremony of laying the foundation stone commemorating the sixth centenary of the death of Dante. The Kasmussen Arctic Expedition reported successes in botanical researches about the middle of June. The Ministry of Public Works secured an appropriation of 700,000 kroner for the deepening of the Drogden waterway. This waterway lies south of the capital between the islands of Amager and Saltholm. Its natural depth is but 22 feet and the plan referred to above contemplates deepening it to 25 feet with a minimum bottom width of 825 feet. This will enable large vessels to pass through from the Atlantic to the Baltic Sea, which now go either through the Kiel Canal or detour through the Great Belt. The deepening of this waterway will greatly lessen the importance of the famous Kiel Canal. The economic situation continued to improve throughout the summer and autumn months. The reduction of 15 per cent in the wages of factory operatives enabled Danish manufacturers to renew competition with Germany and in August it was reported that the unemployed numbered only 39,000. The government inaugurated several economies in the public services and for the first time in April 1922 the state railways showed a surplus amounting to 4,500,000 kroner. The Landsmandsbank of Copenhagen was in serious difficulty more than once during the year, 81,750,000 kroner being written off its reserve to meet losses incurred in the economic crisis of 1921. The National Bank of Denmark came to its aid by putting up a fresh reserve capital at its disposal and leaving it with a total capital of 135,000,000 kroner on 11 July. The Conference of the World's Alliance for International Goodwill Through the Churches met in Copenhagen in August. There were 90 official delegates, representing 24 nations and 60 denominations in Europe present. The chief item on the program was the question of the rights of religious minorities in central and eastern Europe. The question of general disarmament also was placed on the agenda and during the discussion it was brought out that there were 1,000,000 more men under arms in 1922 than in 1914. In August two Danish biological expeditions reported remarkable achievements in the study of deep-sea fauna. One expedition was to the Bermudas where it located the breeding places of the common and American eels. The other expedition was to the Kei Islands in the Malay archipelago where new species of marine animals were discovered in such profusion that the Danish government decided to establish a marine biological station on the Kei Islands. On 21 September the Rigsdag passed the bill for the rehabilitation of the Landsmandsbank. The bank's preferred shares were reduced from 100,000,000 kroner to 70,000,000 kroner and the 30,000,000 kroner of the National Bank was constituted a reserve fund. The Minister of Commerce appointed a committee to act under the appropriation of 5,000,000 kroner for the promotion of the country's export trade. In September the annulment of the engagement of

Crown Prince Frederick and Princess Olga, niece of ex-King Constantine of Greece, was announced. In October the Neergaard ministry was reorganized. The cause of the cabinet crisis was the regulation of imports to protect Danish industries and the refinancing of the Landmandsbank. In November in the closing days of the session the Rigsdag passed the law called "The State Taxation on Real Estate," which for the first time in the history of the country enacts the principle of the single tax and the taxation of unearned increments. A land assessment is also to be levied on real property and the valuation of the land without buildings is estimated for this purpose. On this land assessment a state tax is levied.

DENVER, University of, a Methodist co-educational institution, founded March 1864 and September 1880, and located at Denver, Colo. In 1922-23 it had a faculty of 100 members, 3,500 students, and property valued at \$1,500,000. Income figures not given. Heber R. Harper is president.

DENZA, Luigi, Italian musician: b. Castelmare di Stablia, 24 Feb. 1846; d. London, 23 Jan. 1922. His family had been musicians for many generations. His greatest fame was attained by his song, 'Funiculi-Funicula,' written in 1880 at the time of the opening of the funicular railway up Vesuvius. Richard Strauss introduced it into his 'Italian Suite.'

DE PAUW UNIVERSITY, a co-educational institution, non-sectarian but under the auspices of the Methodist-Episcopal Church, founded in 1837 and located at Greencastle, Ind. In 1922-23 it had a faculty of 67 members, 1,187 students, property valued at \$1,141,854 and an income of \$290,598.92. George Richmond Grose, LL.D., D.D., is president.

DESCHANEL, Paul Eugène Louis, French statesman, 10th president of the republic, and author: b. Brussels, Belgium, 1856; d. Paris, France, 28 April 1922. At the time of his birth his father was a political exile from France. He was educated at the College Saint Barbe and the Lycée Condorcet, receiving his degrees in arts and law. In 1878 he was made sub-prefect of Druex and in the following year became successively Secretary-general of the department of Seine-et-Marne and sub-prefect of Brest. In 1881 he was sub-prefect of Meaux. In 1885 he was elected to the Chamber of Deputies from Eure-et-Loir. Owing to his remarkable qualities he quickly carved out for himself a prominent position in the lower chamber, and in 1896 was chosen vice-president thereof. During the troublous times of the Dreyfus affair, Deschanel successfully stood for the presidency of the chamber against Brisson in 1898 and held the office until 1902. It was during these four years that he gained lasting popularity both in the political world and with the general public, the latter being more especially attracted, perhaps, by his exterior qualities, his charm of manner, and elegant appearance. From 1905-12 he was president of the commission on exterior and colonial affairs, being director of the budget of the ministry of foreign affairs after 1906. In 1912 he was again elected president of the Chamber of Deputies and

this time held the office until January 1920 when he was elected President of the Republic to succeed Raymond Poincaré in a bitter contest with Georges Clemenceau who had been Premier of France during the later years of the World War and one of the negotiators of the Treaty of Versailles. Until a few days before the election it was believed in France and abroad that he was the only candidate who had a chance for the office. The combination of the Catholic and Socialist blocs in the French parliament with the enemies of Clemenceau elected Deschanel by the largest majority received by a candidate since the election of Thiers, the first president. He took office 18 Feb. 1920. On 24 May following, when on his way at night from Paris to Montbrison, he fell from a moving train while attempting to raise a window in his sleeping compartment. At first it was supposed that he had been but slightly injured. However, his health was never fully restored, and in September 1920 he resigned the presidency. After resting for a period he took his place in the Senate, but his work was done. He was a member of the French Academy and the Academy of Moral and Political Sciences. He published 'The Tonkin Question' (1883); 'French Politics and Oceania' (1884); 'French Interests in the Pacific Ocean' (1885); 'Orators and Statesmen' (1888); 'Feminine Notables' (1889); 'Literary Notables' (1890); 'Questions of the Day' (1891); 'Decentralization' (1895); 'The Social Question' (1898); 'The New Republic' (1898); 'Four Years as President of the Chamber' (1902); 'L'Idée de Patrie' (1905); 'Domestic and Foreign Politics' (1906); 'At the Institute' (1907); 'The Organization of Democracy' (1910); 'Beyond the Frontier' (1910); 'French Words' (1910); 'Segrais, Madame de Sévigné' (1911); 'Lamartine' (1913); 'Gambetta' (1920).

DES MOINES UNIVERSITY, a non-sectarian co-educational institution, supported by the Baptist denomination, founded in 1852 and located at Des Moines, Iowa. In 1922-23 it had a faculty of 49 members, 1,488 students, property valued at \$500,000, and an income of \$278,543. John W. Million, LL.D., is president.

DETROIT, University of, a Roman Catholic co-educational institution, controlled by the Jesuits, founded 1877, incorporated 1881 and located at Detroit, Mich. In 1922-23 it had a teaching staff of 190; 1,525 students, property (real estate and buildings) valued at \$2,147,000 and an income of \$126,000. President, Rev. John P. McNichols, S.J.

DE VALERA, Eamonn, Irish Republican leader: b. New York, N. Y., 14 Oct. 1882. His father is said to have been a Spaniard named Vivian de Valera; his mother, Catherine Coll, was a native of Bruree, County Limerick, Ireland. In his childhood he was taken to his mother's people, receiving his primary education in the national schools and later proceeding to the Christian Brothers' School, Charleville, County Cork. He next attended Blackrock College, County Dublin, where he was awarded an exhibition in 1899 and again in 1900. In 1901 he entered the Royal University and was graduated in 1904 with the degree of B.A. Specializ-

ing in mathematics and science he proceeded to the degree Sc.B. in 1914. Meanwhile De Valera became professor at Rockwell College. Returning to Dublin he taught in several colleges and in 1912 became examiner in mathematics to the Irish Intermediate Board of Education. De Valera took part in the organization of the Irish Volunteers in 1913 and was at the same time a member of the Sinn Féin. He assumed no role of leader until the Easter Rising of 1916 when he commanded the insurgents holding Boland's Bakery near Ballsbridge. De Valera was able to hold his position during the entire week of fighting and surrendered on 30 April on order from President Padraic Pearse. De Valera was sentenced to death but the sentence was commuted and he remained in prison until the general amnesty of 15 June 1917. As the only surviving leader of the rebellion the extremists of the Sinn Féin party turned to De Valera for leadership and the same year he was elected to Parliament from East Clare. His victory at the polls gave a great impetus to the Sinn Féin, which in convention on 26 Oct. 1917 elected him President of the "Republic." De Valera took a prominent part in opposing the extension of conscription to Ireland. He was arrested in May 1918 and imprisoned at Lincoln, England. He managed to escape on 3 Feb. 1919 and reached the United States. There he tried to make the independence of Ireland a party issue in the Presidential election of 1920. The election of Harding made it clear that he had failed in this part of his mission and in 1921 he returned to Ireland. He conducted negotiations with the British Government in the autumn of 1921 with a view to a settlement of the Irish question. He ably managed the preliminaries to the conference of Irish and British delegates which resulted in the Treaty of 6 Dec. 1921. De Valera, however, refused to assent to the Treaty and he soon found himself superseded by Arthur Griffith and Michael Collins, who proceeded to set up an Irish Government under the Treaty with Britain. De Valera led the opposition party which caused great destruction and loss of life in Ireland throughout 1922. In 1923 it became evident that De Valera no longer spoke even for the extremists or Republicans. His influence had waned.

DE WET, Christian Rudolf, Boer general: b. Leeuwkop, Smithfield district, Orange Free State (now Orange Free State Province of the Union of South Africa), 7 Oct. 1854; d. De Wetsdorp, South Africa, 3 Feb. 1922. He was a son of Jacobus De Wet of De Wetsdorp and in 1873 married Cornelia Margaretta Kruger of Bloemfontein by whom he had 10 children. He served in the first Anglo-Boer War, 1880-81, as a field cornet of the Heidelberg district, and, in 1885, represented Lydenburg in the Transvaal Volksraad. From 1885-97 he was a member of the Orange Free State Volksraad. De Wet served with distinction throughout the Boer War from 1899-1902, attaining the rank of general and commander-in-chief of the Free State forces. Some days before the ultimatum of President Kruger to Great Britain, De Wet was called out under the commando law of the Free State. At that time he was merely a private burgher. When the commandos met, it was the

duty of the commandants to elect a commander-in-chief, but De Wet was not considered. Prinsloo was elected and De Wet was placed under Steenekamp who sent him off with a small detachment of burghers to the Natal frontier. Upon his return he found that he had been elected vice-commander under Steenekamp. All of this happened prior to 11 Oct. 1899, the date upon which the time allowance for England to accept the Boer ultimatum expired. Prinsloo, in the meantime, had issued orders to the Free Staters to occupy the passes into Natal. Hostilities began immediately upon England's refusal to accede to the Boer demand. On 30 Nov. Steenekamp and De Wet drove the British from Swarthooskop. They had under them but 360 men. Their losses totaled four killed and five wounded, whereas the British lost 203 killed and wounded, 817 taken prisoners, 2 Maxims, 2 mountain guns, 1,000 Lee Metford rifles, besides cartridges, mules, and horses. As a result of this success, De Wet was promoted by President Steyn from vice-commandant to vecht-general, or "fighting general." He was assigned to duty in the west of the Free State and, therefore, had no part in the Colenso victory. Cronje was now his superior officer and from the beginning their relations were strained. Early in 1900 President Steyn appointed Philip Rudolf Botha, vice-vecht-general to De Wet. Philip Botha was an elder brother of Gen. Louis Botha and between him and De Wet there sprang up a remarkable comradeship in arms which did not end until toward the close of the war when Philip Botha was killed. De Wet and Philip Botha were charged with the relief of Cronje but the task was beyond their power. De Wet, however, became vice commander-in-chief and thereafter attended the war council. Thereafter followed his surprise of the British at Sanna's Post, an exploit that was highly praised by the military experts; the victory of Reddersburg, and the defeat by his commandos under Philip Botha of Lord Roberts' advanced columns at Tabaksberg. In November 1900, De Wet and Philip Botha again joined forces and executed the brilliant capture of De Wetsdorp. By the end of the year De Wet had reorganized his Free State forces under two assistant commanders-in-chief, Philip Botha and Peter Fourie, and shortly thereafter began his invasion of Cape Colony and that series of exploits which won him fame. He took an active part in the peace negotiations of 1902. By that time he had become vice-president of the Free State and in this capacity signed the Treaty of Vereeniging. With the other Boer generals, he visited England after the conclusion of the war and endeavored, unsuccessfully, to secure a modification of the peace terms. In November 1902, he published his 'Three Years of War,' being an account of the various campaigns in which he participated. In 1907 he became a member of the first parliament of the Orange River colony and served as Minister of Agriculture therefor, 1907-15. Following the outbreak of the World War in 1914, De Wet, taking advantage of the opportunity that great cataclysm afforded, instigated a rebellion against British rule, alleging as a reason that the liberal attitude of the Union government toward the natives was unreasonable. The insurrection, however, was promptly quelled, in

part at least by the activities of Manie Botha, a son of Philip Botha, De Wet's old comrade in arms. Young Botha organized the government forces and held them until his uncle, Gen. Louis Botha, then Prime Minister, came up and defeated De Wet at Mushroom Valley. His command, numbering about 3,500 men, went to pieces, and he was taken prisoner. He was tried, condemned to six years imprisonment, and fined £2,000, but a year later, in December 1915, he was released after giving a written promise that he would take no further part in politics.

DEY, Frederic Van Rensselaer, American writer of detective stories: b. 1861; d. New York City, 25 April 1922. Originally selecting a legal career, Mr. Dey abandoned his practice in 1887, and thereafter devoted his energies to the writing of detective stories. He won fame as the author of the 'Nick Carter Series,' which made its first appearance from the presses of Street and Smith in 1890. The first story was entitled 'Nick Carter, Detective,' by 'A Celebrated Author.' The series later became *The Nick Carter Weekly*, by 'Nick Carter.' Mr. Dey was a prolific writer; from 1890 onward he is said to have written 1,076 Nick Carter stories, comprising in all about 40,000,000 words; the average number of words in each story being about 25,000. Among those whom he consulted for data and atmosphere for these stories were Inspector Joseph Faurot of the New York police department. The latter was an old friend, and gave him out of his police experience the ideas for many of the adventures of Nick Carter, which thrilled two generations of readers. Before Faurot's time Mr. Dey was accustomed to get material from the late Inspector Thomas Byrnes, and Inspector Aleck Williams. Unlike other writers of fiction, Dey never attempted to apply his theories to the solution of real mysteries. For the two years preceding his death, Mr. Dey had not written anything. Nick Carter had passed out of fashion but under pseudonym of 'Varick Vanardy' his creator had created a new fictitious detective named Crewe, familiar to all who read detective stories. Reduced to rather straightened circumstances, Mr. Dey went to a New York hotel and after writing farewell messages to several friends, committed suicide.

DIABETES. See MEDICINE AND SURGERY, ADVANCEMENT OF.

DICEY, Albert Venn, English barrister and university professor: b. 1835; d. Oxford, England, 7 April 1922. He was educated at Balliol College, Oxford, and became a barrister of the Inner Temple in 1863. From 1882 until 1909 he was Vinerian professor of English law at Oxford University and was regarded as one of the greatest authorities of his day upon the British constitution. He was appointed a Queen's Counselor in 1890. He published 'The Privy Council' (Arnold Essay, 1860); 'Treatise on Rules for Selection of Parties' (1870); 'The Law of Domicil' (1879); 'Law of the Constitution' (1885); 'England's Case Against Home Rule' (1886); 'Treatise on the Conflict of Laws' (1896); 'Lectures on the Relation between Law and Public Opinion in England during the 19th Century' (1905); 'Thoughts on the Union between England and Scotland' (with Prof. Robert Sangster Rait, 1920).

DICKINSON COLLEGE, a co-educational institution under Methodist auspices, founded in 1783 and located at Carlisle, Pa. In 1922-23 it had a faculty of 28 members and 507 students. Figures are not available as to its property valuation or its income. James H. Morgan, LL.D., is president.

DIESEL ENGINE. During and since the World War the adoption of the Diesel engine has been very remarkable. While Germany, according to the peace treaty, is no longer allowed to build Diesel engines, other nations especially England, use this engine for various purposes, for example in the operation of electric power plants, airships and especially sea-going ships. While some years ago England substituted coal-fired steam boilers on her ships with oil burning steam boilers, to-day the latter are being substituted with Diesel engines, to the elimination altogether of steam boilers. The limited size or capacity in which Diesel engines can be built economically, prevents this engine from being adopted for large size war ships, therefore its use is confined to auxiliary war ships and the merchant marine.

Dr. Rudolph Diesel, the inventor, after four years' experimental work, built in 1897 the first commercially successful engine in the Augsburg works (Germany), and demonstrated that it had a higher heat efficiency than any other known heat engine.

The Diesel engine is an internal combustion engine which utilizes, directly in the cylinder, any heavy liquid fuel, ranging from kerosene to coal tar. It requires neither carburetors nor ignition system. Pure air, with which the cylinder is filled, is compressed by the upward-traveling piston to a pressure of 450 to 500 pounds. Its temperature increases, due to the compression, to approximately 1,000 degrees Fahrenheit. At or near the upper dead-center of the piston the fuel is sprayed into the cylinder, gradually and in a finely nebulized condition. The fuel is gasified and ignited by the heat of the compressed air, without any supplementary means; it burns during the first part of the piston down-stroke, after which the hot gases in the cylinder continue to expand and perform work on the piston, until they are exhausted from the cylinder.

Diesel engines are built to operate on either the two-stroke cycle or the four-stroke cycle system. In the former, two strokes of the piston, or one revolution of the crankshaft, are required to complete the cycle of operation. In the latter (four cycle) four strokes of the piston, or two revolutions of the crankshaft, are required to complete the cycle of operations.

There are no other known methods of generating power from fuel which can approach this engine in efficiency. By efficiency as here used is meant the proportion of the energy contained in the fuel which is transferred into useful energy. It is most readily compared on the basis of heat units (British Thermal Units or B. T. U.). Bituminous coal, as ordinarily used for firing under steam boilers, contains 10,500 to 14,500 B. T. U. per pound of coal. The average is somewhat below 12,000. Fuel oil, as used for firing under steam boilers and for combustion in Diesel engines, contains 18,000

to 19,500 B. T. U. per pound. The average is about 18,800 B. T. U. per pound or 143,000 per gallon.

To compare the efficiencies of the various prime movers, cognizance must be taken of the average power developed, and the normal operating conditions. Steam plants are subject to losses in the boilers, due to radiation and leakage; also steam consumption by auxiliary apparatus, such as boiler feed pumps and condenser pumps. Added to this, most steam plants must keep up steam during periods when the prime movers are not running; and during portions of the running periods maintain steam in excess of the immediate requirements. These "stand-by" fuel consumption will vary from zero in an ideal plant operating continuously at a constant load, to 25 to 30 per cent of the useful consumption in a plant operating intermittently or with variable load. For example, at a constant load of 50 per cent of its rated capacity, an 800 indicated horse-power compound condensing Corliss engine plant consumes 29,000 B. T. U. per break horse-power hour, which is equivalent to 2.32 pounds of coal, or 0.203 gallons of fuel oil; while the Diesel engine consumes 9,800 B. T. U., equivalent to 0.069 gallons of fuel oil. The steam plant will, in addition, consume at least 10 per cent for "stand-by"; whereas the Diesel engine plant has no stand-by consumption. The actual comparison would thus be 0.223 to 0.069 gallons, or about three and one-quarter to one in favor of the Diesel engine plant.

FRANK KOESTER,
Consulting Engineer.

DIRIGIBLES. See AERONAUTICS.

DISARMAMENT CONFERENCE. See WASHINGTON CONFERENCE.

DISASTERS. The greatest disaster of 1922 was the typhoon at Swatow, China, on 2 August which took a toll of 50,000 lives. On 28 January, 98 persons were killed when the roof of the Knickerbocker Motion Picture Theatre in Washington, D. C. collapsed. The sinking of the British steamer *Egypt*, off Ushant on 20 May, resulted in the loss of 87 lives. According to a report issued at the time, practically the entire crew of 300 was lost when the Japanese cruiser *Nitaka* went down in a typhoon off the Kamchatka coast, 26 August. A report from Santiago, Chile, stated that 316 persons perished when the Chilean steamship *Itata* sank on 29 August near Coquimbo. Thirty-nine persons were killed in an explosion in the White Haven Colliery in Great Britain on 5 September. Between 50 and 60 lives were lost in the sinking of the German liner *Hammonia* off the Portuguese coast on 9 September. Forty-seven lives were lost in the Argonaut mine disaster in California in the early part of September. On 28 September, the Italian fort at Spezia, on the Gulf of Genoa, was struck by lightning and exploded, killing 174 persons and injuring approximately 1,000. Fifteen persons lost their lives in a fire at 110th Street and Lexington Avenue, New York City, on 22 October. Earlier in the same month, between 30 and 40 persons were reported to have perished in a great fire which swept over northern Ontario,

Canada. On 5 November it was reported that 135 Russian refugees from Vladivostok were drowned when two steamers foundered. Seventy-seven miners lost their lives as the result of a gas explosion in the Reilly coal mine at Spangler, Pa., on 6 November. It was estimated that, at least, 1,000 persons lost their lives as a result of the Chilean earthquake of 9 November and the tidal wave which followed. Over 90 persons were reported to have been lost when the steamer *Topolobampo* capsized 19 November at Port La Bomba on the Gulf of California. A dust explosion in Number 3 mine of the Woodward Iron Company at Dolomite, Ala., on 22 November, caused the death of 84 persons. On 27 November, 34 persons lost their lives in a collision between a launch and a ferry boat in the Parana River, near Zarate northwest of Buenos Aires. See also ACCIDENTS; MINES, BUREAU OF; FIRE LOSSES.

DISCIPLES OF CHRIST. The Disciples of Christ lay especial emphasis upon the unity of the body of Christ, the church, by a return to the Apostolic teaching and practice. The fiscal year of their organized activities closes 30 June. Their mission work, home and foreign; their hospital work; their work for dependent children and the aged; ministerial relief and pension, and church erection are conducted through the United Christian Missionary Society. The work of the women is included in the Society's work. Reports, as of 30 June 1922, show a total membership in the United States and Canada of 1,243,358, a gain for the year of 33,335. The total Bible school enrollment for the world is 1,093,838, a gain of 29,948 during the year. The denomination has a total of 9,397 churches; 5,679 white preachers and 247 negro preachers. The total amount of money contributed to missions and education in 1922 was \$3,608,942.11. The average offering per church in the United States and Canada was \$414.15, a gain per church of \$104.14. The number of churches making missionary offerings during the year was 6,169, a gain of 220. The number of churches giving \$1,000 or more each was 552. The number of churches giving between \$500 and \$1,000 each was 429. The Disciples are at work in 10 great missionary fields of the world. In Africa they have 4 stations, 332 out-stations, 130 schools, 3 orphanages, 42 missionaries and 574 native workers.

In China there are 6 stations, 14 out-stations, 39 schools, 68 missionaries, 169 native workers; in India 13 stations, 12 out-stations, 40 schools, 2 orphanages, 86 missionaries, 491 native workers; in Japan 4 stations, 30 out-stations, 15 schools, 33 missionaries, 141 native workers; in the Philippines 4 stations, 30 out-stations, 6 schools, 19 missionaries, 71 native workers; in Tibet 1 station, 1 school, 1 orphanage, 12 missionaries, 24 native workers; in Porto Rico 1 station, 17 out-stations, 1 school, 8 missionaries, 42 native workers; in Mexico 2 stations, 5 out-stations, 5 schools, one orphanage, 18 missionaries, 13 native workers; in Jamaica 3 stations, 22 churches, 10 schools, 2 missionaries, 18 native workers; in South America 2 stations, 6 out-stations, 1 school, 20 missionaries, 13 native workers. In the home field the Disciples have a vigorous Department

of Evangelism which reported 100,000 additions to the church in the six weeks evangelistic period ending with Easter. They maintain a flourishing mission among the French in Louisiana and have schools for Highlanders at Hazel Green, Ky.; Livingston, Tenn., and Moorehead, Ky. They also maintain a Russian church and Community House in New York City; a flourishing mission among the Slavok people in Bayonne, N. J.; a Brotherhood and Fraternity House in Chicago among the Russians; a flourishing Bohemian church in Cleveland, and a half dozen missions in the coke regions of Pennsylvania.

They have a new mission home for Indian children at White Swan, Wash. Schools for negroes are maintained at Edwards, Miss., Hawkins, Texas, Lum, Ala., and Martinsville, Va. There are thriving missions for the Orientals: Chinese in Portland and San Francisco, and Japanese in Los Angeles, San Bernardino and Berkeley, Calif. Missions for Mexicans are located at San Antonio, Taboli, Robstown and Lockhart, Texas. There is a missionary organization in nearly every State in the Union, and in co-operation with these boards the national organization of the church is maintaining mission churches and evangelistic work in the United States and Canada. A Church Erection Department assists new and weak congregations to obtain modern, adequate buildings. The Department of Ministry provides for both the relief and the pensioning of ministers. The pension fund totals \$222,348.34. Through the Department of Benevolence six homes for orphan and other unfortunate children, and six homes for aged, dependent members of the church are maintained. Through the Department of Religious Education a force of 27 trained specialists is maintained. The Department of Missionary Education is an active one. The Disciples of Christ publish the *World Call*, a 64 page and cover magazine with a circulation of 58,000, which is self supporting and approximately 50 additional papers. The value of property invested in missionary and benevolent work is \$7,465,440.97. Through the Board of Education the church directs and assists in the maintenance of 24 colleges. Educational assets are valued at \$15,421,109. It maintains a Department of Social Welfare, and Association for the Promotion of Christian Unity. The Men and Millions Movement of the Disciples of Christ is finishing up the collection of special pledges amounting to approximately \$7,105,000.

J. H. MOHORTER,

United Christian Missionary Society, St. Louis, Mo.

DISTRICT OF COLUMBIA, the seat of the Federal Government of the United States. It has an area of 70 square miles, and in 1920 had a population of 437,571. It lies on the west central border of Maryland on the Potomac River, opposite Virginia. The city of Washington and the District are co-terminous.

Religion.—The Christian denominations have an aggregate church membership of 164,413, including 51,421 Roman Catholics, 39,978 Baptists, 20,836 Methodists, 18,295 Episcopalians, 9,338 Presbyterians, 3,255 Congregationalists and 3,050

Lutherans. The Christian Science denomination is also represented by a strong membership.

Education.—There are in the District separate schools for white and colored pupils. White teachers number 1,515 and white pupils number 46,695. Negro teachers number 683 and negro pupils number 20,360. There are nine public high schools, with 428 teachers and 9,172 pupils; 26 private schools, with 2,500 pupils, and two public normal schools for the training of elementary teachers, with 28 teachers and 240 pupils. In 1921, the total expenditure on primary education was \$47,120,203. For higher education there are the Georgetown University, George Washington University, the Catholic University, the American University and National Methodist University, and Howard University for negroes.

Finances.—The revenues of the District of Columbia are derived from corporation taxes, licenses from various kinds of businesses and general real property taxes, and from appropriations by the United States, which approximate 41 per cent of the total revenues. At the beginning of the last fiscal year the balance on hand was \$8,432,305. Receipts during the ensuing fiscal year amounted to \$24,947,424. Disbursements for the same period amounted to \$24,268,676, leaving a balance on hand at the beginning of the present fiscal year of \$9,111,053. At the beginning of 1922, the net bonded debt of the District amounted to \$1,166,626. The assessed valuation of real property amounted to \$454,795,000; of tangible personal property, \$116,928,920; of intangible personal property, \$323,949,583.

Production and Industry.—Most activity in the District is governmental, the Federal departments employing over 100,000 persons. There are considerable industries, however, the output of which is consumed locally. The last manufacturing census reported \$63,808,179 invested in industries in the District, which employed 10,482 wage earners, used raw materials valued at \$30,940,100, and turned out products valued at \$68,826,570 during the census year.

Communications.—The railroad mileage of the District is 36, to which may be added 215 miles of electric street railways. The District is one of the chief railway stopping points between the North and South and the great Union Station at Washington has the most up-to-date methods for handling large passenger travel. Navigation is carried on via the Potomac, which flows into Chesapeake Bay. The river has been deepened and otherwise prepared so as to accommodate heavy war vessels and large commercial vessels.

Government.—The government of the District is administered by a board of three commissioners, two of whom are appointed from civil life by the President of the United States and confirmed by the Senate. They are appointed for three-year terms. The third commissioner is detailed from time to time by the President from the engineering corps of the United States Army. This commissioner must have had at least 15 years' experience in the Army Engineering Corps. The commissioners have jurisdiction over all ordinary features of municipal government, but the legislative power is vested in the Congress of the United States. Both the House of Representatives and the Senate have a committee on

the District of Columbia. Residents of the District do not vote. The secretary to the board of commissioners in 1922 was Daniel E. Garges.

DOANE COLLEGE, a Congregational educational institution, founded in 1872 and located at Crete, Neb. In 1921-22 they had a faculty of 20 members, 248 students, property valued at \$740,175.74 and an income of \$64,391.22. Figures for 1922-23 not given. John N. Bennett, LL.D., is president.

DOBRUDJA, one of the historic divisions of the Old Kingdom of Rumania. It has an area of 8,969 square miles and a population of 381,306. The chief city is Kustenje (Constantza).

DOCKS AND HARBORS. See **RIVERS AND HARBORS.**

DODD, Ira Seymour, clergyman: b. Montclair, N. J., 2 March 1842; d. Natanuck, R. I., 4 Aug., 1922. After graduation at Yale in 1867 he studied at the Union Theological Seminary in 1868-69 and at Princeton Theological Seminary, from which he was graduated in 1870. He was ordained in 1870 and served in home mission work in Kansas. He held several pastorates in Maine and then became pastor of the Presbyterian Church at Riverdale-on-Hudson, from which he retired in 1916, becoming pastor emeritus. He served in the Civil War and took part in the campaigns in Fredericksburg and Chancellorsville. He published several books, including 'A Lesson from the Upper Room' (1895); 'The Story of the Rappahannock' (1898); 'The Brother and the Brotherhood' (1908); and 'The Riverdale Hymn Book' (1912). He was a brother of Frank H. Dodd and Robert H. Dodd, of the publishing firm of Dodd, Mead & Co., New York.

DODD, William Edward, American university professor: b. Clayton, N. C., 21 Oct. 1869. He was graduated from the Virginia Polytechnic Institute, B.S. in 1895; M.S. in 1897, and was an instructor in history there from 1895-97. In 1900 he was graduated from the University of Leipzig with the degree of Ph.D. The same year he was made professor of history at Randolph-Macon College, Ashland, Va. and held the position until 1908 when he was chosen professor of American history in the University of Chicago, which professorship he still holds. He is a member of the American Historical Association and of the Mississippi Valley Historical Association. He has published 'Jefferson's Rückkehr zur Politik, 1796' (1900); 'Life of Nathaniel Macon' (1903); co-translator Lamprecht's 'What Is History' (1905); 'Life of Jefferson Davis' (1907); 'Statesmen of the Old South' (1911); 'Woodrow Wilson and His Work' (1920). In addition he was editor and joint author of 'The Riverside History of the United States' (1915) and 'The Cotton Kingdom' (in *Chronicles of America* series). He has been also a frequent contributor of historical articles to reviews and magazines and is a member of the National Board for Historical Service.

DODECANESE, or **TWELVE ISLANDS**, an island group lying off the coast of Asia Minor. Sovereignty of the islands passed to Italy after the war with Turkey in 1911-12, and a clause of the Treaty of Sévres (1920) confirmed that sovereignty. The failure of the Treaty to be ratified by Turkey left this question of sovereignty one of the many problems connected with the Near East. See **TURKEY.**

DODGE, Bayard, President of the Syrian Protestant College at Beirut: son of Cleveland H. Dodge of New York. He was graduated at Princeton University and Union Theological Seminary. After taking part of his examinations for licentiate as a Presbyterian clergyman before the Presbytery of New York in 1913, he decided not to be ordained but to go to Syria as a Y. M. C. A. worker and member of the faculty of the college at Beirut, often called the American University, to which his father has contributed a large hall for meetings and recreation. In 1920, Mr. Dodge, being made director of American relief activities in Syria, distributed about £17,000 (about \$85,000) of his father's money among the poor in Syria and returned to the United States to plead for help, particularly for the children in Armenia and Syria. Mr. Dodge succeeded the late Dr. Howard Bliss at Beirut, whose daughter he married.

DOMINICA. See **LEEWARD ISLANDS.**

DOMINICAN REPUBLIC, a Latin-American republic occupying the eastern half of the island of Santo Domingo in the West Indies. The area of the republic is 19,332 square miles with over 1,000 miles of coast line and 193 miles of frontier with Haiti. According to the census of 1921 the population was 897,405, mainly composed of creoles of Spanish and Indian blood. In the cities there are many Turks and Syrians engaged in the dry goods trade. The language is Spanish but along the frontier the Haitian patois is spoken and there are descendants of American negro immigrants who speak a corrupt form of English. The capital, Santo Domingo, has a population of 45,021. Other cities, with their populations, are Puerto Plata, 26,073; Santiago de los Caballeros, 71,956; San Pedro de Macoris, 25,226; La Vega, 58,041; San Francisco de Macoris, 42,432; Moca, 38,089.

Education.—Primary education is free and compulsory. The annual expenditure on education is about \$1,000,000. There were at the latest computation 996 primary schools in the republic with 1,601 teachers and 111,378 pupils. Manual training and instruction in agriculture are being introduced in the primary system. There are six secondary schools and one university.

Finance.—The budget for 1921 contemplated a revenue of \$11,631,400 and an expenditure of \$5,389,698. Under treaty with the United States in 1907 the republic issued five per cent bonds to the amount of \$20,000,000 secured as of principal and interest by a first lien on the customs revenues of the country. The United States appoints the Receiver-General of Dominican Customs. The total pub-

lic debt of the republic in 1922 was \$13,100,786. This sum was made up as follows:

Bond issue of 1908.....	\$20,000,000	
Redeemed bonds held in amortization fund.....	9,174,750	
Cash in amortization fund.....	618,221	
Unsettled balance.....		\$10,207,029
Bond issue of 1918.....	\$4,161,300	
Redeemed bonds.....	1,113,200	
Cash in amortization fund.....	154,342	
Unsettled balance.....		\$2,893,757
Total indebtedness.....		<u>\$13,100,786</u>

Religion.—The Roman Catholic is the religion of the state but all forms are tolerated. The Church has one archbishop who also is apostolic delegate to Santo Domingo, Porto Rico and Cuba. Porto Rico is a suffragan see to the archbishopric of Santo Domingo.

Agriculture, etc.—Tilling the soil is the chief occupation of the inhabitants. Sugar growing is flourishing and the planting of tobacco is on the increase. Cacao is grown in the eastern part of the republic the yield being about 51,000,000 pounds yearly. The year 1920 brought great prosperity to the sugar industry. The crop was the largest on record, totaling 177,736 tons, while the average sales price was \$12.65 per hundredweight. The total sugar shipments were valued at \$45,739,878, representing in value 78 per cent of all Dominican exports. In addition to sugar, there are three other staples, tobacco, cacao and coffee, which exert a great influence on the economic life of the country. The cacao production for 1920 was 51,000,000 pounds. In the same year the coffee crop proved a failure due to a prolonged drought. Exports that year were the lowest on record for the decade and amounted to only 1,358,826 pounds, valued at \$265,937. The forest area of the republic is about 9,500,000 acres. The live stock census of 1921 showed 360,155 cows, 199,127 calves, 87,876 oxen, 674,232 swine, 705,000 goats, 2,949,053 hens, 162,800 horses and 64,860 mules. Nearly all kinds of minerals are found especially gold and silver. Iron and petroleum have been discovered in Azua. Some lignite of inferior quality has been mined and also some anthracite. Limestone and sandstone are quarried for building purposes. Cigars and cigarettes are manufactured in increasing quantities, and modern factories supply the home demand. The cultivation of bananas is a new industry but the soil has been found favorable and success seems assured for this crop.

Commerce.—The foreign trade of the republic reached a new high record in 1920, amounting to \$105,257,117, an increase of \$43,636,098, or 71 per cent over the trade of 1919 and 535 per cent greater than the trade in 1913. Merchandise valued at \$46,768,258 was imported through the various customhouses. Exports climbed to \$58,767,041 the same year. The phenomenal gain in exports is due entirely to the demand for sugar, which prevailed in the early spring and caused this staple to double in value within three months. In 1920 the United States furnished 77.05 per cent of the imports and Porto Rico 13.08 per cent. Of the exports the United States took 87.03 per cent and France

5.2 per cent. Imports in 1921 amounted to \$24,585,327 and exports to \$20,614,048.

Army.—The only armed force of the republic in 1922 was the native constabulary, officered by Americans. During the same year there were in the republic 14 companies of American marines aggregating about 1,500 men. The republic has no navy.

Communications.—Good roads are now being constructed to connect the principal cities of the island. About 400 miles of improved roads have been completed. There are two railways in the island: one 73 miles from Samana to La Vega with two small branch lines of eight miles each, and the Dominican Central, a state line, from Puerta Plata to Santiago and Moca, 60 miles in length. In addition there are about 225 miles of private railways on the sugar plantations. The postal and telegraph services have been united. There are 32 post offices, 918 miles of telephone line in operation and 311 miles of land telegraphs. There is submarine telegraph communication with New York and Porto Rico. There are three small wireless stations and other more powerful stations established by the United States military government.

Government.—The President of the republic is chosen by electors for a term of six years. The executive power is exercised jointly by the president and 7 ministers. This government has been temporarily set aside since 29 Nov. 1916, when the United States set up a military government headed by American naval officers. The military governor combines the functions of president and congress and naval officers of the United States administer the several government departments.

History.—On 26 Dec. 1921 the Senate Committee which investigated conditions in the Dominican Republic advised against the withdrawal of American troops therefrom on the ground that the conditions prescribed during the preceding summer by President Harding as a preliminary to such withdrawal had not been complied with. On 16 Feb. 1922, Horace G. Knowles, former Minister to the Dominican Republic, was alleged to have charged the United States with violating the Monroe Doctrine in dealing with the republic and to have said that, under American occupation, banditry, instead of decreasing, had increased ten-fold, "due to acts of irresponsible young marines." On 15 April it was announced that the United States Marines would not be withdrawn from the republic until 1 July 1924; that the withdrawal depended altogether upon the attitude of the Dominicans themselves; that an external loan of \$10,000,000 would be arranged for refunding current debts and providing for additional public works. At the time it was stated that, due to political unrest and business depression, the Treasury had been so depleted that the Government payroll could not be met and that officials and employees could draw but half pay, the balance to be credited to their respective accounts, and to be payable in two, four and six months. On 11 July Secretary of State Hughes announced a plan for the withdrawal of American troops from the republic and the restoration to the people of full governmental powers. The plan provided for the setting up of a provisional government,

composed of Dominican citizens, to put into effect desired legislative reforms, to amend the constitution, and to hold general elections for the establishment of a permanent government, without intervention by the United States. (See *Current History*, August 1922.) On 22 July Horace K. Knowles, counsel for the deposed Constitutional Government of the republic, announced his acceptance of the plan. On 6 October it was announced in Washington that Juan Bautista Vicini Burgos had been selected as provisional President of the republic, and on 21 October he took the oath of office. His Cabinet was announced as follows: Foreign Affairs, Angel Morales; Interior and Police, Jose del Carmen Ariza; Justice and Instruction, C. Armando Rodriguez; Public Works, Octavio Acevedo; Agriculture, Pedro A. Perez; Health, Manuel Maria Sanabia. President Harding cabled his congratulations. The next day the new Cabinet took charge of the executive departments and the National Palace was turned over to the provisional government. The American Military Governor, Admiral Samuel S. Robinson, sailed with his staff on 24 October. Command of the American military forces was assumed by Gen. Harry Lee. These forces — about 1,500 marines — it was stated would remain until the setting up of a permanent government, but would be concentrated in two or three points. The Dominican police were entrusted with the maintenance of peace and order, unless outbreaks should get beyond their control.

DONAHUE, Patrick James, Anglo-American Catholic clergyman: b. Malvern, England, 15 April 1849; d. Wheeling, W. Va., 4 Oct. 1922. He was graduated from the University of London in 1869; came to America in 1873; studied law and practised in Washington, D. C., for several years, but gave up the legal profession in 1882 and entered Saint Mary's Seminary, Baltimore. Ordained in 1885, he became assistant rector at Saint John's Church, Baltimore. In 1886 he was appointed chancellor of the archdiocese of Baltimore, which he held until 1891. From 1891 to 1894 he was rector of the Baltimore Cathedral. In 1886 he accompanied the late Cardinal Gibbons to Rome as his secretary. He was consecrated bishop of Wheeling, W. Va., 8 April 1894. Columbian (now George Washington), gave him the degree of LL.B. in 1876.

DOW, Arthur Wesley, American artist: b. Ipswich, Mass., in 1857; d. New York, 13 Dec. 1922. He was educated in Ipswich and Newburyport schools, studied art in Boston and then went to Paris, where he was a pupil of Boulanger and Lefebvre. In 1886-87 he exhibited at the salon and again in 1889 when he received honorable mention. At the Buffalo Exposition he was given a medal. For several years he was curator of Japanese art in the Boston Museum of Fine Arts. From 1895 to 1904 he was instructor of art at the Pratt Institute, Brooklyn. From 1897 to 1903 he was instructor of composition at the Art Students' League, New York. For several years he was director of the summer school of art at Ipswich, Mass. Since 1904 he had been professor of fine arts at Teachers' College, Columbia University. Mr. Dow was a member of many artistic and educational societies, including the Japanese So-

ciety. He was an authority on Japanese art and also on fine printing. He was a skilled craftsman as well as a painter and he printed 'Along Ipswich River' a series of color prints from wood blocks, 'Ipswich Prints,' for school use, reproducing scenes in the vicinity of his birthplace and summer home. He was an expert on design and his 'Composition' (1898), went through seven editions. His pictures of the 'Great Canyon' attracted much attention a few years ago.

DOYLE, Alexander, American sculptor: b. Steubenville, Ohio, 28 Jan. 1858; d. Boston, Mass., 21 Dec. 1922. His early years were spent in Saint Louis, Mo., where his father removed to engage in the marble business and thence in Italy to which his parents took him. He went to an English school in Leghorn. Returning to America he completed his education in the high school at Louisville, Ky. In 1874, he returned to Italy, studied sculpture at the Carrara Academy three years and also learned painting and music. At the age of 20 he took a prize for a design for a public monument under the severe conditions that govern Italian competition. He acted as organist in one of the Italian cathedrals and was made an honorary member of the Royal Raphael Academy of Urbino. He returned to America in 1878 and settled in New York, where he soon became a much sought-after sculptor. In 1888 Mr. Doyle then 30 "had executed more public monuments and statues in the United States than any other sculptor and was the author of more than one-fifth of those standing in the Union." On the death of his father in 1898 Mr. Doyle retired from his profession to care for the stone quarrying business left to him. In 1906 he made, however, a statue to Edwin Stanton, Secretary of War, under President Lincoln, in his native city of Steubenville, giving his talent gratuitously. This was completed and cast in bronze in 1911. In 1912 Mr. Doyle gave up his studio in New York and removed to Dedham, Mass., spending his summers on Squirrel Island, Me. His last work was a statue of President Lincoln, completed a few months before his death. His works include: John Howard Payne, Washington, D. C.; Bishop Pinckney, Sen. B. H. Hill, General Garfield; portrait group of two Cupples children, Saint Louis, Mo.; bronze statues of Gens. Albert Sidney Johnston and Robert E. Lee, New Orleans; Sergeant Jasper, Savannah; Gen. Philip Schuyler, Saratoga; Gen. James B. Steedman, Toledo; Horace Greeley, New York; Admiral Semmes, Mobile; Gen. R. H. Anderson, Savannah; Mrs. Emma Willard, Troy, N. Y.; Gen. G. H. Ward, Worcester, Mass.; Senators Thomas H. Benton, Frank P. Blair and John E. Kenna, for United States Capitol, Washington; Francis Scott Key, Frederick, Md.; Soldiers' Monument, New Haven, and Soldiers' Monument, Montgomery, Ala.

DRAINAGE. See RECLAMATION.

DRAKE, Francis Cornelius, American journalist: b. Palmyra, N. Y., in 1870; d. New York, 17 Feb. 1922. He was educated at the College of the City of New York and began journalistic work in 1890 as a staff-artist on *The Baltimore American*. He worked for McClure's Syndicate and *The New York Herald* and in 1896 became art director of *The New*

York Herald. While holding this last position he devised the first method of printing halftones on fast presses and ordinary news-print paper. In 1903 he went back to *The Herald* and in 1906 became its Sunday editor. In 1908 he joined *The World* as special writer and editor of the Metropolitan Section. Since 1911 he had been general art director of *The World*. In 1921 he organized the American Liberties League in opposition to the Volstead Act and led the anti-prohibition parade on Fifth Avenue, 4 July 1921.

DRAKE UNIVERSITY, non-sectarian educational institution, founded in 1881 and located as Des Moines, Iowa. In 1922-23 it had a faculty of 78 members, 2,000 students, property valued at \$752,967.61. Income figures for 1922-23 are not given, but for 1921-22 they were \$255,775.57. Daniel W. Morehouse, Ph.D., is president.

DRAMA. The fall season of 1921, following on a previous one of crowded theatres and numberless productions, began rather recklessly. Production after production was rushed before the public, many of them failures, a few successes. The year 1922, therefore, began with numerous survivals from the old year. The more important of these were 'Tangerine,' a musical play that ran on into 337 performances; 'Dulcy,' an American comedy by George S. Kaufman and Marc Connelly; Zoe Atkin's 'Daddy's Gone a-Hunting'; 'Six Cylinder Love' by William Anthony McGuire; Irving Berlin's 'Music Box Revue,' which turned out to be the most successful review of the year; 'The Circle,' a comedy by Somerset Maugham, with John Drew and Mrs. Leslie Carter in the cast; Clemence Dane's 'A Bill of Divorcement,' a play on the divorce laws in England; 'Kiki,' a farcical comedy from the French of André Picard, with Lenore Ulric as its star, destined to run the entire year; Eugene O'Neill's 'Anna Christie,' the study of a prostitute, a coal barge captain and an Irish stoker, finely acted by Pauline Lord, and later awarded the Pulitzer prize of \$1,000 as the best "American" play of the year; Clare Kummer's 'The Mountain Man,' a comedy with some, though unequal, charm, starring Sidney Blackmer; A. A. Milne's 'The Dover Road'; 'Bulldog Drummond,' an English melodrama, and Walter Hackett's 'Captain Applejack.'

January brought forth few new plays. There was the general impression that the great number of failures in the autumn and the extravagant efforts of managers to mend matters by sending one new venture after another, had exhausted the stock of plays on hand. Arthur Hopkins revived unsuccessfully 'The Deluge,' an adaptation from the Swedish of Henning Berger. 'S. S. Tenacity,' a comedy in three acts from the French of Charles Vildrac, was produced with excellent finish and taste by Augustin Duncan at the Belmont Theatre, but despite its obvious merits, failed to run beyond a few weeks. Samuel Shipman's 'Lawful Larceny' began in January a run that was to outlast the season.

'Rosa Machree,' by Edward E. Rose, 'Drifting,' by John Colton and D. H. Andrews, and Hartley Manner's 'The National Anthem,'

had short careers. 'Marjolaine,' Louis N. Parker's 'Pomander Walk,' set to music, was launched upon a prosperous course. Fritz Leiber produced in January with tolerable success Shakespeare's 'Macbeth,' 'Julius Caesar' and 'Romeo and Juliet.' 'The Blue Kitten,' from the French, and 'Elsie Janis and Her Gang' added to the number of musical shows on Broadway. And most important of all the theatrical events at the beginning of the year, came the Theatre Guild's production of Andreiev's 'He Who Gets Slapped,' a poetic satire of life, with a philosopher turned clown as its central figure. On the whole the production was soft and undistinguished, in the acting especially, but it was a highly commendable venture on the part of the Guild. 'The Nest' from Paul Gerald's 'Les Noces D'Argent,' distinguished by the acting of Lucile Watson, deserved a longer run even than the 23 weeks that it achieved. 'Marie Lohr,' a London favorite after two efforts proved a failure in New York. Arthur Davison Ficke's poetic drama, 'Mr. Faust,' met with small success at the Provincetown Theatre. Doris Keane, beginning in January, carried 'The Czarina,' a historical comedy adapted by Edward Sheldon from the Hungarian, through 136 performances. Galsworthy's 'Pigeon,' with Whitford Kane in the part of the old artist; Jules Eckert Goodman's 'The Law Breaker,' and 'Madame Pierre' from Brieux's 'Les Hanneçons,' capably acted by Roland Young and Estelle Winwood, were produced with fairly successful results. 'To the Ladies,' the second comedy by the authors of 'Dulcy,' began a long and happy run, and supplied in one scene at least, the business men's banquet, one of the best bits of American comedy in recent years. Meanwhile, there arrived on our shores the long heralded 'Chauve-Souris,' of the Bat Theatre of Moscow, under the direction of M. Nikita Balieff. The 'Chauve-Souris,' though it made no such claims, was applauded by many of the critics and public as great art. It was, however, a remarkably even and charmingly lovable form of vaudeville and it entirely deserved the triumphs that from the very first night came to it.

Toward the end of February the Theatre Guild made a second venture, greatly to its credit. Bernard Shaw's 'Back to Methuselah' was presented in all its astonishing and garrulous volume. The Guild presented the play without cuts, though three evenings were necessary to act the whole of it. 'Back to Methuselah' proved to be an entertainment that with regard to the dramatist, the designing and the actors, was at times tedious and poorly done and at times brilliant and full of ideas and invention and courage.

In March Eugene O'Neill had a tragi-comedy, 'The First Man,' produced at the Neighborhood Playhouse by Augustin Duncan, which lasted through a run of only a few weeks. But not many days later at the Provincetown Theatre 'The Hairy Ape' began its highly successful career and established itself as the most important contribution to the year's drama. 'The Hairy Ape' tells the story of Yank, a stoker on an Atlantic liner. He feels himself to be the power behind the ship, a part of the strong forces of the world. The daughter of one of

the company directors comes down to see what the furnace-room is like. At the sight of Yank she gives a cry of disgust and horror. Later, ashore, the Yank tries to avenge this insult to his self-respect and pride. But he is helpless against society, and is sent to prison. Finally he tries to join the I. W. W., but is kicked out. He ends by being crushed to death by a monster ape and thrown by the beast into the cage. 'The Hairy Ape' is neither socialistic nor realistic but rather an example of modern expressionism in the theatre. Its production was at times very interesting. The most striking thing about 'The Hairy Ape' was the creation in dramatic form of a genuine fable.

'The First Fifty Years' by Henry Myers, a play of married life, acted by Clare Eames and Tom Powers, proved rather above the season's average both as to the promise of the play and as to the acting. Maurice Browne and Ellen Von Volkenburg gave with limited success a short season at the Greenwich Village Theatre, taking for their main offerings Shaw's 'Candida' and Strindberg's 'Creditors.' A delightful comedy of youth, 'The Green Ring,' from the Russian of Zanaida Hippus, at the Neighborhood Playhouse, was one of the attractions of the spring. And toward summer the Theatre Guild produced what in Germany seems to have been the most successful of the long list of expressionistic plays that have appeared since the great war, George Kaiser's 'From Morn till Midnight.' This play is the story of a provincial bank cashier who, knocked off his balance by the sight of a beautiful lady, steals 60,000 marks from the bank and follows her. He is repulsed, and with that he sets out on an orgy of dissipations and excess. He comes to loathe the vileness of the world of men, and, taking refuge in the hall of the Salvation Army, shoots himself. 'From Morn till Midnight' may be taken as representative of its theory and school. The effects were achieved by devising many short scenes and by means of short explosive speeches that are supposed to reveal violent flashes of the character's inmost feelings.

The season came to a happy close with a revival of Sheridan's 'Rivals' by the Players' Club, a charming performance made more charming by the screens devised for it by Mr. Norman-Bel Geddes. Meantime on Broadway such mystery plays as 'The Bat' and 'The Cat and the Canary' flourished alongside the plain comedies and musical shows and the follies, of which the last kind of entertainment grows steadily in skill and display.

Thus ended the season of 1921-22, a season characterized by plunging and chaos on the part of the managers, some few successes and many failures.

But signs for a better turn were already in evidence, and the season of 1922-23 held much promise. Up to the close of the year it could be said that the occurrence of Broadway failures was almost as marked as of old. But alongside these practical failures ran the ambitious attempts of the managers toward plays like Hauptmann's 'Rose Bernd,' in which Arthur Hopkins presented Ethel Barrymore, like Galsworthy's 'Loyalties' and the Czechoslovakian play 'R. U. R.' Of these pieces 'Loyalties' proved the most successful. It is

the story of the struggle of a Jew against the social prejudice around him. Reflections on the war, on justice, on class loyalty are deftly laid on to the machinery of an expert melodrama. George Kelly, an actor and sketch writer of the vaudeville world, produced a promising first play, 'The Torch Bearers,' with many sharply observed details from the American little theatre fad. Brothers Capek's 'R. U. R.,' which the Theatre Guild brought over from Prague, caught the favor of the town. It is a satire, sometimes good, on industrialism, and turns on the invention of mechanical soulless men who finally destroy their human inventors. The Equity Players for their first venture produced with moderate success the Spanish play 'Malvoloca.' And Brock Pemberton, after a failure with one Italian play, produced what was, in form, idea and actuality, the most brilliant and original drama of the autumn, Pirandello's 'Six Characters in Search of an Author.'

The New Year came to a theatre full of high hopes. The air was full of promises. Among the things promised were Hopkins' production of 'Hamlet,' with settings by Robert Edmond Jones and with John Barrymore as *Hamlet*; David Warfield in *Shylock*, Ethel Barrymore and Jane Cowl as *Juliet*; the continuation of the 'Chauve-Souris'; the coming of actors from the Theatre Français, and the visit of the Moscow Art Theatre under the direction of their founder, Stanislavsky.

STARK YOUNG,
Editor, The New Republic and Theatre Arts Magazine; author of 'The Flower in Drama.'

DREXEL INSTITUTE OF ART, SCIENCE AND INDUSTRY, a non-sectarian co-educational institution, founded in 1891 and located at Philadelphia, Pa. In 1922-23 it had a faculty of 55 day and 140 evening members, 718 day and 2,170 evening students and property valued at \$2,165,895. Income figures for 1922-23 not given but in 1921-22 they were \$378,589.43. Kenneth Gordon Matheson, A.M., LL.D., is president.

DRINKWATER, John, English poet and playwright: b. Leightonstone, England, 1 June 1882. He was educated at Oxford High School and worked for 12 years as a clerk in insurance offices before he began to devote his time to theatrical enterprises. He was a co-founder of the Pilgrim Players which developed into the Birmingham Repertory Theatre, of which he became manager. His publications include 'Poems' (1908-14); 'Cophetua' (one-act play in verse, 1911); 'Rebellion' (a three-act play in verse, 1914); 'Swords and Ploughshares' (1915); 'Olton Pools' (1916); 'Pawns' (three one-act plays in verse, 1917); 'Tides' (1917); 'Abraham Lincoln: a Play' (1918); 'William Morris: a Study' (1912); 'Swinburne: a Study' (1913); 'The Lyric: an Essay' (1915); 'Prose Papers' (1917); 'Mary Stuart' (play, 1921). He edited St. John Hankin's plays, the poems of Philip Sidney, 'The Way of Poetry,' 'An Anthology for Schools,' etc., and contributed to *Georgian Poetry*, *Oxford Book of Victorian Verse*, *New Numbers*, *Edinburgh*, *English*, *Fortnightly*, *Nineteenth Century*, *Quarterly*, and other reviews, also *The Nation*, and *Spectator*. Several of his plays have been produced in the United States.

of which 'Abraham Lincoln' probably achieved the greatest success.

DROPSIE COLLEGE, a non-sectarian co-educational institution for Hebrew and Cognate learning, founded in 1907 and located at Philadelphia, Pa. In 1922-23 it had a faculty of eight members, 46 students, property valued at \$843,880.94 and an income of \$40,428.17. Cyrus Adler, Ph.D., is president.

DRURY COLLEGE, a co-educational institution affiliated with Congregational Church, founded in 1873 and located at Springfield, Mo. In 1922-23 it had a faculty of 27 members, 415 students, property valued at \$500,000, and an income of \$65,000. Thomas William Nadal, LL.D., is president.

DUBUQUE, University of, a Presbyterian co-educational institution founded in 1852 and located at Dubuque, Iowa. In 1922-23 it had a faculty of 25 members, 279 students, property valued at \$550,087.37 and an income of \$179,868.74. Cornellius M. Steffens, D.D., is president.

DUNKARDS. See CHURCHES IN THE UNITED STATES, STATISTICS OF THE.

DUNNING, William Archibald, American university professor: b. Plainfield, N. J., about 1859; d. New York City, 25 Aug. 1922. He was graduated from Columbia University with the degrees of A.B. in 1881, A.M. in 1884 and Ph.D. in 1885. In 1886 he joined the Columbia faculty, of which he continued to be a member until his death, serving successively as Fellow, lecturer and instructor in political science and history until 1891; as adjunct professor and professor of history until 1903, and as Lieber professor of history and political philosophy thereafter. He received the degree of LL.D. from Columbia in 1904 and the degree of Litt. D. from Dartmouth College in 1916. From 1894 until 1903 he was managing editor of the *Political Science Quarterly*; in 1913 he was president of the American Historical Association. He was a member, also, of the American Political Science Association, the New York Historical Society, the Massachusetts Historical Society and various clubs. Although recognized everywhere as a leading authority on American history and politics, Professor Dunning did not come prominently into the public eye until in 1919 when he appeared as a witness for Henry Ford in the latter's \$1,000,000 libel suit against the *Chicago Tribune*. His testimony was to the effect that in his opinion Mr. Ford's writings were not anarchistic. Professor Dunning's publications include: 'Essays on the Civil War and the Reconstruction' (1898); 'History of Political Theories,' 3 vols. (1902-20); 'Reconstruction, Political and Economic' (1907); 'Carl Schurz's Political Career, 1869-1906' (with Frederick Bancroft, 1908); 'The British Empire and the United States' (1914); also numerous articles on political and historical subjects, contributed to various magazines.

DURAND-RUEL, Paul, French art-dealer: b. Paris, 1832; d. Paris, 24 Feb. 1922. He was a typical Parisian and born two years after the Revolution of 1830 had lived through the reign of Louis Philippe, the Second Repub-

lic, the Second Empire and saw the jubilee of the Third Republic. It was Durand-Ruel's persistency and conviction that ultimately forced the Impressionists on the public. One of Durand-Ruel's biggest deals was probably the purchase jointly with MM. Bernheim-Jeune and Cassier of Berlin of M. Pellerin's collection of works by Manet. Most of the best of them went to Germany. The Louvre did not buy even one.

DUTCH EAST INDIES, the possessions of Holland in the East Indies consisting of islands situated between 6' N. and 11' S. Lat. and between 95' and 141' E. Long. These possessions include Java and Madura, Sumatra, Borneo, Riau-Lingga Archipelago, Banca, Billiton, Celebes, the Molucca Archipelago, the Sunda Islands, and a part of New Guinea. The area and population of the several divisions are shown in the following table:

DIVISION	Area sq. miles	Popula- tion (Census, Nov. 1920)
Java and Madura.....	50,557	35,017,204
Sumatra, West Coast.....	15,494	1,522,227
Tapaneli.....	16,167	840,371
Sumatra, East Coast.....	35,312	1,197,554
Sumatra Benkulen.....	9,399	257,140
Island Lampongs.....	11,284	233,903
Palembang.....	32,574	827,985
Djambi.....	19,038	233,344
Atjeh.....	20,471	736,348
Riau-Lingga Archipelago.....	16,301	223,104
Banca.....	4,446	154,114
Billiton.....	1,863	68,582
Borneo, West Coast.....	55,825	605,399
Borneo, South and East.....	156,912	1,020,054
Celebes.....	49,390	2,328,587
Island Menado.....	22,680	760,676
Amboina.....	13,118	243,543
Molucca Ternate.....	9,663	149,241
Islands New Guinea.....	121,339	
Timor Archipelago.....	17,698	1,146,657
Bali and Lombok.....	4,065	1,565,014
Total.....	683,000	49,161,047

Of this population, 169,355 are Europeans and 878,986 are Orientals, chiefly Chinese and Arabs.

Religion.—Most of the natives are Mohammedans, but there are also several millions of Christians and Buddhists. The Roman Catholic Church has about 130 clergymen in the colony and the Reformed Church about 70.

Education.—There are in the colony 196 public European primary schools and 53 private schools, 34 public and 14 private Dutch-Chinese primary schools, 146 public and 67 private Dutch-vernacular primary schools, 1,845 public second-class for natives schools, 2,368 private schools for natives, 7,183 Desa or rudimentary schools, 18 public and 5 private Mulo or extended primary schools, 7 public and 6 private secondary schools. The total attendance in these schools is about 900,000, with a teaching staff numbering 14,500. The total expenditure on education in 1921 was 14,000,000 guilders.

Army.—There is compulsory military service for Europeans. The colonial army is 75 per cent native and 25 per cent European. The

strength of the colonial army in 1921 was 1,320 officers and 36,114 men.

Navy.—There is a colonial navy consisting of 22 small vessels, with 173 Europeans and 811 natives. The Netherlands navy maintains in the colony 30 vessels with a personnel of 229 officers and 1,215 European and 1,441 native non-commissioned officers and men. The expenditure in 1922 for both land and sea armament was 156,000,000 guilders.

Finance.—In 1922 the revenue of the colony was 734,491,841 guilders and the expenditures 924,717,380 guilders (guilder=40 cents). The revenue is derived from taxes on houses and lands, the government monopolies of salt, pawnshops and opium, railways and a number of indirect taxes. The public debt at the beginning of 1922 was 446,868,584 guilders.

Agriculture.—The greater part of the soil is government property and the bulk of the people are agricultural laborers. In 1920 rice was planted to 7,964,000 acres, Indian corn to 4,885,000 acres, cassava to 2,006,000 acres, soya beans to 401,000 acres, sugarcane to 44,000 acres, tobacco to 242,000 acres, tea to 312,000 acres and capsicum to 84,000 acres in the so-called native "cultures." In the same year a total of 369,213 acres was planted to sugar and yielded 1,577,528 tons of sugar. There were 183 sugar factories in operation. The coffee crop in 1920 was 45,547 tons, or about 22 per cent below the normal level of production. Cinchona was produced the same year to the extent of 10,457,472 kilograms and tobacco to the extent of 31,465,201 kilograms. Tea production in 1920 amounted to 48,110,000 kilograms. Cacao production amounted to 840,745 kilograms.

Other Products.—Tin mines are worked by the government in the Banca district and by private interests in Billiton and Riau. The production in 1920 amounted to 22,560 tons. Mineral oil to the amount of 2,365,320 kilograms was produced the same year. Coal production is on the increase the output in 1920 amounting to 1,055,832 tons.

Commerce.—The foreign trade of the colony in 1920, including government and private trade and both merchandise and specie, amounted to 1,310,823,899 guilders for imports and 2,267,871,729 guilders for exports (guilders=40 cents). Sugar, coffee, tea, cinchona, tobacco, copra and tin are the chief exports.

Communications.—There are both state and private railways with an aggregate length of 3,923 miles. There are about 7,000 miles of government telegraph lines and over 6,000 miles of telegraph cables. There are 1,035 post offices and about 22,565 miles of government telephone lines served by 228 exchanges.

Government.—The administration and executive authority are vested in a governor-general who is assisted by a council of five members who, however, take no share in the executive. Both governor and council members are nominated by the queen. There is also an advisory assembly called the Volksraad, some of the members of which are the appointees of the government and others are elected by the local councils. The governor-general in 1922 was Dr. D. Fock, who was appointed to office 28 September 1920.

DUTCH GUIANA, or SURINAM, a colony of Holland on the north coast of South America situated between the colonies of French Guiana and British Guiana. It has an area of 46,060 square miles and a population in 1921 of 113,181, exclusive of negroes and Indians. The capital, Paramaribo, has a population of 50,560. The governor in 1922 was Baron van Heemstra. The census returns show 9,594 Reformed and Lutheran, 23,927 Moravian Brethren, 19,319 Roman Catholics, 15,431 Mohammedans, 21,500 Hindus and 778 Jews. There are 33 public schools with 4,331 pupils and 44 private schools with 7,457 pupils. A normal school is maintained by the government. The colonial revenue is derived from import, export, and excise taxes, personal imposts and some indirect taxes. In 1921 the local revenue amounted to 6,440,000 guilders, the expenditure to 8,193,000 guilders and the subvention from the home government to 1,753,000 guilders (guilder=40 cents). Sugar, bananas, coffee, rice, Indian corn, rum and molasses are the chief colonial products of the soil while gold and balata are the chief mine products. The sugar crop in 1920 amounted to 23,000,000 pounds, the cacao crop to 3,500,000 pounds, coffee to 3,700,000 pounds, rice to 24,000,000 pounds, corn to 5,000,000 pounds, rum to 175,000 gallons and molasses to 80,000 gallons. The exports of gold in the same year amounted to 458,740 grams valued at 706,561 guilders. Balata was produced to the extent of 900,000 pounds. In 1920 the importations were valued at 13,718,026 guilders and the exports at 7,477,512 guilders. The colony is administered by a governor assisted by a council of five, all of whom are appointed by the Queen of Holland. The governor is vested with executive authority.

DUTCH WEST INDIES. See CURACAO; DUTCH GUIANA.

DYE INDUSTRY. The dye industry of the United States is comparatively new, and occupies a unique position. The best dyes, and far the cheapest dyes, are still made in Germany. During the World War the American industry was built up, and has since been artificially maintained, as the cost of making dyes here is still excessive. We are indebted to the *Color Trade Journal* for the following figures, comparing the cost of American-made dyes with the German product. Eight common dyes have been selected for illustration.

Name of Dye	No. of U. S. mfrs.	U. S. Prices per lb.				Price in Germany 1921-22
		1918	1920	1921	1922	
Alizarine Yel. R.	10	\$0.91	.86	1.20	.80	.33
Orange II.	12	.68	.62	.48	.40	.12
Fast Red A.	12	1.03	1.04	.91	.65	.11
Salicini Blk U.	14	1.62	1.10	.73	.73	.26
Benzo Blue BB.	14	1.37	.88	.59	.40	.16
Direct Deep Bl.						
EW.	14	1.04	1.03	.69	.42	.33
Sulfur Black.	12	.37	.25	.20	.18	.10
Indigo Synthetic.	3	.88	.74	.52	.30	.11

The textile industry is the largest user of dyes. American textile manufacturers are at present using American dyes, except in those in-

stances where the War Trade Board has issued special licenses giving permission to purchase German or other foreign dyes, on the ground that a similar and satisfactory article cannot be had here. The amount imported is moderate, as might be expected with such safeguards. More than half of it comes direct from Germany, a considerable portion from Switzerland, and the rest through England.

This singular condition exists: Germany owes France, France owes us, yet we prefer to make our own dyes at three times the cost of German dyes, and a war board is perpetuated to enforce the condition. This infant industry rest largely on a group of German patents that were taken over by the Alien Property Custodian during the war, and sold for a nominal sum to the Chemical Foundation. This Chemical Foundation seems to have been created for the especial purpose of taking title to these patents; but it has got into hot water. By order of President Harding an investigation was started and on 8 September suit was instituted to compel the return of all former German patents to the Alien Property Custodian. It appears that the Chemical Foundation has lost money.

The American dye industry was encouraged in 1920 by the development of a fair export trade, selling to the Far East, Canada, etc. In 1921 and 1922 this export trade sunk away, owing to the appearance of the much lower-priced German dyes, usually of better quality. The arguments advanced for maintaining and farther developing the American dye industry is that dye-making plants are fitted for turning out poison gas in wartime; and while we are officially against poison gas, and do not mean to have another war, it is best to be prepared. For dye export statistics see CHEMICALS, sub-section, EXPORTS.

There are 145 concerns in the United States manufacturing dyestuffs and natural extracts; they are capitalized at \$39,000,000, and pay Federal taxes of about \$2,000,000, plus \$333,000 State taxes. In the census year of 1919 they purchased \$33,000,000 of materials, and produced \$54,000,000 worth of goods. The dyeing and finishing of textiles may also properly be classed as a part of the dye industry. There are 629 establishments in the United States, capitalized at \$230,000,000, giving occupation to 73,000 people. They pay \$10,000,000 Federal taxes and \$3,400,000 State taxes. In the census year their materials cost \$164,000,000 and their production was valued at \$324,000,000.

Indigo is still the dyestuff of largest use; it is successfully produced synthetically. A vast amount of money has been expended in the endeavor to produce chemical combinations of definite fast color. Of the nearly 5,000 German patents that have been so much discussed, less than 250 were commercially useful, as measured by the fact of paying royalties; and two-thirds of the royalties paid on German patents here have been credited to only 31 patents.

German Reparation Dyestuff Deliveries.—

Contrary to the popular conception that German reparation deliveries of dyestuffs have

been made in large proportion since the London schedule of payments, a study of the records by the western European division of the Department of Commerce shows that the major deliveries were made during the months following the Armistice, in the first efforts of Germany to meet the requirements of the Versailles Treaty. The London schedule of payments became effective on 1 May 1921. The deliveries made previous to that date totaled 32,476,000 gold marks in value; from 1 May 1921, to 30 June 1922, dyestuffs were delivered to the value of 10,705,000 gold marks. Distribution of the deliveries made previous to 1 May 1921, was as follows:

	Gold Marks
France.....	9,251,000
Italy.....	9,124,000
British Empire.....	8,499,000
Belgium.....	2,949,000
Japan.....	2,630,000
Serb-Croat-Slovene State.....	23,000
	<hr/> 32,476,000

On 1 May 1921, Germany began deliveries on account of the annuities described in the schedule of payments and dyestuff deliveries are now credited to annuity payments only. From that date to 30 June 1922, they totaled 10,708,000 gold marks distributed as follows:

	Gold Marks
Italy.....	5,589,000
Belgium.....	3,221,000
France.....	2,006,000
British Empire.....	1,696,000
Greece.....	196,000
	<hr/> 10,708,000

Thus during the 31 months previous to the London schedule the deliveries were 75.2 per cent of her total deliveries, leaving 24.8 per cent during the 14 months since that schedule became effective. An interesting fact which appears in the records of deliveries is that the largest deliveries have been to Italy, rather than to France and Belgium as popularly believed. Deliveries to France were 1,000,000 gold marks less than to Italy while those to Belgium were less than half as great as to Italy. The total distribution to 30 June 1922, was as follows:

	Gold Marks	Percentage
Italy.....	12,713,000	29.4
France.....	11,257,000	26.0
British Empire.....	10,195,000	23.6
Belgium.....	6,170,000	14.3
Japan.....	2,630,000	6.1
Greece.....	196,000	.5
Serb-Croat-Slovene State.....	23,000	.1
	<hr/> 43,184,000	<hr/> 100.

The above tables include only the deliveries distributed among the powers. In addition to these, from the beginning of German deliveries to 30 June 1922, dyestuffs to the value of 4,000,000 gold marks, were sold through the Reparation Commission to the textile alliance of the United States and others to the value of 3,000,000 gold marks were resold to German buyers. These sums were credited as cash received rather than as deliveries in kind.

E

EAST AFRICA PROTECTORATE. See KENYA COLONY.

EBARA, Soroku, Japanese educator: b. Numazu, Japan, in 1842; d. 20 May 1922. First he was a military officer; in 1870, secretary of the prefecture of Shizuoka; member of the House of Peers after 1902; and sat several times in the house representing Tokio. Ebara was a leader of the Seiyu-kai, director of the Azibu Middle School, and a devout Christian. He was a founder of and chairman of the Young Men's Christian Association in Tokio.

ECUOLOGY. See BOTANY.

ECUADOR, a republic of South America, bounded north by Colombia, south by Peru, east by Peru and west by the Pacific Ocean. The actual boundary lines are in dispute but commissions are engaged in settling frontier differences with the neighbor states. The area is given variously from 116,000 square miles to 276,000 square miles. The republic is divided into seventeen provinces and one territory. The majority of the people are of Indian blood and there are about 400,000 of mixed or mestizo blood. The provinces of the republic, with their capitals and populations, are as follows:

PROVINCES	Capitals	Population
Azuay.....	Cuenca.....	132,400
Bolivar.....	Guaranda.....	43,000
Canar.....	Azogues.....	64,000
Carchi.....	Tulcan.....	36,000
Chimborazo.....	Riobamba.....	122,000
Esmeraldas.....	Esmeraldas.....	14,600
Colon (Galapagos Is.).....	San Christobal.....	400
Guayas.....	Guayaquil.....	150,000
Imbabura.....	Ibarra.....	68,000
Leon.....	Latacunga.....	109,600
Loja.....	Loja.....	66,000
Manabi.....	Puertoviejo.....	64,100
Napo-Pastaza.....	80,000
Santiago-Zamora.....	32,600
Oro.....	Machala.....	205,000
Pichincha.....	Quito.....	32,800
Los Rios.....	Babahoyo.....	103,000
Tungurahua.....	Ambato.....
Total.....		1,323,590

The figures given above are from the census taken nearly 20 years ago and there having been no enumeration since it is only possible to give estimates of the population at the present time. Conservative estimates place the present population at 2,000,000. Quito is the capital and has a population of 70,000. Other cities are Guayaquil with 93,851; Cuenca with 30,000; Riobamba with 12,000; and Ambato with 10,000 people. Vital statistics show a normal increase of population of 30,000 yearly.

Religion.—There is granted full freedom of worship to all denominations. The Catholic is the prevailing form of religious faith and its income is provided in the state estimates. There are six bishops and one archbishop, all of whom

must be citizens of Ecuador. Civil marriage is obligatory since 1902.

Education.—Primary education is free and compulsory. In 1921 there were 1,716 schools, of which 1,395 were government schools, 182 municipal schools and 139 private schools, with a total attendance of 103,344 and a teaching staff of 2,438. There are three universities, those of Quito, Guayas and Azuay with the usual faculties. There is a law school at Loja.

Agriculture.—There are two agricultural zones in the republic, tropical farming in the coastal lowlands and the temperate zone of the highlands where cattle raising, dairying and wheat growing are the chief farming activities. Cocoa, coffee and rubber are important crops; cocoa being a staple. The annual production of cocoa beans is about 4,000,000 pounds. Coffee exports average an equal amount. Rubber exports amount to about 1,000,000 pounds. The rubber industry is on the decline because of the destructive methods used in gathering the gum. Tagua nuts are gathered in large quantities. Sugar growing is on the increase. Mangrove bark for tanning is exported.

Mining.—Gold has been found in many places and silver was worked for many years but no mines are now in operation. Oil wells are being developed by British companies. Copper, iron, lead and coal are also found in considerably rich veins but mining has not yet reached a high stage of development.

Industry.—The timber industry is flourishing there being vast forests throughout the republic containing dyewoods, cinchona trees and other high grade woods. So-called 'Panama' hats are made almost entirely in Ecuador, there being very little competition except from Peru. Flour mills, sugar refineries, chocolate works and breweries furnish most of the industrial employment apart from hat-making and the timber industry as above noted.

Commerce.—Ecuadorian exports for the year 1920 were valued at \$24,665,650 and the imports at \$21,122,678. The chief exports were cocoa, tagua or ivory nuts, hats, coffee, hides and rubber. The chief imports were textiles, foodstuffs and machinery. The United States furnished most of the imports. Of the exports nearly two-thirds of the value was represented by cocoa and over \$2,000,000 by tagua or ivory nuts now so extensively used in the manufacture of buttons. In reviewing the situation at the close of 1922, the United States Department of Commerce reported that, despite unusually large crops in 1922, produce was being sold at higher prices, the average increase being about 15 per cent over the prices of Ecuadorian products on the last day of 1922 were: Cacao, 1,630,825 pounds; cinchona bark, 35,000 pounds; coffee, 400,000 pounds; cotton, 1,400,000 pounds; hides, 75,000 pounds; kapok, 60,000 pounds.

Communications.—There are over 200 miles

of navigable waterways in the republic over the rivers Guayas, Daule and their tributary streams. Over these about 40 steam vessels ply regularly and there are many gasoline launches and lesser craft. A railway from Duran opposite Guayaquil connects that port with Quito, the capital, 280 miles in length. The total length of railways in the republic is 413 miles. There are about 5,000 miles of telegraph lines and 200 stations. There are about 3,000 miles of telephone lines with about 3,000 subscribers of whom three-fourths are in Guayaquil. There are three wireless stations in operation and 230 post-offices. Guayaquil has steamship communication with Europe and with the United States. In 1920 there entered at this port 241 vessels of an aggregate tonnage of 451,753.

Banking and Finance.—The coin of the republic is minted abroad, there being no mint in the country. There are five banks of issue which have in circulation an aggregate of \$8,000,000, of which all but about \$500,000 was secured by reserve funds of gold and silver specie. The revenue of the country in 1921 was \$10,050,000 balanced by an expenditure of an equal amount. Of the revenue about 70 per cent is derived from customs dues and 15 per cent from the taxes on cocoa, tobacco and rum. The foreign debt of the republic amounts to \$17,000,000 and the internal debt to \$13,300,000.

Army and Navy.—The regular army has 600 officers and 4,500 men. Military service is compulsory since 1921. There are six military districts with a military training school at the capital. The navy consists of three vessels, two gun boats and an old destroyer.

Government.—The executive power is vested in a President who is elected for a term of four years. The legislative functions are delegated to a bicameral Congress. The Senate has 32 members chosen for four years while the Assembly has 48 members chosen for two years. The Congress meets annually on 10 August in regular session. The suffrage is possessed by all adults who are able to read and write. The constitution definitely bans all privileges of rank and race and since 1918 peonage has been abolished. Indians no longer pay tribute and are admitted to citizenship. The provinces are ruled by governors appointed by the central government. The President of the Republic is assisted in his executive functions by a cabinet of five ministers with the usual portfolios of Interior, Public Instruction, Foreign Affairs, Finance and War. The President in 1922 was Dr. Jose Luis Tamayo, whose term of office runs from 1 September 1920 to 31 August 1924. His salary is 24,000 sucres a year (about \$12,000).

History.—Under the presidency of Dr. Luis Tamayo, Ecuador continued with the Liberal party in power in unbroken succession since 1895. The peace inaugurated in 1916 remained uninterrupted; and the government maintained its policy of retrenchments meeting all expenses without recourse to foreign loans. During the year 1922 efforts were made to introduce sanitation into the hot-country lands and to place Guayaquil, the chief port of the nation, in as healthful a condition as the ports of other tropical countries. The harbor was deepened,

the river mouth dredged and yellow fever completely driven out. The two important lines of railway between Esmeralda and Quito and Guayaquil and La Playa, on the coast, respectively, were pushed ahead steadily so that they were nearing completion by the end of 1922. The declared policy of the Tamayo government, of encouraging immigration brought thousands of immigrants, principally Italians, Germans, Spaniards and Swiss, into Ecuador in 1922, most of them to settle on the free land given them by the government. Many of these immigrants were furnished with working animals, farming implements and seed. Numerous land and colonization companies contributed to increase the constant stream of immigration during 1922. One of the largest and most active of these was organized with Chilean capital and a board of directors. To handle the increased coast and trans-Pacific business of Ecuador steamship lines were strengthened, especially those plying between United States ports and Guayaquil and between the latter and Italian ports, from which immigration was heavy.

Ecuador continued to extend and strengthen her commercial relations with England and France during 1922 because of old commercial traditions which have always exercised strong influence in the Pacific-coast countries of South America. Conditions of exchange also favored these latter countries; and the sanitation of the Ecuadorian ports and coast country contributed to increase the trans-oceanic and coast trade. After considerable diplomatic correspondence, Ecuador finally re-established consular and other relations with Germany by decree of 18 May 1922. This contributed to the extension of the commercial relations of the country with the German republic and was largely instrumental in attracting German settlers to Ecuador in increasing numbers throughout the year 1922. The favorable condition of exchange and the demand of agricultural products also contributed to the development of agriculture, apart from that induced by the increased immigration. The crisis through which the country had been passing, which was largely one of exchange with foreign countries, and the after effects of the World War continued gradually disappearing, with the consequent improvement of business conditions. The free press, which the Tamayo government has continued to strenuously support, helped, during the past year, to educate the people of Ecuador to a better appreciation of free institutions and liberal democracy. Confidence in the banking institutions of the country, both commercial and state, continued steadily increasing, in 1922, though the banks continued their policy of limiting credit and demanding what, in the United States and European countries, would be considered excessively heavy interest. This gave rise to a very extensive lending business with private money lenders at high rates of interest; and this, in its turn, forced merchants and other business men generally to sell goods at a comparatively high margin above cost, thus tending to retard the financial and commercial rehabilitation of Ecuador. But business, though thus seriously handicapped, continued to steadily improve; and with this improvement, public confidence steadily increased. The 18 accredited banks of the country raised their combined capi-

tal and other resources, during 1922, to over \$120,000,000.

A commission appointed by the Belgian government visited Ecuador in May 1922, for the purpose of promoting commercial relations between Belgium and Ecuador. It visited all important commercial and industrial centres as guests of the government, which furnished facilities for the study of such phases of the national life as interested the visitors. The report made by the commission to the Belgian government was instrumental in augmenting immigration from Belgium to Ecuador, with the promise of largely increased immigration during 1923. In 1922 Ecuador celebrated the 100th anniversary of her national independence, which all Ecuadorians believe was won by General Sucre at the battle of Pichincha, 24 May 1822. The other countries especially interested in this event, Colombia and Bolivia, associated themselves with Ecuador, in this celebration which assumed a decidedly official character.

EDUCATION ASSOCIATION OF THE UNITED STATES, National, a voluntary organization of persons actively engaged in educational work and others interested in education. Its purpose and object is to elevate the character of the teaching profession, advance the interests of the profession, and promote the cause of education in the United States. It was organized in Philadelphia, 26 Aug. 1857, under the name of The National Teachers' Association. In 1870 the American Normal Association and the National Superintendents' Association united with it to form the National Educational Association. It was incorporated under the laws of the District of Columbia, 24 Feb. 1886, and by a special act of Congress, which was approved 30 June 1906, it was incorporated under the name of The National Education Association of the United States. The charter was accepted and by-laws were adopted at the 50th anniversary convention held 10 July 1907 at Los Angeles, Calif. This organization, which is now the largest teachers' organization in the world, until 1918 had an active membership of less than 10,000. On 1 Jan. 1923, the enrollment was 115,000. With the rapid growth in membership it was found necessary to work out new methods for the conduct of its business. At the annual meeting in July 1920, in Salt Lake City, a reorganization plan was adopted, the chief features of which may be summarized as follows: The business of the association is transacted by a representative assembly which is composed of delegates from State and local associations. Any State or local teachers' association may affiliate and thereby become a unit in the National association. The basis of representation of an affiliated State association in the representative assembly is one delegate for each 100 of its members or major fraction thereof, who are active members of the National association up to 500 of such members and thereafter one delegate for each 500 members or major fraction thereof. Affiliated State associations are assessed annual dues of \$10 for each delegate to which such association is entitled, the maximum dues being \$100. The basis of representation of an affiliated local association in the representative assembly is one delegate for each 100 members

or major fraction thereof, who are members of the National association. An association must have, therefore, at least 51 members in the National association in order to be entitled to a delegate. The annual dues of each affiliated local association to the National association are \$5. All delegates, both State and local, have equal rights and privileges in the assembly and each has one vote. The National association continues to enroll individual members.

The most important yearly event of the association is the annual meeting held the first week in July. This meeting serves as a clearing-house for educational ideas, reviews the progress of the year in education, and furnishes inspiration for the coming year to thousands who attend. In connection with this summer meeting the departments of the association, of which there are 22, and a number of allied organizations hold meetings for the discussion of various phases of education. The department of superintendence holds an annual meeting the last week of February. The first meeting of the reorganized association was held at Des Moines, July 1921. The second meeting of the reorganized association, which was its 60th annual meeting, was held at Boston, 2-8 July 1922, Charl Ormond Williams of Memphis, Tenn., presiding. It was attended by 900 accredited delegates, representing 47 States, three Territories, the District of Columbia, and several hundred local associations. The total attendance was 12,000. The program was built on the general theme "Education and the Democratic Awakening." Great emphasis was placed on the subject of rural education, one day being given over entirely to the study of rural problems. In addition to the representative assembly the business and work of the association are transacted through a board of directors, an executive committee, a board of trustees, departmental organizations, standing and special committees, and a staff at headquarters. The association has 24 active committees, each carrying on a special line of investigation. Several of the larger committees are the legislative commission, illiteracy commission, commission for the co-ordination of research agencies, commission for reorganization of secondary education and the commission for reorganization of elementary education. The two last named groups are thoroughly investigating the school curriculum, while others are working on problems of foreign relations, rural education, visual education, thrift, sources of revenue, salaries, tenure, pensions, high-school libraries, health, financing of delegates, and standardization of schoolhouse planning; several committees are co-operating with other national organizations.

The annual dues of active and associate members are \$2, which includes a subscription to the association's *Journal* and entitles a member to all privileges of the association. Five-dollar memberships may be taken out by those desiring not only the *Journal* but the annual volume of 'Addresses and Proceedings' and other regular publications of the association. The membership year is the same as the fiscal year which extends from 1 June to 31 May, inclusive. Active memberships for life may be taken out upon the payment of \$100, the income derived from this source being placed in the permanent fund. The

finances of the association are embodied in two funds. The current fund is derived from membership fees, advertising in the association's *Journal*, commercial exhibits, interest on the permanent fund, and the sale of publications. The permanent fund of the association is invested in securities and the headquarters' property. The total receipts of the association for the fiscal year ending 31 May 1922, were \$228,832; and the total expenditures were \$209,357. The amount in the permanent fund on that date was \$197,456.

Until 1917 headquarters were maintained at the place where the secretary resided; in 1917 they were established at 1400 Massachusetts Avenue, Washington, D. C. In August 1920, the property at 1201 Sixteenth Street, Northwest, became the permanent home of the association. Since 1898 the association has employed a paid secretary. The present secretary, elected by the board of trustees for four years, has general supervision over the work at headquarters. He and his executive staff are held responsible for the carrying out of decisions and policies of the governing bodies of the association. There are six well-organized divisions in the headquarters' staff, each under the leadership of a director. These divisions are records and accounts, established in 1917; field work, established in 1918; business, established in 1919; publications, established in 1920; research, established in 1922; and elementary school service, established in 1922. The department of superintendence since August 1922, has employed a full-time secretary and has maintained an office at headquarters.

One of the association's outstanding achievements of the past two years is the establishment and development of its monthly *Journal* which is now recognized as one of the foremost authorities on educational progress not only in the United States but in the entire world. The *Journal* has grown from a publication of 20 pages in January 1920, the date of the first number, to one of 68 pages, January 1923. The *Journal* not only vigorously supports the policies and programs of the association but aims to reflect the growing activities of professional organizations, national, state, and local, in such a way that their programs shall appeal to the great body of educational workers throughout the nation. It also gives special consideration to new movements in education and to matters of national and international concern. Besides the *Journal* the association publishes an annual volume of proceedings and numerous reports and bulletins on educational subjects.

Because of the great demand by educators of the country for current information on such problems as school finance, sources of revenue, budget statistics, and teacher problems, including salaries, training, tenure and pensions, a research division was established in March 1922. The director of this division, a recognized expert in research, collaborates with other research agencies of the country, conducts investigations in the field of education, and issues information of distinctive current value through correspondence and bulletins. The division of elementary school service, established in September 1922, keeps in touch with the local affiliated associa-

tions assisting them in co-operating with the national association and gives personal attention to requests of any kind that are received from classroom teachers throughout the country. One of the leading activities of the association during the past four years has been its legislative program. It is now concentrating its efforts on the passage of the Towner-Sterling bill which provides (1) for a department of education with a secretary in the President's cabinet; (2) for a national council of education composed of the 48 chief State school executives, 25 experts in special fields of education, and 25 lay members; and (3) for Federal aid to encourage the State in (a) removal of illiteracy, (b) Americanization of foreign born, (c) promotion of physical education, (d) equalization of educational opportunities, and (e) training of teachers. In the sponsorship of this measure the association has the support of leading national, civic, and patriotic organizations. The association has its headquarters at 1201 16th Street, N. W., Washington, D. C. The officers for 1922-23 are: President, William B. Owen, Chicago Normal College, Chicago, Ill.; secretary, J. W. Crabtree, 1201 16th Street, N. W., Washington, D. C.; and treasurer, Cornelia S. Adair, Richmond, Va.

AGNES S. WINN,

Director, Elementary School Service Division.

EDUCATION, Home. To meet the demands of adults for help in furthering their own education, the United States Bureau of Education has instituted home reading courses with respect to which information is available upon demand. These courses, 22 in number, cover a wide range of subjects, such as literature, biography, history, fiction, foreign trade, teaching, etc. Thousands of adults, it is announced, have availed themselves of the opportunity to improve themselves. Many, upon completion of courses, have received certificates issued by the Bureau of Education and signed by the Commissioner of Education. Sixteen State universities assist the Federal Bureau of Education in giving this free service. They are the universities of Arizona, Arkansas, Colorado, Indiana, Iowa, Kentucky, Louisiana, North Carolina, North Dakota, Oregon, South Carolina, South Dakota, Utah, Virginia, Washington and Wisconsin.

EDUCATION, International Institute of. See PEACE AND ARBITRATION, INTERNATIONAL.

EDUCATION, Progress in. Public education has assumed a status of national importance. The stimulating influence of the National Education Association and the program which this organization has sponsored are largely responsible for the national spirit which has been developed in public education.

The discussion of the provisions of the Towner-Sterling bill at not only local, state, and national educational gatherings but also at such national meetings as the Federation of Women's Clubs, the Daughters of the American Revolution, the League of Women Voters, the Parent-Teacher Association, the American Federation of Labor, and other important meetings has not only revealed the limited educational facilities provided for the children of many sections of the country but has also re-

sulted in a clear understanding of the responsibility which the nation possesses in the education and training of all future citizens.

The sentiment of the country is undoubtedly reflected in the serious consideration given by the President of the United States and his Cabinet to the subject of education, and the plans of the commission for reorganizing the administration of the official affairs of the government. The President has announced that the report of the Cabinet to the commission will contain a recommendation for a Department of Education and Welfare.

A decisive movement has been inaugurated in every section of the country to equalize educational opportunity and thus afford the youth of America the facilities to obtain that education and training which shall qualify them for service — for citizenship in a great democracy. This movement is generally called "democratizing education." It is shown by an increase in the length of the compulsory school period, as well as in the length of the school year, by more rigid enforcement of the compulsory attendance laws, by an enrichment and an enlargement of the school curriculum, by an increase in the State appropriations and a more equitable distribution of State funds, by the consolidation of schools, by more thorough and scientific supervision of instruction, and by an advancement in the social status, the scholarship, and professional training of teachers.

A recent survey of the entire country by the secretary of the National Education Association revealed a more wholesome respect for compulsory attendance statutes. Every State in the Union appears to be making substantial gains in the enrollment of children and in the average daily attendance. In some States the increase has been phenomenal. The tendency is to make the compulsory school period include all children between the ages of 6 and 16 years. There is also a general trend toward increasing the legal period of time during which school must be in session. Those States that have hitherto been maintaining school for a shorter period of time than the average term for the country have increased their school year from one to four weeks. This is especially true in relation to the term for rural schools. There is developing, throughout the entire country, a strong current of public opinion for making the term in rural schools equal in length to the term maintained in cities. This movement will ultimately mean a uniform term of 10 months.

In the field of general education this effort to democratize education is reflected best in the phenomenal development of the junior high school movement; and in the field of vocational education, in the unprecedented growth in vocational, agricultural, commercial, home economics and industrial education that has taken place throughout the country during the past year. There is a pronounced tendency, in other words, to adapt the curriculum, in so far as may be possible, to the varying needs of individuals and to make available the types of education that will meet the desires of the greatest possible number of persons by giving due recognition to their individual differences in native

physical and mental capacities, and in aims and ambitions in life.

An important development in industrial arts education during the current year has been the idea of the "general shop." This is the term that is used to designate a single shop of ordinary classroom size, or preferably somewhat larger, in which are housed a number of types of industrial activity. For example, the shop may contain equipment that will enable five boys to participate in each of four kinds of work such as printing, woodworking, electrical work, and metal work. A class of 20 boys may thus be taught by one teacher in a single shop, and by rotation, in four important forms of industrial activity.

One of the most significant and hopeful developments of the year in the field of vocational industrial education has been brought about by means of conferences of several kinds and through reports of a number of persons as well as by public and private organizations who are striving to establish mutually helpful working relations between the schools and industry. School people in several States have taken the initiative in demonstrating that the public schools can be of distinct service in furthering trade and industrial training to employed persons. It has long been recognized that the schools as well as industry have a responsibility for assisting in apprenticeship training, but during the last year there has been a general agreement that one of the first and most effective ways in which this may be brought about is by first reaching the foremen that have instructional responsibilities in order that they may be equipped to give, in turn, effective, well-organized instruction to apprentices and others in need of job training.

In the field of vocational agriculture, during the past year there has been the tendency to measure the extent to which the teaching of vocational agriculture is functioning in making more and better farmers. Data from the nation at large shows that more than 55 per cent of the boys who have taken vocational courses in agriculture are now engaged in gainful agricultural occupations. Evidence is also at hand that indicates improvements in agricultural practices and increases in agricultural production because of instruction in vocational agriculture.

Music is gaining an increasingly large place in all public school curriculums. It has been made a required subject in every school maintained in the States of California and of Pennsylvania. In the latter State, under the direction of the State school authorities, a music week has been permanently established and is observed by the schools, colleges, churches, civic organizations, and the commercial, industrial and mercantile establishments in every city and school district in the State.

The funds appropriated by State legislatures for the support of public schools have been greatly increased. Notable increases have been provided in New York, Pennsylvania, Delaware, Florida, Louisiana, Maine, Maryland, Massachusetts, North Carolina, Tennessee, Virginia and West Virginia. The method of the distribution of such funds adopted by the States has been upon a basis intended to give the greatest

aid to those communities which are the least able to bear the burden of taxation necessary to provide good schools.

The movement for the consolidation of schools has made great advancement. The States in the South and those in the West are generally leading the States in the East. Many States are endeavoring to stimulate an interest in this work through financial aid. Provision has been made in some States for paying part of the cost of transportation. In other States aid is extended toward the construction of new buildings and increased aid is often provided on a more generous plan to a consolidated school than that given to a single school. The building of good roads facilitates the consolidation of schools. The development of consolidated schools during the past year has been pronounced in Mississippi, Louisiana and Pennsylvania.

Decided progress has been made during the past year in the supervision of instruction. This is especially the case in rural schools. California has employed 100 rural school supervisors. These supervisors are not associated with administrative supervision but with instructional supervision. State superintendent Harris, of Louisiana, in co-operation with city and county superintendents, has inaugurated an effective system of this type of supervision. These supervisors are persons of sound liberal scholarship who have been students of children and of methods of instruction. The methods under which this plan has been adopted have developed co-operation between all the school forces, created a fine professional spirit, and stimulated teachers. Demonstration centers have been adopted which have been substituted for the traditional teachers' institute. Many supervisors have been employed in the State.

The legislatures of Kentucky, North Carolina and Pennsylvania made largely increased appropriations to the State Departments of Education in these respective States for the organization of a professional staff to give intelligent direction and supervision to the schools of these States. The subject of instructional supervision has been discussed in all parts of the country and it may be said that there is a decided trend in favor of scientific supervision of instruction. School boards are generally showing a greater appreciation of this service.

School authorities in all parts of the country have placed increased emphasis upon the qualifications of teachers. The general tendency has been to set as a minimum standard for all schools those standards which progressive cities have adopted in recent years. Some States, as Pennsylvania for instance, have written into their school codes a provision to the effect that no teacher shall be employed in any school in the State after 1 Sept. 1927, who has not been graduated from a four-year approved high school and, thereafter, from a two-year professional course in a State normal school or college.

Advanced standards have been set for admission to State normal schools and the professional courses in these institutions modernized in many of the States. A strong move-

ment is also developing throughout the country to increase the length of the professional courses in State normal schools from two to three or four years, to change the names of these institutions to colleges, and to confer upon them authority to grant degrees. There has been a phenomenal increase in the number of students in attendance upon the education courses given in the colleges and universities of the country. In the State of Louisiana 5,000 out of 8,000 white teachers are college or normal school graduates.

There is a nation-wide movement for the improvement of the teachers in service. This movement is also traceable to the influence of the National Education Association which adopted the slogan a few years ago "A trained teacher for every classroom in America." The campaign of this organization to improve and professionalize the teaching force of the country is bearing fruit. There are two agencies exerting a powerful influence in this movement. These are vacation courses given in summer schools and extension courses given during the school year. Nearly all the influential colleges and universities of the country and the State normal schools are giving summer courses for teachers. The number of teachers attending these sessions in 1922 exceeded by many thousands the number in attendance during any previous year. In North Carolina, 12,500 of the 19,540 teachers of the State attended summer schools; in Oklahoma, 13,000 out of 17,000 attended summer schools, and in Pennsylvania 25,000 out of 45,000 teachers were in attendance upon summer courses. In these States and in others the session covered nine weeks. The extent of this movement has been general, and most successful in the Southern States.

Many teachers are also taking extension courses during the year. These courses are given by professors on the faculties of normal schools, colleges, and universities. These professors go out into the communities accessible to their institutions two or three times per week and give instruction to classes which they organize from the surrounding country. In Pennsylvania 22,000 teachers in service were registered in these classes during 1922.

The improved social status of the teacher accounts in part for this stimulation of the teachers of the country. Teaching is gradually being recognized as a profession. The teacher has a better social standing in the community and generally enjoys tenure during efficient service. Retirement laws providing for annuities have been enacted in many States. Salary schedules have been enacted into laws which provide more adequate compensation and therefore attract a better type of teacher into the service. Furthermore, the decided trend in all parts of the country to grant teachers a larger participation in the formulation of general school policies has given a decided professional status to the teacher. The establishment of codes of ethics by the voluntary action of teachers in many parts of the country is a significant indication of the enlarged outlook which teachers possess of the importance of their work and of its development into a real profession. Any action which gives standing

and dignity to the individual members of the profession will tend to attract men and women of strong mental and moral fibre into this important field of public service.

The National Education Association, through its Committee on Foreign Relations, inaugurated a movement during the past year for a world conference on education in connection with the annual meeting of that Association which will be held at Oakland, Cal., in July 1923. It is believed that the leaders of the educational systems of the important nations of the world may become a potential factor in the development of "a new order of international friendship, justice and good will." The main objectives of the conference are stated as follows: (1) To promote peace and good will among the nations of the world. (2) To bring about a world-wide tolerance of the rights and privileges of all nations.

It is believed that these great ends may be attained through proper instruction of the youth of each nation. The schoolmaster has started out to accomplish what the statesman has been unable to achieve.

It is further proposed to organize at this conference an International Education Association and, through the co-operative spirit of such Association, to federate the influence of several effective international, social, economic, educational and religious organizations and make them a powerful agency in developing a bond of common brotherhood among the men of the civilized nations of the world.

Educational measurements and mental tests have received great attention, made notable progress and gained much public confidence during the past year. This is true in public schools as well as in colleges and universities. These agencies have not supplanted other essential factors in public school administration but they have been made a supplemental and confirming agency to such factors. Probably no event in educational circles during the year has provoked more wholesome and sound discussion than the able and thoughtful address of Dr. William C. Bagley on "Educational Determination: or Democracy and the I. Q." This stimulating address raised several important issues in regard to the proper function and limitations of educational tests and measurements which are both timely and pertinent. There have been many excessive claims and ill-considered conclusions in regard to this rapidly developing field of educational research and practice. Doctor Bagley's scholarly and masterly treatment of the subject is opportune and courageous. It properly challenges the proponents of educational measurements to establish by sound evidence the position which these agencies are entitled to hold in modern, scientific educational procedure. His contribution to this problem has served not only the desirable end of checking the indiscriminate "testing" which has been carried on by those who have had no training in this field and have no understanding or conception of the aims or objectives of such procedure, but has also brought squarely before the school administrators the desirability of giving this practice a fair trial under competent and skilled men.

A legitimate and wide field of usefulness for educational tests and measurements is, however,

being rapidly established by the experimental work of many able investigators who are interested in a more effective adaptation of the educational process to the individual needs and capacities of the girls and boys of our schools.

Accepted and established educational policies are often the products of tradition or accident. More and more they are being made the subjects of careful study, to the end that they may be either confirmed or revised.

Certain recent laboratory investigations of reading may serve as a type of the scientific study of educational problems. By photographic processes, the number and length of the pauses a reader makes in reading a line of printed matter are determined. It is established that competent readers see more at a glance than do poor readers; that there is a marked difference between oral and silent reading. It is made quite evident that, in the upper grades, the school ought not to emphasize oral reading, which is a slow, clumsy form of reading, when the pupils ought to be cultivating the power of rapid silent reading. By means of investigations of this kind, each of the subjects of instruction is being examined, and as a result school work is becoming increasingly effective in cultivating children's intellectual powers.

Studies of individual differences in pupils; sex differences; the periodicity in the pupil's development; the measurements of the outcome of instruction, and the developments of standardized tests and measures; curriculum-organization; planning of buildings; supervision and administration — all these — demand and are now receiving patient, detailed scientific study.

This character of scientific investigation has received pronounced attention during the past year. Some of the notable movements in this field have been the investigations in reading made by the University of Chicago under the financial support of the Commonwealth Fund, the studies in Latin subsidized by the General Education Board and conducted under the leadership of Mason D. Gray, and similar investigations in the field of high school subjects by A. J. Inglis of Harvard University.

The guidance movement, starting mainly with vocational guidance, has expanded to take in numerous other kinds of guidance. The choice of curriculum, health, worthy use of leisure, character and other objectives of education are included as having their bearing on a vocation. Its narrowest conception, the guidance of pupils into occupations, has widened to include school preparation for a life work which goes far into the field of general education.

Because so much of the service of vocational counselors has been in the field of curriculum guidance and social counseling, it is being recognized that a more inclusive term must be used. The term "educational guidance" and "vocational guidance" are giving way to "guidance."

The trend in guidance service during the past year has had a decided tendency toward a greater co-operation of teachers and those in charge of compulsory attendance, health, tests and measurements, and with employing interests and social agencies of the community.

The National Vocational Guidance Association, the United States Child Labor Bureau, the United States Junior Employment Service, and

many of the larger school systems have been making important strides in the guidance movement. Notably among the latter are Pittsburgh, Chicago, Boston, Seattle, and Cincinnati.

Safe and more sanitary school buildings, with better facilities for health activities such as gymnasiums, swimming pools, nurses' and doctors' rooms, rest rooms for teachers, and facilities for hot lunch for both pupils and teachers, are being built. Larger playgrounds are being provided.

Physical education is broadening in scope and time allotment. Physical efficiency tests and mass competitions designed to reach all pupils are more emphasized. Inter-scholastic competition is being based on physical activities for the whole student body, and is under better control.

Physiology is becoming a real health training and instruction through habit building, based on information regarding cleanliness, rest, sleep, fresh air, proper food, good posture, and control of communicable disease; ideals of health and physical efficiency, and the establishment of individual and community healthful attitudes.

Medical inspection is developing into a real health supervision, including the activities not only of school physicians, but those of nurses, dentists, dental hygienists, teachers, school clinics, and special classes for the care of the physically handicapped. The health of teachers is being conserved through better facilities, environment, program arrangement, and increased salaries. It is now realized that all these factors must work together as a real school health program.

No question in the field of public education has received more careful and scientific consideration during the past year than that relating to the financing of educational enterprises. In all parts of the country there has been much criticism of progressive public school programs and of the increased expenditures not only for the maintenance of such programs but for the support of colleges and universities as well. In many sections of the country organized movements were promoted to curtail such programs in order to reduce expenditures for education. Notwithstanding all the activities of the reactionary forces of the country in relation to educational affairs, the year has been one of substantial progress. Very generally the advances made in increased salaries for teachers, in the development of more adequate school plants, in the broadening and expansion of courses of study, in the organization of better rural schools, and in the efforts generally to equalize educational opportunity have not only been held but additional gains have been made. The expenditures for public school maintenance, for the construction of new buildings, and for the support of colleges and universities have exceeded those of any previous year in the history of the nation. More important than this, however, has been the support which men of large affairs have given to the financial necessities of education and the support which the influential press of the country has also given to the needs of public education.

One of the outstanding features of educational interest during the year has been the "Finance Inquiry" into the cost of public edu-

cation supported by the leading foundations in education, sponsored by the American Council of Education and conducted under the direction of Dr. George D. Strayer of Teachers' College, Columbia University.

With the extraordinary increase in the number seeking admission to institutions of higher learning, it has become increasingly necessary to restrict the size of the groups admitted, and to devise means for selecting the applicants of greater ability. The discovery and encouragement of students of superior ability and of promise of achievement in research is a project recently inaugurated by the National Research Council.

As an outcome of the crowded conditions of the colleges and universities, there has recently been an increase in the number of junior colleges. More of these schools will probably be established, particularly in the cities, and as the result of reorganization of the weaker four-year colleges.

As the result of recognition that undergraduate institutions are founded and maintained as teaching, rather than research institutions, there is coming into prominence an increased emphasis upon the importance of the teaching done in college classes. There is now an insistence that the college instructor must be not only a profound scholar, but also a trained teacher.

The industries of the country are coming to look to the higher institutions of learning for assistance, and will cooperate with them to their own advantage and the advancement of education and progress. The establishment of "Industrial Fellowships" is typical of this development.

Everywhere we note a movement directed toward the establishment of intimate relationship between institutions of higher learning and their communities, through extension courses and the provision of opportunities for students other than those regularly enrolled.

The Hon. John W. Weeks, Secretary of War, invited a number of leading educators in the country to attend a conference at the War Department at Washington in November 1922. The subject under discussion related to the best methods under which Federal and non-Federal agencies could best cooperate in the preparation of the youth of the country for citizenship and national defense.

The theory of the War Department is that the training which develops the character of boys, gives them vigorous bodies, and instills in them proper ideas as to the responsibility and obligations of citizenship, is essential to give them the necessary preparation to become efficient defenders of our country.

It was pointed out by the War Department that the responsibility for national defense before the World War was generally considered to rest solely with the regular army, the navy, and the national guard, but that under the Congressional Act of 1920 reliance for national defense is centered on a citizen army in which the quality of the manhood of the country is a fundamental factor. While national defense is a function of the Federal government, the development of young manhood is a function of the States and of the people. The responsibility,

therefore, for national defense is divided among the Federal government, the States and the people.

The outstanding question under discussion was, therefore, how shall these Federal and non-Federal agencies cooperate in meeting their several responsibilities?

THOMAS E. FINEGAN,
Superintendent of Public Instruction, The Commonwealth of Pennsylvania.

EDUCATION, United States Bureau of. The Federal government maintains no national system of public schools; the establishment, maintenance, and control of such schools and school systems are left to the individual States, but from the inception of the republic, the Federal government has encouraged education in the several States. The necessity of some central office for the collection and study of educational statistics and data was early seen and appreciated by schoolmen. Several attempts were made to establish such an agency, but attempts to interest Congress and the Federal government in a national office of education proved abortive until the National Association of School Superintendents, at their annual meeting in Washington, D. C., 6-8 Feb. 1866, appointed a committee to memorialize Congress on the question. On 14 Feb. 1866, Representative James A. Garfield of Ohio, afterwards President of the United States, presented the memorial to the House of Representatives, together with a bill for the establishment of a department of education on practically the same lines proposed by the school superintendents. The bill was passed by the Congress and was approved by the President 3 March 1867. The department of education was continued as an "independent establishment" until 1 July 1869, when, according to a provision contained in one of the annual appropriation acts, approved 20 July 1868, it was constituted an office or bureau in the Department of the Interior.

The purposes of the Bureau, as set forth in the act establishing it, are "to collect statistics and facts showing the condition and progress of education in the several States and Territories, and to diffuse such information respecting the organization and management of schools and school systems, and methods of teaching, as shall aid the people of the United States in the establishment and maintenance of efficient school systems and otherwise promote the cause of education throughout the country." The Bureau is, therefore, primarily an institution for educational research and promotion. The act creating it gave it no administrative duties and such administrative duties as it possesses were subsequently assigned to it. The most casual investigation shows that some of the States are more successful than others in solving the problems of public education. While some of them, through years of experience and through the consecutive efforts of trained leaders, have accomplished notable achievements in various phases of educational theory and practice, certain other States are seeking the answers to many of the same questions, laboriously and at great expense exploring the ground that has already been carefully charted. Much of this costly duplication of experiment has un-

doubtedly been saved by the Bureau of Education, which has made available to all the States the experiences and achievements of the most progressive and of the most highly endowed, as far as its resources would permit. In an effort to make its service to the country fully effective, the functions of the Bureau have been divided into four parts: field service, research and investigation of special educational problems, educational surveys, and dissemination of information.

Service in the field by representatives of the Bureau includes lectures and addresses upon educational topics before teachers, students, women's clubs, business men's clubs, and other organizations interested in education, conducting and assisting in special conferences for the consideration of educational questions, visiting and conferring with school officers and teachers for the purpose of procuring and imparting information, and participation in educational surveys at the request of the proper local authorities. Educational surveys constitute an important activity of the Bureau. During the fiscal year 1921-22, 41 surveys were made, embracing the State systems of public schools of Arkansas; State systems of higher education of Kansas and Oklahoma; higher educational institutions of Arkansas, Arizona, Oregon, Tennessee, and State College for Women, Greensboro, N. C.; public school systems of Trenton, N. J., Washington, D. C., Shreveport, La., and Sparta, Ga.; school buildings in Parkersburg, W. Va., Washington, N. C., and Greenfield, Ohio; and the system of public schools of Washington County, Va. Some of these were comprehensive studies requiring the services of 20 or more experts for periods of field work varying from four to eight weeks; others were surveys of individual institutions, made by a single representative of the Bureau in one or two days. The recommendations of these surveys have resulted in substantial improvements in the school systems studied. To fulfill its function as a clearing house of information, the Bureau is at all times engaged upon the systematic study of a variety of current problems. The staff is so limited that it is impossible to give full attention to more than a small part of the perplexing questions upon which school authorities seek advice, but in spite of handicaps research work of great extent and variety was done during 1922. The results of the research and survey work have been published by the Bureau as part of its work in the dissemination of information.

The plan of publication of the Bureau of Education includes (1) a biennial survey of education, comprising a complete statistical and textual résumé of educational conditions in the United States, with brief statements of the conditions in the principal foreign countries; (2) an annual report of the operations of the Bureau of Education; (3) bulletins or monographs usually containing comprehensive reports of educational research; (4) leaflets, comprising less extensive reports or discussion of educational movements or occurrences; (5) the periodical, *School Life*, which contains information of important educational events reported as early as practicable. One hundred and sixteen documents of all kinds were published during the year. A limited edition of each of them was

distributed gratuitously, and later editions were sold at the actual cost of printing. The first national program of home education to be adopted by the government of the United States, or in fact, by any national government, was inaugurated by the Bureau in 1913, and to-day the national reading circle includes readers in every State of the Union, in the insular possessions of the United States, and in many other countries where Americans are temporarily residing.

Direction of the education and welfare of the natives of Alaska was assigned to the Bureau of Education when civil government was established in that Territory in 1885. That work now constitutes the most important administrative function of the Bureau. It involves far more than academic instruction in the school-room, for the first thing that had to be done was to teach the meaning of actual cleanliness and sanitary living. Like primitive people generally, the Alaskan natives, especially the Eskimos, lived largely by hunting and fishing, and were accustomed to move from place to place when it became necessary to find a better food supply. At best they led an uncertain and precarious existence, and because of their migratory habits it was exceedingly difficult to carry the means of civilization to them. It was proposed, therefore, in 1890, to import domestic reindeer from Siberia and by establishing reindeer-raising as an industry to give the Alaskan Eskimos an assured means of support and in the course of time to advance them from a nomadic to a pastoral people. A beginning was made in 1891, and 171 deer were brought over in 1892. A small congressional appropriation was made in 1893 to continue the experiment. The importations were continued until 1902, and in that time 1,280 Siberian deer were landed in Alaska. Congress has continued to appropriate money for the work and it has been remarkably successful. Reindeer 'stations' have been established at convenient places, and in them young Eskimos are taught to care for the deer. After sufficient training each apprentice received a small number of animals and he is allowed to establish a herd of his own under the supervision of officers of the Bureau of Education. There are now approximately 259,000 reindeer in Alaska and two-thirds of them are owned by natives.

In the meantime the other educational and philanthropic work of the Bureau in Alaska has also progressed. School work, largely industrial in its character, has been carried on, medical relief has been extended, sanitary methods of living have been maintained, commercial enterprises of the natives have been fostered, and destitution has been relieved so far as possible with the resources at the command of the Bureau. During the year 1921-22 the field force in Alaska included 5 superintendents, 144 teachers, 8 physicians, 14 nurses, 5 nurses in training, 16 hospital attendants, and 7 herders in charge of reindeer belonging to the government. Seventy schools were in operation with an enrollment of approximately 4,000. Orphanages were maintained at Kanakanak and Tyonek for the care of children left destitute by the epidemic of influenza which prevailed in these

regions, and hospitals were maintained at Juneau, Kanakanak, Akiak, Nulato, and Noorvik. As heretofore, teachers in settlements where the services of a physician or nurse were not available were supplied with medicines for use in relieving minor ailments. The work extends through the Territory from the southernmost boundary to the northernmost cape. The majority of the villages are practically inaccessible during eight months of the year. The larger settlements have been reached, but there yet remain certain regions, especially difficult of access, into which the work has not been extended. Two of these regions were reached during the summer of 1921.

Other than the work in Alaska the only administrative function performed by the Bureau of Education is in connection with colleges of agriculture and the mechanic arts endowed by the Morrill act of 2 July 1862. By that act 11,050,000 acres of public land were distributed to the States in proportion to the respective numbers of senators and members of Congress; and though more than a half million acres remain unsold, the receipts from sales have reached about \$20,000,000, and the income amounted in 1921-22 to approximately \$1,009,225. Under later acts, \$2,550,000 is disbursed annually to the several States, Alaska, Hawaii, and Porto Rico, each receiving \$50,000. These funds are expended for the agricultural and mechanical colleges under the supervision of the Commissioner of Education, who must certify that moneys previously disbursed have been expended in accordance with law before a new allotment can be made to any State. The present Commissioner of Education is Dr. John J. Tigert.

THEODORE HONOUR,

Secretary to the Commissioner of Education.

EFFICIENCY, United States Bureau of

The duties of the United States Bureau of Efficiency have to do only with the administration of government offices. They include surveys of business methods and investigations of duplication of work in the various branches of the government service; studies of the personnel problems of the several executive establishments; and the establishment and general supervision of a standard system of efficiency ratings for the classified civil service in Washington. A special report was submitted to Congress during the year 1922, describing the statistical work of the government. This report covers in detail the activities of every branch of the Federal establishment engaged in the collection or dissemination of statistical information. The recommendations embodied in the report contemplate the reorganization of the Bureau of the Census; the transfer of a large number of statistical inquiries to that bureau from other branches of the service; the collection of more comprehensive statistics relating to internal commerce; the elimination of certain statistical activities now conducted from time to time by the government; and the discontinuance of the free distribution of statistical publications.

The Bureau has worked in co-operation with the Bureau of the Budget since the establishment of that organization in July, 1921, in investigating the organization and methods of the various

government branches. It has acted as staff agency for the joint congressional committee on departmental reorganization, making special investigations and reports at the call of the chairman. Surveys of the business methods of 17 government offices were undertaken during the year 1922, at the request of the administrative officers concerned, recommendations being submitted for changes in accounting, filing methods, office procedure, personnel, and organization. The work of setting up a uniform system of efficiency ratings in the departments was the major activity of the year. The application of the system has so far been limited to employees engaged in clerical or routine work. Exclusive of skilled craftsmen in the Government Printing Office and the Bureau of Engraving and Printing, about 75 per cent of the total number of employees in the departmental service are now rated under the prescribed procedure. The principal features of this system are as follows: Salary standards are fixed for all types and classes of work; employees are classified according to the character of the work performed in order that each position may be provided with the proper salary standard; efficiency ratings are assigned twice each year, as of 15 May and 15 November, to prepare for adjustments and other personnel changes on 1 July, and 1 January, respectively. Employees are rated chiefly on two factors: quantity of work and quality of work. As a prerequisite to the application of salary standards under the rating system the Bureau made a classification of all employments in the departmental service, which is now in effect in all branches.

JOSEPH P. RAGLAND,

Member of the Staff of the Bureau of Efficiency.

EGGS. See POULTRY AND EGGS.

EGYPT, a kingdom of northeast Africa and a former British protectorate with its capital at Cairo. The area of the kingdom is about 350,000 square miles if the desert regions be included and 12,226 square miles if the cultivated and settled areas of the Nile Valley and Delta alone be considered. The population is 12,750,918 according to the census of March 1917, or 1,061 persons to the square mile. The chief cities are: Cairo, 790,939; Alexandria, 444,617; Port Said, 91,090; Suez, 30,996; Damietta, 30,984; Tanta, 74,195; and Mansura, 49,238.

Education and Religion.—The native elementary schools are called Maktabas and are very numerous. In 1921 there were 3,162 of these under control of the central department of education and attended by 202,257 pupils. In the same year there were 3,317 Maktabas under the control of the provincial councils attended by 210,850 pupils. In addition there are several elementary training colleges for teachers, industrial, agricultural and commercial schools and higher primary schools. There are also a school of law, military school, high school of agriculture, police and reformatory schools, arts and crafts, and a school for quadis. There is a university at Cairo. According to religious profession the population is divided as follows: 11,658,148 Moslems; 854,773 Orthodox Christians; 107,687 Roman Catholics; 47,481 Protestants; 14,416 other Christians and 59,581 Jews.

The University of El-Azhar at Cairo is the chief centre of Islamic learning, having 9,749 students and 405 professors. The Copts are the chief Christian body and the oldest, dating from the 1st century. The head of the Coptic Church is the Patriarch of Alexandria.

Finance.—The revenue for the year 1922 was 38,682,000 Egyptian pounds balanced by expenditures of an equal amount. The total debt of the kingdom amounts to 92,971,740 pounds.

Production and Industry.—The arable area of Egypt is about 8,000,000 acres. The agricultural year is divided into three parts, of which the first begins in November with the sowing of cereal crops which are harvested in May; the second period begins in March and is marked by the sowing of cotton, sugar and rice; and the third begins in July with the planting of rice, Indian corn and the usual vegetables. The three crop system is practiced in Lower Egypt and the Fayum, where the irrigation system is perfected. The area under cotton in 1921 was 1,292,000 acres which yielded 4,600,000 quantars of cotton. The area and yield of wheat in 1920 were 1,190,290 acres and 863,022 tons; of barley, 340,231 acres and 227,489 tons; while 1,937,869 acres were planted to Indian corn and 164,228 acres to rice and 53,475 acres to sugar cane. In 1920 13,795 tons of sugar were exported and 4,001,467 quantars of cotton (quantar equals 99 pounds approximately). The chief mineral products are phosphate rock, petroleum, manganese iron ore, nitrate shale, sodium, talc, clay, gypsum, salt, turquoise, alum, granite and sulphur.

Commerce.—The contraction in the purchasing power of the Egyptians and the general commercial depression are illustrated by the preliminary figures for the foreign trade of Egypt during 1921 which late in 1922 made their appearance. The following table gives a comparison between these figures, those of the preceding two years and of the last normal pre-war year:

	1913	1919	1920	1921
Imports...	\$37,656,383	\$56,321,280	\$102,595,539	\$55,907,023
Exports...	42,799,997	75,891,495	88,478,902	36,414,614
Re-exports	578,251	4,307,401	2,551,894	6,127,894

The above figures show that compared with 1920 imports declined by 45 per cent and exports by 57 per cent while re-exports have increased by 150 per cent. Incidentally imports are 50 per cent higher than they were the year before the war and exports are 15 per cent lower, while re-exports have undergone enormous expansion owing to the opening up of Palestine, Syria and Arabia, and the resumption of transit trade with Turkey and the Balkans, which is likely greatly to increase the traffic in the Egyptian ports.

The main imports during the year were meat, £E.344,883 (£E.223,000 from Australia and New Zealand); boots and shoes £E.248,768 (£E.124,690 from the United Kingdom and £E.31,441 from France); wheat and maize, £E.1,741,270 (£E.283,817 from Australia and New Zealand and £E.1,-

076,311 from the United States); barley, £E.609,702 (£E.499,045 from Rumania); rice, £E.459,584 (£E.264,497 from India); wheat and maize flour, £E.7,173,409 (£E.2,325,997 from Australia and New Zealand and £E.3,144,765 from the United States); sugar, £E.263,696; coffee, £E.561,071 (£E.324,240 from Brazil and £E.121,420 from India); vegetable oils, £E.416,511; petroleum, £E.1,389,181 (£E.552,410 from the United States, £E.264,580 from Rumania, £E.104,260 from Persia, and £E.424,158 direct from Suez refinery); benzine, £E.300,401; oil-fuel, £E.553,986 (£E.322,596 from Mexico and £E.154,792 from Suez refinery); paper and printed matter, £E.998,545 (in which generally speaking the British share is slightly on the decrease); wood for building, £E.1,591,143 (Sweden and Finland provided one-third); wooden furniture, £E.275,701 (in which British manufacturers increased their share); coal, £E.3,591,143 (£E.1,697,195 from the United States, £E.1,063,376 from the United Kingdom, and the balance from British possessions); cement, £E.197,620 (£E.101,058 from Serbia and £E.47,899 from the United Kingdom); nitrate of soda, £E.537,304 (Belgium and Chile each supplied roughly half); household soap, £E.611,384 (Palestine supplied £E.261,772, and the United Kingdom, £E.230,050).

Cotton yarns amounted to £E.591,618 (the United Kingdom supplied one-third, India one-half, and Italy the balance); sewing cotton, £E.297,746 (the United Kingdom supplied two-thirds and Belgium one-fifth); cotton goods classified as light and heavy stood at £E.7,942,683 (the United Kingdom supplied 87 per cent, and Italy 10 per cent, the latter country offering serious competition only in textiles dyed in the yarn); woollen textiles attained a value of £E.931,351 (Great Britain supplied 80 per cent); manufactured iron and steel, £E.2,273,141 (in which our sole serious competitor was Belgium); stationery and internal combustion engines, £E.302,762 (two-thirds came from the United Kingdom); rail locomotives, £E.506,937 (practically all of which came from the United States); machines and machine parts, £E.1,163,723 (half came from the United Kingdom and 15 per cent each from France, Germany, and the United States); motor vehicles, £E.471,563—926 in number—(more than 30 per cent came from the United States, 25 per cent from Italy, and 20 per cent from France); and tobacco, £E.1,973,128 (mostly from China, Greece, Russia and Turkey).

Communications.—Egypt has 2,311 miles of railways owned by the state and 721 miles owned by private companies. In addition there is the Sudan military railway to Khartum, 375 miles long. Cairo is connected with Palestine by a railway bridge (swing type) over the Suez Canal at Kantara. There are 2,846 post offices, 8,558 miles of telegraph lines with 21,000 miles of wire.

Government and Recent History.—Adly Pasha's cabinet fell in December 1921 and thereafter the leader of the Nationalists, Zagloul Pasha appealed to his followers to liberate the country. He was deported on the order of General Allenby but on 23 January his followers issued a boycott manifesto modelled on the Ghandi non-co-operation movement in India. It

incited the government servants to strikes and deliberately interfered with the public order. General Allenby retaliated the next day, arresting the signers of the manifesto and suspending the newspapers that had published it. On 29 January the British government issued a manifesto of its own, in which was stated: "His Majesty's Government have explicitly stated their readiness to invite Parliament to terminate the protectorate, to recognize Egypt as a sovereign state and to agree to the re-establishment of an Egyptian Ministry of Foreign Affairs as soon as they were satisfied as to the following conditions: First, that imperial communications are assured; second, that Britain retain the right and power to afford protection to foreign communities; and, third, that Egypt is safeguarded from all foreign interference. As soon as an agreement satisfying these conditions has been drawn up, there will be no hesitation in inviting parliamentary sanction to such an accord."

General Allenby was ordered to return to England to report on the situation. On 28 February Premier Lloyd George announced in the House of Commons that Britain had definitely abandoned the protectorate over Egypt and the latter was declared to be a sovereign state. 'The Declaration to Egypt,' made public at the same time, stated that martial law would be withdrawn as soon as the Egyptian government passed an act of indemnity. Pending the conclusion of a general agreement, the British government reserved to its discretion four subjects: (1) The safety of imperial communications; (2) Defense of Egypt against foreign aggression; (3) Protection of foreign interests in Egypt and of minorities; (4) Guarantees for British interests in the Sudan. The policy of the British government in Egypt was sustained in the House of Commons by a vote of 202 to 70, after some severe criticism from the Liberal benches.

Sarwat Pasha, a prominent Nationalist at once formed a cabinet in Egypt on 1 March, taking over the premiership and the portfolio of the interior and that of foreign affairs. The new cabinet held its first council in the Abdin Palace, Cairo, on 6 March with the Sultan Fuad I presiding. It was agreed to limit the prerogatives of the Sultan under the terms of the new constitution and to change his title to that of king of Egypt. On 16 March, Fuad was proclaimed king of Egypt. A rescript, issued the previous day, announced that Egypt had become an independent state and that the Sultan would assume the title of king. Simultaneously all British ambassadors and ministers abroad were instructed to inform all foreign governments of Egypt's new status and of Great Britain's abandonment of the Protectorate, at the same time pointing out that as far as Great Britain's special relations, established and recognized by all powers for 40 years, are concerned, the status quo will be maintained until such time as Egypt herself embodies them in the direct negotiation of a treaty with these countries. After the joy occasioned by the gaining of her independence Egypt was plunged into gloom by the prospect of losing the Sudan, over which she had had joint sovereignty with Great Britain since 1899. The Sudan was gradually incorporated in Egyptian territory under the Khe-

dive Ismail, who appointed Sir Samuel Baker, Governor. The latter formally annexed it to Egypt on 26 May 1870. The Arabs under the Mahdi, Mahommed Ahmed, revolted in 1881, annihilated the army of Hicks Pasha two years later and on 25 Jan. 1885 took Khartum and killed Chinese Gordon. The Arabs held the Sudan until 1898, when Kitchener reconquered it from them with an Anglo-Egyptian force. The British Government then claimed "by right of conquest" to share in the settlement of the administration and legislation of the region. An agreement, signed 19 Jan. 1899, provided for the joint sovereignty of Great Britain and Egypt over the Sudan. It appeared from public utterances of General Allenby in April that Great Britain had no intention of abandoning her sovereignty over the Sudan.

In April the new Egyptian Government appointed a Constitutional Commission of 35 members to draft a constitution for the kingdom. On 7 May it was announced that the commission had decided to decree in the constitution that the Sudan was an integral part of the kingdom and that the king of Egypt is the sovereign of the Sudan. The Sudan region is potentially the most fertile land in Africa and covers an area of 950,000 square miles. Great irrigation works have been projected and the Sudan will control the water supply on which the very life of Egypt depends. On 15 April the King issued a rescript fixing the succession to the throne, making it hereditary in the dynasty of Mehemet Ali, in direct male line by primogeniture. A new flag was adopted with a green background carrying a white crescent and three white stars.

The United States formally recognized the new kingdom on 27 April with the stipulation that it declined to accept the abolition of the capitulations. The rights under the capitulations have existed since 1830, when the United States made a treaty with Turkey under which American citizens received a guarantee of the right of trial in American consular courts, rather than in Turkish courts. The Egyptian government has decided to present to the city of New York a part of the celebrated Temple of Philae, which in its ancient site was partially submerged when the Assuan Dam was constructed.

A government commission, with Rushdi Pasha, as chairman, set about drafting a constitution for the new kingdom but the work proceeded very slowly. As the draft now stands it calls for a Parliament of two chambers, in the upper of which the members are to be chosen by the executive and in the lower by popular vote. In the lower chamber there will be a representative to each 75,000 inhabitants. Voters must have attained their twentieth year and have paid the minimum land tax. Despite the settlement with England, Lord Allenby and 10,000 British soldiers remained on Egyptian soil and the capitulations remained in force over the protest of the Egyptians that they were a virtual denial of sovereignty. Considerable friction was caused by the continued refusal of Great Britain to repatriate Zagloul Pasha from the Seychelles Islands. The year witnessed the lowest water in the Nile in all the period since records have been kept. The White Nile was

reported practically dry from Gondokoro to Nibuelo, near Lake Albert, in June. Steamers could not proceed above Rajaf. A British officer, Wilfred Cave, assistant commandant of police in Cairo, was shot and killed by assassins in Cairo on 24 May, while returning from a bicycling tour. Six bullets of different calibre were found in his body. Agitation was rife for the purchase by the government of greater quantities of cotton from the Alexandria market. The government had purchased about 2,500 bales early in the year but on 18 May it was stated that the government had no funds available for further purchases of cotton.

The constitutional commission offended the Copts by refusing to provide for proportionate representation and the Coptic bishop of Alexandria resigned from the commission in protest on 10 June. This question as well as that of the sovereignty of the Sudan is reserved for future settlement with Great Britain. The American consul-general on 19 June was made first United States Minister to Egypt. On 23 July, the British government, through the high commissioner, General Allenby, expressed forcibly to the Egyptian government its grave concern at the frequent outrages against British officials in Egypt and its regret at the failure of the Egyptian government to punish the offenders. The warning was given that if the outrages continued the British government would be compelled to reconsider its attitude towards Egypt. Lawlessness continued throughout the summer and military courts meted out severe sentences to prisoners found guilty. Seven Zaglulists were condemned to death by a British military court in August but the sentence was commuted to seven years penal servitude and fines of £5,000 on 14 August. On 4 September it was announced that the leader of the Nationalists, Zaglul Pasha, had been transferred to Gibraltar from Seychelles because of impaired health. The draft of the new constitution was published on 13 August and the day following the *Alahram*, an Arabic newspaper, was suspended for criticism of the draft. It declared that the proposed constitution placed too much power in the hands of the sovereign and should be drawn on more democratic lines. On the other hand, it was reported that the King thought the constitution too liberal. On 5 September a decree was promulgated exiling Abbas Hilmi, former Khedive, depriving him of exercising political rights through an intermediary and confiscating his property, which was to be sold at public auction, his debts paid and the balance forwarded to Abbas Hilmi. In the autumn the chief political questions agitating the country were the representation of minorities and the future of the Sudan. The proposal to guarantee a minimum representation to minorities in the new Parliament was rejected by a vote of 15 to seven in the constitutional commission. Thereafter vigorous protests were made by the Copts, Syrians and Jews. The inclusion of the Sudan by the commission was offset by a visit of General Allenby to Khartum where he received 30 sheiks of the Sudanese tribes who pledged their loyalty to the British government. The victory of the Turks over the Greeks in Asia Minor had its repercussion in Egypt where the mosques were illu-

minated and Islamic flags carried in parades. Efforts were made towards the end of the year to abolish martial law throughout the country and a supplementary section of the penal code was prepared to this end in order that the civil authorities might be enabled to deal adequately with offenses before punishable only under martial law. The relations with the Sudan were complicated by the decision of the Sudan government to retain sole control of the Sennar Dam because it was bearing the expense of these undertakings. The economic situation continued to improve as the year closed, the only country showing a loss in trade with Egypt being the United States. The American tariff on cotton caused uneasiness in Egypt, a good market having been built up in America for this staple product of Egypt. Discrimination against American shipping caused some friction in official quarters. At the close of the year it was evident that the coal trade was being lost to the United States and again reverting to England. The reigning King is Fuad I, son of the Khedive Ismail Pasha. Early in 1923 Zagloul was permitted to leave Gibraltar, but was still forbidden to return to Egypt.

EINSTEIN THEORY, Tests of. See ASTRONOMY; PHYSICS.

ELECTIONS IN 1922. On 7 Nov. 1922 there were held throughout the United States the usual elections of Congress, governors and other officers of the various States. The broad result showed a great reduction in the overwhelming Republican majorities of two years before and a corresponding encouragement of the Democrats in their hope of electing their candidate for President in 1924. Of the Republican reverses, there are various explanations. It is argued that President Harding's 7,000,000 majority in 1920 was less a majority for the Republicans than a majority against the Democrats and especially against Woodrow Wilson who was, when his term came to an end, unpopular. The war had been followed by a great disturbance of trade, by heavy taxation and by a peace, held in many quarters to be unsatisfactory. Among sections of the voters, particularly of German and Irish origin, there was hostility to the Treaty of Versailles and, generally, the League of Nations was a subject of misgiving.

In 1922, however, none of these issues helped the Republicans. A policy of not interfering in European affairs was found, as many thought, to involve a considerable loss of European trade, and a consequent fall in prices of cotton and farm produce. A somewhat severe tariff, though in line with Republican traditions, made few friends and many critics of the administration—reproducing in fact the situation which caused anxiety to President Taft during his tenure of the White House. Also the refusal of the President to accept a bonus for the demobilized soldiers, unless Congress would raise the revenue to pay for it, while it pleased the financial and commercial leaders of opinion, caused a disappointment among many young men and their friends whose expectations of a handsome sum of money had been aroused. All these causes militated against the Republican candidates.

With regard to the prospects for 1924, much will depend on the state of trade and employment and also upon conditions in Europe. The Democratic Party is committed to a League of Nations and a certain active participation in world affairs. If the world be still disturbed, it may be that a majority will still wish the country—in the words of Colonel Harvey, American Ambassador in London—to be well out of it. On the other hand, there will doubtless be a tendency to attribute some of the trouble in Europe to the failure of the United States to play her part in that sphere of the world's affairs.

The 67th Congress, now retired, consisted of a Senate and House of Representatives, composed as follows:

	Republicans	Democrats	Majority
Senate.....	59	37	22
House.....	301	131	170

In the House, there was one Socialist and two vacancies, so making a total of 435.

In the 68th Congress, the position of parties is

	Republicans	Democrats	Majority
Senate.....	53	42	11
House.....	223	206	17

The Senate also includes one Farmer-Labor candidate, Hendrik Shipstead of Minnesota who brings up the number of senators to 96. In the House, there is one Socialist, Victor L. Berger of Milwaukee, who was twice expelled from Congress on account of his views during the war; one Farmer-Labor candidate, Knud Wefald of Hawley, Minn.; and one Independent, Rev. O. J. Kvale of Benson, Minn., who defeated Andrew J. Volstead, whose name had been given to the act enforcing Prohibition. This contest was curious because Kvale declared himself "drier than Volstead" and yet received the support of the Association Opposed to the Prohibition Amendment which was determined to exclude Volstead from Congress, at any cost. With three vacancies, these unattached representatives make up the House of 435.

A Republican majority of 24 in the Senate has been reduced to 11 over the Democrats and 10 over all parties, while in the House, a Republican majority of 170 has been reduced to 17 or 14 over all parties.

Miss Alice Robertson of Oklahoma, who, until the election of Mrs. Winnifred Mason Huck of Chicago, to fill the vacancy caused by the death of her father, William E. Mason, was the only woman representative in the 67th Congress, was defeated. The only woman who now sits in the House is Mrs. Mae Ella Nolan of San Francisco, who at a special election was chosen to fill the vacancy caused by the death of her husband, John J. Nolan. Three women stood as candidates for the Senate, but were all defeated. As an act of courtesy, however, Mrs. William H. Felton, on 22 November, took her seat as junior senator for Georgia and addressed the chair.

Senator Newberry of Michigan, whose election over Henry Ford led to an enquiry into irregularities, resigned. An attempt through a recount to unseat Senator Lodge of Massachu-

ELECTRIC BOILERS

setts, who was elected by a narrow majority only, failed. Senator Miles Poindexter of Washington was among the defeated.

Among the new senators elected were Edward I. Edwards of New Jersey, formerly Governor; Dr. Royal S. Copeland of New York City, health commissioner under Mayor Hylan; until he resigned to take his seat in the Senate; Simon D. Fess, Ohio; Col. Smith W. Brookhart, Iowa, and Thomas F. Bayard, Delaware.

Of the elections for Governor, two stand out as sensational. In New York State, former Gov. Alfred E. Smith, Democrat, defeated Governor Miller by 1,397,670 votes to 1,011,725, a plurality of 385,945. In the city itself, Smith's lead was about 480,000 a very remarkable figure.

Scarcely less startling was Gifford Pinchot's success in Pennsylvania, where he first captured the nomination for Governor at a primary in which the entrenched forces of a powerful Republican machine were ranged against him and afterwards carried the State by a plurality of 250,000.

The elections did not disclose any third party. There was no separate ticket for Labor and Socialism, as in Britain. Nor was there any Progressive crusade, like that led by Theodore Roosevelt. But undoubtedly the historic parties, as organized, were given ample food for thought.

One interesting possibility, much discussed in advance, is the appearance of Henry Ford as an aspirant for the Democrat nomination for President and even as a third candidate if this nomination is refused.

The British election has been dealt with under events in that country. Under Ireland, there will be found particulars of the Irish election.

The general election in Poland was held in November 1922. The results were:

SENATE

Christian Union of National Unity (Right and Affiliated Parties).....	51

The elections in Poland were followed by a tragedy which threw the country into mourning. On Dec. 1922 President Gabriel Narutowicz

was inaugurated into his office amid rioting. On the 16th, he was assassinated by an artist of unbalanced mind called Niewiadomski. He was succeeded as President by M. Wojciechowski. The Prime Minister is Gen. Ladislas Siborski. He has to depend on radical groups—Socialists, peasants and non-Poles—who control 40 per cent of the seats of the Diet. It is the Diet voting as a whole that chooses the President. Narutowicz had a majority of 289 votes to 228. His successor, Wojciechowski received 298 votes to 221.

The Australian elections were held in December 1922. The results were as follows: Labor Party, 29; National Party, 27; Liberal and Country parties, 19. William Morris Hughes, Prime Minister, saw five of his colleagues in the government defeated. Labor gained four seats; the Liberal Country Party gained seven seats and the Nationalist or Hughes Party lost 11 seats, so finding itself a decided minority in the House. Finding his situation impossible, Mr. Hughes resigned and was succeeded by Stanley M. Bruce, Commonwealth Treasurer and Nationalist.

PHILIP WHITWELL WILSON.

ELECTRIC BOILERS. The high cost of coal and the comparatively low cost of hydro-electric energy induced European countries, like Switzerland, Italy, Germany and Sweden, since the outbreak of the war, to make use of hydro-electric energy for steam and hotwater heating. Instead of using coal or wood in the furnaces under the boilers, specially constructed boilers are provided with electrodes, which are supplied with electric current drawn from available water-power developments.

These electric boilers are used in manufacturing plants, where steam and hot water are required in the manufacturing processes and for heating buildings. Hospitals, schools and private residences are also provided with these boilers, which have an additional advantage of cleanliness.

For ordinary steam and hot-water heating, low-pressure steam boilers are used; but many manufacturing plants need high-pressure steam, and a large number of electric-boiler plants have been installed in the various countries, ranging in pressure of from 8 to 14 atmospheres, or from 117.8 to 205.8 pounds per square inch. The latter pressure is equal to that in modern and large-sized coal-boiler steam plants of electric central station concerns.

The electric boiler eliminates the transportation of high-priced coal, as current may be drawn from water-power developments or even from distant located steam-electric plants, principally during non-peak loads of such plants.

The economical factor of such electric boiler installation depends mainly on the cost of coal in comparison with the cost of electric current at the point of consumption. The average efficiency of the transformation of coal into steam is about 60 per cent, while the average efficiency of transforming coal into mechanical energy is about 11 per cent. The efficiency of transforming hydraulic energy into steam by means of electric-heated boilers in about 62½ per cent, as shown by tests, while the electric boiler itself has an efficiency of 98 per cent.

against the average 60 per cent coal-fired boiler, which has losses in ashes, radiation, leakage in the boiler-wall setting and smoke—or mainly in incomplete combustion. One kilowatt hour in an electric boiler will evaporate 2.9 pounds of water at 15° Centigrade (59 F.) to a steam pressure of eight atmospheres (117.6 pounds).

Different types of electric boilers have been developed during the past eight years and several hundred installations are now in operation in Switzerland, Italy, Germany and Scandinavia, all countries where water power is comparatively cheap. The most frequent types are boilers provided with electrodes (resistances) inserted in the water to be heated. The water evaporates at the surface, while in coal heated boilers the

section of an electric boiler, provided with two stationary electrodes, marked 2; the inner sleeve 3, is automatically raised and lowered according to the water level in the boiler. The outer sleeve 7, is stationary. The pump 4, circulates the water through the pressure pipe 5, and discharges it upward through the inner sleeves, against the electrodes. The water separator 6, prevents water from entering into the steam supply pipe.

When such a boiler is used, say for 200 pounds pressure, steam is drawn off as in a high-pressure coal-fired boiler plant, that is for direct consumption. For low steam pressure plants reservoirs or accumulators may be used in addition. Should the hydro-electric source,

2. Electrode.
3. Inner isolating sleeve.
4. Water circulating pump.
5. Pressure pipe.
6. Water separator.
7. Outer isolating sleeve.

water evaporates at the lowest part of the boiler nearest the fire and the steam must pass when rising to the surface through colder water and therefore the moisture in steam generated by coal, runs as high as 8 per cent, while in electric boilers it is not higher than 3 per cent.

The current used is mostly three-phase alternating, as direct current, also used for low-voltage boilers, disintegrates the water at a certain voltage, into hydrogen and oxygen, and therefore additional precautions must be taken. A number of electric boilers operate at a pressure of from 500 to 1,000 volts, and many at a pressure of from 5,000 to 15,000 volts. Experience has shown that 20,000 volts may be used without difficulty. The use of high voltage eliminates step-down transformers, and the current can be drawn directly from distance transmission lines.

The accompanying drawing shows a cross-

section of an electric boiler, provided with two stationary electrodes, marked 2; the inner sleeve 3, is automatically raised and lowered according to the water level in the boiler. The outer sleeve 7, is stationary. The pump 4, circulates the water through the pressure pipe 5, and discharges it upward through the inner sleeves, against the electrodes. The water separator 6, prevents water from entering into the steam supply pipe.

When such a boiler is used, say for 200 pounds pressure, steam is drawn off as in a high-pressure coal-fired boiler plant, that is for direct consumption.

For low steam pressure plants reservoirs or accumulators may be used in addition. Should the hydro-electric source,

ELECTRIC FURNACES. See METALLURGY.

ELECTRICITY. According to one of the leading electrical engineers of the United States the greatest electrical developments during 1922 were in radio and wire transmission and in the "tubes" used in amplifying, receiving, etc., and applied to other engineering work. These developments, the authority referred to asserts, "are truly remarkable." With respect to developments in other electrical lines, he states "they have been to a great extent merely the well-known application of well-known principles to well-known devices in slightly enlarged sizes or on a somewhat enlarged scale." The output of electric current during the year amounted to approximately 51,000,000,000 kilowatt hours. Over \$750,000,000 was raised for refunding, new construction and betterments by the electrical companies of the United States. An interesting development of the year was the manufacture by the General Electric Company of a 30,000 watt incandescent lamp, having a capacity of about 60,000 mean spherical candle power—the largest lamp of its kind ever manufactured. Throughout the world much interest was manifested in the electrification of railways. See also ELECTRIC BOILERS; ELECTRIC MINING; HYDROELECTRIC DEVELOPMENT; RADIO. See also under RAILWAYS.

ELECTRIC MINING. Electric current has been used in mines for the operation of drainage-pumps, air-compressors, ventilators, breaker-machinery, drills, etc., and also for hoisting for a number of years. However, most of the mine hoists are of the type used also with steam engines, but, instead of steam-engines, motors have been substituted therefor.

European countries (the continent of Europe) have developed and used for a number of years highly efficient hoisting systems, so that to-day no more mines are put in operation without this equipment and the old steam and the ordinary motor hoist are being rapidly replaced, as it pays to replace them.

The adoption of this radically new system of hoisting is due not only to the economical operation but also due to the safety and flexibility in operation. Where previously steam had to be generated at each mine for operating the machinery, to-day electric current is drawn from distant water-power developments or from centrally located steam-electric power plants, supplying a number of mines with current from one place of generation. To obtain still further economy and with a greater factor of continuous operation, central steam-electric plants are interconnected with hydro-electric plants, by means of the over-head high-tension transmission systems, and the individual plants "help each other out," that is, plants running temporarily on peak-load receive current from plants running at normal or at low-load. In some cases there are as many as 10 central stations so interconnected.

The modern hoisting system as used in Europe, consists mainly in the controlling device of the hoisting machinery. There are, for instance, the Ward Leonard system and the Ilgner system of operation and control. A prominent feature in the Ilgner system is the fly-

wheel, attached either mechanically or electrically to the hoisting equipment. On account of the high speed, this flywheel is made of a solid steel disc, having often a peripheral speed of 30,000 feet per minute or more. Instead of the slow hoisting speed of the old-time steam hoist, the cages are lowered and hoisted with a two-ton load at a speed ranging from 10 to 20 meters per second, or from 3,936 to 7,872 feet per minute. The latter speed is 42.8 miles per hour. These factors are especially of importance for deep mines, such as are found in Germany, where depths of 500 to 750 metres (1,640 to 2,460 feet) are not unusual; in fact, there is one mine in Germany which has a depth of 4,000 feet.

The steam engine and the ordinary motor-driven hoist consume too much in starting and stopping and making the proper landing at the different levels, and, in addition, consume too much power to start a cage, especially when loaded. The quick accelerating and quick retarding time in the hoisting process is accomplished by a control of electric-actuated switches to reverse the current and thereby the hoisting motor; this is, in addition, augmented by the flywheel, which keeps up the high speed, running in one and the same direction.

Often a single hoist is provided with one controlling dynamo, one three-phase generator, two exciter machines, one hoist motor and the flywheel. This entire equipment is interconnected, partly mechanically and partly electrically, and actuates as a unit. It is automatically controlled, so that cages stop at the individual levels, just flush with the railways in the veins or at the surface; this in spite of the tremendous starting, hoisting and stopping speed. The advantage of such a combination of expensive machinery and apparatus, instead of the primitive single motor and single switch control hoist, is the great reliability in operation and the great efficiency produced thereby. The cost of coal is reduced considerably and the output increased.

Besides the specially designed electric motors used in mines for the operation of various equipments, electric haulage has been greatly improved. The storage battery locomotive has been replaced by electric locomotives, drawing current from overhead wires suspended six feet above the rails. As a rule, each locomotive is equipped with two direct-current motors of 15 horsepower each, operating at 250 volts. The transformer stations, to step-down the line voltage (5,000 to 10,000) to the 250 operating voltage, are often located, instead of on the surface, at the veins, some 2,000 feet under the surface; this of course depends on the depth of the deepest vein. Other electric auxiliaries in mines are the electric-lighting systems and the loud-speaking telephones and alarm systems. It can be safely stated that in modern mining the electrical equipment is far better developed in refinement and with a much greater factor of safety in operation than the electrical equipments in most other industries.

ELLSWORTH COLLEGE, a non-sectarian, co-educational institution, founded in 1890 and located at Iowa Falls, Iowa. In 1922-23 it had a faculty of 19 members; number of students enrolled, estimated to June, 535; property valued at \$650,000, and an income of \$50,000. Ido Franklin Meyer, A.M., is president.

ELMIRA COLLEGE, a non-sectarian educational institution for women, founded in 1855 and located at Elmira, N. Y. In 1922-23 it had a faculty of 44 members, 500 students, property valued at \$1,000,000, and an income of \$281,084.05. Frederick Lent, Ph.D., is president.

ELON COLLEGE, a co-educational institution belonging to the Christian Church, founded in 1889 and located at Elon College, N. C. In 1922-23 it had a faculty of 33 members, 323 students, property valued at \$787,661.82 and an income of \$83,176.77. William Allen Harper, LL.D., is president.

ELWELL, Francis Edwin, American sculptor: b. Concord, Mass., 15 June 1858; d. Darien, Conn., 23 Jan. 1922. He studied sculpture under May Alcott in Concord and then went to the Beaux Arts, Paris. In this city he also studied under John Alexandre Falguière. He was the first American sculptor to model a statue in America that was erected in Europe. He received a medal at the Chicago Exposition, 1893; a gold medal twice from the Art Club, Philadelphia; a medal from the King of Belgium for study in architecture, and a medal at the Buffalo Exposition, 1901. He was curator of ancient and modern sculpture at the Metropolitan Museum of Art, New York, for several years. He was honorary colonel of the Seventh Rhode Island Infantry. He was a delegate to the Atlantic Congress for the League of Nations and speaker for the same. Colonel Elwell was a member of many societies in the United States and Europe including the International Longfellow Society, Dickens' Fellowship of London (Philadelphia branch), and the Cincinnati Art Club. His best-known works are: 'Death of Strength,' Edam, Holland; 'Lord Provost of Aberdeen,' Aberdeen; 'Awakening of Egypt,' Paris; 'Gen. Hancock,' equestrian statue, Gettysburg; Edwin Booth, Mount Auburn, Cambridge; 'Kronos' and 'Ceres,' two fountains, Buffalo Exposition, 1901; 'Dickens and Little Nell,' Fairmount Park, Philadelphia; 'New Life,' Lowell Cemetery, Lowell, Mass.; 'Intelligence'; busts of Levi P. Morton and Garret A. Hobart, United States Senate Chamber, Washington; 'Classic Art,' Art Palace, Saint Louis Exposition, 1904; 'Greece and Rome,' New York Custom House, 1904; marble bust of Col. E. T. Van Horn, Journal Office, Kansas City; monument to Gen. L. P. di Chesnola, Kensico Cemetery, New York; 'Despatch Rider of the American Revolution,' Orange, N. J.; 'The Flag,' Seventh Rhode Island Infantry; monument, Vicksburg, Miss.; 'Dante and Shakespeare,' Scranton Memorial Library; 'Kronos,' Harvard University; 'The

Orchid Dance,' Gorham & Co.; 'Lincoln,' East Orange, N. J.; bust of Hon. Robert Miller Walmsley, New Orleans; bust of Morris Patton; statue of Rear-Admiral Charles H. Davis, for the United States Naval Monument, Vicksburg; statue of Gen. Frederick Steele, National Military Park, Vicksburg, 1911; 'Acrosteria,' Agricultural Building, Panama Exposition, 1915; 'Genius of Memory,' Lowell, Mass., 1915, and heroic bust of Amzi L. Dodd, for Mutual Benefit Life Insurance Company, Newark, N. J.

ELWES, Henry John, horticulturist: b. 16 May 1846; d. London, 27 Nov. 1922. He was educated at Eton and on the Continent, served five years in the Scots Guards and traveled in Turkey, Asia Minor, India (four times), North America, Mexico (three times), Chile, Russia, Siberia (three times), Formosa, China, Japan (twice), and in Nepal and Sikkim. In 1886 he was scientific member of the Indian Embassy to Tibet. He was vice-president of the Royal Horticultural Society; was Victoria Medalist of the same, and was past president of the Royal English Arboricultural Society and of the Royal Entomological Society of London. He represented Great Britain officially at the Botanical and Horticultural congresses at Petrograd and Amsterdam. In addition to many papers for the *Transactions and Proceedings* of the Zoological, Linnean, Entomological, Horticultural and Agricultural societies, between 1869 and 1889, he published 'A Monograph of the Genus *Lilium*,' and 'The Trees of Great Britain and Ireland.'

EMERGENCY FLEET CORPORATION, United States. See MERCHANT MARINE OF THE UNITED STATES.

EMERSON, Charles Franklin, American educator: b. Chelmsford, Mass., 28 Sept. 1843; d. Hanover, N. H., 1 Dec. 1922. He was graduated from Dartmouth in 1868 and received the degree of A.M. in 1871. Upon graduation he was made instructor in gymnastics at Dartmouth and from 1868-72 was instructor of mathematics at the New Hampshire College of Agriculture and Mechanic Arts (at that time a part of Dartmouth College). In 1872 he was appointed associate professor of natural philosophy and mathematics and in 1878 promoted to Appleton professor of natural philosophy, which he held until 1899. From 1877-99 he was also instructor in astronomy. From 1893-1913 he was dean of the academic faculty of Dartmouth and dean emeritus from 1913 until his death—a total service to Dartmouth of 45 years. He was a member of the New Hampshire House of Representatives in 1915-16 and again in 1917-18.

EMMANUEL MISSIONARY COLLEGE, a co-educational institution under the auspices of Seventh-Day Adventists, founded in 1875 at Battle Creek, Mich., as the Battle Creek College. In 1901 it was moved to Berrien Springs and renamed Emmanuel Missionary College. In 1922-23 it had a faculty of 45 members, 625 students, property valued at \$500,000 and an income of \$300,000. Frederick Griggs, A.M., is president.

EMORY AND HENRY COLLEGE, a Methodist, but non-sectarian co-educational institution, the corner-stone of which was laid

30 Sept. 1836. It is located at Emory, Va. In 1922-23 it had a faculty of 13 members, 180 students, property valued at \$350,000 and an income of \$56,000. James N. Hillman is president.

EMPLOYERS' LIABILITY. See LABOR LEGISLATION.

EMPORIA COLLEGE, a Presbyterian co-educational institution founded in 1882 and located in Emporia, Kan. In 1922-23 it had a faculty of 25 members, 375 students, property valued at \$800,000 and an income of \$100,000. Frederick Wheeler Lewis, D.D., is president.

ENGINE, Unaflow or Uniflow. In 1908 Prof. Johannes Stumpf of the Charlottenburg University, Germany, adopted the idea which had been tried by Eaton in the United States in 1857, and Todd in England in 1885, of taking the steam into the cylinder at the ends and exhausting it at the centre, in order that there should be no back-flow of cold exhaust steam across the hot inlet end, as is being done in single and compound expansion engines. While Eaton's and Todd's undertakings had absolutely no economical and commercial success, Stumpf succeeded to such a degree that this engine competes in steam consumption with the best compound engines and the best steam turbines, and, due to the simplicity of construction, it is correspondingly cheaper in first cost as well as in maintenance and cost of operation. Stumpf named the engine "una-flow," which means one direction flow; in the English-speaking countries it is called "uniflow" engine.

Section through Unaflow Engine Cylinder and Piston.

The accompanying drawing shows a cross-section through a unaflow engine cylinder and piston. The live or high-pressure steam enters at "A," passes the popped valve "B" and enters here the cylinder, pushing the piston forward and the steam escapes in the middle of the cylinder at "C;" the same process is repeated from the other end of the cylinder. The hot live steam keeps the cylinder heads always at a high temperature. This prevents condensation and the full force of steam expansion against the piston takes place. This heating of the cylinder heads, as devised by Stumpf, made this engine a success, and this is the one principal feature which Eaton and Todd failed to develop. The moisture in the steam is greatest nearest the piston when the piston uncovers the exhaust port "C," and this moisture is swept out by the flow of the exhaust steam. At this time the inlet head, being dry, does not give off its heat. Therefore when the piston covers the exhaust port on its return stroke, there being no moisture or cold cylinder head to absorb the heat of the compression, and heat being added from the head jacket during compression, the tem-

perature of the steam remaining in the clearance at the end of the compression stroke (usually 10 per cent cut-off) will be higher than the temperature of the boiler or live steam. When the piston moves away at the beginning of the next stroke, the high-pressure live steam will enter the cylinder with a higher temperature than its own, hence there will be no initial condensation.

Contrary to the pistons in single and compound expansion engines, the pistons of all unaflow engines are long—practically nine-tenths of the stroke, which also requires a cylinder practically twice as long. Unaflow engines are built in all sizes, and up to the present time some have been built up to 14,000 horsepower capacity, while the largest reciprocating engines of single and compound type never have been built of more than 7,500 normal horsepower. The friction loss in these engines is comparatively low, amounting to not more than 3 per cent, and the steam consumption is low also. For instance, for the 14,000 horsepower engines, with 240 pounds steam pressure, 120° Fahrenheit superheat and 26 inches vacuum, the steam consumption is nine pounds per indicated horsepower. These 14,000 horsepower engines have four cylinders, and therefore are quadruplex engines. However they are not quadruplex expansion engines, as the steam does not pass from one cylinder into the other as in the old compound engines.

In Europe the unaflow engine is also applied to large locomotives. The A. Borsig Works, Berlin, in 1920, constructed the first locomotive of this kind for the German state railway, and to-day there are more than 200 unaflow locomotives in operation in Europe. The one great advantage in the unaflow locomotive over the counterflow type, is that with a lower steam pressure and lower degree superheat the same power is developed that is developed in a counterflow locomotive with higher pressure and higher superheat. If the same pressure and the same superheat is used in both types of engines, then the unaflow engine will develop 26 per cent more power, and it is expected that still greater gains will be made in future developments. This gain is caused by the elimination of the initial condensation in the unaflow cylinder.

FRANK KOESTER,
Consulting Engineer.

ENGINES, STEAM, GAS, AND WATER, Manufacture of. According to a report of the Department of Commerce, there were 296 establishments engaged primarily in the manufacture of engines in the United States in 1921, which turned out products valued at \$199,499,000. These figures compare with products valued at \$464,775,000 turned out by 348 establishments in 1919 and products valued at \$72,121,000 turned out by 375 establishments in 1914. In addition, establishments engaged primarily in other lines of manufacture, reported the production of engines valued at \$27,916,000 in 1921, \$115,259,000 in 1919 and \$39,421,000 in 1914. These figures relate only to engines and tractors produced for sale as such, and do not include the engines used in automobiles and trucks when produced by the builders of those vehicles. The

total number of engines turned out was, in 1921, 399,856; in 1919, 836,206; in 1914, 418,526. Of the engines manufactured in 1921, 3,617 belonged in the stationary class (not turbines), 978 were portable (not automobile); 2,016 were stationary turbines; 1,687 were marine (not turbines); 34 were marine turbines while other steam engines manufactured numbered 228. Internal combustion engines manufactured numbered 159,592 automobile engines, 927 Diesel type engines, 18,640 marine engines, 105,317 stationary engines, 11,332 portable engines, and 18,132 other internal combustion engines. Farm tractors manufactured during the year numbered 68,403; road and other tractors numbered 5,963, while waterwheels, motors and turbines numbered 2,990. Persons engaged in the industry, including proprietors, firm members, salaried employees and wage earners numbered 43,726 in 1921 as compared with 96,286 in 1919 and 36,303 in 1914. Salaries and wages paid totaled \$72,260,000 in 1921; \$136,347,000 in 1919 and \$28,586,000 in 1914. Materials used cost \$111,698,000 in 1921; \$217,551,000 in 1919 and \$31,460,000 in 1914. The value added by manufacture (that is, value of products less cost of materials), was \$87,801,000 in 1921; \$247,224,000 in 1919, and \$40,661,000 in 1914. Twenty-seven establishments which turn out products valued at less than \$5,000 each produced engines valued at a total of \$66,600 in 1921.

ENGLAND. See GREAT BRITAIN.

ENGLAND, CHURCH OF. See PROTESTANT EPISCOPAL CHURCH.

ENTOMOLOGY. See ENTOMOLOGY, UNITED STATES BUREAU OF.

ENTOMOLOGY, United States Bureau of. The Bureau of Entomology is charged with investigations of the insects that are injurious to agriculture directly and indirectly. In a broad way, the Bureau studies all insects in their relations to man and covers a very large field in its work. In its organization it is directed by a chief and two associate chiefs, and is divided into sections according to the character of the crops or products injured. There is thus a section for the insects that affect fruit trees, another for insects affecting cereal and forage crops, another for insects affecting truck crops, another for stored products, another for southern field crops, and so on. Each of these sections has a leader and a body of trained scientific assistants. The main work of the Bureau is done in field laboratories, the Washington offices being mainly for administration. There are 75 of these laboratories scattered all over the country, each one being situated at the center of some great problem of insect damage. The Bureau has grown during the last 40 years to a commanding position in applied entomology, and the United States service in this direction is far stronger than that of any other country. All of the investigations of the Bureau, however, are conducted in co-operation with the agricultural colleges and experiment stations of the different States, and these latter organizations depend upon the Federal Bureau for assistance in certain directions, notably for the identification of insects, since the Bureau has on its staff a large number of trained specialists and has in Wash-

ington the enormous collections of the United States National Museum close at hand. In fact, the division of insects of the national museum is largely manned by experts of the Federal Bureau of Entomology. The work of the Bureau for the year 1922 covered, as usual, a very large number of projects, but there are certain ones of prime importance about which some details should be given.

The Japanese Beetle.—This is an extremely destructive insect which made its appearance a few years ago in northwestern New Jersey not far from Camden. It has gradually spread in spite of all efforts to hold it by quarantine and inspection, and now threatens to be a pest of national importance. It feeds upon the foliage of all sorts of trees, and in its larval stage feeds underground upon the roots of grass and other plants. During the season, all vegetable products, especially sweet corn, coming from the infested district were inspected. More than 205,000 baskets of corn were inspected and more than 5,000 beetles were removed from the tips of the ears. Scouting work shows the limits of the infestation for 1922 to cover about 1,000 square miles in New Jersey and 57 square miles in Pennsylvania. Biological studies of the insect have been carried on, and investigations of insecticides and methods of control have been made. These investigations have included the treatment of the grubs in the soil, the use of poisons and repellents sprayed on foliage, and the destruction of the grub by agricultural methods. Experts sent to Japan last year have been studying the parasites of the insect in its native home, and large numbers of these parasites have been imported. These have been propagated in New Jersey, and large numbers will be liberated next spring.

The European Corn-borer.—The European corn-borer, originally discovered in eastern Massachusetts and later in the vicinity of Schenectady, N. Y., and still later near Buffalo, N. Y., and in 1921 in small numbers in Michigan and Ohio along the south shore of Lake Erie, made no notable western spread during the year. In New England, it has reached central New Hampshire and entered Maine and Rhode Island, and in western New York has made some spread to the eastward. Over in lower Ontario it made a very considerable spread. A laboratory of the Bureau has been established at Sandusky, Ohio, in order to study the insect in its new environment. No commercial damage has become apparent in Ohio, but it is feared that if the insect is not kept in check it will spread into the main corn belt and become a very serious pest. The spread in eastern New York has been slight, and damage to the corn crop has also been slight. In Massachusetts, however, where the insect has two broods each year as contrasted to a one-brooded condition for the west, the insect has done very considerable damage to garden crops in general and especially to celery, beets and beans. It has multiplied enormously and infests the weeds in waste areas to an extraordinary degree. Research work conducted mainly at the field laboratory in Arlington, Mass., has been vigorously pressed in the effort to find out practical means of control. This work indicates that the methods adopted will have to be chiefly changes

in finer details of agricultural practice and in the consumption of the infested crops in such a way as to destroy the insects. Extensive work in the introduction of the European natural enemies of the corn borer has been carried on, and more than a million individuals of a single promising species of a parasite have been liberated in Massachusetts during the past summer. These came from a laboratory which has been established at Hyères, France, in charge of a very competent expert. Several additional insect parasites have been discovered which, it is hoped, will help to lessen the numbers of the corn-borer in America.

The Cotton Boll Weevil.—Excellent progress has been made in the control of the boll weevil by the calcium arsenate dust. Very many planters have used this process with profitable results during the year and it has been constantly simplified and cheapened and adapted to different regions. Experiments have been made in the use of the airplane which show that in this way the amount of the poison can be cut in half and indicate the possible use of this instrument for dusting on large plantations or in regions of almost continuous cotton culture and suggests that it may come into play in community service. The general feeling throughout the regions where the boll weevil has been present for several years is one of encouragement, and it has been shown in many cases that, by the application of the cultural methods recommended by the Department, even the small planter with comparatively poor soil may raise cotton under boll weevil conditions at a profit. Just at the close of the year, the Florida Experiment Station (a State institution, not connected with the Federal Bureau) issued a bulletin indicating a cheap means by which upland cotton may be grown in Florida under boll weevil conditions by the small planter and on comparatively poor land. This method promises to be of great importance.

The Mexican Bean Beetle.—This insect, first reported in Alabama in 1920, has since invaded Georgia, Tennessee, Kentucky, Virginia and the Carolinas, and is still spreading. Intensive work on methods of control were carried on during the year, as well as biological studies. A perfectly satisfactory method of control has not yet been reached. An expert has been studying the insect in Mexico and has secured a promising parasite which has been imported into this country. Efforts will be made to colonize it during next year.

Gipsy Moth and Brown-tail Moth.—The Federal bureau has, during the past few years, confined its attention towards preventing the spread of these two insects, their control in the interior of New England being left to the respective States. A number of smaller colonies have been found in New York, New Jersey and Pennsylvania, and these have been exterminated. A very large colony was found a year or so ago in New Jersey, and an effort is being made to wipe it out. The work of the past season has been apparently very successful, and it seems altogether likely that, by the combined efforts of the State and Federal government, this very dangerous colony will be exterminated. In the meantime, the gipsy moth, in spite of all efforts, is now approaching the Hudson River

valley on its western range, and the efforts of the government and of the State of New York have been during the past season, and will be during the next season, concentrated on this advance line. Some years ago a number of effective parasites were imported from Europe and Japan and have been established in New England, and these assist in reducing the numbers of the gipsy moth very considerably. During the past summer one expert was sent to Europe and another to Japan, with the idea of trying to secure additional parasites of species which in their work will supplement that done by those imported earlier.

The range of the brown-tail moth in New England, contrary to the case that exists with the gipsy moth, has been retreating, and 2,342 square miles of territory formerly occupied by this insect have been relieved from quarantine. This is due in part to the general application of measures recommended by the bureau and by the different States, in part to the work of parasites imported from Europe during the years 1905 to 1911, and in part to disease.

Other investigations.—In addition to the main pests mentioned above, notable progress has been made in the campaign for the suppression of the plum curculio in the Georgia peach belt, and also in North Carolina. The use of paradichlorobenzene for the control of the peach-borer has become quite general among commercial peach orchardists and has resulted in large savings in the cost of control of this insect. Many practical points have been discovered in the work on the codling moth in the Pacific northwest. A new spray has been developed for the San José scale which is especially applicable in the Ozark region of Missouri and Arkansas as well as in southern Illinois and Indiana. This consists of a two-per-cent engine oil thoroughly emulsified with potash-fish-oil soap and is used as a dormant treatment for the scale, costing about one-half less than the standard lime-sulphur wash.

Studies of the sorghum midge, the so-called green bug of cereal crops in the southwest, and of the Hessian fly, have been continued with excellent results. Grasshopper investigations were carried on in Wyoming, Montana and North Dakota, as well as in Oregon, California, Arizona and Texas. Further progress was made toward the control of the alfalfa weevil by a method of dusting with arsenicals which promises simpler and cheaper control. Work has been continued with tobacco insects, including the horn worm, flea-beetle, bud worm and tobacco thrips, and also with sugar cane insects. In forest insect control, a very striking co-operative bit of work has been carried on in the northwest against the yellow pine bark beetle. In this work the Forest Service, the National Parks Service, the Office of Indian Affairs and associations of private owners have co-operated, and during the spring of 1922 control work was carried on in the Klamath region of Oregon which promises to give results of great value. The work on the sweet potato weevil eradication has been continued in Florida, Georgia, Alabama and Mississippi, with very favorable results in the first three States. In Mississippi, however, a number of new infestations have been reported. The pea aphid, which

has become a serious pest in recent years, especially in New York, California and Wisconsin, on cannery peas, has been intensively studied, and there is every prospect of the working out of a cheap and satisfactory method for its control. A newly imported potato and tomato weevil has made its appearance in Mississippi and is being intensively studied.

The experts engaged in the investigation of insects affecting stored products have been at work upon the insects attacking wheat, corn and other grains in farmers' bins, warehouses, grain cars, ships and elevators. Intensive studies have been made of the Angoumois grain moth, or fly weevil, that has done much damage to the 1922 crop of winter wheat in the eastern States. Investigations have been carried on in co-operation with the bureau of chemistry to discover a more satisfactory fumigant for grain cars, and studies have been made of weevils attacking beans, peas and cowpeas in storage. Insects affecting fabrics made of wool, hair, furs and feathers have been studied. Many important studies have been continued with reference to bee culture, all the problems of importance to practical bee-keeping being borne in mind.

L. O. HOWARD,
Chief of Bureau.

ENVER PASHA. Turkish soldier. About the birth and death of Enver Pasha, there is still some uncertainty of detail. Apparently, he was born at Stamboul, in 1882. His father was a Turk; a woodturner who was as popular with Abdul Hamid as locksmiths were with Louis XVI; and his mother was an Albanian of whose race Byron wrote "where is the foe that ever saw their back" adding, in grim prophecy of Enver, "their wrath, how deadly." At Stamboul, Enver attended the Hassan Aga Medressa School, but he completed his education at Monastir. Like Kemal, he is thus to be regarded as essentially a Macedonian or European Turk, a small dapper man, with mild gentle eyes and the complexion of a Levantine girl, he may have had in his pedigree a Hungarian strain. It was when aroused that his mild disposition turned to flame. As a youth, he traveled in Europe and India. He entered the army as a cavalry officer in the Damascus corps and joined the Committee of Union and Progress. Those were days when Hilme Pasha was endeavoring to crush revolutionary bands in the mountains, who entered what was then Turkey across the Bulgarian frontier. Enver, then a major, became his aide-de-camp. Rumors reached the Sultan Abdul Hamid that there was disaffection among the second and third army corps, stationed in Macedonia, and Hilmi was urgently invited to Constantinople, there to be lulled into loyalty or, if this failed, to disappear. Instead of joining the Sultan's personal suite at Yildiz Kiosk and possibly marrying his niece, Enver took to the hills and, with the army behind him, "precipitated the movement." He telegraphed the Sultan, that no taxes would be paid and that the standard of revolt would be raised unless the delayed constitution was exactly and immediately granted. The revolution followed, Enver's attitude at that time being declared thus: "We are all brothers, Arbitrary govern-

ment has disappeared. Under the same sky, we are all equal. We all glory in being Ottomans." Between Moslem and Christian, between Turk, Greek and Armenian, there was to be one common citizenship. The Sultan's revenues were cut from \$7,500,000 to \$3,000,000 and his Mesopotamian properties were confiscated. But Enver's personal reward was slight. For eight months, he was merely military attaché at Berlin. It was the appointment that he himself selected. With Britain virtually allied with Russia, and a German ambassador so astute as Baron Marschall von Bieberstein at Constantinople, it is no wonder that the Young Turks, Enver included, became pro-German. When the Sultan tried to destroy the constitution, Enver was among the leaders who dethroned him and sent him to Salonica. In the Italo-Turkish War, Enver dodged the Italians at sea and the Egyptian authorities on land, so reaching Tripoli where he led the forlorn hope for Turkey. After the Second Balkan War, it was Enver who entered Adrianople in triumph.

In February 1913, Enver, by a bloody coup d'état, seized the supreme power as Minister of War. It was he who threw in Turkey on the German side, winning at first a measure of success against the British-Australians in the Gallipoli Peninsula and against the Russians in the Caucasus. But his plunge utterly ruined the Ottoman Empire. Whatever went right for Turkey was attributed to Von Der Goltz, the German field marshal, and the other German advisers. Whatever went wrong, was Enver's fault. Largely in order to pacify critics, it was said that Enver ordered the massacre of 1,000,000 almost entirely unarmed Armenians while an immense number of Christian women, many of them educated in American missionary institutions, were enslaved. With the collapse of Turkey, Enver was recognized as a war criminal who had incurred grave guilt. With his colleagues, Djemal and Talaat, he was condemned to death for high treason. Of the three men, Talaat was shot in Berlin by an Armenian; Djemal was pursued to Afghanistan and there done to death; and Enver alone was left. All kinds of stories were current as to his fate. He had escaped by aeroplane to Moscow. He had been seen in Berlin. He had again quarreled with Kemal in Anatolia. What may be taken as certain is that he made his way somehow into Turkestan, possibly as an agent of the Soviets. There, however, he turned against the Russians, who are the hereditary foes of the Turks and developed a Pan-Turanian ambition. His idea was to gather up the moslems of mid-Asia and so recover the Ottoman Empire. Kemal was against him; so was Moscow; and on 25 July 1922 he met his end near Raljiwan in Turkestan where his forces, reduced to 1,000 men, were fighting a superior contingent of Bolsheviks. It is said that Enver fell, saber in hand, pierced by five bullets.

EPIDEMIOLOGICAL INTELLIGENCE SERVICE, International. See ROCKEFELLER FOUNDATION.

EPIRUS, a district of the kingdom of Greece comprised in the Departments of Janina and Prevesa. The population in 1920 was 213,276. The boundary with Albania is ill-defined.

EPISCOPAL CHURCH. See PROTESTANT EPISCOPAL CHURCH.

EPWORTH LEAGUE. See METHODIST EPISCOPAL CHURCH, SOUTH.

ERITREA, a colony of Italy consisting of eight commissariats on the African shores of the Red Sea. The total area is 46,500 square miles and the population numbers 400,000. There are about 138 officers and 5,457 men in the military forces, nearly all Italians. The central government is represented by a civil Governor nominated by the King and under the supervision of the Minister for the Colonies. The total revenue from all sources in the fiscal year 1921-22 was 25,044,000 lire, balanced by an expenditure of the same amount. Camels, oxen, sheep, goats, are pastured in the lower zone. Hides, butter, and meat are the chief articles of local trade. The pearl fisheries are important, the value of the pearls recovered annually amounting to 250,000 lire and the mother of pearl to 800,000 lire. Palm nuts are exported. Gold is worked in the Hamasien district and petroleum has been discovered. Asmara, the capital of the Colony, is connected by railway with Massawah, a distance of 74 miles; other branch lines are under construction. A wireless station at Massawah maintains communication with the Italian station at Coltano. There are 12 post offices in the Colony and 863 miles of telephone lines and 514 miles of telegraph lines. The Governor in 1922 was Marquis G. Cerrina Feroni.

ERSKINE COLLEGE, a co-educational institution, belonging to the Associate Reformed Presbyterian Church, founded in 1837 and located in Due West, S. C. In 1922-23 it had a faculty of nine members, 141 students, property valued at \$500,000, and an income of \$50,000. R. C. Grier, is president.

ESMOND, Henry V., English actor and dramatist: b. Hampton Court, England, 30 Nov. 1869; d. Paris, France, 17 April 1922. He was the fourth son of the late Dr. R. G. Jack and was educated under private tutors. Under the name of Esmond he appeared on the stage at the old Princess Theatre, Oxford Street, in 1886 as "Grandfather Corby" in 'The Noble Vagabond.' During his early years he appeared with Wilson Barrett, E. S. Willard, Edward Terry, and George Alexander, gaining valuable experience with each. He achieved his first pronounced success in London in 'The Middleman,' in which Miss Eva Moore, whom he married in 1891, was also playing. His second great success was made in Pinero's play 'The Times.' He appeared at Saint James Theatre in 1893 and acted there for many years, scoring another success as 'Cayley Drum-mle' in Pinero's 'The Second Mrs. Tanqueray.' This latter performance established his position on the London stage. He achieved another conspicuous success in 1895 as "Little Billee" in 'Trilby.' As an author he produced plays which were both artistic and popular successes. The list includes 'Rest,' 'Bogey and The Divided Way,' 'One Summer's Day' (1897); 'Grierson's Way' (1899); 'The Wilderness' (1901); 'When We Were Twenty-one' (1901); 'The Sentimentalist,' 'My Lady Virtue' (1902);

'Billie's Little Love Affair' (1903); 'The O'Grindles' (1907); 'Under The Greenwood Tree' (1907); 'A Young Man's Fancy' (1912); 'Eliza Comes To Stay' (1913); 'The Dangerous Age' (1914); 'A Kiss or Two' (1917); 'The Law Divine' (1918); 'Birds of a Feather' (1920). He appeared himself in 'Eliza Comes To Stay' at the Criterion Theatre production in 1913 and afterward when the play was produced in New York City. He made a second visit to America in 1921.

ESTHONIA, a republic comprising the former Russian government of Estland, the northern part of Livland, part of the Pskoff government, and the islands Oesel, Dago and Muhumaa in the Baltic Sea. Its area is about 23,160 square miles. The population is 1,750,000, of whom 94 per cent are Esths and about five per cent Russian. Esthonian is the language of the people but Russian and German are also in very general use. The capital is Reval (Tallinn), with a population of 160,000. About 85 per cent of the population are Lutheran. There is no state church. Primary education is free and compulsory. The percentage of illiteracy is very low, being about three per cent of the population above school age. There are in the republic 1,257 primary schools and 300 secondary schools. There are also numerous professional schools, agricultural, commercial, etc. There is a university at Dorpat (Tartu). Agriculture is the principal occupation of the people. Rye, wheat, potatoes and barley are the principal crops. The large landed estates are now parcelled out to the peasants under the Agrarian reform act of 1919. There were 414,955 cattle, 497,838 sheep, 244,912 swine and 155,489 horses in the republic in 1922. The republic exports flax, timber, meat and cellulose. The value of the exports in 1921 was \$14,667,680. The same year the imports were valued at \$17,500,000. Imports were chiefly salt, coal, fertilizers, sugar and oil and oil products. Articles declared for export to the United States in 1922 were valued at \$813,193 compared with \$180,194 in 1921.

Government.—Esthonia declared her independence in February 1918 and was soon after recognized as a de facto government by the Allied powers and in 1921 was accorded de jure recognition by the supreme council of the League of Nations. The constitution went into effect 20 December 1920. Sovereign power rests in the hands of the people who exercise it through a state head and nine ministers and an assembly of 100 members elected by universal and direct suffrage. The initiative and referendum are fundamental provisions of the constitution. The ministers are chosen by the assembly and are responsible to it. All citizens are equal before the law and the death penalty has been abolished. The national flag is blue, black and white in horizontal stripes. The state head or Riigivanem in 1922 was Konstantine Paets and the minister for foreign affairs Antone Piip.

ETHNOLOGY, American Bureau of. See SMITHSONIAN INSTITUTION.

EUREKA COLLEGE, a co-educational institution, affiliated with the Disciples of Christ,

founded in 1855 and located at Eureka, Ill. In 1922-23 it had a faculty of 23 members, 325 students, property valued at \$345,000, and an estimated income of \$75,000. L. O. Lehman, LL.D., is president.

EUROPEAN CORN-BORER. See CORN-BORER, EUROPEAN.

EUROPEAN COUNTRIES, Budget Deficits of. Below is presented in tabular form the budget deficits of the principal European countries for the years 1920 and 1921, together with the estimated deficits for the years 1922 and 1923.

Of the six great powers of Europe, above enumerated, three are so completely submerged in bankruptcy that it is scarcely worth while to attempt to furnish figures, expressive of their finances. These powers are Russia, Germany and the disintegrated Austria-Hungary. In the cases of France, Great Britain and Italy, there remains intact the fabric of an ordered revenue and expenditure. In Russia, the gold ruble is worth 51.46 United States cents or roughly half a dollar. In 1913, the paper currency amounted to 1,775,000,000 rubles and the gold or equivalent guarantee was 1,695,000,000 rubles, or almost ruble for ruble of paper. On 1 July 1922—just 10 years later—the paper circula

EUROPEAN DEBTS. Before she destroyed herself by war, Europe was, by tradition, by education, by finance, by military, naval and political influence, the headquarters of modern civilization. The sovereignty of Europe was vested in six great powers—Austria-Hungary, France, Germany, Great Britain and Italy, and in 14 smaller states, with Turkey holding Constantinople. Certain of the Balkan countries, like Turkey, had their financial difficulties, but of Europe as a whole, it may be said that she was solvent, that her currencies were based on the gold standard, and that, despite military and naval expenditure which led to frequent deficits in budgets, she was increasing in wealth and comfort. That was in 1913, only a brief 10 years ago. But in the interval, the European system has been utterly shattered and, unbelievable as it seems, the credit of the continent, taken as a whole, does not compare with the credit of Latin-America or of India.

tion was 271,236,000,000,000 rubles or, to put these gigantic figures more plainly, 1½ billion rubles had been inflated to 271,236 billions or multiplied 180,000 times. On 31 Aug. 1922, the paper rubles in circulation were 700,000,000,000,000 or 700,000 billions, that is three times the figure for June. By the end of October, the figure had reached 1,182,000 billions. In 1921, a gold ruble was worth, on the average, 80,000 paper rubles, but in September 1922, the official quotation was 3,500,000 paper rubles while the unofficial rate of exchange was 5,500,000 paper rubles. This means 11,000,000 rubles to the United States dollar and 50,000,000 rubles to the British sovereign sterling. In October, rubles fell yet further to 20,000,000 for a dollar, at which point the Soviet government took certain measures. On the 12th of that month, the state bank was authorized to issue a new kind of gold ruble bill, of denominations, 10, 20, 30, 50, 100, 200 and 500, which would be backed by 25 per cent of precious metals, foreign currency and bills of exchange. These securities would be (continued on page 292)

¹² See Austria for 1914 and 1919.

¹³ Includes "gold and balances abroad."

NOTE.—The currency notes of Russia in 1917 aggregated approximately 17,500,000,000 rubles with a gold reserve of about 1,250,000,000 rubles. Associated Press dispatches from Moscow in January, 1922, quote the Commissar of Finance, M. Krestinsky, to the effect that the paper issues of the Soviet Government to the end of 1920 aggregated 1,142,000,000,000 rubles, the number issued in 1921 10,000,000,000,000. The London Economic Review puts the total currency of Russia on 31 Dec., 1922, at 450,000,000,000,000 rubles. The Soviet circulation 31 Dec. 1922 was 40 times as much as one year earlier; the German mark circulation in March 1923 was 35 times as much as one year earlier, and that of Austria 18 times as much.

O. P. AUSTIN,
Statistician, National City Bank of New York.

available for an issue of 500,000,000 rubles or \$250,000,000. This is an attempt by the Soviet government to return to a gold basis and it implies a surrender of Bolshevik economic theory. But the obliteration of the paper ruble, inherited from the Czardom, implies the total loss of all the national and private securities which were based on that currency. The war loans to Russia were \$2,734,000,000 by Great Britain and \$1,092,000,000 by France. Pre-war investments in Russia by France are estimated at \$3,000,000,000. Belgium has also lent large sums to Russia all of which are to be regarded as now irrecoverable. A default on such a scale is, of course, without parallel in Europe. At two gold rubles to the dollar, the budget of Russia in 1913—the last normal year—was:

Expenditure:		
Ordinary.....	\$1,493,000,000	
Extraordinary.....	110,000,000	
		\$1,603,000,000
Revenue.....		1,589,000,000
Deficit.....		\$14,000,000

The Soviet budget for the months January to September 1922, was:

Expenditure.....	\$566,000,000
Revenue.....	496,000,000
Deficit.....	\$70,000,000

It will thus be seen that the Russian budget calculated in gold would, if worked out for the whole year, amount to about half the budget in 1913. In Germany, also the collapse of credit, as measured by currency has been sensational. On 15 Dec. 1922, the banks held a sum of 1,004,846,000 marks in gold, or approximately \$250,000,000. The circulation of notes on that date was 969,620,766,000 marks, and this figure, a few days later, passed into a trillion or above the thousand billion limit. This means that for every mark in the gold reserve, there had then been issued 1,000 paper marks. With the occupation of the Ruhr Valley, the mark fell at once to 20,000 per dollar. Since then it has fallen below 40,000 to the dollar. It is estimated that, since 1919, Germany sold 80,000,000,000 marks to private speculators in the United States, for which paper \$960,000,000 were paid. (New York *World*, 3 Oct. 1922.) This investment must be reckoned an almost total loss, being worth, on 3 Feb. 1923, only \$2,000,000 or less than one-quarter of 1 per cent of the money risked. By cable (20 Dec. 1922, New York *Times*) figures of the estimated German budget for 1923 are furnished. The ordinary budget balances at 732,000,000,000 marks. The extraordinary budget shows an expenditure of 84,500,000,000 marks and revenue of 18,700,000,000 marks, showing a deficit of 65,800,000,000 marks. A further 449,000,000,000 marks was held to be due under the peace treaty and there were 206,400,000,000 marks to be found somehow for other items. The total German deficit for 1923, as then estimated, was thus to be 721,200,000,000 marks. On 3 Feb. 1923, that huge figure only represented the absurd sum of 18,000,000 gold dollars. But it may be assumed that all estimates of the German budget, made in advance of the occupation of the Ruhr are valueless.

In the case of Russia and still more in the case of Germany, the financial collapse, while destructive of the propertied classes, has not meant so complete an industrial disaster, as was at first thought to be inevitable. In Germany, at any rate, the constant rise in prices stimulated domestic trade. On 1 Dec. 1922, manufactured articles cost 1,184 times as much as before the war; and textiles and leather, 2,663 times. But on 30 Dec. 1922, the London *Economist* stated that "the condition of industry and trade (in Germany) has been good." In March 1921, the number of unemployed was 429,000 but in 1922, it fell to under 12,000. In the case of shipping, Germany has repurchased from the Allies 130 vessels, of a total 491,567 gross tons, or 10 per cent of her war losses. It is calculated that Germany's internal war-debt was 157,000,000,000 marks. The fall in the mark has reduced this war-debt to less than \$4,000,000 gold. In other words, it has been wiped out.

As a great power, Austria-Hungary has ceased to exist and whatever would have been her finances must be considered as part of the finances of the small nations into which the dual empire has been disintegrated. It will thus be seen that European credit, in the larger sense, depends upon three countries, Great Britain, France and Italy. For three years, Great Britain has balanced her budget, her estimated revenue for the current 12 months,—March to March, 1922–23, being £910,775,000. On 31 Dec. 1919, the British debt was £7,998,000,000. On 31 March 1922, the debt had been reduced to £7,654,500,000, that is by £343,500,000, an achievement to some extent assisted by the sale of war stores. On 31 Dec. 1922, the debt had been increased nominally by certain conversions into new bonds to £7,768,000,000 but the floating debt, consisting of temporary advances, and treasury bills had been reduced during 1922 from £1,259,840,000 to £941,051,500, a relief to the money market of no less than £318,788,500. On 3 Feb. 1923, therefore, Sterling exchange had risen to \$4.65 to the sovereign, which compares with \$4.86½ par.

The French budget for 1922 was:

Expenditure:	Francs
Ordinary.....	28,348,952,965
Extraordinary.....	10,558,534,377
	38,907,487,342
Revenue.....	28,362,328,929
Estimated deficit.....	10,545,158,413

On 1 Jan. 1922, the French treasury had disbursed 80,000,000,000 francs on reconstruction of devastated provinces and similar services, chargeable against Germany. During 1922, the extraordinary expenditure, stated above, brought up this figure to 90,000,000,000 francs—if, that is, the money appropriated was actually spent. The charge for interest on reconstruction advances is approximately 5,000,000,000 francs and is met at present by the French treasury. There is, it is to be feared, little likelihood of Germany relieving France of this liability and M. de Lastyrie, the finance minister, has announced a general increase of taxes by 20 per cent with a view to balancing the budget during 1923. On 3 Feb. 1923, the franc stood at 6.17 cents

EUROPEAN DEBTS

which compares with 19.3 cents normal. The franc has thus fallen to one-third of its par value. The debt of France on 31 March 1922 was:

	Francs
Internal.....	155,058,325.853
Floating.....	87,050,312.100
Foreign.....	74,876,351.000

316,984,988.953

At normal exchange, this amounts to \$60,000,000,000. With the franc, depreciated, the equivalent figure to-day would be more, nearly \$30,000,000,000. It should be borne in mind that the foreign obligation is payable, not in paper but in gold, and must be still calculated at par. The budget of Italy for the year 1922-23, stated in lire, was:

Expenditure.....	20,454,809,000
Revenue.....	17,602,957,000
Deficit.....	<u>2,851,852,000</u>

The lira, like the franc, is worth 19.3 cents, but on 3 Feb. 1923, the quotation was only 4.80 cents, or one-quarter the par value. It will thus be seen that with the franc at one-third its par value and the lira at one-quarter its par value, there is no convenient currency available in France and Italy whereby large payments might be made to the United States on account of loans due to her. The only large European debt, therefore, that has been funded up to the present is the British to the United States. On 15 Nov. 1922, the debts due to the United States from foreign powers amounted to:

nations, but certain interest charges had been met. On loans under the Liberty Bond Acts, interest has been paid as follows:

Belgium.....	\$10,907,281
Cuba.....	1,859,733
Czecho-Slovakia.....	304,178
France.....	129,570,376
Britain.....	351,657,185
Greece.....	1,159,133
Italy.....	57,598,852
Liberia.....	861
Roumania.....	263,313
Russia.....	7,485,555
Serbia.....	636,059
	<u>\$561,442,550</u>

On loans arising out of sales of war stores, interest had been paid as follows:

Belgium.....	\$4,176,780
France.....	40,898,283
Latvia.....	126,266
Poland.....	1,290,620
Russia.....	50,760
	<u>\$46,542,711</u>

The payments from Russia on account of interest were made out of funds deposited in this country by Russia before the advent of the Bolshevik régime. The British totals, for principal and interest, includes an item of \$61,000,000 due on the advances to India of 200,000,000 ounces of silver, authorized in April 1918 by the Pittman act. By the act of 9 Feb. 1922, Congress appointed a War Debt Funding Commission. Secretary Mellon of the Treasury is chairman and the President nominated also Charles E. Hughes, Secretary of State, Herbert

COUNTRY	Principal	Interest	Total indebtedness
Armenia.....	\$11,959,917	\$1,677,256	\$13,637,174
Austria.....	24,055,708	2,886,685	26,942,394
Belgium.....	377,123,745	60,073,383	437,197,129
Cuba.....	7,740,500	14,404,536	22,145,036
Czechoslovakia.....	91,887,668	2,089,625	93,977,293

Finland.....	8,281,926	503,386,035	511,667,961
France.....	3,340,746,215	611,044,201	3,951,790,416
Great Britain.....	4,135,818,358	750,000	4,885,818,358
Greece.....	15,000,000	202,300	15,202,300
Hungary.....	1,685,835	284,681,434	286,367,269
Italy.....	1,648,034,050	643,576	1,648,677,626
Latvia.....	5,132,287	3,518	5,135,805
Liberia.....	26,000	747,244	773,244
Lithuania.....	4,981,628		4,981,628
Nicaragua.....	170,585		170,585
Poland.....	135,662,867	17,618,809	153,281,676
Roumania.....	36,128,494	5,864,104	41,992,599
Russia.....	192,601,297	39,712,670	232,313,968
Serbia.....	51,104,595	7,994,087	59,098,683
Total.....	<u>\$10,102,140,829</u>	<u>\$1,554,791,908</u>	<u>\$11,656,932,737</u>

The principal of these debts represent:

Loans under Liberty bond acts.....	\$9,386,311,178 60
Sales of war stores under act of 9 July 1918.....	574,876,884 10
Relief supplies.....	84,093,963 95
United States Grain Corporation.....	56,858,802 55
	<u>\$10,102,140,829 20</u>

On 15 Nov. 1922, no repayment of the principal of the debts had been made by any of the

C. Hoover, Secretary of Commerce, Senator Reed Smoot and Theodore E. Burton of the House of Representatives. The act of Congress stipulated that, on any funding of a debt, interest should be fixed at not less than 4¼ per cent and final repayment made not later than 15 June 1947 — after a term, that is, of 25 years.

During the year a visit was paid to Washington by M. Jean Parmentier, chairman of the French Foreign Debt Commission, but he did

not bring any proposal to fund the French obligations. In November, the United States protested against a proposal by Rumania to contract a new loan, amounting to \$175,000,000, internationally guaranteed, without first arranging with the United States to fund a debt that, with interest, has reached \$42,000,000. A Rumanian debt commission visited Washington, but with no very definite results. In October 1922 Reginald McKenna, the former Chancellor of the Exchequer and chairman of the London Joint City and Midland Bank addressed a bankers' conference in New York and expressed the view that Britain would pay the United States in full but that other European creditors would only meet a fraction of their obligations. In August 1922 Earl Balfour for the British government dealt with the position in an important note. Broadly he urged that all the European debts should be dealt with together; he indicated that Britain was ready for cancellation all round and that, in any event, she would not seek from the rest of Europe any larger sum than she was paying to the United States. To this note, Secretary Mellon gave an answer in which he insisted that each debt to the United States stood on its own footing. A letter was moreover produced (July 1922) in which President Wilson in October 1920 informed Prime Minister Lloyd George that "no power has been given by Congress to anyone to exchange, remit or cancel any part of the indebtedness of the Allied governments to the United States." The only question was thus on what terms the British debt could be funded. Statements, unconfirmed but not denied, have been made that Chief Justice Taft and Ambassador Harvey, when entertained during the summer at luncheon in Downing Street informed Prime Minister Lloyd George and his successor, Bonar Law, that Congress would probably agree to fund the British debt at 2 per cent interest. With some such idea in his mind, Stanley Baldwin, the British Chancellor of the Exchequer visited Washington in January 1923. When terms, so unfavorable as these to the American treasury, could not be obtained, the Chancellor returned to London where the tentative offer of the United States Debt Funding Commission was speedily accepted. By this offer, the British obligations are funded at 3 per cent for 10 years and afterwards at $3\frac{1}{2}$ per cent. The bonds are to be repaid by instalments, beginning at \$23,000,000 a year and rising to \$175,000,000. This means that as the debt is reduced, and with it the charge for interest, the amount of the instalments increase. The burden of the sinking fund is thus spread equally over the term of the obligation. Upon giving 90 days' notice, Great Britain may repay additional amounts of the principal of the bonds. For the first five years, half the interest may be funded and so added to the principal. Payment of interest or principal may be made in United States government bonds, issued since 6 Aug. 1917, such bonds to be taken at par with accrued interest. Up to the date of funding, the interest automatically accruing on the debt was at the rate of 5 per cent. By the offer, it is to be reckoned at only $4\frac{1}{4}$ per cent and Great Britain is to be allowed the advantage of the

difference. The amount of the funded debt, therefore, works out thus:

Principal of debt.....	\$4,135,818,358
Less Pittman silver advances.....	61,000,000
	\$4,074,818,358
Interest up to 15 Dec. 1922 at $4\frac{1}{2}$ per cent.....	629,836,107
	\$4,704,654,465
Deduct British payments of \$100,000,000 with interest at $4\frac{1}{2}$ per cent.....	100,526,380
	\$4,604,128,085
To be paid in cash.....	4,128,085
Funded debt as from 15 Dec. 1922.....	\$4,600,000,000

At 3 per cent the interest at the outset will be \$138,000,000. Adding the first repayment of \$23,000,000, the sinking fund as a whole for 1923 is \$161,000,000. On the announcement of these terms, there was a buoyancy in Sterling exchange, showing great confidence that Britain will be able to meet these annual charges. There are various estimates of the favorable balance in her foreign trade, including shipping insurance and interest on her foreign investments. All authorities agree, however, that this balance amply covers the sums to be transmitted to the United States. On 7 Feb. 1923 President Harding appeared before Congress and urged approval of the British-American debt arrangement. The House passed the Debt Funding Act 9 February by a vote of 291 to 44. The Senate passed it 16 February by a vote of 70 to 13. On 22 February the House accepted the Senate changes in the bill and it was sent to the President by whom it was approved. Having settled with Great Britain, there now arises the question whether the United States, possibly in association with Britain, should explore the possibility of funding other European debts, due to these powers. In 1921 these debts were:

DUE TO	From France	From Britain	From Italy	From other nations	From total
United States.....	3,596	4,560	1,659	1,096	10,911
Great Britain.....	2,970	2,322	4,489	9,781
France.....	3,122	3,122
Other nations.....	252	863	34	1,149
Grand total.....	6,818	5,423	4,015	8,707	24,963

Of these obligations the gross total of which is roughly equal to the Federal debt of the United States, the following sums have been lent to Russia under the Czarism.

By Great Britain.....	\$2,840,000,000
By France.....	5,459,000,000
By United States.....	188,000,000
	\$8,487,000,000

About one-third of the obligations are thus due from Russia and must be pronounced irrecoverable. Among bankers, both in London and New York, there has been a considerable body of opinion in favor of debt cancellation. It has been argued that most of these debts are merely wastepaper and that it would be advantageous on commercial grounds to drop them altogether

and gain the benefit which, it is believed, would accrue from a renewal of trade between the Old World and the New. According to this view, Europe is more valuable to the United States as a purchaser of cotton, grain, meat, metals and manufactures than she is ever likely to be as a debtor ready to repay. Others, led by Senator Borah, think that cancellation of debts should be only agreed to on condition that Europe disarm, since otherwise the relief afforded would be merely an encouragement to the militarists who would demand larger expenditure on preparations for further war. One suggestion has been that a second Washington conference be called by the President to deal with disarmament and the debts as one proposition. This idea, incorporated by Senator Borah, in a resolution of the Senate, has not yet found acceptance.

With Finland, arrangements have been made for the repayment in 62 years of her debt amounting to \$9,000,000.

PHILIP WHITWELL WILSON.

EVANGELICAL CHURCH. So far as the name is concerned The Evangelical Church is a new ecclesiastical organization which came into being on the morning of 14 Oct. 1922, in Mack Avenue Evangelical Church, Detroit, Mich. when the general conference (in special session) of the Evangelical Association and the general conference of the United Evangelical Church met in joint session and the two bodies, by the provisions of the so-called enabling act, organized as the General Conference of the Evangelical Church. The Evangelical Association was the outgrowth of a religious movement started in Pennsylvania in 1800 by the followers of Jacob Albright, who for a number of years were frequently called "The Albrights." The name "Evangelical Association" was formally adopted in 1816. After many years, differences arose in the church which in 1891 culminated in a division, a considerable number of ministers and members organizing themselves in 1892 into the denomination known as the United Evangelical Church. At the end of the second decade of the separation, the growing conviction that the two churches should be reunited began to find articulate expression. The act of merger referred to above was the consummation of twelve years of negotiations which finally resulted in the adoption of a basis of union by the joint commissions in January 1921, in Chicago. At the time of merging the Evangelical Association had 167,416 church members, with a total enrollment in the Sunday schools of 271,758, assets in its institutions, organizations and departments valued at \$7,688,663.31, and a total property value of \$13,906,435, not including north Germany, south Germany, Switzerland, Japan and Colorado. The United Evangelical Church had 92,001 church members and a total Sunday school enrollment of 147,487, with assets similar to those of the Evangelical Association noted above, of \$3,009,234.67, and a total property value of \$8,931,641. At the beginning of the year the two churches had an aggregate of 252,954 church members and a Sunday school enrollment of 394,422; the Evangelical Church at the beginning of 1923 has 259,417, and 419,-

245 respectively. The total value of the property of both churches a year ago was \$22,838,069, and of the Evangelical Church in January 1923 was \$23,917,585, which figures in neither case, however, include value of property of the former Evangelical Association outside of the United States and Canada. Missions were not established in any new country during 1922, but generally in all in which missions are maintained the work was considerably strengthened. The united church has work in 31 States, Canada, Germany, Switzerland, Latvia, France, China, Japan and Africa.

EVANS, Bernard Walter, British landscape painter: b. Birmingham, England, 26 Dec. 1843; d. 27 Feb. 1922. He was a son of the late Walter Evans who was associated with Pugin in the revival of mediæval architecture, and a cousin of George Eliot. He began his artistic studies at the age of seven under Samuel Lines of Birmingham and in 1865 studied under the late Edward Watson. He moved to London at the age of 21, and from 1870 until his election to the Royal Institute of Painters in Watercolors, exhibited regularly at the Royal Academy. He represented English art at the Paris exhibition and also at the Saint Louis exposition in 1904. He originated the City of London Society of Artists. Specimens of his work are to be found in the permanent collection at South Kensington, the Sydney Art Gallery, the Melbourne Art Gallery and in Cartwright Hall, Bradford.

EVANSVILLE COLLEGE, a Methodist Episcopal co-educational institution, founded 17 Feb. 1919 and located at Evansville, Ind. In 1922-23 it had a faculty of 23 members, 340 students, property valued at \$575,000 and an income of \$66,000. Dr. Alfred F. Hughes, S.T.B., D.D., is president.

EWING COLLEGE, a missionary Baptist co-educational institution founded in 1867 and located at Ewing, Ill. In 1922-23 it had a faculty of 10 members, 95 students and property valued at \$150,000. Income figures not given. August Griesel was acting president 15 Jan. 1923.

EXPLORATION. The outstanding event in the field of exploration during 1922 was the attempt made in the spring by the joint expedition of the Royal Geographical Society of London and the British Alpine Club to reach the unconquered summit of Mount Everest—the loftiest peak not only of the Himalayas but in the world, its height being 29,002 feet or 5½ miles. The expedition, led by Brig-Gen. the Hon. C. G. Bruce, was organized to carry on the work begun in 1921 by a similar expedition commanded by Col. C. Howard Bury, which attained an altitude of 23,000 feet. General Bruce and his party left Darjeeling, India, 26 March and marched to Rongbuk Glacier where the base camp was established at a height of 16,500 feet. The actual climb began on 19 May. By noon of the second day the party had reached a height of about 25,000 feet. The cold was so intense that already at least two members of the party of four, led by George L. Mallory, had been frost-bitten, while a third was too ill to proceed. At 2:15 p.m.

on 21 May this climbing party reached the height of 26,800 feet and was then forced to turn back. The climb had been made without the use of oxygen. A second attempt to reach the summit of the mountain was begun on 24 May by a party consisting of Captain Noel, Tejbir, Geoffrey Bruce and George I. Finch, all using oxygen. On the first day it reached a height of 23,000 feet and camped on the North Col; the second day it attained an altitude of 25,500 feet, weather conditions forcing it to make camp at that point. Snow was falling fast and after sunset the storm developed into a gale. Describing his experiences on that night, Mr. Finch said, "a dead, numbing cold was creeping up my limbs—a thing I had only once before felt and to the seriousness of which I was fully alive. Like an inspiration came the thought of trying the effect of oxygen. We hauled an apparatus and cylinders into the tent, and, giving it the air of a joke, we took doses all around. The result was marvelous. We slept well and warmly." The following day the party, minus Tejbir, who was forced to give up at 26,000 feet, climbed to a height of 27,300 feet. Here exhausted by their struggles and weak from hunger the members of the party were forced to abandon their efforts. To quote Mr. Finch: "Everest, itself, was the only mountain top which we could see without turning our gaze downward. Though 1,700 feet below we were well within half a mile of the summit, so close indeed that we could distinguish individual stones on a little patch of scree lying just underneath the highest point." The point attained was 400 feet above Abruzzi's highest and 1,500 feet above Madison's on Kamet in 1916.

On the descent from one of the upper camps to the base camp an avalanche overwhelmed one party and seven Gurkha porters perished. All of the British members of the party came through without serious harm though suffering from frost-bites, snow blindness and exposure. On the approach to the mountains from Darjeeling, by way of Phari (6 April) and Kampa Dong (11 April) and across the Tibetan Plateau, many interesting and valuable collections of geological, zoological and ethnographic material were made and abundant and excellent photographs taken. Results of the expedition as a whole, were accepted by its promoters and the scientific world as entirely satisfactory. Decision to continue the work in anticipation of ultimate success is practically determined, though whether the next attempt will be made in 1923 has not yet been settled.

Donald B. MacMillan's expedition to Baffin Land, which, in the schooner *Bowdoin*, named for Bowdoin College, his Alma Mater, and built for him by the Bowdoin Association, sailed from Wiscasset, Me., 16 July 1921, passed up Fox Channel to Lat. $68^{\circ} 30'$, finding the eastern shores of the Melville Peninsula and the western shores of Baffin Land heavily banked in ice. MacMillan writes, "At our farthest north we discovered an island about 25 miles in length with high red cliffs. All ice in this vicinity was aground, indicating shoals and stopping all further progress northward.

Sailed southward and at about the Arctic Circle southeast. To our surprise we sailed 15 miles over where land is indicated in our latest and best maps; turned back southwest and sailed over 60 miles of land and no land in sight. All salient points on this western coast are located incorrectly, both in latitude and longitude. We later, with dog-teams, traversed this coast for 150 miles north of Bowdoin Harbor, $64^{\circ} 24'$ in 78° W., and confirmed our observations taken on shipboard. The expedition also succeeded in penetrating into the hitherto unexplored interior as far as Amadjuak Lake and eastward along the coast to Lake Harbor, finding the coast line very different from that indicated on the maps." Director Louis A. Bauer of the Carnegie Institution, department of research in terrestrial magnetism, says "The scientific observations in geophysics obtained by the MacMillan expedition included 1. Continuous photographic registration from 1 Nov. 1921 to 15 June 1922 at a temporary observatory at the winter-quarters of Bowdoin Harbor, of (a) the three magnetic elements and (b) the electric potential-gradient of the atmosphere. 2. Meteorological observations at Bowdoin Harbor from 14 Sept. 1921 to 16 July 1922. 3. Two months series of tidal observations at Bowdoin Harbor. 4. Magnetic observations at 28 field stations in Baffin Land, Labrador and Canada, 21 of these stations being in Baffin Land chiefly on the southern, western and extreme northern coasts. 5. Collection of 69 specimens of rock at the field stations which furnished splendid material for the study of petrology of the region of which but little knowledge had been obtained previously. 6. Miscellaneous geological and chart data. The continuous photographic registrations of the three magnetic elements at winter-quarters will add materially to our knowledge of magnetic storms through the co-ordination and study of the magnetograms obtained at a point so near the north magnetic pole in connection with the corresponding data from observatories in all parts of the world, while the electric potential gradient records furnish data of importance, aiding materially in the discussion of atmospheric-electric phenomena. The field observations have added materially to our knowledge of the distribution and secular variation of the earth's magnetism in Baffin Land and Labrador."

MacMillan has already determined upon another Arctic and sub-Arctic expedition in 1923, for which plans and preparations are already well advanced.

Sir Ernest H. Shackleton (q.v.), whose *Quest* sailed from London 26 Sept. 1921 on an Antarctic and sub-Antarctic cruise of exploration, died on board in harbor, South Georgia, 5 Jan. 1922, and his body, having been brought to Buenos Aires, was, at Lady Shackleton's request, returned and interred upon a prominent headland overlooking the scene of his death. Capt. Frank Wild, associate of Capt. Sir Douglas Mawson, in his 1915-16 Antarctic expedition and of Shackleton's *Endurance* party in 1914-16, second in command, brought the *Quest* home after Shackleton's death and further work was discontinued. Other notable deaths of 1922 among explorers were those of

the Prince of Monaco, 26 June, and of Prof. Rollin D. Salisbury of the University of Chicago, 15 April.

The third North China expedition of the American Museum of Natural History of New York under Roy C. Andrews has been continuously in the field during the year and with most gratifying success. Collections include mammals, hitherto unknown to science, others rare and imperfectly described, and the complete life history of Asiatic fauna is now within reasonable sight of completion. President Osborn of the Museum went to China late in the autumn to lay out and direct further work and complete the program of the Andrews forces. Expeditions to Africa by the museum and to Yucatan and Central America, by a specially organized group of archaeologists, have been definitely decided upon for early dates in 1923.

During the year the Field Museum of Natural History of Chicago sent six expeditions to South America. Two of these were geological, two botanical, one zoological and one archaeological. During August the announcement was made that the archaeological expedition, under Dr. J. A. Mason, had discovered a prehistoric city of considerable size in Colombia. The ruins are located in the Department of Magdalena, 20 miles south of Santa Marta and about 40 miles inland. See also ANTHROPOLOGY AND ARCHAEOLOGY.

Of more than ordinary interest was the announcement made by Vilhjalmur Stefansson on 6 Jan. 1923 of his retirement as an explorer. Approximately 11 years of his life have been spent in the Arctic regions.

An important book on exploration issued during the year was 'The Worst Journey in the World, Antarctic 1910-1913' by Apsley Cherry-Garrard, the official narrative of the Scott Antarctic Expedition of 1910-13. Mr. Cherry-Garrard was the assistant zoologist of the expedition.

HERBERT L. BRIDGMAN,
Secretary, Peary Arctic Club.

EXPLOSIVES, Manufacture of. According to the report of the Department of Commerce made public on 2 Dec. 1922, the total value of explosives manufactured in the United States in 1921 by establishments engaged primarily in that industry was \$59,174,600, compared with \$92,474,800 in 1919, a decrease of 36 per cent. There were 109 establishments engaged in the industry in 1921. Of these 24 were located in Pennsylvania, ten in Ohio, nine in Oklahoma, eight in Illinois, seven in New Jersey, six in West Virginia, five in Missouri, four in Kansas, four in Texas, three in California and three in New York, while the remainder (one or two in each of several States) were scattered more or less generally throughout the country. Of the establishments that reported in 1919, eleven were idle or out of business in 1921, while two new plants were placed in operation during the latter year. The decrease in production of explosives was accompanied by decreases in the number of persons employed, the amount paid out in salaries and wages and in the cost of materials. The average number employed during the year was 4,478 in 1921, compared with 9,249 in 1919. The amount paid out

in salaries and wages in 1921 was \$13,610,200, compared with \$25,749,200 in 1919. Materials cost \$30,644,300 in 1921, as compared with \$45,911,000 in 1919. Twenty-six establishments engaged in the manufacture of dynamite turned out 167,258,300 pounds valued at \$28,457,300 in 1921, compared with 212,529,700 pounds valued at \$37,230,700 turned out by 27 establishments in 1919. Forty-two concerns engaged in the manufacture of blasting powder produced 7,340,768 kegs of 25 pounds each in 1921, compared with 7,406,991 kegs in 1919. The value of the blasting powder manufactured in 1921 was \$12,544,900, compared with \$12,168,500 in 1919, an increase of 3.1 per cent. Five establishments engaged in the manufacture of black gun powder turned out 990,700 pounds valued at \$227,400 in 1921, compared with 11,730,100 pounds valued at \$2,096,600 turned out by seven establishments in 1919. The total production of nitro-glycerine in 1921 was 45,855,400 pounds, compared with 56,361,200 pounds in 1919. Of the nitro-glycerine manufactured in 1921, 172,600 pounds valued at \$160,700 was sold as such. The amount used in the manufacture of dynamite was 42,264,100 pounds, compared with 48,024,600 pounds in 1919.

EXPORTS AND IMPORTS OF PRINCIPAL COUNTRIES. See WORLD INTERNATIONAL TRADE.

EXPOSITIONS. During 1922 preparations were being made for the Sesqui-Centennial Exposition to be held at Philadelphia in 1926. The exhibition is to be known as the "World Festival of Peace and Progress." According to the plans outlined the exhibition is to open toward the last of April 1926 and close in November of the same year. It will mark the 150th anniversary of the signing of the Declaration of Independence. During the last week in September 1922 the first country fair of southeastern Alaska was held at Juneau. It was successful in demonstrating the important possibilities of the southeastern section of the Territory of Alaska in the way of agricultural development. The exhibits at the fair consisted largely of vegetables grown in the temperate zone of a quality that would bear comparison with those of any section of the United States. Other attractions at the fair were exhibits of native handwork and photographs of Alaskan scenery. The National Dairy Show held at the Minnesota State Fair Grounds in October was one of the greatest aggregations of farmers ever assembled. Everything in connection with the dairy industry was exhibited. The exhibit of the United States Department of Commerce held in November also attracted decided interest, comprising within its organization the bureau of navigation, bureau of lighthouses, coast and geodetic survey, bureau of foreign and domestic commerce, bureau of fisheries, bureau of census and bureau of standards. All except the census bureau and the bureau of fisheries were represented at the exhibition. In November was held at Seattle the annual exposition of the Pacific Northwest \$100,000,000 Industry—the fruit crop. Approximately one mile of booths under a canopy of evergreens and autumn leaves housed the finest specimens of fruit yield and made a most impressive spec-

tacle. One of the features of this exposition was the home canning contests. The Marine Exposition held in New York early in November attracted many visitors. The purpose of the exhibition was to display the service and wares of the American shipping companies, ship builders and marine equipment manufacturers. The Kansas City Livestock Show was held in that city 18-25 Nov. 1922. Approximately 2,000 head of livestock were exhibited. Beef cattle were the principal attraction and of these, Herefords led with 672 entries, competing for \$11,255 in prize money.

Of foreign expositions the most noteworthy was that held in Rio de Janeiro from 7 September to 15 Nov. 1922 in commemoration of the centennial of the independence of Brazil. The Congress of the United States appropriated \$1,000,000 for American participation in the exposition. The United States building at the exposition was one of the most attractive there. It is a permanent structure and was designed to house the American Embassy after the close of the exposition. Secretary of State, Charles E. Hughes, and other high officials of the American government attended the exposition, further particulars of which will be found in the article on Brazil. The Second International Eastern Fair and Market was held in Lwow (Lemberg) from 5-15 Sept. 1922. It proved a great success. The exhibiting facilities were greater than those of the first fair held in 1921. The products displayed showed that the plants destroyed or damaged during the war had in the main been restored, and in addition, new enterprises had been established to supply goods formerly obtained from Germany, Austria and Russia. The most notable development occurred in the display of Polish-built machinery, machine tools and agricultural equipment. Apart from this, the manufactured articles exhibited largely represented handwork. The Holland Industries Fair, the seventh of its kind, was held at Utrecht, 4-9 Sept. 1922. The fair did not attain in extent the general popularity of the exhibitors of former fairs. In the first place, there was the general economic de-

pression and in the second place, the change of an annual into a semi-annual fair made itself felt to a certain extent. Henceforth the Holland Industries Fair will be a semi-annual event, one in the spring and one in the autumn. In 1922 the Nizhni-Novgorod Fair was reinstated for the first time since 1917. The revival of the fair made necessary much reconstruction as many of the permanent buildings on the fair grounds had been destroyed during the period of rigid communism. The most striking exhibits at the fair came from central Asia, Persia and Caucasus. Turkestan merchants displayed their goods in a great circular tent, the outside of which was festooned with strings of many colored stones. Persia exhibited large quantities of rugs, dried fruits and nuts. Russian peasant handwork was one of the most interesting features of the fair. White wood figures, gaily painted dishes, boxes, spoons, toys, etc., constituted this part of the exhibit. Announcements were made for the Fourth Official Commercial Fair to be held at Brussels 9-25 April 1923. In 1922 this fair leased 29,000 square metres to exhibitors and applications for space up to 2,000 metres had to be rejected. For the 1923 fair, therefore, 31,000 square metres of space is provided. An invitation to American manufacturers and merchants to the International Commercial Exposition in Osaka, Japan was received by the American Department of Commerce late in 1922. The date of the exposition is 31 March to 31 May 1923. Exhibits are not to be returned to the exhibitors, but are to be placed permanently in Osaka Commercial Museum. The Ninth British Industries Fair was scheduled for 19 February to 2 March 1923. The most enterprising and dependable firms in Great Britain are exhibitors at this annual event. An exhibit of agricultural machinery in the Grand Palais on the Champs-Elysee, Paris, was scheduled for January 1923. It was confined strictly to articles used in agriculture, viticulture, horticulture and forestry. It was open to manufacturers of all countries.

F

FABBRI, Alessandro, American explorer and inventor: b. New York, 1878; d. there, 6 Feb. 1922. He was the son of Ernesto G. Fabbri, a member of the firm of J. P. Morgan and Company. He was educated at the Westminster School, Simsbury, Conn., and subsequently under private tutors in Europe. He achieved distinction as a naturalist, hunter, yachtsman, explorer and inventor. When he began his scientific investigations he equipped a fine working laboratory. He built a large wireless station at Bar Harbor, Maine, which at the outbreak of the war he offered gratis to the government of the United States. His offer was declined, but the plant was commandeered and Mr. Fabbri was given the rank of lieutenant in the navy and placed in command. His wireless station was picked by a commission of engineers and radio experts sent to this country by the Allies as the best station for their purposes on the Atlantic seaboard. After the government had taken over the plant it paid to Mr. Fabbri the amount of his estimated expenditures on it. Mr. Fabbri also perfected a moving picture machine with which it was possible to take pictures of microscopic organisms showing their development. This he worked out in connection with the experimental work of Dr. Alexis Carrel of the Rockefeller Institute.

FAILURES, Business. See BUSINESS FAILURES.

FAIRMOUNT COLLEGE, a co-educational institution of Congregational affiliation, founded in 1895 and located at Wichita, Kan. In 1922-23 it had a faculty of 26 members, 456 students and an income of \$75,000. No figures given as to value of property. Dr. John D. Finlayson is president.

FALKENHAYN, Erich von, German general: b. 1861; d. Wildpark, near Potsdam, Germany, 8 April 1922. In 1913, at the age of 52 he was made lieutenant-general and appointed Minister of War—the youngest man ever to hold that position in Germany. The following year the World War broke out and in December 1914, after the failure of von Moltke, Falkenhayn was appointed his successor as chief of the German general staff. Although he never attained the popularity that came to von Hindenburg and never was rated as high professionally as was von Ludendorff, Falkenhayn, nevertheless, was, for almost two years, in many respects perhaps the most powerful individual in Germany. During the first year of his service as chief of the general staff, his plans were fairly successful. In May 1915, the Germans made a violent attack upon Ypres which gained for them a considerable amount of ground at a cost materially less than was the cost of the attacks of the previous autumn. On the other hand, the British at Neuve Chapelle and Loos

and the French in Champagne failed to break the lines of Falkenhayn's armies. In Russia the Germans gained Courland and all of Poland, while they also overran Serbia. Bulgaria was brought into the war, on the side of the Central Powers, in October 1915 and in December following the British began the evacuation of Gallipoli, after one of the greatest failures of the war. At this time Falkenhayn was almost omnipotent in the German war councils. At the beginning of 1916 he was forced to choose between a continuance of the offensive against Russia and reverting to the original plan of making France the main theatre of the war. Unfortunately, for his own reputation he chose the latter alternative and then followed the disastrous failure of the Germans at Verdun. In August 1915, Falkenhayn was succeeded, as chief of the general staff, by von Hindenburg. It was said at the time of Falkenhayn's removal as chief of staff that he had been dismissed for urging the German emperor to abandon the Balkan campaign and shorten all of the German lines. He was thereafter sent on a mission to Turkey and in the latter stages of the war was never heard of. He was an ardent exponent of German militarism and is acknowledged to have been a clever and efficient organizer. His early career was not promising. Like Hindenburg he was called an army failure. He drifted out to China, and his chance came with the outbreak of the Boxer Rebellion. He was made the German governor of Tien-Tsin and upon his return to Berlin was reinstated. He is credited with having been a personal favorite of the kaiser and to the latter's friendship some have attributed his rapid rise to power. At any rate, in 1916, at the age of 54 he was the youngest of the German military leaders. It was he who is said to have recognized the hidden merits of von Hindenburg and to have summoned the latter from his Hanoverian retreat and placed him in charge of the army which won for Germany her great victories in the marshes of East Prussia.

FALKLAND ISLANDS, a British Crown Colony in the South Atlantic, 300 miles east of the Straits of Magellan. The principal islands are East and West Falkland. There are about 100 small islands in the group. The total area is 6,500 square miles. South Georgia is a dependency of the colony and has an area of about 1,000 square miles. The South Shetlands, South Orkneys, the Sandwich group and Graham's Land are dependencies of the colony also. The population is 3,255. The chief town is Stanley, which has a population of 950. Education is compulsory. There are three schools with a combined enrollment of 306 pupils. In 1919 the imports were valued at \$5,000,000 and the exports at \$10,400,000 approximately. The annual revenue of the colony averages \$225,000 and the expenditures \$135,000. Customs, rent of crown lands, postal receipts and licenses are

the chief sources of revenue. Public works and the postal service are the chief items of expenditure. The colony has no public debt. Wool and whale products are the principal exports, while foods, timber, coal and clothing are the chief imports. There is good pasturage on the islands and sheep-raising is a promising industry. There are 700,000 sheep in the colony. Whaling and sealing give employment to many. The whaling industry products are valued at \$10,000,000 yearly. There is cable communication with the outside world via Montevideo. There is regular steamer communication with Great Britain and there is interinsular communication by means of a small steamer. For further information consult the annual report issued by the Colonial Office, London.

FALL, Albert Bacon, United States public official: b. Frankfort, Ky., 26 Nov. 1861. He received some of his education in country schools, but was principally self-taught. Between the age of 18 and 20 years he taught school, at the same time devoting himself to the study of law, which he practiced from 1889-1904. During the Spanish-American War he served (1898-99) as a captain in the Volunteer Infantry. His varied experience has included working on a farm and cattle ranch, and in a mine. In New Mexico, where he resides, he served several times as a member of the New Mexico Legislature, as a member of the Constitutional Convention, associate justice of the Supreme Court, and twice as Attorney-General of New Mexico Territory. He was elected by the New Mexico Legislature to the United States Senate, 27 March 1912, and was re-elected for terms 1913-19 and 1919-25, respectively. In 1921, however he resigned his senatorship to accept the appointment as Secretary of the Interior in President Harding's Cabinet. He took oath of office and began his duties 5 March 1921. Early in January 1923 he announced that he would retire 4 March, and on that date he was succeeded by Dr. Hubert Work, who had succeeded Will H. Hall as Postmaster General.

FALLOWS, Samuel, American clergyman and educator: b. Pendleton, England, 13 Dec. 1835; d. Chicago, Ill., 5 Sept. 1922. His parents left England and settled in Wisconsin in 1848 and engaged in farming. This son grew up on the farm near Madison, went to school at Astorian, Wis., and was graduated from the University of Wisconsin in 1859. From 1859-61 he was vice-president of the Galesville University. In 1862 he was made chaplain of the 32d Wisconsin Infantry and later organized the 40th Wisconsin Infantry, known as the "Normal Regiment," because it included so many teachers and students. He was made its colonel and was brevetted brigadier-general for gallant service. After the war he returned to his pastorate of the Summerfield Church, Milwaukee, then the leading Methodist Episcopal Church in Wisconsin. Later he became pastor of the Spring Street Church in Milwaukee, and while serving in that pulpit he was appointed by Governor Fairchild in 1871 State Superintendent of Public Instruction for Wisconsin, and in this office he accomplished the unifica-

tion of the educational system of Wisconsin. In 1874 he became president of Wesleyan University at Bloomington, Ill. In 1875 Bishop Fallows allied himself with the Reformed Episcopal Church (which had been founded in New York in 1873) and immediately became rector of Saint Paul's Reformed Episcopal Church, Chicago, which pulpit he occupied from 1875 until his death. On entering upon his duties here he assumed the title of "Missionary Bishop of the West." Shortly afterwards he became presiding bishop of the entire church, both in the United States and Canada. In 1908 he succeeded Archbishop Ireland as chaplain-in-chief of the Grand Army of the Republic and in 1913-14 he was department commander of the Illinois G. A. R. Like the late Bishop Potter of New York, he endeavored to find a substitute for the saloon by the establishment of a "home saloon," as he called it, in Chicago in 1907; and for two years it was a success. He was also a lecturer and writer. His books include: 'Bright and Happy Homes' (1877); 'The Home Beyond' (1879); 'Synonyms and Antonyms' (1884); 'Handbook of Abbreviations and Contractions' (1884); 'Handbook of Briticisms, Americanisms,' etc. (1884); 'Supplemental Dictionary of the English Language' (1887); 'Webster's Encyclopedic Dictionary' (1897); 'Past Noon' (1892); 'The Bible Looking-Glass' (1898); 'Life of Samuel Adams' (1898); 'Splendid Deeds' (1900); 'Popular and Critical Biblical Encyclopedia' (1901); 'Story of the American Flag' (1903); 'Science of Health' (1904); 'Christian Philosophy' (1905); 'Memory Culture' (1905), and 'Health and Happiness' (1908). He was made president of the Society Army of the Tennessee in 1917.

FAR EASTERN QUESTION. See WASHINGTON CONFERENCE.

FARM ANIMALS. See AGRICULTURE IN THE UNITED STATES.

FARM BUREAU FEDERATION, American. The Farm Bureau Movement had its real origin in the South. In 1902 when the Mexican boll weevil began its depredations in the cotton fields of Texas, Dr. Seeman A. Knapp, secured an appropriation of \$250,000 from the Department of Agriculture and established the Farmers' Co-operative Demonstration Work and demonstration agents were appointed. The United States government approved the idea, and Asbury F. Lever, then a Congressman from South Carolina, introduced in Congress the Smith-Lever bill, providing that the United States should appropriate funds to be matched by the States in putting an agricultural agent in every county in the United States. The Smith-Lever funds provide the basis for the agricultural extension work of the United States Department of Agriculture and the State colleges of agriculture.

Throughout the country the farmers have banded themselves into farm bureaus, through which the county agent can best carry on his work. From the Government appropriations, there is available only about \$1,000 per county, not enough to pay the salary of a high-class agent and therefore the farmers themselves, who

are members of the county farm bureaus, pay dues (usually \$10 per year) and the funds so raised are used in connection with the Federal appropriation to pay the county agent's salary, office and other expenses. In Illinois farm bureau members pay \$15 each per year, in Ohio \$10, in Iowa \$5, in one county in Idaho, \$25. In McLean County, Illinois, there is a county agent with three assistants, none of whom receives a salary of less than \$5,000 a year though the Federal appropriation is but \$1,000 annually.

The secret of the success of the Farm Bureau movement lies in the fact that it is the farmer's own scheme. It started to get its real hold when the farmers themselves took it over, about 10 years ago—in Broome County, New York, in Dekalb and Kankakee counties, Ill., in Pettis County, Mo., in Oneida County, Wis.,—and began to run it. The idea spread through the corn belt and westward with great rapidity. Eventually the county farm bureaus began to find that they had many problems State-wide in nature and that they needed State-wide organizations. Federation began with 34 farm bureaus in New York State, where in 1917 the New York Farm Bureau Federation was organized. Other States followed rapidly in federating their county units, so that in 1918, more than a dozen commonwealths had State federations.

During the war, leaders of the State farm bureaus frequently were called to Washington to confer on various matters relating to food production, etc. Out of these conferences grew the idea of a national organization. A preliminary conference was held in Ithaca, N. Y., on 12 Feb. 1919 and the organization meeting was held in Chicago 12–13 Nov. 1919. A tentative constitution was completed and 3 March 1920, was set as the date for ratification. At the ratification meeting 28 States signed up, and the American Farm Bureau Federation was born. The membership was approximately 400,000. Each member of the county farm bureau contributed to the American Farm Bureau Federation through his State Farm Bureau Federation 50 cents. In less than two years the American Farm Bureau Federation had increased its membership to 967,279. Forty-seven States (all except South Carolina) have affiliated with the national organization. Of county farm bureaus there are 1,486.

The American Farm Bureau Federation vitalized co-operative marketing in America, through its national commodity marketing conferences. Separate conferences have been held on grain, live stock, fruit, dairy products, cotton and wool. And each one of these commodities is now receiving special attention in the national office. Out of these conferences came the commodity committees which have brought to the attention of both producers and consumers the urgent need for better distributive systems.

The grain marketing conference resulted in the formation of the Farmers' Grain Marketing Committee of 17. This committee devised a co-operative plan which is now in effect and is known as the United States Grain Growers, Inc. More than 52,000 farmers and 600 co-operative elevators had joined the United States Grain Growers by the end of 1922.

The live stock marketing conference was responsible for the Farmers' Live Stock Market-

ing Committee of 15. This committee devised a plan for the marketing of live stock which involves co-operative commission houses and orderly marketing. The plan in detail was unanimously approved by the producers in conference in Chicago on 11 Nov. 1922. The National Live Stock Producers' organization has established co-operative live stock commission houses at Saint Louis, Chicago, Peoria, Indianapolis, Buffalo, Fort Worth, Kansas City, Sioux Falls, Sioux City and Cleveland. Invariably the "Producers" companies lead all the other firms at the various terminals in business handled, and they return nearly half the commission charge as "patronage dividend" to their customers. Out of the fruit marketing conference came the Farmers' Fruit Marketing Committee of 21. It began its investigations at Atlanta, Ga., 19 Nov. 1922. Subsequently, this committee took over the North American Fruit Exchange with sales agencies in 150 carlot markets and revamped it into the grower-owned and grower-controlled Federated Fruit and Vegetable Growers, Inc.

A dairy marketing conference resulted in the formation of the Farmers' Dairy Marketing Committee of 11, which held its initial meeting in Saint Paul, Minn., on 11 Oct. 1922, during the National Dairy Show. In the fall of 1922 a subsidiary Committee of Nine was appointed which worked out the plan for a national sales agency for dairy products to begin selling butter, cheese and condensed milk by 1 Sept. 1923.

A wool growers' conference created the Farmers' Wool Marketing Committee of 25, which has succeeded in developing co-operative wool pools in 18 States. The wool pools last year handled 40,000,000 pounds of wool. An additional benefit from the wool pools is that they have educated the producer through the grading systems so that the quality of the clip has been greatly improved.

The American Farm Bureau Federation also held a cotton marketing conference in Memphis, Tenn., on 26 April. This conference endorsed the co-operative marketing plan of the American Cotton Growers Exchange. The basis of the plan is a 100 per cent cotton pool and the Texas Farm Bureau Federation is the bulwark of the movement.

When the American Farm Bureau Federation was organized it was apparent that the first great national service to be performed for the farmer was to improve his marketing systems. The Department of Co-operative Marketing has therefore been one of the most important divisions of the national organization. It is directed by Walton Peteet, formerly secretary of the Texas Farm Bureau Federation and has as legal advisor Aaron Sapiro, California's noted co-operative counsel. There are several other departments of the American Farm Bureau Federation which have grown to positions of great service and power. A Washington office of the Federation has been set up to study national legislative problems and to voice the viewpoint of the American farmer. It is under the direction of three members of the executive committee, and due largely to its activities, the Congress has passed a vast amount of agricultural legislation. This legislation was accomplished largely by the intervention of the farm

bloc, originally organized in the Washington office of the American Farm Bureau Federation. Among the measures advocated by the American Farm Bureau Federation are the following:

The packer and stock-yards control measure; regulation of grain exchanges and future trading in grain; extension of War Finance Corporation's powers to lend \$1,000,000,000 to farmers and co-operative associations; increasing by \$25,000,000 the working capital of the Federal Farm Loan System; Federal Highway Act, providing \$75,000,000 for farm-to-market roads; and the momentous Intermediate Credits Act.

The Department of Transportation has built up a traffic file on railroad rates second to none. The Department of Legal Counsel, intervened for the Farm Bureau in the famous Pittsburg Plus case, the Land Multiple Case, the valuation of railroads, and other important cases. The Department of Research conducts economic studies of farm problems, and furnishes information for use of other departments. The Department of Information publishes a *Weekly News Letter* which goes to Farm Bureau officials, State and national, and to county farm bureaus. It also maintains a news service, and a publishing division, which prints and distributes booklets, pamphlets, and bound volumes; heads up the publicity work for many of the national co-operatives, and produces and distributes rural motion pictures, having built up the most extensive non-theatrical distribution in America.

The Federation has set up a taxation service and a definite taxation policy has been outlined. The Bureau opposed the proposed general sales tax and made a strong fight for the retention of the excess profits tax. The Federation sent to Europe more than 500,000 bushels of farmers' gift corn, to alleviate famine conditions. A woman's committee has been named to outline the woman's work of the Federation, the establishment of a woman's department being contemplated. Questionnaires have been issued on important questions affecting agricultural policy; a uniform system of bookkeeping has been worked out for farm bureau organizations; investigations have been instituted by the Federal Trade Commission and Congressional bodies at the instance of the Bureau looking toward the solution of a number of important agricultural problems.

O. E. Brodfute, Xenia, Ohio, is president of the American Farm Bureau Federation, and W. H. Walker, Willows, Calif., is vice-president. The executive committee, which is the governing board chosen by the board of directors in annual convention, is as follows: Central Group—Frank Smith, New York; Frank App, New Jersey; George Putnam, New Hampshire; Central Group—J. F. Reed, Minnesota; W. H. Settle, Indiana; Howard Leonard, Illinois; Western Group—C. S. Brown, Arizona; J. F. Burton, Utah; J. M. Rodgers, Colorado.

FARM CREDITS. See RURAL CREDITS.

FARM LOAN SYSTEM, Federal. The Federal Farm Loan System at the beginning of the year 1922 consisted of 12 Federal land banks, 23 joint stock land banks and 4,151 farm loan associations. The number of the Federal land

banks is prescribed by law and cannot be increased. The number of joint stock land banks increased during the year to 63, and the farm loan associations to 4,487. The 12 Federal land banks, receiving applications through the national farm loan associations closed during the year 74,055 loans in the aggregate sum of \$224,301,400, and were able throughout the entire year to meet all calls upon them for loans of satisfactory character. The same banks during the year sold to the public farm loan bonds to a total of \$278,650,000. This being in excess of loaning requirements, bonds held by the Federal Treasury were repurchased to the extent of \$70,150,000.

The Federal land banks at the beginning of the year 1921 were charging 6 per cent interest on loans made, and issuing farm loan bonds bearing 5 per cent interest. The bond rate was reduced during the year from 5 to 4½ per cent, and the loaning rate from 6 to 5½ per cent, which is now the prevailing rate.

The stock originally subscribed by the Federal government in the Federal land banks is automatically retired as borrowers take stock in the farm loan associations, which in turn take a like amount of stock in the Federal land bank. This retirement of government stock during the year amounted to \$2,333,890.

The Federal land banks are essentially mutual, their function being to supply money to borrowing farmers at actual cost. Their profit-making capacity is measured by the difference between the bond rate and the loaning rate. After this has been collected, expenses deducted and proper provision made for reserve, the balance of the difference is returned to the stockholding association in the form of dividends. All of the banks have paid regular dividends to their stockholders cumulative from the date of their organization, and are now on a basis of substantial earning prosperity. The net earnings of the several banks for the year 1922 were as follows:

Springfield	\$243,288 11
Baltimore	236,973 46
Columbia	338,589 49
Louisville	462,545 13
New Orleans	495,988 54
Saint Louis	515,073 13
Saint Paul	637,541 88
Omaha	767,003 59
Wichita	479,546 74
Houston	599,488 12
Berkeley	241,298 55
Spokane	675,357 59

At the conclusion of the year the 12 Federal land banks, after paying dividends, added more than \$1,300,000 to their reserve account and more than \$1,100,000 to their undivided profits account. The total resources of the 12 Federal land banks on 31 December were \$697,358,489.33. The joint-stock land banks during the year closed 15,916 loans, amounting to \$138,684,779, making the total loans closed under the supervision of the bureau for the year 89,971, amounting to \$362,996,179.

CHARLES E. LOBDELL,
Federal Farm Loan Commissioner.

FARM POPULATION OF THE UNITED STATES. According to the Census Bureau, the number of persons dwelling on

farms in the United States in 1920 was 31,614,269. Of these 16,496,338 were males and 15,117,931 were females. Of the total farm population 49.5 per cent was 21 years of age and over, 24.7 per cent between 10 and 20 years and 25.7 under 10 years. Those 21 years and over numbered 15,632,093. For the country as a whole those 21 years and over comprised 57.6 per cent of the total population. The farm population, therefore, includes a relatively large proportion of persons under 21 and a relatively small proportion 21 years and over. The difference in age distribution was declared by the Census Bureau to be due in large part to the fact that the majority of persons who leave the farm to take up their residence elsewhere have reached or passed 21 years. The largest proportions of children and youth in the farm population are shown for the Southern States and the lowest for the New England States, New York, New Jersey and California. The sex ratio of farm population on 1 July 1920 was 109.1 males to 100 females, while the ratio for the entire population was 104 males to 100 females. The Department of Agriculture estimated that in 1922 the farm population of the United States decreased 460,000.

FARM PRODUCTS. According to the Department of Agriculture, farm production of all kinds in the United States in 1922 had an estimated gross farm value of \$14,310,000,000, as compared with the estimate of \$12,402,000,000 placed upon the farm production in 1921. Of the 1922 total, \$8,961,000,000 represented the value of crops, while \$5,349,000,000 represented the value of animal products. In 1921 the crops were valued at \$6,934,000,000 and the animal products at \$5,468,000,000. In making public the foregoing estimates, the Department of Agriculture stated that there were some duplications in the crop and animal products estimates to the extent of the crops used in producing animal products, but that the extent of this duplication had not been ascertained at the time the report was made public, 7 Feb. 1923.

Crop prices increased, the Department said, except in the case of nearly all fruits, beets, clover seed, rye, potatoes, sweet potatoes and some other vegetables. On the other hand, the price of animal products generally declined, including prices of veals, milk cows and other cattle, horses and mules, all dairy products, eggs and poultry except turkeys. Prices of sheep, lambs and swine increased while wool prices nearly doubled. A 10-years' study of production and prices shows that the crop value in 1922 was 46 per cent higher than in 1913. The peak was reached in 1919 with a crop value 152 per cent higher than in 1913. In 1920 crop prices were only 78 per cent above 1913 and in 1921 only 13 per cent above 1913. Despite the increase in 1922, the department points out that the crop value was still lower than in any year since 1913 with the exception of 1921.

Animal products values lagged behind crop values during the 10-year period and show less fluctuation. The peak was reached in 1919 when an increase of 125 per cent over 1913 was shown. The subsequent decline in values of animal products was less precipitous than in the case of crop values, but the 1922 figure shows

an increase of only 44 per cent above 1913 as compared with an increase of 46 per cent in crop value.

The purchasing power of the 1922 crop value in terms of other products was 89.9 as compared with 100 in 1913. The purchasing power of the 1921 crop value is placed at 70.3 as compared with 100 in 1913. The purchasing power of animal products in 1922 was 88.5, and in 1921 it was 91.5, using 100 in 1913 as a base in both instances.

Although the purchasing power of crops and animal products took almost divergent courses in some years since 1913, they came almost together in 1922, it is pointed out.

Principal Farm Crops.—The principal crops grown in the United States in 1922—such crops as corn, cotton, wheat, potatoes, rye, etc.—were estimated by the Department of Agriculture as having a farm value on 1 December of \$7,483,326,000. These crops in 1921 had a farm value of \$5,630,781,000 and in 1920 a value of \$8,998,820,000. It was stated that the 1922 figures were subject to revision, but that the 1920 and 1921 figures were final. The crop value was 34 per cent larger in 1922 than in 1921, while crop prices showed an increase of 24 per cent on 1 December of that year, as compared with 1 Dec. 1921. The mass of crop production in 1922 exceeded that of 1921 by 8 per cent. In its review, the Department of Agriculture said that prices of many farm crops were lower per unit in 1922 than in 1921. The price of hops was 65 per cent lower; the price of potatoes 47 per cent lower; the price of cabbage 47 per cent lower; the price of apples 41 per cent lower; the price of cranberries 40 per cent lower; the price of pears 38 per cent lower; the price of peaches 16 per cent lower; the price of maple sugar 15 per cent lower; the price of sweet potatoes 12 per cent lower and the price of clover seed 6 per cent lower. Most of the leading crops, however, brought higher prices in 1922 than in 1921. Corn, for instance, was 55 per cent higher, cotton 47 per cent higher, oats 35 per cent higher, barley 26 per cent higher, wheat 9 per cent higher, tobacco 16 per cent higher; rice 5 per cent higher, beans 40 per cent higher, flaxseed 46 per cent higher and grain sorghums 124 per cent higher. The wheat crop of 1922 was 5 per cent larger than the crop of 1921, and was the fifth largest on record, production being estimated at 856,000,000 bushels, compared with 815,000,000 bushels in 1921. A few crops reached a record high production during the year. These included rye, potatoes, sweet potatoes, tame hay and possibly pears and cabbage, records for which cover but a few years. The rice crop, estimated at 41,965,000 bushels, was the third largest on record. The tobacco crop (1,324,840,000 pounds) was the fourth largest grown. The cotton crop was the smallest grown in 21 years with the exception of the 1921 crop. Corn, as usual, was the country's most valuable crop, estimated as being worth \$1,900,287,000. Cotton stood second, with an estimated value of \$1,192,461,000, to which should be added \$177,756,000 as representing the value of the cottonseed produced. Hay was the third most valuable crop, having an estimated value of \$1,331,679,000. No other crop reached

FARM PRODUCTS

\$1,000,000,000 in value in 1922. The wheat crop of the year was valued at \$864,139,000, standing as the fourth most valuable crop of the country. The following table shows by crops the acreage, production figures and value, based on farm prices as of 1 December of the various crops for each of the years 1920, 1921 and 1922.

ACREAGE, PRODUCTION AND VALUE OF PRINCIPAL
FARM CROPS GROWN IN THE UNITED STATES

³ Principal producing States.

⁴ Commercial crop.

World Crops.—The International Institute of Agriculture at Rome estimated the world wheat crop for 1922 at 2,932,000,000 bushels, compared with a recorded total of 2,288,000,000 bushels grown in 1917. The 1921 rye crop of the world, estimated by the United States Department of Agriculture, was 783,000,000, compared with 473,000,000 bushels grown in 1917. It was stated that the 1922 crop would probably materially exceed the 1921 crop. The world crop of corn grown in 1921 was estimated at 3,710,000,000 bushels, compared with 3,129,000,000 bushels raised in 1917. *The Trade Record* of The National City Bank gave the barley production in 1921 as 969,000,000 bushels, compared with an average annual production of slightly more than 1,000,000,000 bushels in the five years preceding 1921. The figures for 1921 and 1922 quoted, relate only to production in those countries from which continuous reports were received during and since the war and are not comparable with those of pre-war years, which included Russia, Turkey and other areas, for which figures are not now available. However, late in 1922, one estimate placed the total grain production of Russia during that year at approximately 2,000,000,000 poods (one pood equaling 36 pounds) against 1,600,000,000 poods in 1921 and 1,738,000,000 poods in 1920. The Russian total for 1922, it was stated, was only about one-half of the annual average for the five-year period preceding the outbreak of the World War.

FARMER-LABOR PARTY. The beginnings of an American Labor Party became somewhat more manifest after the Conference for Progressive Political Action, held in Cleveland 11-12 Dec. 1922. While the delegates from the various labor bodies and progressive and radical political organizations declined to endorse forthright an independent party of labor, they carried back to their groups two recommendations: (1) in States where primaries are held, Labor should try to capture the old political parties for its own candidates; (2) in all other States, Labor should set about, with the aid of the agricultural elements, to form an independent Farmer-Labor Party.

The Cleveland Conference, born out of a protest movement on the part of union labor and farmers against injunctions, unfavorable Supreme Court decisions, congressional and State legislation, was attended by representatives of the 16 standard railroad unions, the United Mine Workers of America, the Amalgamated Clothing Workers of America, the International Typographical Union, representing 2,000,000 workers; the Farmers' National Council, the Farmer-Labor League of America and the National Non-Partisan League, representing a million farmers, and by delegates from various State federations of labor and central labor bodies, the Farmer-Labor Party, the Socialist Party and a score of local unions. The conference refused to seat representatives of the Workers' Party, a frankly Communist political organization, on the ground that it was "un-American."

The Socialists, as well as the Communists and some progressive labor leaders, expressed disappointment at the failure of the conference to declare for an independent party of labor, after

the manner of the British Labor Party in which various factions of the political and industrial labor movement of England unite upon common candidates at every election. Observing that the majority of the delegates took unkindly to the idea of the immediate formation of a labor party, Socialists, headed by Morris Hillquit, devoted themselves to the task of obtaining support for a common candidate of labor for President in the next national elections. Direct election of President and vice-president by the people was also urged.

In 1922 the Farmer-Labor party succeeded in capturing a seat in the United States senate when Dr. Hendrik Shipstead, of Minnesota, defeated his Republican opponent by 84,000 votes. From the same State, the Farmer-Labor party sent a representative to the lower house of Congress. Senator-elect Lynn J. Frazier, of North Dakota, while classed as a Republican, is in actuality a Non-Partisan League candidate. The Non-Partisan League in North Dakota is akin to the Farmer-Labor party. The Farmer-Labor vote shows a moderate decline since 1920, but this is explained by the election of liberals who succeeded in capturing the primaries as Republican and Democratic candidates.

In the State of New York an alliance was effected by the Socialist party, the Farmer-Labor party and a half-hundred progressive trades unions; these organizations united on the same political candidates though retaining their freedom of action in propaganda, educational activities, etc. The total vote cast for the joint nominees showed a marked falling-off for these parties since 1920 though Charles P. Steinmetz, Socialist and Farmer-Labor candidate for State Engineer and Surveyor, the electrical "wizard," polled almost triple the vote of others on his party's State ticket.

Out of the National Labor party, organized in 1919, grew the Farmer-Labor party. The Labor party was formed out of various unattached units in Connecticut, New York, Pennsylvania, Indiana, Illinois and some other States. At the nominating convention in July 1920, after a unity program had been worked out with the Committee of 48, the name was changed to the Labor party. It had presidential electors on the ballot in 17 States. In some of these States the tickets endorsed by the Non-Partisan League were approved by the Farmer-Labor party and no candidates for State offices were named.

The platform of the Farmer-Labor party opposed anti-union injunctions, child labor, industrial courts and legislation making labor unions liable to civil suit in time of strike; it favored the 44-hour week, national, state and municipal ownership and control of public utilities and the necessities of life. It demanded freedom of speech and other traditional guarantees which, it claimed, had been interfered with during and since the war. Conservation of natural resources and government exploitation of hydro-electric power were other planks incorporated in the demands of the Farmer-Labor party in various States.

One of the outstanding features of the Farmer-Labor party is the provision in its constitution for the direct affiliation of local, State and national farmers' organizations, labor

unions and co-operative societies. To all such organizations full reports covering the finances and activities of the party are submitted regularly. Local organizations affiliate with city or county units of the party, state organizations with the State unit, and national organizations with the national party. Each is entitled to representatives in the party conventions, which insures that the views of the workers on the farms and in the cities will dominate the affairs of the party. Moreover, through the payment of a per capita tax, the party is maintained by the rank and file. In addition, regular political organizations are set up in all the political subdivisions of the States and nation. These are made up of dues-paying members. Local and State branches hold meetings, carry on campaigns and function in a general political way for the party. The Farmer-Labor party has a direct dues-paying membership of approximately 30,000. It publishes an official national party organ; in addition to this, many State and local branches have official organs. The Farmer-Labor party holds second place in Washington, South Dakota and Minnesota. In South Dakota it is called the Non-Partisan League party. The party has been endorsed by six international unions, seven State federations of labor and hundreds of city central labor bodies. It controls many municipalities in Illinois, Iowa, Washington and Pennsylvania.

FARMERS' CO-OPERATIVE ASSOCIATIONS. See AGRICULTURE IN THE UNITED STATES, subsection AGRICULTURAL LEGISLATION; CO-OPERATIVE MOVEMENT.

FARMERS' CO-OPERATIVE ORGANIZATIONS. See FARM BUREAU FEDERATION, AMERICAN.

FASCISMO, Italian political and social movement, sponsored by the Italian "National Fascista Party". The word "Fascismo" is derived from the word "Fasci" which is the Italian for the Latin "fasces", a bundle of rods used by the Roman lictors to denote authority, discipline and law. The origin of the National Fascista Party which succeeded to the "Fasci Italiani di combattimento", is undoubtedly political and military. The struggle waged by the interventionists from the fall of 1914 to 24 May 1915 (Italy's entrance into the World War), constitutes the passionate and polemical element. The war literature and the devaluation of victory constitutes the second element. The first meeting of a few citizens, dissatisfied with the result of victory, embodying in themselves all the lost hopes of a people morally and physically tired of the war, and of diplomatic and financial failures, took place at Milan on 23 March 1919. Benito Mussolini, who had dared to denounce in his editorials those who believed in a policy of non-resistance to the tergiversations of the Allies and the Bolsheviki invasion of Italy, was the guiding spirit. Less than 100 men took part in that first meeting. Few promises were exchanged—and soon kept. On 15 April, a few hundred Fascisti and Arditi, still in uniform, attacked and burned the *Avanti* (Socialist daily). That first offense, not rebuked by the Socialists, encouraged the Fascisti to further their aims, showing at once the lack of ability and the revo-

lutionary insensibility of the Socialist Party. The general strike of 19-20 July 1919, which was to take place the world over against the Treaty of Versailles, found the Fascisti ready to resist any demonstration other than peaceful. The D'Annunzio raid on Fiume got full support from the Fascisti, showing the sentimental and adventurous character of the new movement. The election of 1919, the first one at which the Fascisti voted as a bloc, proved a failure for the new party, only 4,000 voters being for Fascismo. The electoral failure, however, did not dismay the Fascisti, who improved their organization and prepared themselves for the next battles (1920). During such period their ranks and files increased considerably. At the Second Congress (24 May 1920) 250 Fasci participated. On that occasion Mussolini delivered an important speech, eliminating all possible misapprehensions as to the anti-constitutional character of the movement. During the fall of 1920, Fascismo had its first real development. The "red" occupation of factories, the Ancona riots, and the "Out of Albania" policy, increased the Fascisti strength.

In 1921 Fascismo spread to the rural sections. At the election of 16 May 1921, 35 deputies, members of the Fasci, were sent to Parliament. In November 1921, at the Rome Congress, it was decided to transform the movement into a National Party. The name taken was "National Fascista Party". Headquarters were transferred from Milan to Rome, the centre of Italian politics and of all organized parties in the kingdom. Michele Bianchi—former chief editor of *Popolo d'Italia*—was appointed secretary. The Central Committee was abolished and a "Direction of the Party" substituted therefor.

The year 1922 was characterized by the entrenchment of Fascismo in Italian life and activities. Such entrenchment, however, was accompanied by reprisals and violence. The attacks on Socialistic institutions and Deputy Miglioli at Cremona, in July, are some of the "punishments" inflicted by the Fascisti on Communists. The general strike of 1 Aug. 1922 found the Fascisti ready to oppose it at any cost and under any circumstances. The strike was proclaimed by the Central Committee of the Labor Alliance from Genoa, and was to have taken place all over Italy. However, it failed. In many instances the people—and some workingmen too—opposed it. In some cities, such as Bergamo, Florence, Naples, Pavia, etc., it was almost unnoticed. Postal, telegraphic and railroad service continued—although on a reduced scale. In Rome, Milan and Turin, Fascisti took over the street-car service. Unfortunately, many acts of outrage and sabotage were committed. Socialist municipalities were occupied by the Fascisti—Chambers of Labor were burned, Socialist organizations were plundered and Socialist leaders attacked and beaten.

On 2 August the Fascisti Party called for a cessation of the strike and ordered the immediate occupation by Fascisti forces of all capitals of provinces unless the Government enforced at once law and order. On 3 August, Palazzo Marino, the seat of the Socialist Administration of the city of Milan, was occupied and the Italian

flag raised on the building. Next day, however, the Fascisti turned the reins of administration over to a commissioner appointed by the Prefect of the Province of Milan. On the 8th, the demobilization of the Fascisti was ordered and an explanation of their conduct toward the strikers was given to the public.

On 6 September, a new meeting took place in Rome to study the organization of the Fasci in relation to the needs of Southern Italy and the Italian islands. On the 20th, the Fascisti assembled again at Udine. Mussolini there delivered one of his most important speeches, clearing several points questioned by the public in general, such as Fascisti intentions toward the Monarchy.

Early in October Trent and Bolzano were occupied. The Fascisti invaded and occupied the offices of the Housing Commissioner in Rome and forced the dismissal of all women clerks, replacing them with former service men. The Fascisti later sent a letter to Prime Minister Luigi Facta, endeavoring to justify their action by accusing the Housing Commissioner's office of dishonesty and incompetence. The letter further stated that the facts had often been placed before the Government, but no notice had been taken of them. The Fascisti said they were forced to take justice into their own hands.

It was the Naples Congress, however, that marked the advent of the Fascisti to power. Achille Beneditti—an Italian journalist—published such a good account of their ascendancy to power in *Giornale d'Italia*, 9 Nov. 1922, that I cannot refrain from quoting him: "The mental process of the revolutionary attempt dates back to the Fascisti victory against the general strike of last August (1922). A few weeks later, at the end of September, in Rome, in Via Montedoro, No. 28, seat of the Italian Syndicate of Co-operatives—the Direction of the Fascisti Party entrusted Mussolini to develop a larger political and military action for the seizure of power." Early in October Mussolini created the famous quadrumvirate with Bianchi, De Vecchi, Dr. Balbo and General Del Bono, giving them full military and political powers. When the Naples Congress took place, all plans had been laid, but no one, with the exception of the four men, knew anything about them.

At the Congress (24-26 Oct. 1922) well above 40,000 Fascisti in uniform and 50,000 civilians took part. Mussolini's speech on 24 October at San Carlo Theatre was the keynote. At Milan on 6 Oct. 1922, Mussolini had said: "In Italy there exist two governments—a fictitious one run by Facta, and a real one run by the Fascisti! The first of these must give way to the second." Later he said: "In November the Chamber must be dissolved. In December general elections must take place. If the Government will not do this, the Fascisti will do it."

At the same time it became known in Rome that Michele Bianchi, secretary-general of the Fascisti Party, had presented a sort of ultimatum to the Government, not only demanding the dissolution of the Chamber and ordering general elections, but also demanding that the elections be run on a new plan, by which the party polling the greatest number of votes should have three-fifths of the total number of seats, the remainder to be divided proportionately

among the remaining parties. The Fascisti, who felt sure of obtaining a majority, hoped in this way to obtain 321 seats in the Chamber, leaving only 214 for all the other parties put together. At Naples both Mussolini and his colleagues showed more aggressiveness. On 24 October he announced that he had already been asked what conditions the Fascisti demanded in order to accept participation in the Government, adding: "I demanded the portfolios of Foreign Affairs, War, Navy, Labor and Public Works."

Mussolini stated that he would not enter the Cabinet himself. The Government had offered the party ministerial posts without portfolios. The Fascisti leader added that several places as under secretaries of State had been tendered, but that he had indignantly refused them. Referring to the ruling house he said: "Italian unity has been strongly cemented by the House of Savoy." He was loudly applauded with cries of "Viva King Immanuel." "Democracy was useful during the nineteenth century," he continued, "but now it must be superseded by a superdemocracy which must create a new, powerful political structure in closer harmony with national needs." It was the desire of the Fascisti to pacify the country, he added, but no peace was possible unless adversaries accepted the conditions of the Fascisti. His party program consisted in the regeneration of the country, the resurrection of Southern Italy, the restoration of Italian prestige and the solution of the financial and economic problems. His utterances were greeted with frantic applause by the delegates.

As the Facta Government refused to give the Fascisti the portfolios desired, a hostile attitude developed against it which culminated in its resignation. Meanwhile Mussolini had called together all the military leaders of his organization and simultaneously had ordered all the military sections of the Fascisti to keep in readiness the 800,000 workers who had joined the Fascisti organization, and had been ordered to co-operate at an opportune moment with the military sections.

In Rome it was believed that either Orlando or Giolitti would be requested to organize a new Cabinet, which would include four or five Fascisti, but soon it became evident that the Fascisti were after full power.

On 27 October, important cities such as Florence, Pisa and Cremona were occupied by Fascisti, who deposed the state authorities and command. The famous "Black Shirt" march on Rome then was started. Manifestoes were distributed to the people reading as follows: "Officers, soldiers, citizens: The Fascisti movement is neither against the country nor against the King. We want his Majesty to be really King of Italy and not submit himself to State actions which are cowardly imposed on him by his present weak ministers. We march on to Rome to give Italy her full liberty, to give the Italian people an Italy such as was dreamed of by the half million dead in the great war and by our own dead, who continued at war during peace. Marching with the sincere desire of peace and love, our greatest shout shall always be 'Long live the army, long live the King and long live Italy.'"

Facta, however, although he had resigned,

wanted to "take care of the defense of Rome," and proposed to Victor Emmanuel to proclaim a state of siege all over the country. Fortunately, the King foresaw at once the tragedies that would come out of such a proclamation and, instead of acceding to Facta's request, called Mussolini to form a new Cabinet. This invitation was accepted, and the new Cabinet included well-known heroes such as General Diaz and Thaon di Renal. Mussolini's entrance into Rome and the following parade of the Fascisti organization were unforgettable even for Rome, so long accustomed to glories and triumphs. The country had found a new spirit.

Mussolini's first acts were to reassure the country as to Fascismo's aims, and to disband his powerful army. By 4 November—as a matter of fact—most Fascisti had returned home or were about to return. Such was the rise to power of Fascismo.

GIOVANNI SCHIAVO.

FEDERAL COUNCIL OF THE CHURCHES OF CHRIST IN AMERICA. See CHURCHES OF CHRIST IN AMERICA, FEDERAL COUNCIL OF THE.

FEDERAL FARM LAND BANKS. See FARM LOAN SYSTEM, FEDERAL; also AGRICULTURE IN THE UNITED STATES, subsection AGRICULTURAL LEGISLATION.

FEDERAL RESERVE SYSTEM, a system of 12 regional banks the operations of which are co-ordinated under the supervision of a central board at Washington (Federal Reserve Board) in such a way that while they are separately managed and serve the diverse interests of their respective districts they practically constitute one central banking system, serving the United States as the Bank of England and the Bank of France serve their respective countries. The System was inaugurated in 1914. During 1922 the act creating the Board was so amended as to provide for the appointment thereon of a representative of the agricultural interests. Under another amendment to the act, State banks may enter the Federal Reserve System when their capital is 60 per cent of the amount required of National banks, provided that within reasonable time the capital be increased to the amount required of National banks. Another amendment provides that acceptances may be discounted by Federal Reserve Banks for 90 days but that such term may be extended to six months if secured by warehouse receipts on readily marketable staples. Likewise Federal Reserve Banks are now authorized to discount agricultural paper for nine months instead of six. On 12 Jan. 1923 Daniel H. Crissinger, of Marion, Ohio, at that time Comptroller of the Currency, was nominated by President Harding as Governor of the Federal Reserve Board to succeed W. P. G. Harding, whose term had expired in August 1922. At the same time the President nominated Milo D. Campbell, of Michigan, as agriculture's representative on the Board. Henry M. Dawes of Chicago was subsequently named as Comptroller of the Currency in the place of Mr. Crissinger. Mr. Campbell dropped dead while playing golf on the course of a Washington club on 22 March 1923. Secretary of the Treasury A. W. Mellon,

is chairman of the Board; Comptroller of the Currency Dawes, like the Secretary of the Treasury, is an ex officio member. In addition to Mr. Mellon, Mr. Crissinger and Mr. Dawes, the other members of the Board early in 1923 were: Edmund Platt, vice-governor; Adolph C. Miller, Charles S. Hamlin and John R. Mitchell. Secretary, W. W. Hoxton. The Federal Reserve System has approximately 10,000 members and its expenses in 1922 amounted to \$29,559,343. The net earnings of the 12 banks in that year totaled \$20,931,396, compared with \$86,798,540 in 1921 and \$29,889,307 in 1920. Dividends paid amounted in 1922 to \$6,307,035; franchise taxes paid to the government totaled \$7,450,543 and \$2,740,158 was transferred to surplus. The reserve ratio at the end of the year was 72.1 per cent compared with 71.1 per cent at the beginning. The 12 Federal Reserve Banks are located in the following cities: Boston, New York, Philadelphia, Cleveland, Richmond, Atlanta, Chicago, Saint Louis, Minneapolis, Kansas City, Dallas, and San Francisco.

Between 27 Nov. 1914 (the year of its inauguration) and 25 Oct. 1922, the resources of the Federal Reserve System increased from \$270,018,000 to \$5,065,095,000, according to the last annual report of the Comptroller of the Currency. On the date last mentioned the assets of the System were given as follows: Gold, \$3,085,000,000; other currency, \$127,000,000; bills discounted and bought, \$729,000,000; United States securities, \$409,000,000. Liabilities, on the same date, were: Capital, \$106,000,000; surplus, \$215,000,000; gross deposits \$2,382,000,000; circulation, \$2,337,000,000. Federal Reserve notes outstanding showed a reduction during the year of \$26,784,000; the amount outstanding on 25 Oct. 1922 being \$2,688,822,000, of which \$2,124,432,000 was secured by gold and the balance by commercial or other eligible paper. In the period indicated the ratio of notes secured by gold was increased from \$1,708,670,000 to \$2,124,432,000 while the amount of notes secured by commercial and other eligible papers was reduced from \$1,006,936,000 to \$564,390,000. The amount of mutilated Federal Reserve notes received and destroyed from the organization of the banks to 31 Oct. 1922 was \$7,820,756,340; the amount in vaults for destruction on that date was \$7,657,050. Federal Reserve notes are secured by the deposit of United States bonds with the Treasurer of the United States, or in accordance with the act of 23 April 1918, known as the Pittman Act, by United States certificates of indebtedness. Federal Reserve notes issued during the year which ended 31 Oct. 1922 totaled \$761,052,000; notes redeemed during the year totaled \$704,847,600.

FEDERAL TERRITORY, Australian, a territory of the Commonwealth of Australia set off from New South Wales in 1911. It has an area of 940 square miles and a population of 2,572. Yass-Canberra, the proposed seat of the Commonwealth Government lies within the Federal Territory. The project of transferring the seat of the Commonwealth Government to the Territory was opposed in 1922 by the financial and labor interests and at the close of the year it might be said that it was for the time being in abeyance.

FEDERATED FRUIT AND VEGETABLE GROWERS, Inc. See **HORTICULTURE**.

FEDERATED MALAY STATES, British protectorates which occupy a large part of the Malay Peninsula and consist of Perak, Negri Sembilan, Pahang and Selangor. The areas of these states are as follows: Perak, 7,800 square miles; Negri Sembilan, 2,550 square miles; Selangor, 3,156 square miles; and Pahang, 14,000 square miles. The total population is 1,100,000, of whom 420,000 are Malays, 433,000 are Chinese and about 3,000 Europeans. Kuala Lumpur in Selangor is the largest town with 60,000 inhabitants. The total number of schools in the states is 560 with an attendance of 29,000. About \$700,000 is expended annually on education. The laws made by the Federal Council, composed of the British High Commissioner as president, the chief secretary, the sultans of Perak, Pahang and Selangor and the Yang di per Tuan Besar of Negri Sembilan, the four British residents, the legal and financial advisers and six additional members. In 1920 the revenue of the states was \$38,677,676 and the expenditure \$53,413,679. The public debt is \$7,960,000.

The states produce cocoanuts, rubber, sugar, tapioca, pepper, and rice. Rubber is under extensive cultivation, about 500,000 acres being devoted to this crop at present and the yearly output approximately 100,000 tons. About 1,000,000 tons of timber are taken annually from the forests for export. The mining of tin is well developed, the export in 1920 amounting to 35,000 tons. In the same year, 12,283 ounces of gold were produced. Many other minerals are found, such as lead, copper, iron, manganese, wolfram, silver, zinc, arsenic and mercury. Coal also is found in workable quantities. About 90,000 are engaged in mining. The states import rice, tobacco, textiles, milk, live stock, oil, hardware and machinery. The chief exports are rubber, copra, tin and tin ore, timber and hides. In the four states there are 2,500 miles of metalled roads and 175 miles of unmetalled roads. There are 1,003 miles of railway open for traffic and several branches and connecting lines are under construction. There are 98 post-offices in the four states, 2,502 miles of telegraphs and telephone lines. The current money is the Straits Settlements dollar which is worth \$0.55 in American currency.

FENCING. See **SPORTS**.

FERRO-MANGANESE. See **METALLURGY**.

FERTILIZER. The volume of business in this industry was fairly large in 1921 and could be vastly larger in 1923 if the mixers of fertilizers dared to give credit to all who would buy. But the existence of a large body of overdue and unpaid notes of 1922, 1921 and even 1920, holds them back, and mixing plants are run at only about half capacity. Perhaps the most encouraging condition is the activity of the National Fertilizer Association and of various government and State officials, together with agricultural college experts, in working out the best standard mixers for various soils, so that the farmer can readily buy what is best suited to his land and crops. Ordinary barnyard manure is a complete fertilizer, but badly balanced,

requiring addition of phosphorus. Information as how to make the most of home manure by correct addition of acid phosphate is made available. And in the Middle West, a dozen of the best soil analyses have been passed upon, and are given away. New England followed suit, and at a convention of agronomists in Boston, 31 Dec. 1922, adopted "the New England Standard Nine" fertilizers. The Middle Atlantic States took similar action, and before long standard fertilizers, best adapted to individual localities anywhere in the United States, will be available. This scientific action is regarded as certain to increase crops as fast as put into practice.

One of the most important soil constituents is nitrate of soda, which comes mostly from Chile. To secure a larger supply for munition purposes, the United States went largely into the business during the World War, and after hostilities were ended had on hand an immense stock of nitrate. This is offered for sale at intervals, and has a rather pronounced bearish effect on the market. During December 1922, 25,000 tons were sold at between \$47 and \$48 a ton. On 8 Jan. 1923, 10,000 tons were sold at an average of \$44 a ton. Ninety-four per cent of the offering was taken by 26 bidders, W. R. Grace and Company securing the most.

Florida is the principal source of phosphate, and the production there for two years follows, in long tons:

	1921	1922
Hard phosphate rock, foreign.....	174,000	198,000
Hard phosphate rock, domestic.....
Land pebble phosphate, foreign.....	568,000	520,000
Land pebble phosphate, domestic.....	547,000	701,000
All-rail, United States.....	310,000	265,000
Totals.....	1,599,000	1,684,000

The phosphate industry is liable to change materially because of the discovery and development of a very large supply (estimated at 100,000,000 tons or more) on the islands of Nauru and Ocean, lying 26 miles below the equator and about 2,200 miles from New Zealand. This supply is very high grade, and easily mined and shipped, lying right on the surface, near the water.

Pyrites is imported mostly from Spain. The United States used to buy 1,500,000 gross tons annually, but now imports less than 500,000 tons, while the local production is near 250,000 tons. Sulphur is largely taking its place in agriculture. The low cost production of sulphur in the United States during the past three years has so increased the local supply that this country has taken the lead in production from Italy, which is now second, Japan being the third largest producer. The United States exports for 1922 (partly estimated) were 540,000 tons, as against 380,000 for 1921. The largest buyers were Canada, France, Germany, Sweden and Australia.

The leading fertilizer mixers of the United States quoted prices in January, 1923, that were regarded as rather low. Acid phosphate was offered at \$9.50 per ton, sulphate ammonia at \$3.50 per 100 pounds, Japan taking 4,500 tons at that price; cottonseed meal, rich in ammonia, sold at \$41 to \$42 f. o. b. Fish scrap was quoted

at \$3.85 and blood at \$4.75, bones at \$22 to \$25 a ton.

The potash production of the United States has been small for two years, as large stocks are held; but in 1922 Germany sent us 91,000 tons within nine months, evidently trying to realize something on her surplus. Statistics compiled by the Federal Bureau of Census show that there were 588 establishments engaged in the manufacture of fertilizers in the United States in 1921, 584 in 1919 and 734 in 1914. The products turned out by these concerns were valued at \$180,374,800 in 1921, \$281,143,600 in 1919, and \$153,196,100 in 1914. The South Central and South Atlantic States reported approximately 62 per cent of the value of products in 1921, 73 per cent in 1919 and 70 per cent in 1914. The North Central, Middle Atlantic and New England States reported 35 per cent in 1921, 25 per cent in 1919 and 28 per cent in 1914, while the Mountain and Pacific States reported 2.5 per cent, 1.5 per cent and 1.6 per cent respectively. The total number of persons, proprietors, firm members, salaried employees, and wage earners, engaged in the industry in 1921 was 21,438; 32,522 in 1919 and 28,301 in 1914. Salaries and wages paid totaled \$25,845,500 in 1921, \$36,934,700 in 1919 and \$17,774,400 in 1914. The amount of fertilizer turned out during the three years referred to was 5,992,633 tons in 1921, 8,237,011 tons in 1919 and 8,432,206 tons in 1914. The total production of superphosphates was 3,483,704 tons in 1921, 5,831,767 tons in 1919 and 4,483,607 tons in 1914. Complete fertilizers produced in 1921 totaled 2,984,494 tons. Ammoniated fertilizers manufactured in 1921 totaled 339,190 tons. Subsidiary products turned out by the fertilizer establishments had a value of \$7,817,900 in 1921; \$25,380,300 in 1919, and \$15,821,400 in 1914.

Exports of fertilizer and fertilizer materials in 1922 totaled 935,008 tons, valued at \$16,648,372, as compared with exports of 895,443 tons, valued at \$16,117,123 in 1921.

FIELD, Hamilton Easter, American art editor and critic: b. Brooklyn, N. Y., 21 April 1873; d. there, 9 April 1922. He was educated at the Brooklyn Polytechnic Institute, Columbia University, Harvard University, and the École des Beaux Arts, Paris, and studied under Gerome, Raphael Collin and Fantin-Latour. He was a director of the Thurnscoe School of Modern Art, Ogonquint, Me., the Ardsley School of Modern Art, Brooklyn, and also of the Ardsley Studios, Brooklyn. At the time of his death he had been art editor of the *Brooklyn Daily Eagle* since 1919. He was also associate editor of *Arts and Decoration* and president of the Brooklyn Society of Artists; life member of the Museum of French Art; director of the China Society of America, and until his resignation a month before his death, because of objection to his criticism of the alleged publicity

methods of certain members of the organization, was, for a number of years, a member and director of the Society of Independent Artists. He published 'The Technique of Oil Painting' (1913).

FIJI ISLANDS, an island group in the South Pacific consisting of about 250 islands and forming a crown colony of Great Britain. The largest islands are Viti Levu and Vanua Levu. The total area is 7,435 square miles and the population 162,604, of whom 88,000 are Fijians and 59,000 are Indians. There are Christian missions of the Methodist and Roman Catholic churches attended by about 90,000 natives. These two creeds also maintain schools. In 1920 the Catholics had 122 schools with 2,700 pupils and the Methodists 863 schools with 13,400 pupils. In addition there are a few schools for Europeans. The revenue in 1920 amounted to \$2,400,000 and the expenditure to \$3,000,000. Revenues are derived from customs, shipping dues, native taxes, court fees and the postal service. The public debt of the colony in 1920 was \$1,500,000. The islands produce bananas, coconuts, Indian corn, sugarcane, tobacco, tea, rice, rubber and sisal hemp. There are six sugar mills, tea factory, two soap factories, four rice mills, one rubber mill, five fibre mills and 22 boat building yards. In 1920 the value of the imports was \$8,000,000 and that of the exports \$14,000,000. The colony has regular steamship connection with Australia and Canada. The total tonnage entered and cleared in 1920 was 671,790. The colony is governed by an officer called the governor, appointed by the crown, and assisted by an executive council consisting of the colonial secretary, the attorney-general, other official members appointed by the governor, and two members selected from the members of a legislative council. The governor of Fiji in 1922 was Sir Cecil Hunter Rodwell. The governor is also high commissioner for the western Pacific.

FINANCE. While it may be true, as the *Boston News Bureau* asserted, that "from practically all angles, 1922 can be recorded as the renaissance of prosperity," it is nevertheless a fact that, despite a general improvement in economic conditions throughout the United States, the year closed leaving unsettled a great many of the financial problems which came upon the world as a result of the Great War. Nor, is it believed that real prosperity will be experienced by any of the countries until the problems referred to have been solved, not even by the United States. The European situation, at the close of the year, is dealt with in detail in the article EUROPEAN DEBTS. So far as the United States is concerned, its return to prosperity was far out of proportion to that of the rest of the world, notwithstanding the fact that during the year economic progress was materially impeded by three of the greatest strikes in the country's history—the textile strike, the coal strike and the railway shopmen's strike. The iron and steel

industry showed a decided improvement during the year, the output being nearly double that of 1921. The building boom of 1922 was unprecedented, while automobile production reached record figures. The agricultural situation showed some improvement—but conditions were by no means satisfactory to the farmers. In almost all lines of industry there was an upward trend from the depressed conditions of the year before, especially during the last six months of the year.

From a strictly financial viewpoint one of the outstanding features of the year in the United States was the number and value of stock dividends declared. According to the *New York Times*, stock dividends declared by 139 companies aggregated in value \$1,484,107,719. A list prepared by the Federal Trade Commission for Senator Smith W. Brookhart gave the total value of such dividend declarations made during the year as \$2,149,151,425, the figures including small as well as large corporations. The largest stock dividend declared by any one company was that of the Standard Oil Company of New Jersey, amounting to \$393,353,200; the Standard Oil Company of New York paid out \$150,000,000; the Standard Oil Company of Indiana, \$107,360,455; the Standard Oil Company of California, \$100,971,111. Up to 22 November 10 Standard Oil subsidiaries had either declared or announced their intention of declaring stock dividends aggregating \$752,288,415. Other companies which declared stock dividends of more than \$50,000,000 include the Gulf Oil Corporation and the Magnolia Petroleum Company. The Atlantic Refining Company distributed a stock dividend amounting to \$45,000,000; the Vacuum Oil Company a stock dividend of \$45,000,000; the Standard Steel Company, \$36,000,000; the Victor Talking Machine Company, \$29,994,000, and the Ohio Oil Company, \$45,000,000. The various declarations ran all the way from 1 per cent to 3,333 per cent. Most of these declarations were made, it is believed, because of the fear that Congress would pass a law making the surpluses of corporations subject to income tax levies. Under the existing law stock dividends are not taxable.

During the year industrial corporations of the United States distributed in cash dividends \$525,140,500 and paid out in interest charges \$50,900,000. The dividend disbursements compare with \$542,352,714 in 1921 and \$601,806,277 in 1920. Steam and electric railways paid in cash dividends \$351,463,800 and in interest approximately \$162,000,000. These dividend payments compare with \$356,753,900 in 1921 and \$363,130,222 in 1920.

Stocks traded in on the New York Stock Exchange during 1922 totaled 262,472,100 shares as compared with 170,680,100 shares in 1921. Sales of industrial stocks in 1922 totaled 221,876,800 shares as compared with 154,562,500 shares in 1921. Sales of railroad shares totaled 40,595,300 in 1922 as compared with 25,117,600 shares in 1921. The record year was 1919, when 320,046,100 shares of all kinds of stock were traded in on the New York Stock Exchange. Bond sales for 1922 on the New York Stock Exchange had an aggregate value of \$4,098,696,027 as compared with \$3,504,814,845 in 1921. Stocks and bonds listed on the New York Stock Exchange during 1922 had an aggregate value of \$4,111,492,615

compared with listings totaling \$3,047,367,555 in 1917, which was a record year until 1922 took first place. The listings of 1922 exceeded those of 1921 by \$1,930,000,000, and was due in a large measure to the stock dividend declarations referred to above. Of the 1922 listings, Dow, Jones and Company estimated that \$2,075,784,215 represented stocks and \$2,035,708,400 represented bonds. New railroad capital flotations in 1922 totaled, according to *The Annualist*, \$621,658,850 against \$272,920,220 in 1921.

New corporate financing in 1922 totaled, according to the *Boston News Bureau*, \$3,944,426,000, of which \$3,200,176,000 was for new capital and \$744,251,000 for refunding, as against \$2,780,874,000 of new capital and \$574,671,000 for refunding in 1921. State and municipal financing, in 1922, was estimated by the *Daily Bond Buyer* at \$1,177,699,000, while foreign loans negotiated in the United States during the year were estimated by the Guaranty Trust Company at a total of \$869,992,000. The latter figures include foreign government and municipal loans aggregating \$680,565,000, foreign corporation borrowings totaling \$153,206,000 and loans of American corporations abroad totaled \$36,221,000. Foreign financing in 1921 amounted to \$625,820,000.

Charters for new enterprises, filed during 1922, under the laws of the principal States, involved, according to the *Journal of Commerce*, the sum of \$8,400,153,390 as compared with \$7,959,111,400 in 1921, and \$14,999,044,200 in 1920, these figures covering concerns with authorized capital of \$100,000 and over.

A subject to which much attention was given during the year was that of tax-exempt securities, including State, municipal and farm loan bonds. Since the World War, State and municipal security issues have increased approximately three times as compared with the output prior to the war. Dr. Edwin R. A. Seligman of Columbia University, in an article in the *New York Times*, estimated that from 1919–26 there will have been outstanding an amount of tax-exempt securities ranging from \$25,000,000,000 to \$35,000,000,000 to be reduced in 1926, unless the Federal government issues more tax-exempt bonds, to between \$18,000,000,000 and \$21,000,000,000. As a result of this situation Secretary Mellon of the United States Treasury recommended the adoption of a Constitutional amendment to forbid the issuance of tax-free securities, and on 23 Jan. 1923 the House of Representatives, by a vote of 223 to 101, adopted a resolution proposing to submit such amendment to the legislatures of the various States for ratification. Congress adjourned, however, without the Senate having taken any action on the resolution.

New security issues in England during 1922 totaled £584,950,914 as compared with £392,799,723 in 1921. Out of the total of new securities issued in 1922 in England, £441,432,391 were government loans, £17,795,631 were municipal loans and £125,722,892 were industrial and railway issues. Checks, bills, etc., paid at the London Bankers' Clearing House in 1922 totaled £37,161,461,000; city clearing amounted to £32,780,636,000. FINEGAN, Thomas Edward, American educator: b. West Fulton, Schoharie County, N. Y., 28 Sept. 1866. He attended the public schools of West Fulton and the Cooperstown High School, then entered the State College for Teachers at Albany, N. Y., from which he was graduated in 1889. Thereafter, he read law and was admitted to the New York bar in 1894. He taught in the public schools of New York State for six years, supervised public schools for two years, and, in 1894, entered the State Education Department of New York with which he was connected for twenty-seven years. He organized the work relating to the examination and certification of teachers in the schools of the State and supervised this work for twelve years. He was in charge of the law division, passing upon legal questions and preparing judicial opinions on school questions for four years. He was made assistant commissioner of elementary education in 1908 and deputy commissioner of education in 1915; he was acting commissioner of education, 1918-19 and was in charge of the supervision of elementary education in New York State, 1908-19, which included supervision of all elementary schools, State normal schools, city training schools, training classes, the certification of teachers, and the 207 district superintendents in charge of the rural schools and of the enforcement of the following statutes:

Compulsory education law, medical inspection law, physical training law, laws relating to the education of physically handicapped and mentally deficient children, and the Americanization law. Doctor Finegan holds the degree of M.A. from Hamilton College, the degree of Pd.D. from the State College for Teachers, Albany, N. Y., the degree of Litt.D. from the University of Pennsylvania, and the degree of LL.D. from Colgate University, Hamilton College, Grove City College, Dartmouth College and the University of Maine. On 1 June 1919 he became State superintendent of public instruction in Pennsylvania where his progressive methods soon placed him in the front rank of the school superintendents of the country. In 1921 he secured the enactment by the General Assembly of Pennsylvania of a law requiring every public school teacher to be a graduate of a high school, giving a four-year course, and, in addition, to have had at least two years normal school training. The same measure increased the salaries of all teachers meeting the foregoing qualifications. Under Doctor Finegan's direction, there is being included in the courses of study in the Pennsylvania schools instruction in citizenship and democracy; provision has been made also to include the study of music and art, to correct speech defects and for special education for those types of children who are unable to take standard courses. Under his supervision, the State department of public instruction, in 1920-21, made a survey of the Philadelphia school system. He has arranged for summer courses for teachers in thirteen State normal schools and in twelve universities and colleges. Approximately 12,000 teachers attend these sum-

mer courses. Doctor Finegan is author of the following articles in the 'Encyclopedia Americana': "Education, Compulsory," "Education Rural," "Education of the Feeble-Minded," "Education of Immigrants," "Education of the Physically Handicapped," "Health Education," "Lancasterian Schools," "State Systems of Education," "Teachers, Professional Training of."

His brochures on educational subjects include the following: "Uniformity of Standards in School Administration"; "The Establishment and Development of New York's School System"; "The Organization of City School Systems"; "Some of New York's Contributions to the Development and Standardization of Normal Schools"; "The Organization of a Modern Rural School"; "Medical Inspection in the Public Schools"; "Fundamental Principle in School Administration"; "Struggle for Free Schools in New York"; "The Obligations and Opportunities of Superintendents"; "Important Features in Rural Education"; "The Life and Services of Andrew S. Draper"; "Colonial Schools and Colleges in New York"; "The Function of the Modern School"; "Education and the State"; "Training for National Service"; "The Place of the Nation in Education"; "What Service Shall the Public Schools Render"; "A Practical Program for the Development of the Rural Schools"; "The Education of the Illiterate Immigrant"; "Our Army of Illiterates"; "Pennsylvania's Educational Program"; "The State Program in Education and Its Bearing on the National Program"; "Co-operation Between the State and the School District."

Doctor Finegan edited a volume of 500 pages on 'Agencies for the Training of Teachers in New York State,' as well as volumes on 'The Development of Free Schools in New York,' and 'The Township Administration of Schools.'

FINLAND, an independent republic of northern Europe, formerly a Russian grand duchy, bounded north by Norway and the Arctic Ocean, south by the Baltic Sea and Russia, east by Russia and west by the Gulf of Bothnia and Sweden.

Area and Population.—The area and population of the several divisions of the republic are as follows:

DIVISION	Area, square miles	Popu- lation (31 Dec., 1919)
Uusimaa.....	4,705	427,751
Turku-Pori.....	8,832	490,671
Åland.....	557	27,351
Häme.....	8,102	357,106
Vimpuri.....	16,691	564,512
Mikkeli.....	9,002	208,818
Kuopio.....	17,014	352,585
Vaasa.....	15,969	544,656
Oulu.....	64,854	366,787
Petsamo.....	3,860	1,700
Total.....	149,586	3,335,237

By 31 Dec. 1921 it was estimated that this total had increased to 3,367,542. The chief towns with their populations are: Helsingfors, 188,922;

Turku or Abo, 59,914; Tammerfors, 46,819; Viborg, 24,479; Vasa, 24,479; Oulu, 21,216; Kuopio, 18,137; and Bjorneborg, 17,045.

Religion.—The national church is the Evangelical Lutheran but there is full liberty guaranteed to those professing other faiths. There are about 56,000 Greek Orthodox Catholics and about 650 Roman Catholics. There are four bishoprics of the national church and an archbishop at Turku.

Education.—The educational establishments of all grades are as follows:

SCHOOL	Number Schools	Pupils
Elementary (country):		
Higher elementary.....	3, 639	179, 389
Lower elementary.....	1, 262	41, 104
Infant schools.....	1, 543	197, 721

Commercial high.....	2	158
Universities:		
Helsingfors.....		2, 578
Turku (Swedish).....		130

Agriculture.—About 9 per cent of the land area of the republic is under cultivation, yet agriculture is the principal occupation of the inhabitants. The chief crops are rye, barley, oats, potatoes, hay and flax. Dairying is a flourishing industry, the annual output of butter is about 300,000,000 pounds. The live stock industry is well developed and there are about 1,250,000 head of horned cattle in the republic. Sheep and goats number about 1,000,000 and swine about 125,000. The country has extensive pine forests; in fact over one-half of the area of the country is covered with these forests of pine. There are nearly 2,000,000 tree trunks. There are 279 saw mills and the timber industry gives employment to 20,000 workers.

Other Industries.—The republic has over 4,000 factories which give employment to 83,000 workers and yield an annual product valued at 1,500,000,000 marks. These establishments include iron and mechanical works, textile mills, woodworking factories, paper mills, leather works, chemical factories, tobacco factories, distilleries and breweries, electric, gas and water supply plants.

Commerce.—Finland's foreign trade during 1922 shows the strong economic position attained by that country. The total value of exports

was 4,461,000,000 Finnish marks, or \$95,600,000 at an average exchange rate of 46.7 Finnish marks to the dollar; imports amounted to 3,953,000,000 Finnish marks, or \$84,700,000. The favorable balance of 508,000,000 marks, or \$10,900,000, was the first recorded in the history of Finnish trade statistics. In 1913 imports were valued at 495,400,000 marks and exports at 404,800,000 marks, or \$96,600,000 and \$78,100,000, respectively (conversion at par, 1 mark=19.3 cents). The favorable balance of 1922 contrasts also with an unfavorable balance of 196,000,000 marks in 1921 and of 700,000,000 marks in 1920. If prices of 1913 be applied to the 1922 exports and imports, it will be found that exports were 93.4 per cent of those in 1913 or nearly normal, while imports were smaller, reaching only 74.4 per cent of the 1913 imports. The most important import values were: Textiles, finished and partly finished, 862,200,000 Finnish marks; cereals, 703,400,000 marks; colonial products, 551,500,000 marks; metals and metal goods, 403,600,000 marks; machinery, 203,900,000 marks; oils and fats, 177,500,000 marks; stone and earthenware, 139,600,000 marks; drugs and chemicals, 121,211,000 marks; asphalt, tar, and resin, 77,700,000 marks; and fertilizers, 72,800,000 marks. The values of the most important exports in 1922 were: Timber, 2,292,700,000 Finnish marks; pulp, cardboard, and paper, 1,430,300,000 marks; animal products, mostly butter, 435,700,000 marks; and hides, skins, and leather goods, 76,900,000 marks.

Communications.—Finland has 2,685 miles of railways of which all but 186 miles are the property of the state. The gauge is 4.9 feet. There are many lakes connected one with another by canals and the whole system connected with the Gulf of Finland. There are 2,685 miles of improved roadways and 2,500 miles of secondary roadways. There are 2,525 post offices, 10,517 miles of telegraph and 3,230 miles of telephone lines.

Army.—Military service is universal and compulsory and begins with the 17th year and ends with the 45th. Active service begins at the age of 20 and continues for 18 months. The total peace establishment is 100,265 officers and men.

Navy.—Finland has a few Russian ships which she uses as training vessels. At present the personnel of the navy is 71 officers, 79 civil officers and 1,028 petty officers and men. There are three regiments of coast artillery.

Finances.—The state budget for the year 1922 comprised a revenue of 2,065,660,000 marks and an expenditure of 1,885,300,000 marks. The total debt of the republic in 1922 amounted to the huge sum of 1,934,897,323 marks, of which 536,309,365 represented foreign loans, 955,146,800 national loans and 443,441,158 short-dated loans.

The budget for 1923, as passed by Parliament, authorizes expenditures of 2,633,500,000 Finnish marks, or roughly \$65,900,000 at the current exchange rate of 2½ cents to one Finnish mark.

Ordinary revenues were estimated at 2,448,000,000 marks, exceeding ordinary expenditures by 248,000,000 marks; extraordinary expenditures, however, cause an estimated deficit of 167,300,000 marks. This deficit is to be covered by state funds accumulated in previous years,

no loans or currency issues being contemplated, according to advices received by the United States Department of Commerce.

This is the third year in which the Finnish budget is balanced without loans or paper money issues for ordinary state expenditures. A balance of about 500,000,000 marks (after allowing 167,300,000 marks for balancing the 1923 budget) had been accumulated at the end of 1922 as a result of ordinary revenues in 1921 and 1922 exceeding the estimated amounts, and from the proceeds of certain loans of moderate amount. In 1922 the import duties exceeded the estimates by 237,000,000 marks, the railroad receipts by 110,000,000, the revenue from state forests by 45,000,000, and the income and property tax by 25,000,000 marks.

Government.—On 6 Dec. 1917 the Finnish house of representatives proclaimed the independence of the Finnish nation and soon thereafter it was recognized by the Powers. There is universal suffrage for all who have attained their 24th year. The legislature consists of one chamber of 200 members chosen by proportional and direct election. The term of representatives is three years. The president is elected for six years by the votes of the citizens. In him is vested the executive power. He is assisted by a cabinet of 12 ministers with the usual portfolios. The president in office in 1922 was Dr. Kaarlo Juho Staalberg, elected July 1919.

History.—At the beginning of 1922 there was friction between Finland and Soviet Russia, the latter accusing Finland of fomenting the Karelian insurrection. The Russian government massed troops on the frontier and on 7 January won a victory over the Finnish White Bands that infested the border. The controversy was referred by Finland to the Council of the League of Nations, which on 11 January undertook formally to guarantee the neutrality of the Åland Islands. Finland was empowered to act in defense of the islands in case their neutrality is threatened. Finland's action was endorsed by the new Baltic states, Esthonia, Latvia, Lithuania, Poland and also by Rumania. The League of Nations appointed Poland as arbitrator between Soviet Russia and Finland. The Finnish government took care of great numbers of the Karelian refugees who fled from the Red armies. The government in February passed a defense bill imposing a year's training and active service for every man of military age. The premier made known the necessity for such a measure because of the menace of the Bolshevik armies on the country's eastern front. The sole opposition to the measure came from the Agrarians and the Socialists. On 14 February, Heikki Ritavuori, minister of the interior, was slain at the hand of a demented youth. The crime was without political significance although the minister was very unpopular because of his amnesty measures in behalf of the Red rebels. In the middle of March Finland participated at the conference of the Baltic states (Lithuania excepted) at Warsaw in order to prepare a common policy with regard to Russia to be adhered to at the forthcoming Genoa Conference. The meeting also gave opportunity for the conclusion of a commercial agreement between the assembled states. The

conference agreed upon mutual recognition of the peace treaties concluded severally with Russia and greatly strengthened their economic and other relations. On 24 March a mixed commission met in Helsingfors to continue the boundary negotiations between Finland and Soviet Russia. Later the same month Finnish delegates left for Berlin to seek an agreement with Germany as to communication between the two countries and for the return of the ships confiscated by Germany during the war. The agreements of 1918 with Germany had become invalid. The result of this expedition was a German-Finnish treaty signed in Berlin 22 April, regulating economic relations between the two countries, and pledging both to early negotiations for a broader economic convention.

In May a Swedish official who visited Finland to study the effects of prohibition there reported that Finnish prohibition was a "disillusionment." Intoxication he reported rife and he found that all kinds of spirits were served in restaurants without restraint. The police do not interfere unless patrons showed signs of tipsiness. On 13 May the entire cabinet resigned because of the failure of the Diet to ratify the Baltic alliance treaty, which the premier, Vennola, had negotiated at Warsaw just prior to the Genoa Conference. The main objection was to article seven of the treaty, which reads as follows: "The States in conference at Warsaw (Finland, Poland, Esthonia and Latvia), declare that, in case one of them is attacked by another State without proper cause, they shall observe a benevolent attitude toward the State attacked, and immediately consider what intervention shall be undertaken." When the foreign affairs committee of the Diet asked for further information concerning the treaty, the foreign minister disclosed an unpublished protocol affixed to the treaty text, specifying the procedure to be followed at Genoa by the contracting parties and other pledges couched in more or less vague terms. General dissatisfaction with the treaty was expressed as a result of this disclosure and a vote of lack of confidence in the government was passed in the Diet by a vote of 119 to 54 and it was decided to leave the treaty in abeyance until after the general elections in July.

The Finnish government joined Poland and Latvia in replying to the Russian proposals for disarmament to the effect that no reduction of armaments was feasible until Russia fulfilled its treaty obligations with the Baltic countries. The general parliamentary elections were held in July and resulted in victory for the Conservative elements. The new Eduskunta (Diet) has 45 Agrarians; 15 Progressives; 35 Finnish Coalitionists; 25 Swedish party; 53 Social-Democrats, and 27 Communists. The Finnish police discovered a Communist conspiracy at Viborg which involved large-scale espionage for Soviet Russia in Finland and the Karelian Peninsula. Plans were developed during the year for the hydro-electrification of the country, based on a usage of 800,000,000 kilowatts yearly. Sufficient funds were made available this year for the purchase of power sites and general surveys. Late in September the detective police discovered the activities of a band of

4,000 Finnish Reds in Sweden who planned to destroy rail and steamer communication with Finland preparatory to starting a revolution in Finland. The disclosure of the plan was sufficient to thwart it. At the opening of the new Parliament the temporary cabinet resigned but President Staalberg requested it to remain in office until a new ministry could be formed. On 20 October the bill regulating election of the president passed the Diet. This bill provides for the election of 300 presidential electors by general suffrage. These electors in turn elect the president. An Agrarian bill was enacted on 14 October providing for the breaking up of the large estates by limiting the size of private estates to about 300 hectares (450 acres). The excess areas of the estates are to be subdivided into small farms for sale at a reasonable price to persons without land. Foreign owned estates are to be cared for by the government for five years, when it will appropriate those whose owners do not appear and pay up all tax arrears plus the cost of the government in taking care of the property. The favorable trade balance shown throughout the year was reflected in the exchange. The Finnish mark stood at 2.80 cents at the beginning of November.

FIRE LOSSES. The fire loss record of the year 1922 stands as the worst in the history of the United States and Canada, with the exception of the year 1906, the year of the San Francisco fire and earthquake. The estimated value of the property in the United States and Canada destroyed by fire during 1922, as compiled by *The Journal of Commerce* from its daily records, aggregate \$410,889,350. This is an increase of some \$78,000,000, or 23 per cent, over the abnormally high figures of 1921.

There were no great general conflagrations in large cities during the year to excuse the immense fire waste, but, on the other hand, pronounced waves of heavy losses in centres or classes of business in which through the readjustment trade conditions were acute have produced evidence of bad moral hazard. This phase of the situation will be seen from a study of the monthly returns of the past three years given in the table below. It will be noted that wherever financial and trade conditions became particularly strained the monthly fire losses almost immediately became more excessive.

The monthly table of fire losses for the past three years is as follows, showing an unusually high average:

	1920	1921	1922
January....	\$37,012,750	\$35,319,950	\$38,663,000
February....	26,631,500	25,888,850	29,304,300
March.....	27,597,701	28,581,100	39,910,750
April.....	22,108,750	22,178,900	31,009,750
May.....	25,440,300	23,956,800	29,868,950
June.....	25,745,900	29,000,700	24,102,850
July.....	25,135,825	33,355,750	36,667,750
August.....	17,930,800	25,829,000	21,579,500
September..	25,630,050	26,502,400	41,515,000
October.....	28,331,100	27,955,350	40,065,400
November...	28,093,350	26,178,600	30,776,100
December...	41,197,600	28,907,550	47,426,000
Total year	\$330,855,625	\$332,654,950	\$410,889,350

This table gives the total fire losses of the three years of the readjustment period as \$1,074,-

399,925, or an annual average of \$358,133,308. That this enormous waste has been largely contributed to by carelessness and arson is beyond question. The loss experience of the fire insurance companies analyzed by the National Board of Fire Underwriters as to causes of fires shows that about 64 per cent of the fires are from preventable causes.

During the past 44 years the aggregate fire waste of the United States and Canada, as compiled from the daily records of *The Journal of Commerce*, reached the enormous annual average total of \$184,235,608. The record by years since 1879 is as follows:

1922.....	\$410,889,350	1900.....	\$163,362,250
1921.....	332,654,950	1899.....	136,773,200
1920.....	330,855,625	1898.....	119,650,500
1919.....	269,000,775	1897.....	110,319,650
1918.....	317,014,385	1896.....	115,655,500
1917.....	267,273,140	1895.....	129,835,700
1916.....	231,442,995	1894.....	128,246,400
1915.....	182,836,200	1893.....	156,445,875
1914.....	235,591,350	1892.....	151,516,000
1913.....	224,728,350	1891.....	143,764,000
1912.....	225,320,900	1890.....	108,893,700
1911.....	234,337,250	1889.....	123,046,800
1910.....	234,470,650	1888.....	110,885,600
1909.....	203,649,200	1887.....	120,283,000
1908.....	238,562,250	1886.....	104,924,700
1907.....	215,671,250	1885.....	102,818,700
1906.....	459,710,000	1884.....	110,108,600
1905.....	175,193,800	1883.....	110,149,000
1904.....	252,554,050	1882.....	84,505,000
1903.....	156,195,700	1881.....	81,280,000
1902.....	149,260,850	1880.....	74,643,400
1901.....	164,347,450	1879.....	77,703,700
Total, 44 years.....	\$8,106,366,745		

Fire losses in the United Kingdom for the first 11 months of 1922 showed a considerable reduction as compared with the same periods in the two previous years. The *Policy-Holder of Manchester*, published the following figures:

	1922	1921	1920
January.....	£1,285,000	£370,000	£303,000
February.....	477,000	350,000	694,000
March.....	505,000	425,000	506,500
April.....	347,000	643,000	479,500
May.....	792,000	936,000	1,120,000
June.....	454,500	780,000	806,000
July.....	415,700	820,000	619,000
August.....	281,700	1,070,000	561,000
September.....	345,000	750,000	940,000
October.....	305,000	620,000	1,155,000
November.....	510,900	475,000	500,000
Total for 11 months.....	£5,718,800	£7,239,000	£7,684,000
December.....		525,000	805,000
Total for 12 months.....	£5,718,800	£7,764,000	£8,489,000

FIRES, Forest. See FOREST SERVICE, UNITED STATES.

FISH, Larvical. See ROCKEFELLER FOUNDATION.

FISHERIES, United States Bureau of Fisheries of the United States.—The present annual production of the fisheries of the United States, including Alaska, on the basis of the latest available statistics, is about 2½ billion pounds, having a value to the fishermen of about \$80,000,000. The number of persons engaged in the industry, including those in the wholesale fishery trade, canneries, and other fishery establishments, is about 200,000, and the amount of capital invested is about \$154,000,000.

The total value of the canned fishery products of the United States in 1921 was \$46,634,706, and of fishery by-products \$8,351,827. The pack of canned salmon, on the basis of 48 pounds of fish to the case, amounted to 3,599,774 cases, valued at \$28,867,169. Of this quantity 2,596,826 cases, valued at \$19,632,744, were packed in Alaska, and 1,002,948 cases, valued at \$9,234,425, in the Pacific Coast States. The pack of sardines in Maine was 1,350,631 cases, valued at \$3,960,916, and in California 415,587 cases, valued at \$2,346,446. Other canned products included shad on the Pacific Coast, 894 cases, valued at \$2,597; alewives on the Atlantic Coast, 40,842 cases, valued at \$158,654; albacore and tuna, 418,821 cases, valued at \$3,073,681, and mackerel, 2,255 cases, valued at \$12,275 in California; shrimp, 667,557 cases, valued at \$3,804,781; crabs, 11,960 cases, valued at \$115,800; oysters, 455,550 cases, valued at \$2,179,271; clams, 226,130 cases, valued at \$1,166,507, and miscellaneous products valued at \$946,609.

The fishery by-products included fish scrap and meal, 107,273 tons, valued at \$3,557,142; fish oils, 7,446,281 gallons, valued at \$2,078,670; liquid glue, 347,048 gallons, valued at \$364,415; poultry, grit and lime, 259,238 tons, valued at \$2,261,754; and other by-products, 821,007

pounds, valued at \$89,846. The technological work done in 1922 included development of new preservatives for the preservation of fish nets, improved methods of freezing and transporting fish, and advances in the technique of canning sardines in California.

Biological Investigations.—These investigations during the year were directed principally to the acquisition of more definite knowledge concerning the life histories of certain of the more important food fishes, particularly such as are subjected to intensive fisheries and by reason of their distribution or habits are vulnerable to capture in numbers large in proportion to the total of the species. Noteworthy examples of such fishes are the Pacific Coast salmons, which run from the sea into fresh waters to spawn, and the various members of the whitefish family which are confined to interior waters and therefore, in many instances, subject to capture at all times throughout their lives. Important investigations of these fishes are being conducted to determine facts necessary for the establishment of effective measures for their conservation. The fishes of Chesapeake Bay, as a whole, have also been under investigation for essentially the same reasons. Grave difficulties with which the oyster industry has

SUMMARY, BY SPECIES, OF THE DISTRIBUTION OF FISH AND FISH EGGS, DURING THE FISCAL YEAR, ENDED 30 JUNE 1922.

SPECIES	Eggs	Fry	Fingerlings, yearlings and adults	Total
Catfish			52,137,880	52,137,880
Buffalofish	86,906,000	51,000,000	3,341,480	141,247,480
Carp		82,050,000	22,006,805	104,056,805

3. Thousands of pounds of Alaska salmon in Seattle cold storage plant

had to contend in recent years, particularly in Long Island Sound and on the south shore of Long Island have continued to receive attention, and in connection with this, and in its relation to other fisheries, such studies as have been possible have been made of the very serious and growing menace of water pollutions. Three biological laboratories have been open during the year, that at Fairport, Iowa, having been in full activity, that at Beaufort, N. C., being operated on a much reduced scale throughout the year, and that at Woods Hole, Mass., giving limited service during the summer.

Fish-Cultural Service.—Fish-cultural operations and the rescue of fishes from overflowed lands during the fiscal year 1922 resulted in a net output of 5,125,101,320 fish and fish eggs for distribution, as compared with 4,962,489,405 for the fiscal year 1921. This increased output, which includes an increase of approximately 33 per cent in the output of fingerling fish, was accomplished with a decrease of about 6 per cent in operating costs. The cost per million of the fish and eggs produced during 1922 was \$120.36, as compared with \$128.06 per million in 1921. Hatchery operations were conducted in 33 States and the Territory of Alaska, at 38 main stations and 35 auxiliaries. During the year the bureau's five distribution cars traveled a total of 77,128 miles, and the detached messengers delivering fish traveled 306,215 miles. Approximately 10,370 applicants were supplied with fish. In the preceding table is a summary of the distributions by species.

Alaska Fisheries Service.—The work of the bureau of fisheries in Alaska is carried on along two principal lines, first, for the protection of the salmon and other fisheries proper, and, second, in connection with the American fur-seal herd which annually resorts to the Pribilof Islands, Bering Sea. In the fisheries service a small force of permanent agents and wardens, and a considerably larger number of temporary employees patrol the waters during the active fishing seasons to enforce the laws and regulations for the protection of the salmon and other fisheries. Scientific and practical studies of the fisheries are made to determine the need of restrictions on operations. Commercial fishing in streams and within 500 yards off their mouths is prohibited and further limitations have been imposed in extensive fisheries reservations established by executive orders. Statistics collected by the Alaska service show that in 1921 there were 15,070 persons employed in the fisheries, the active investment of capital was \$39,001,096, and the value of products was \$24,086,867. Operations were expanded considerably in the season of 1922. The work of the fur-seal service consists chiefly in the killing of the surplus male seals on the Pribilof Islands and the preservation of the skins which are dressed and dyed and sold at public auction by agents of the Department of Commerce. The census of the seal herd as of 10 Aug. 1922, showed a total of 604,962 animals. In the calendar year 1921, 23,681 sealskins were taken, and through the summer sealing season ending 5 Aug. 1922, 30,260 skins had been taken. Additional skins will be secured in the fall. In the fiscal year 1922 two sales were held at Saint Louis at

which a total of 22,976 dressed and dyed fur-seal skins and 579 culls were disposed of, the gross proceeds being \$722,060. Under the terms of the fur-seal convention of 7 July 1911, Great Britain and Japan are each entitled to 15 per cent of the sealskins taken, but by mutual agreement payments have been made to those countries of 15 per cent of the net proceeds of sales. Herds of blue foxes are also maintained on the Pribilof Islands, from which in the winter of 1921–22 there were taken 733 skins, which sold for \$67,310.

HENRY F. MOORE,
*Deputy Commissioner, United States Bureau
of Fisheries.*

FISK UNIVERSITY, a non-sectarian co-educational institution for colored students, founded in 1865 and located at Nashville, Tenn. In 1922–23 it had a faculty of 45 members. The student registration at the end of the second quarter of the 1922–23 session totaled 618. The institution's property is valued at \$516,326 and its income for the year 1921–22 was \$151,120. Fayette Avery McKenzie, LL.D., is president.

FIUME, an independent state on the borderland between Italy and Yugoslavia near the head of the Adriatic. It has an area of eight square miles and a population of 49,806. The state was created by the treaty of Rapallo, signed 12 Nov. 1920 between Italy and Yugoslavia. In 1921 and in 1922 there was considerable unrest in the state resulting in the setting up of a provisional government under Lieutenant Cabruna.

FLAGLER, Clement Alexander Finley, American army officer: b. Georgia, 17 Aug. 1867; d. Baltimore, Md., 7 May 1922. After taking the Bachelor of Science degree at Griswold College, Iowa, in 1885, he entered the United States Military Academy and, upon his graduation therefrom in 1889, was commissioned additional second-lieutenant in the corps of engineers of the United States army. He was appointed second-lieutenant 1 April 1890; was graduated from the Engineering School of Application, 1892; and promoted to first-lieutenant 4 Oct. 1894. During 1894–95 he was instructor in civil and military engineering at the United States Military Academy. On 17 May 1898, following the outbreak of the war with Spain, he was commissioned a major in the engineering corps of the volunteer army and served on the staff of major-general J. H. Wilson at Chickamauga Park, Ga., Charleston, S. C., and Porto Rico. He was honorably discharged from the volunteers, 31 Dec. 1898, and resumed his rank of captain in the regular army to which he had been promoted 5 July 1898. He was engineer officer of the Department of the East, 1900–02, and in 1906 was appointed a member of the Chesapeake and Delaware canal commission. The same year, on 27 June, he was made a major in the regular army and on 27 Feb. 1913 was promoted to lieutenant-colonel. He served as a member of Gen. Frederick Funston's staff during the Vera Cruz expedition in 1914. In 1914–15 he was an instructor at the Army War College, and in 1916 was assigned to duty in Washington. He was promoted to colonel in 1917 and on 4 Jan. 1918

was nominated to the rank of brigadier-general by President Wilson. During the early part of America's participation in the World War, he was artillery commander of the 5th Division at St. Mihiel. Later he was promoted to major-general and given command of the artillery of the Third Army Corps in the Argonne-Meuse sector. After the armistice he commanded the 42d (Rainbow) Division in the army of the Rhine from 21 Nov. 1918 to 6 April 1919. Upon his return from overseas he was made commandant of the engineering school at Camp Humphreys, Va. Thereafter he was stationed for a time in Honolulu. In May 1921 he was transferred to Baltimore as commanding officer of the Eastern Division of the United States Engineer Corps, the position held by him at the time of his death.

FLAXSEED. The 1922 flaxseed crop of the United States was estimated by the Department of Agriculture at 12,238,000 bushels, as compared with the 1921 crop of 8,029,000 bushels, and the 1920 crop of 10,774,000 bushels. The acreage for the three years was 1,308,000 in 1922, 1,108,000 in 1921 and 1,757,000 in 1920. The total farm value of the crop based on 1 December prices was \$25,869,000 in 1922, \$11,648,000 in 1921 and \$19,039,000 in 1920. The average farm price per bushel on 1 December was 211.4 cents in 1922, 145.1 cents in 1921 and 176.7 cents in 1920. The production in bushels by States was as follows: Wisconsin, 52,000; Minnesota, 3,770,000; Iowa, 80,000; North Dakota, 5,462,000; South Dakota, 1,834,000; Nebraska, 24,000; Kansas, 120,000; Montana, 889,000 and Wyoming, 7,000.

FLINT, Charles Wesley, American clergyman and educator: b. in Stouffville, Ontario, Canada, 14 Nov. 1878. He was graduated from Victoria College, University of Toronto in 1900 and from the Drew Theological Seminary in 1906. Columbia gave him the degree of M.A. in 1908; Wesleyan University that of D.D. in 1912; and Coe College, Iowa, that of LL.D. in 1916. He entered the Methodist Episcopal ministry in 1900 and was pastor at Pocahontas, Iowa, in 1900-02; Marathon, Iowa, in 1902-04; Bayville, Long Island, 1904-06; Saint James's Church, Brooklyn, 1906-08; Middletown, Conn., 1908-13; and New York Avenue Church, Brooklyn, 1913-15. In 1915 he became president of Cornell College, Mt. Vernon, Iowa, where he remained until 1922 when he was made Chancellor of Syracuse University. He made his first appearance before a Syracuse assembly when he spoke to 4,000 students in an open air meeting in the Archbold stadium on 20 September. He denounced drunkenness as a "traitorous taint" and hazing as belonging to "the stone age of college life."

FLOOD CONTROL, Appropriations for. See RIVERS AND HARBORS, APPROPRIATION FOR IMPROVEMENT OF.

FLORA MACDONALD COLLEGE, a Presbyterian educational institution for women, founded in 1896 and located at Red Springs, N. C. In 1922-23 it had a faculty of 35 members, 304 students, and property valued at \$460,000. Income figures not given. Charles Graves Vardell, A.B., D.D., is president.

FLORIDA, a South Atlantic State of the United States, bounded on the north by Georgia and Alabama, on the east by the Atlantic Ocean, south by the Straits of Florida and west by the Gulf of Mexico. The State has an area of 58,666 square miles, which makes it the 21st State in order of size; and in 1920 had a population of 968,470, which made it 32d in order of population. Of the entire population in 1920, whites numbered 638,983, negroes, 329,487, Asiatics, 312 and Indians, 518. In the same year the foreign-born numbered 43,008, including 8,700 from the West Indies, 4,451 English, 4,745 Italians, 4,121 Canadians, 4,091 Spaniards and 3,534 Germans. The seat of the State government is at Tallahassee. The largest cities in the State, with their population, in 1920 were: Jacksonville, 91,558; Tampa, 51,608; Pensacola, 31,035; Miami, 29,549; Key West, 18,749, and Tallahassee, 6,000.

Religion.—The chief religious denominations are Baptists, 131,107; Methodists, 114,821; Roman Catholics, 24,650; Protestant Episcopalians, 10,399; Presbyterians, 10,170; and Congregationalists, 2,878.

Education.—Attendance at the primary schools of the State is not compulsory. Separate schools are provided for white and colored children. There are in the State 2,584 public primary schools with 6,296 teachers and 212,465 pupils; 125 high schools with 525 teachers and 12,695 pupils. For purposes of higher education, the State maintains a university at Gainesville and a State College for Women at Tallahassee. In addition to these State institutions, there is Rollins College at Winter Park; also, the John B. Stetson University at DeLand. The expenditure on primary education in 1920 amounted to \$7,003,188.

Agriculture.—Florida is one of the most important fruit growing States of the Union, the citrus fruits being especially important. The production of citrus fruits in 1922 was estimated at 15,000,000 boxes by the United States Department of Agriculture. Of this total about 8,400,000 boxes were oranges and tangerines, the remainder consisting of grape fruit. The chief crops, with their acreage, yield and value, for the year 1922 were: corn, 750,000 acres, 10,500,000 bushels, \$7,350,000; oats, 37,000 acres, 481,000 bushels, \$327,000; oranges and tangerines, 8,400,000 boxes, \$19,320,000; tame hay, 126,000 acres, 139,000 tons, \$2,572,000; sorghum syrup, 1,000 acres, 130,000 gallons, \$68,000; rice, 3,000 acres, 75,000 bushels, \$98,000; potatoes, 26,000 acres, 2,600,000 bushels, \$4,550,000; sweet potatoes, 32,000 acres, 2,720,000 bushels, \$2,557,000; cotton, 124,000 acres, 25,000 bales, \$2,875,000; tobacco, 3,000 acres, 3,300,000 pounds, \$1,551,000; peanuts, 72,000 acres, 44,928,000 pounds, \$2,246,000; peaches, 130,000 bushels, and pears, 50,000 bushels. According to the last agricultural census there were in Florida 154,005 farms, with a total acreage of 6,046,691 acres, of which 2,297,271 acres were improved. The same census gave the value of all farm property in the State at \$330,301,317. Florida is about the only State in the United States in which the pineapple crop is considerable. Outside of the fruit crop, tobacco, Indian corn,

oats, peas and peanuts are the chief sources of agricultural wealth. On 1 Jan. 1923 there were in the State 38,000 horses, valued at \$3,-990,000; 43,000 mules, valued at \$5,934,000; 97,-000 milk cows, valued at \$5,432,000; 774,000 other cattle, valued at \$12,384,000; 63,000 sheep, valued at \$220,000, and 703,000 hogs, valued at \$5,272,000. About three-fourths of the State is covered by valuable timber. The State exports large quantities of oak and pitch pine. Tar, turpentine and rosin are important by-products of the timber industry.

Mining.—The State has extensive natural deposits of phosphate rock, of which great quantities are yearly ground into fertilizer and exported. The annual value of the phosphate rock output is about \$6,000,000. Other mineral products are Fullers' earth, lime and mineral waters.

Fisheries.—The fisheries of the State are extensive, and while not fully developed, are more important than those of the neighboring States. The chief products of this industry are shad, snappers, mullet, tuna, tarpon, turtles and sponges. Florida has a practical monopoly of the last-named industry.

Manufactures.—At the last census there were in the State 5,493 manufacturing establishments with an aggregate capital of \$65,061,746, employing 69,955 hands, who received in wages \$40,-075,037. The chief manufactures are those of tobacco, centering in Key West and Tampa, both cities competing closely with Cuba in the manufacture of fine cigars.

Communications.—There are 5,212 miles of railway in the State and 218 miles of electric railway. Water transportation is facilitated by the position of the State, and a large trade is carried on through the port of Pensacola. A feature of the transportation system of the State is the line of railway which crosses the Keys and terminates at Key West. During 1922, a regular air service was maintained between Florida and Cuba.

Finances.—At the beginning of the fiscal year, 1921-22, the State Treasury had a balance on hand of \$1,695,473.56. Receipts during the fiscal year, 1921-22, amounted to \$12,480,857.96. Disbursements during the same period amounted to \$11,913,041.88, leaving a balance on hand at the beginning of the fiscal year, 1922-23, of \$2,263,289.64. In 1922, the public debt of Florida consisted of refunding bonds to the amount of \$601,567. The assessed value of real property was \$288,040,507; personal property, \$79,571,-126; railroad, \$52,017,530; telegraph, \$1,094,752; Pullman cars, \$724,599, making a grand total of \$421,448,514, as of 1 Jan. 1922.

Government.—The State executive is a governor, elected for four years. The legislative power is vested in a State legislature of two chambers—a senate of 32 members and a house of representatives of 75 members. Senators are elected for four years and members of the lower house for two years. Sessions are held biennially beginning in April of odd years and are limited to sixty days. The governor in 1922-23 was Cary A. Hardee; secretary of state, H. C. Crawford; president of the senate, W. A. MacWilliams; attorney general, Rivers Buford; comptroller, Ernest Amos; treasurer, J. C. Lun-

ing; auditor, W. M. Smith; superintendent of education, W. S. Cawthon.

Judiciary: Chief Justice, R. Fenwick Taylor; Associate Justices, James R. Whitfield, William H. Ellis, Jefferson B. Browne, Thomas F. West.

FLORIDA, University of, a State educational institution for men, founded in 1905 and located at Gainesville, Fla. In 1922-23 it had a faculty of 75 members, 1,252 students, property valued at \$1,500,000 and an income of \$219,-054. Albert Alexander Murphree, LL.D., is president.

a big falling off in the food products exported from the United States in 1922 as compared with similar exports in 1921. Only in the shipments of canned fruits and vegetables were increases registered. The total value of all meats shipped in 1922 was \$134,919,343 as compared with \$150,878,243 in the preceding year. Grain shipments dropped in value from \$758,397,520 in 1921 to \$515,913,077 in 1922. The preceding table compiled by the Department of Commerce shows the quantity and value of the principal food products exported in 1921 and 1922.

Exports of sugar, not shown in the above list, reached 1,836,722,436 pounds or about twice the amount exported in 1921 and almost 13 times the amount exported in any pre-war year. Butter exports totaled 10,937,519 pounds in 1922 as compared with 8,014,731 pounds in 1921. Cheese exports, which like butter are not shown separately in the above list, totaled but 5,006,574 pounds in 1922 as compared with 11,771,971 pounds in 1921. Dried fruit exports, likewise not shown in the above list, were as follows: apples, 1922, 17,391,339 pounds; 1921, 19,962,306 pounds; apricots, 1922, 9,858,450 pounds; 1921, 21,575,149 pounds; raisins, 1922, 93,891,071 pounds; 1921, 32,968,664; peaches, 1922, 5,764,923 pounds; 1921, 6,893,124 pounds; prunes, 1922, 94,216,405 pounds; 1921, 117,933,740 pounds. For Food Production see AGRICULTURE IN THE UNITED STATES; FARM PRODUCTS; HORTICULTURE, etc.

FOOD STANDARDS, Federal. On Jan. 1923, Secretary Wallace of the United States Department of Agriculture, announced the adoption, for the guidance of Federal officials in the enforcement of the Federal Food and Drug Act, of standards and definitions of butter, condensed milk, breads (wheat, rye, raisin, brown, etc.), ginger ale, cacao products (cocoa, chocolate, etc.), cayenne pepper and oil of cassia. The standards became effective at once and the announcement of their adoption stated that they had been approved by the Association of American Dairy, Food and Drug Officials and the Association of Official Agricultural Chemists. It was further stated that they will be used generally by State officials in the enforcement of State food laws.

The texts of the standards and definitions, which were adopted upon the recommendation of the Joint Committee on Definitions and Standards, follow:

Butter.—Butter is the clean, sound product made by gathering in any manner the fat of fresh or ripened milk or cream into a mass, which also includes a small portion of the other natural milk constituents, with or without salt, and contains, all tolerances provided for, less than 16 per cent of water, and not less than 80 per cent of milk fat. By acts of Congress, approved August 2, 1886, and May 9, 1902, butter may also contain added coloring matter.

Renovated butter, process butter, is the clean, sound product made in semblance of butter from melted, clarified or refined butter-fat, without the addition or use of any substance other than water, milk, cream, or salt, and contains, all tolerances provided for, less than 16 per cent of water, and not less than 80 per cent of milk fat.

Condensed Milk.—Condensed milk, evaporated milk, concentrated milk is the product resulting from the evaporation of a considerable portion of the water from milk, or from milk with adjustment, if necessary, of the ratio of fat to non-fat solids by the addition or by the abstraction of cream. It contains, all tolerances being allowed for, not less than seven and eight-tenths per cent of milk fat, nor less than twenty-five and five-tenths per cent of total milk solids; provided, however, that the sum of the percentages of milk fat and total milk solids be not less than thirty-three and seven-tenths.

Bread.—Bread is the sound product made by baking a dough consisting of a leavened or unleavened mixture of ground grain and (or) other clean, sound, edible farinaceous substance, with potable water, and with or without the addition of other edible substances.*

In the United States the name "bread," unqualified, is understood to mean wheat bread, white bread.

Wheat bread dough, white bread dough, is the dough consisting of a leavened and kneaded mixture of flour, potable water, edible fat or oil, sugar and (or) other fermentable carbohydrate substance, salt and yeast, with or without the addition of milk or a milk product of diastatic and (or) proteolytic ferments, and of such limited amounts of unobjectionable salts as serve solely as yeast nutrients,* and with or without the replacement of not more than 3 per cent (3%) of the flour ingredient by some other edible farinaceous substance.

Wheat bread, white bread, is the bread obtained by baking wheat bread dough in the form of a loaf or of rolls or other units smaller than a loaf. It contains, one hour or more after baking, not more than thirty-eight per cent (38%) of moisture, as determined upon the entire loaf or other unit.

Milk bread is the bread obtained by baking a wheat bread dough in which not less than one-third (1) of the water ingredient has been replaced by milk or the constituents of milk solids in the proportions normal for whole milk. It conforms to the moisture limitations for wheat bread.

Rye bread is the bread obtained by baking a dough which differs from wheat bread dough in that not less than one-third (1) of the flour ingredient has been replaced by rye flour. It conforms to the moisture limitation for wheat bread.

Raisin bread is the bread obtained by baking wheat bread dough, to which have been added sound raisins in quantity equivalent to at least three (3) ounces for each pound of the baked product and which may contain proportions of sweetening and shortening ingredients greater than those commonly used in wheat bread dough.

Brown bread, Boston brown bread, is a bread made from rye and corn meals, with or without flour, whole-wheat flour and (or) rye flour, with molasses and in which chemical leavening agents, with or without sour milk, are commonly used instead of yeast.

In some localities the name brown bread is used to designate a bread obtained by baking a dough which differs from wheat bread dough in that a proportion of the flour ingredient has been replaced by whole wheat flour.

Ginger Ale.—Ginger ale flavor, ginger ale concentrate, is the flavoring product in which ginger is the essential constituent, with or without aromatic and pungent ingredients, citrus oils and fruit juices.

Ginger ale is the carbonated beverage prepared from ginger ale flavor, sugar (sucrose) syrup, harmless organic acid, potable water and caramel color.

Cacao Products.—Cacao beans, cocoa beans, are the seeds of trees belonging to the genus Theobroma, especially those of Theobroma, cacao L., and closely related species.

Cacao nibs, cocoa nibs, "cracked cocoa," are roasted or dried cacao beans, broken and freed from germ and from shell or husk.

Chocolate, plain chocolate, bitter chocolate, chocolate liquor, chocolate paste, bitter chocolate coating, is the solid or plastic mass obtained by grinding cacao nibs and contains not less than 50 per cent of cacao fat and, on the moisture- and fat-free basis, not more than 8 per cent of total ash, not more than four-tenths per cent of ash insoluble in hydrochloric acid and not more than 7 per cent of crude fiber.

Sweet chocolate, sweet chocolate coating, is chocolate mixed with sugar (sucrose), with or without the addition of cacao, butter, spices, or other flavoring materials, and contains, on the moisture, sugar- and fat-free basis, no greater percentage of total ash insoluble in hydrochloric acid, or crude fiber, respectively, than is found in moisture- and fat-free chocolate.

Milk chocolate, sweet milk chocolate, is the product obtained by grinding chocolate with sugar, with the solids of whole milk, or the constituents of milk solids in proportions normal for whole milk and with or without cacao butter and (or) flavoring material. It contains not less than 12 per cent of milk solids.

Cocoa, powdered cocoa, is a chocolate deprived of a portion of its fat and pulverized and contains, on the moisture and fat-free basis, no greater percentage of total ash, ash insoluble in hydrochloric acid, or crude fiber, respectively, than is found in moisture- and fat-free chocolate.

"Breakfast cocoa" is cocoa which contains not less than 22 per cent of cacao fat.

Sweet cocoa, sweetened cocoa, is cocoa mixed with sugar (sucrose), and contains no more than 65 per cent of sugar in the finished product, and, on the moisture-sugar- and fat-free bases, no greater percentage of total ash, ash insol-

*The propriety of the use of minute amounts of oxidizing agents as enzyme activators is reserved for future consideration and without prejudice.

† Definitions and standards for alkalinized products will form a separate schedule.

uble in hydrochloric acid, or crude fiber, respectively, than is found in moisture- and fat-free chocolate.

Sweet milk cocoa is the product obtained by grinding cocoa with sugar, with the solids of whole milk, or the constituents of milk solids in proportions normal for whole milk, and with or without flavoring material. It contains not less than 12 per cent of milk solids.

Cacaco butter, cocoa butter, is the edible fat obtained from sound cacao beans (seeds of *Theobroma cacao* L., or other closely related species), either before or after roasting.

Cayenne Pepper.—Cayenne pepper, cayenne, is the dried, ripe fruit of *Capsicum futescens* L., *Capsicum baccatum* L., or some other small-fruited species of *Capsicum*. It contains not less than 15 per cent of non-volatile ether extract, not more than 15-10 per cent of starch, not more than 28 per cent of crude fiber, not more than 8 per cent of total ash, nor more than 125-100 per cent of ash insoluble in hydrochloric acid.

Oil of Cassia.—Oil of Cassia is the lead-free volatile oil obtained from the leaves or bark of *cinnamomum cassia* B., and contains not less than 80 per cent by volume of cinnamic aldehyde.

FOORD, John, Scottish-American journalist: b. Perthshire, Scotland, 12 Oct. 1844; d. Washington, D. C., 17 April 1922. He was educated at Dundee and went to London, where he became a journalist. In 1869, he became a reporter for the *New York Times* and attracted attention by his handling of the exposures of the "Tweed Ring." He then began to write editorials and displayed a wide grasp of affairs and a great insight into commercial and financial topics. In 1876, Mr. Foord became editor-in-chief of the *New York Times* (then a Republican paper) and held this position until 1883. Next he became editor and part owner of *The Brooklyn Union*; then he edited *Harper's Weekly*; and for the last 20 years was a member of the editorial staff of *The Journal of Commerce*, devoting his pen to economics and international topics. In the summer and autumn of 1920, while in the Orient, he contributed to the *New York Times* a series of signed articles on his observations. The growth of his interest in Asiatic affairs led him to the formation in 1898 of the American Asiatic Association, which was a protest against the encroachment of German and Russian aggression upon Asia. Mr. Foord was also the founder and editor of *The Journal of the American Asiatic Association*, published from 1898 to 1917. In the last year the late Willard Straight, who was president of the American Asiatic Association, agreed to finance the development of this *Journal* into a broad general magazine and he and Mr. Foord then organized and began the publication of *Asia*, with Mr. Foord as editor. In 1914 he joined James A. Farrell, president of the United States Steel Corporation, the late Willard Straight and Robert H. Patchin in organizing the National Foreign Trade Council, and with Willard Straight founded India House. His speech responding to the toast "Why India House?" at the first dinner of the club was published throughout the world. For many years Mr. Foord was president of the Burns Society. He wrote a life of Andrew H. Green, one of the factors in New York City government in cleaning up the "Tweed Ring"; and the life of Simon Stern, lawyer and president of the bar association. His death was occasioned by injuries received when he was struck by an automobile in Washington.

FORBES, Jesse Franklin, American clergyman: b. Hartford, Conn., 19 Dec. 1847; d. Watermill, Long Island, 9 July 1922. He was graduated from Amherst College in 1874 and from Union Theological Seminary in 1877. He was ordained to the Congregational ministry in 1878 and went to officiate at the First Congregational Church, Warren, Mass., where he remained seven years. Then he became pastor of the Adams Memorial Presbyterian Church of New York, 30th Street, near 3d Avenue, and remained there for 25 years. When John S. Kennedy left several million dollars for Presbyterian Church Extension in New York, Dr. Forbes gave up his active pastorate to devote all his time to the church extension committee. His office was in the Presbyterian Building, 156 Fifth Avenue, and as secretary of this committee \$1,500,000 passed through his hands for purchasing new property, for building, paying off mortgages, etc. He bought or built 27 churches, and parish houses in the boroughs of Manhattan, The Bronx and Richmond. Every Sunday he preached in a different pulpit and it was said that he knew more about local Presbyterianism than any other living person. For three successive terms he was Moderator of the Presbytery and for many years he had been a member of the Moderator's Council. New York University gave him the degree of Ph.D. in 1894 and Bellevue College, Nebraska, that of D.D. in 1906. Dr. Forbes wrote for the *New York Observer* and other religious papers and magazines.

FORDHAM UNIVERSITY, a co-educational institution, founded in 1841 and located at Fordham, New York City. Although controlled by the Roman Catholic Church, it is non-sectarian. In 1922-23 it had a faculty of 140 members, 3,997 students, property valued at \$3,600,000, and a gross income of \$562,000. Rev. Edward P. Tivnan, S.J., Ph.D., is president.

FOREIGN POLICY ASSOCIATION. See PEACE AND ARBITRATION, INTERNATIONAL.

FOREIGN RELATIONS, Inc., Council on. The Council on Foreign Relations of New York, a national organization which aims to provide a continuous conference on the international aspects of America's political, economic and financial problems. Its membership, made up of men of many professions, is limited in number, as a large body would be unwieldy and freedom in discussion would be lost. At the council's round-table meetings and dinners foreign guests are entertained, and the attitude which the United States might properly assume toward the problems they raise is discussed. The council is not a trade organization nor has it any connection with any political party. It is simply a group of men concerned in spreading a knowledge of international relations and, in particular, in developing a reasoned American foreign policy.

In addition to holding regular meetings, the Council on Foreign Relations publishes occasional bulletins and in the fall of 1922 founded a quarterly review, *Foreign Affairs*, under the editorship of Dr. Archibald Cary Coolidge of Harvard University, with Hamilton Fish Arm-

strong as managing editor. The following constitute the editorial advisory board: Isaiah Bowman, George H. Blakeslee, Stephen P. Duggan, John W. Davis, Harry A. Garfield, Edwin F. Gay, Alexander Legge, Leo S. Rowe, George W. Wickersham.

Foreign Affairs, a non-partisan medium for the discussion of international problems, has been warmly welcomed both here and abroad. The council feels that it is performing an important public service in making possible the publication of an authoritative review of this nature. During 1922, the Council on Foreign Relations also held a number of meetings and organized study and discussion groups among its members. The chief public meeting of the year organized by the Council on Foreign Relations was that held at the Metropolitan Opera House, when M. Georges Clemenceau, former Premier of France, made his only public address in New York on 21 Nov. 1922. The officers of the Council on Foreign Relations are as follows: Elihu Root, honorary chairman; John W. Davis, president; Paul D. Cravath, vice-president; Edwin F. Gay, secretary and treasurer. Directors: Isaiah Bowman, Archibald C. Coolidge, Norman H. Davis, Stephen P. Duggan, John H. Finley, David F. Houston, Otto H. Kahn, Frank L. Polk, Whitney H. Shepardson, William R. Shepherd, Paul M. Warburg, George W. Wickersham.

HAMILTON FISH ARMSTRONG,
Manager, Council on Foreign Relations.

FOREST INSECTS. See **ENTOMOLOGY, UNITED STATES BUREAU OF.**

FOREST SERVICE, United States. In the specific work of the Forest Service bearing upon the national situation, the most striking advances during the past year were the threefold expansion of forest protection in co-operation with the States and the enactment of a general forest exchange law. This legislation will make possible a substantial consolidation of the existing national forests through the acquisition of privately owned cutover lands within their exterior boundaries. The Forest Service is continuing the nation-wide study, in co-operation with State foresters, timberland owners, and other agencies, of the barriers to reforestation which exist in each important forest region, and of the methods of cutting and fire protection which are necessary to keep the various types of forest land productive. From this study it will be possible to formulate in reasonably definite terms the measures that may be equitably enforced by public regulation in each region to keep up the productiveness and usefulness of its forest lands. During January, 1922, extended hearings were held by the committee on agriculture of the House of Representatives on the need for additional Federal legislation dealing with the national forestry situation. It is hoped that a constructive measure will be brought before Congress as the result of these hearings. The immediate needs are: (1) The extension of Federal co-operation with States; (2) An enlarged scale of national forest purchases; (3) The extension of

forest protection and management to all lands now under national ownership or control whose greatest utility lies in the growing of timber or protection of watersheds; (4) Co-operation with States in growing and distributing forest planting material; (5) Provision for enlarged research in order to keep pace with the demand of timber growers and wood users for needed technical information.

Alaska.—Good progress was made in collecting the information essential to the practical development of Tongass National Forest, which occupies the heavily timbered panhandle of Alaska. The merchantable timber on this forest includes at least 100 million cords of western hemlock and Sitka spruce. Fully 90 per cent of this timber is admirably adapted for use in the manufacture of wood pulp and paper. It is estimated that this forest alone can furnish perpetually an annual yield of print paper equal to one-third of our total national consumption. As a step toward the establishment of the industry, the Tongass National Forest was tentatively divided into 14 zones, each embracing sufficient timber to furnish a large paper mill with a permanent supply of raw material. Each zone is laid out so as to include sufficient water-power to meet the requirements of manufacture. The Federal Power Commission is co-operating with the Forest Service in securing water-power data. Roads have been, and more are being, constructed in the Alaska forests in co-operation with the Bureau of Public Roads. The result has been a marked increase in home building and a decided improvement in business and living conditions there.

National Forest Properties.—Specific acts of Congress added to the forests 55,753 acres, and a presidential proclamation 16,719 acres. In Michigan 11,499 acres passed from State to Federal ownership by exchange and were added to the Michigan National Forest. At the same time 8,320 acres were eliminated from this forest and transferred to the State. Exchange agreements with other States resulted in transfers of titles and eliminations totaling 43,675 acres. At the close of the fiscal year, the net area of national forest land was 156,837,282 acres. The net increase for the year was 171,327 acres. Purchase agreements were approved by the National Forest Reservation Commission covering 242,169 acres at a total cost of \$800,584.96, or \$3.30 per acre. Actual acquisition of these lands will not take place until subsequent years. The acquisitions completed last year totaled 137,659.24 acres. The cost was \$839,406.91, an average of \$6.49 per acre. The Commission, which controls all purchases of land under the Weeks law, has recommended that \$2,000,000 be appropriated for the purchase of forest lands during the fiscal year 1924. This would be a return to the scale of expenditure established by the Weeks law itself during the first five years following its passage. This amount is the least that can be expended with complete efficiency in view of the size of some of the holdings offered and the field organization that effective work necessitates. It is essential that purchases by the government keep pace more nearly with the progress of deforestation.

One of the most significant events in the history of the national forest movement was the signing by the President on 20 March 1922 of a bill authorizing exchange of national forest lands or stumpage for privately owned lands within a national forest in the same State. This will permit private owners who cannot handle their holdings advantageously to offer them in exchange for lands or stumpage of equal value, and which are better located for their purposes. No other forest legislation passed in recent years will have so far-reaching an influence for the betterment and extension of the public forest properties. This act is quite different from the Lieu Selection Act of 4 June 1897, which conferred on owners of land within national forest boundaries the right to surrender title to the government and take other lands of equal area, quite irrespective of wide discrepancies in value, which almost invariably were grossly unfavorable to the public interest. Acceptance of exchange by the government was mandatory and not discretionary under the lieu act. There was, therefore, no way to prevent lieu selections that were against public interest. Public resources were spoiled to such an extent that this act was repealed 1 Feb. 1905, thus correcting a crying scandal.

Co-operation with States.—Protection from fire of lands in State and private ownership on watersheds of navigable streams was made more effective by an increase in the Federal appropriation for this purpose from \$125,000 to \$400,000. This has led to the extension of protection to 4,800,000 acres in New York State and 5,000,000 acres in Maine, and to 8,000,000 to 12,000,000 acres in Louisiana. It is noteworthy that though the 1922 increase in Federal funds was less than one-half of the increase in State expenditures, the area to which fire protection was extended increased 26,000,000 acres during the year. In addition to public expenditures, amounts now expended by private owners total approximately \$1,000,000 a year. It is doubtful if any form of Federal expenditure is more valuable in assuring a future supply of forest products for the nation than this co-operation. A material increase in the Federal appropriation for this purpose is urgently needed.

Forest Management.—The national forest resources are being brought under a system of management that has as its object the growing of timber as fast as it is cut. Studies are being conducted continually with a view to the perfecting of such systematic management as will contribute most to the needs of the many industries that depend on supplies of timber. Timber sold during the calendar year ending 31 Dec. 1921 totaled 1,276,991,000 board feet, valued at \$3,762,793. The number of timber sales was 13,690. The number of acres planted and sowed 8,901.

Grazing.—During the year, 37,241 permits were issued for grazing of stock on the national forests. The following numbers of head of stock were grazed. Sheep 6,936,377, cattle 1,999,680, horses 78,115, goats 43,574, swine 2,453, a grand total of 9,060,199 head.

Fish and Game Protection.—Fish and game management plans are being developed on all forests as fast as funds and personnel will

permit. Their objectives are the preservation of adequate spawning and breeding stock; control of environmental factors, and promotion of public sentiment, laws, and organizations necessary to the proper protection and development of wild life. In this work the views of game enthusiast, sportsman, stockman, and lumberman must be recognized and harmonized.

Visitors to National Forests.—Motors and good roads have resulted in marked increases of visitors to the national forests. Between 5,000,000 and 7,000,000 people visit them each year. No restrictions are placed on these visits excepting care with fire and cleanliness about camps. Public welfare dictates an aggressive policy of ascertaining, developing, and offering the recreational opportunities in the national forests.

Roads and Trails.—During the fiscal year 1922, 1,104 miles of road and 2,959 miles of trail were constructed and improved and 3,007 miles of road and 4,294 miles of trail were maintained. These mileages include the more costly and important work of the Bureau of Public Roads and also the more simple work of the Forest Service. A study is being made of the road needs of the national forests under the two classes of roads specified in the Federal highway act.

Research.—Forest research has for its broad aim the obtaining of the knowledge necessary to the best use of our forest land and of what it can be made to grow. This involves a number of subsidiary studies. A study of forest fires is being conducted to determine where most fires occur, how they are caused and the weak spots in prevention organizations. Also the relation between weather conditions and fires is being studied. Low humidity means danger. Abundant moisture in the air acts like a wet blanket. Tests made on fires in the Pacific northwest have predicted with surprising accuracy the rising or falling violence of the fires and made possible increased efficiency of attack. The Forest Products' Laboratory studies the uses to which wood may be put, its strength and its preservation. Its task is to do by saving what forest management does by growing. The past year was one of the most successful in the history of the laboratory. The scope of fundamental research was enlarged, its application increased, co-operation work with industrial agencies extended and new methods of disseminating information developed. As examples; standard methods of mechanical wood tests developed here were adopted by the American Society for Testing Materials. A committee representing 13 national organizations adopted specifications for railroad ties proposed by two sponsors appointed by them, one being the Forest Service. An exhaustive research was made to determine kinds of wood and manufacturing conditions necessary to insure efficient airplane propellers. It has developed the fact that practically all commercial American woods may be used under proper manufacturing conditions. This knowledge during the past war period would have saved enormous expenditures for mahogany and walnut. The proper gluing of woods; the causes of weaknesses. the use of boxes, crates and

fiber containers, which require approximately 16 per cent of our lumber; and the elimination of waste in wood using have all been studied, together with kiln-drying methods. The production of sugar and ethyl alcohol from mill waste and sawdust was investigated and showed that a 25 per cent increase of convertible sugars could be secured without appreciable increase in expense. Educational classes in kiln-drying, boxing and crating were given to industrial representatives. Also the publication of results of laboratory research was given to the press and technical and popular magazines, and a wide circle of readers reached. To promote the diffusion of knowledge of forestry generally and secure best results in the efforts of all parts of the service to bring about better protection of the national forests, informational and educational activities have been carried on through schools and organizations. Exhibits and motion pictures have been shown and co-operation has been given through educational agencies to the end that enlightened action on the needs and aims of forestry for the entire nation may be secured.

H. R. KYLIE,
Forest Service, United States Department of
Agriculture.

FORSYTHE, Grace Strachan, American educator and school reformer: b. Buffalo, N. Y., 1863; d. New York City, 21 July 1922. Her father was the proprietor of a small soap and candle manufacturing business and she was one of nine children. At the age of 16 she was graduated from the State normal school of Buffalo, taught in various public schools in Buffalo and in 1896 was made principal of public school 42, in Brooklyn. Four years later she was promoted to be an assistant superintendent of schools. In 1904 she was made a district superintendent and began her campaign of "equal pay for equal work" for the right of a married woman teacher to hold her position; and for many other reforms and innovations in the local schools system. In 1904 also she turned her house, 293 Henry Street, Brooklyn, into a club house for teachers where they might discuss the problems of their profession. In 1907 she became president of the Interborough Association of Women Teachers founded in 1906 and of which she had been chairman. Under her leadership bills providing for the standardization of pay were introduced at Albany, N. Y., in 1907, 1908 and 1909. Each year the bills were passed by the assembly and senate but vetoed by Mayor McClellan and Gov. Charles E. Hughes. In 1912 the 15,000 members of her organization had the satisfaction of seeing the bill passed signed by Mayor Gaynor and Governor Dix. In 1916 she campaigned through New York State in behalf of the teachers' pension bill, and during the trip Timothy J. Forsythe, to whom she was married at Fairhaven, Vt., in 1917, acted as her press agent. In 1921 Mrs. Forsythe was appointed a member of the board of examiners to fill a temporary vacancy, and soon afterwards was re-elected for the 13th time to head the Interborough Association of Teachers. She was elected chairman of the woman's civic committee and actively campaigned for the re-election of Mayor Hylan. In January 1922, she was appointed to be associate superintendent of

schools, the first woman to hold this post. Mrs. Forsythe had had 29 years of consecutive service in the New York public schools; and because of her unceasing fight to better the condition of her sister-teachers she was known as "the stormy petrel of the schools."

FOX, Richard Kyle, Irish-American patron of sports, editor and publisher: b. Belfast, Ireland, 1846; d. Red Bank, N. J., 14 Nov. 1922. At the age of 12 he became an office boy of *The Banner of Ulster*, a religious journal and a few years later was employed in the office of *The Belfast News Letter*, where he remained 12 years. In 1874, he landed at Castle Garden, New York, with an empty pocket and no friends. Three days after his arrival he obtained work in the office of the *Wall Street Journal* and in 1875 became manager of *The Police Gazette*, then little known. In 1876 he bought an interest in this paper and in 1877 became sole owner. He changed its policy and soon made it the leading sporting publication of the United States. In order to make the paper popular he offered prizes and is said to have disposed of more than \$1,000,000 in this manner. The trophy that was best known was the diamond-studded belt (costing more than \$4,000) emblematic of the world's boxing championship. This was of gold studded with diamonds, rubies, emeralds and sapphires. Jake Kilrain first defended it against Joe Smith in England and John L. Sullivan took it from him at Richburg, Miss. When Sullivan refused to meet Joe McAuliffe, the latter took it from him. Frank Slavin of Australia won it from McAuliffe. Mr. Fox offered belts for middleweights and lightweights, gave medals for sculling, football, shooting, running, wrestling and every branch of the sport. He offered \$25,000 if Sullivan would meet Slavin after the latter had defeated McAuliffe and try to win back the diamond-studded belt; put up \$5,000 of the \$10,000 stakes for which Paddy Ryan fought John L. Sullivan and put up Kilrain's part of the \$20,000 purse for which he and Sullivan fought. Mr. Fox was a favorite with English sportsmen and it was in his light road wagon that the Earl of Lonsdale raced to win a wager of \$30,000 made with Lord Shrewsbury.

FOX FARMS. See BIOLOGICAL SURVEY, UNITED STATES BUREAU OF; FUR FARMS.

FRANCE, a republic of western Europe with an area of 212,659 square miles. Of this area, 5,605 square miles were added as a result of the World War. The districts added consisted of Lower Alsace, Upper Alsace and Lorraine and are now included in the departments of Haut-Rhin, Bas-Rhin and Moselle. The population added by the accession of these departments was 1,709,749.

Population.—At the census of March 1921 there were in France 39,209,766 people, not including 192,973 military and naval forces and crews of the merchant marine abroad. In the same year there were 1,550,449 foreign residents in France. The area and population of the 90 departments are as follows:

The movement of the population for the year 1920 was, for the whole of France, 623,869 marriages, 834,411 living births, 674,621 deaths and 38,641 still-births. In the same year there were 29,156 divorces. On 13 Dec. 1922 the *Journal Officiel* published statistics showing that the nation's births during the first semestre of 1922 exceeded the deaths by only 9,045. The births for the first six months of the year were 316,726, compared to 421,180 during the corresponding period of 1921. The deaths for the first six months of 1922 were 387,681, compared with 348,329 in the corresponding period of 1921. Thus, while the births decreased 25,454, the deaths increased 39,352. This lowers the excess of births over deaths from 72,851 during the first semestre of 1921 to 9,045 for the corresponding period of 1922. Marriages during the same time dropped from 238,195 to 193,454. Divorces decreased also but not in a proportionate difference, the drop being only 260. The population of the chief cities in 1921 was as follows: Paris, 2,906,472; Marseilles, 586,341; Lyons, 561,592; Bordeaux, 267,409; Lille, 200,952; Nantes, 183,704; Toulouse, 175,434; Saint Etienne, 167,967; Strasbourg, 166,767; Nice, 155,839; Le Havre, 163,374; Rouen, 123,712; Roubaix, 113,265; Nancy, 113,226; Toulon 106,331, and Mulhouse, 99,226. Of the population about 56 per cent is rural and 44 urban.

Religion.—Since the passage of the separation Law in 1905 no form of religion is recognized by the state. The churches continue at the disposal of the ministers of religion and their worshippers under certain formalities. Roman Catholicism is the prevailing faith of the people of France. This church has 17 archbishops and 68 bishops and 51,000 clergy of all grades, exclusive of Alsace-Lorraine, Algeria or the French overseas colonies. There are about 1,000,000 Protestants in all France. Those of the Augsburg Confession are governed by a General Consistory and the Reformed Church by a Council of Administration.

Education.—In 1921 there were in France 68,122 primary schools with 102,498 teachers and 3,839,468 pupils. Primary education is free and compulsory from the age of six to that of 13. Secondary education is provided in the Lycees and in communal colleges and in free schools supported by individuals and societies. There are in France and Algeria, exclusive of Alsace-Lorraine, 67,710 pupils in lycees, 32,475 in communal colleges, 45,160 girls in the secondary institutes for girls. For higher education there are the universities, special schools and private faculties. There are 16 universities, many of ancient foundation. These are located at Aix-en-Provence, Besancon, Bordeaux, Caen, Clermont-Ferrand, Dijon, Grenoble, Lille, Lyon, Montpellier, Nancy, Paris, Poitiers, Rennes, Strasbourg and Toulouse. The total number of students in the universities is 29,058. There are 15 faculties of law, nine faculties of medicine, 17 faculties of science, 17 of letters, eight higher pharmacy schools and mixed faculties of medicine and pharmacy, and 15 schools with full functions and preparatory schools of medicine and pharmacy. In 1921 there were 17,376 students of law in state institutions, 11,344 students of medicine, 10,918 students of the sciences,

7,892 students of letters and 2,197 students of pharmacy. There are free faculties at Paris (Institut Catholique de Paris), Angers, Lille, Lyon, Marseilles and Toulouse. In addition there are several institutions of higher learning dependent on the various ministries other than the Ministry of Public Instruction, such as schools of commerce, arts and trades, veterinary schools, forestry schools, the military and naval schools and engineering schools. There are also several technical schools of lower grade dependent on the Ministry of Public Instruction.

Agriculture.—Of the total area of France about 67 per cent is arable and of this fully two-thirds are cultivated or under pasture. In 1921 13,245,000 acres were planted under wheat and yielded 8,784,000 metric tons of wheat; 8,346,000 acres were planted to oats, the yield from which was 3,559,000 metric tons; 2,185,000 acres were planted to rye and yielded 11,302,000 metric tons; 1,662,000 acres were planted to barley and yielded 823,000 metric tons; 271,000 acres were planted under mixed corn and yielded 1,460,000 metric tons; 3,230,000 acres were planted to potatoes and yielded 9,878,000 metric tons. About 250,000 acres were planted with sugar beets, the yield from which was 2,100,000 metric tons. In the same year there were 3,750,000 acres under vines, the output from which amounted to 1,255,000,000 gallons of wine. About 350,000 gallons of cider were produced the same year. Hops were grown on 10,800 acres and yielded 3,044 tons; tobacco was grown on 32,000 acres and the crop was 17,650 tons. Flax was grown on 44,900 acres which produced 6,954 tons of seed and 10,069 tons of fibre. Hemp was planted on 17,400 acres, the crop being 1,524 tons of seed and 5,969 tons of fibre. The yield of millet in 1921 was 11,098 metric tons; of buckwheat 260,683 tons; forage cabbage, 2,692,962 tons; Jerusalem artichokes, 919,763 tons; forage turnips, 1,726,906 tons; distillery beets, 313,704 tons; forage beets, 14,325,987 tons; hay from irrigated lands, 8,322,712 tons; hay from hay meadows, 842,460 tons; hay from green feed pasture, 6,733,399 tons; hay from natural prairies, 13,268,152 tons; beans, 65,024 tons; lentils, 2,872 tons; peas, 12,956 tons, and broad beans, 60,033 tons. The continuous drought of 1921 was reflected in the reduced yields which were in every case below those of the year previous, while they show a falling off of over 50 per cent as compared with 1913, despite the inclusion of the Alsace-Lorraine figures in the returns for 1921. Of table fruits and nuts the yield in 1921 was as follows: Table apples, 144,188 tons; chestnuts, 165,557; olives, 72,613; apricots, 8,344 tons; plums, 14,860 tons; oranges, 983 tons; lemons, 580 tons; raspberries, 647 tons; gooseberries, 1,581 tons; small nuts, 94 tons; truffles, 73 tons; table pears, 52,067 tons; walnuts, 22,201 tons; peaches, 19,511 tons; cherries, 27,476 tons; plums for drying, 6,044 tons; tangerines, 516 tons; strawberries, 7,374 tons; black currants, 1,999 tons; almonds, 7,429 tons, and figs, 2,241 tons.

The French wheat crop for 1922 was estimated at 235,000,000 bushels, or 73 per cent of the crop of 1913; the spelt crop was 4,500,000 bushels, or 80 per cent of that of 1913; the rye crop 34,400,000, or 70 per cent; barley 39,500,000,

or 82 per cent; and oats 288,000,000 bushels, or 80 per cent of the 1913 crop. The normal French pre-war production of wheat was about 325,000,000 bushels the normal consumption 340,000,000 to 345,000,000. The shortage in 1922 (requirement production) was somewhat over 100,000,000 bushels. Due to the fact that the harvest was one month late, provision had to be made for only 11 months before the next expected harvest. This fact indicated a saving of over 22,000,000 bushels. A further saving of 14,000,000 bushels was expected as a result of the long milling regulations, or a total saving of 36,000,000 bushels. Wet weather, however, injured the crop to the extent of 14,000,000 bushels, and the net saving was, therefore, only 22,000,000 bushels, thus making it necessary for France to import over 80,000,000 bushels. As noted above, not only is the wheat crop short, but the other grain crops are also short when compared to the normal pre-war production. Compared with 1921 the barley crop is about the same, while oats show an increased production of 43,000,000 bushels. The decreased production of the 1922 crop as compared with 1913 is largely due to the decreased acreage which was the result of the shortage of farm labor and the decline in the price of wheat which fell from 100 francs per 100 kilos on 1 Aug. 1921 to 70 francs in March 1922.

Coal Production.—The production of coal in 1921 reached 28,240,887 tons, to which must be added 735,608 tons of lignite, making a grand total of 28,976,495 tons as compared with an annual average of 40,000,000 tons prior to the war. France imported 22,044,591 tons of coal in 1921 and exported 2,313,265 tons, leaving the figure of French coal consumption at 48,707,821 tons. The consumption in 1921 was 6,000,000 tons less than in 1920 which is striking evidence of the industrial crisis through which the country passed in 1921. The unusually heavy exports of coal in 1921 were due principally to shipments to Great Britain during the strike of the British miners.

Other Mining Products.—The iron resources of France were estimated at 3,300,000,000 metric tons before the war, or 300,000,000 tons less than Germany and 2,000,000,000 tons greater than England. The discovery of new basins since 1910 has brought the estimate of French deposits up to something between 3,800,000,000 and 4,100,000,000 metric tons. Owing to the recovery of the Lorraine basins, the total iron resources of France at the present time (aside from the new mines discovered) are 5,500,000,000 metric tons and those of Germany, 1,270,000,000 tons. The exploitable iron-ore deposits of Algeria and Tunis are estimated at 100,000,000 to 150,000,000 metric tons. During the year 1922, 16,667,900 metric tons of iron ore were mined in France, as compared with 14,106,068 metric tons in 1921, and 13,846,122 metric tons in 1920. In 1913 French iron-ore production amounted to 21,917,870 metric tons, to which amount should be added 21,136,265 metric tons produced in the Metz-Thionville basin, which was German at the time. The 1921 output represents only about one-third of the production realized in 1913 within the present boundaries of France. The table below shows a

comparison of the iron-ore production of the principal regions for the years 1920 and 1921 (given in metric tons).

REGIONS	1920	1921	Per cent of increase (+) or decrease (—)
Lorraine:	<i>Tons</i>	<i>Tons</i>	
Metz-Thionville..	8,074,989	7,816,674	—4
Briey.....	3,466,388	4,033,697	+16
Longwy.....	666,797	789,159	+18
Nancy.....	839,180	605,644	—28
Normandy.....	357,200	511,923	+43
Anjou, Brittany.....	119,984	147,438	+22
Pyrenees.....	213,782	115,967	—46
Other regions.....	107,802	85,566	—21
Total.....	13,846,122	14,106,068	+1.8

Lead, silver and zinc were also mined to the extent of 30,000 tons, copper and tin to the extent of 1,000 tons. Other minerals were gold, manganese and antimony. Potash was produced in Alsace to the amount of 1,000,000 tons.

Commerce.—The year 1921 was one of economic crisis. In 1921 the foreign trade of France, exclusive of gold, silver, bullion and the baser coins, reached 45,101,574,000 francs (\$3,340,857,300 at 13.50 francs to the dollar), compared with 76,799,835,000 francs (\$5,296,540,300 at 14.50 francs to the dollar) in 1920 and 15,301,549,000 francs (\$2,953,198,900 at 5.18 francs to the dollar) in 1913. Imports in 1921 amounted to 23,548,473,000 (\$1,744,331,300), against 49,904,897,000 francs (\$3,441,717,000) in 1920; while the value of exports was 21,553,101,000 francs (\$1,596,526,000) in 1921 compared with 26,894,938,000 francs (\$1,854,823,300) in 1920. The United States Department of Commerce furnishes the following statistics of French trade (exclusive of specie and bullion), by principal countries of origin and destination, during 1913, 1920 and 1921:

FRENCH IMPORTS AND EXPORTS, BY COUNTRIES.

COUNTRIES OF ORIGIN OR DESTINATION	1913	1920	1921
IMPORTS			
United States.....	\$172,685,200	\$749,386,300	\$265,317,700
Great Britain.....	215,221,200	811,599,500	234,561,900
Germany.....	206,278,400	183,997,500	183,440,400
Belgium.....	107,361,500	229,343,700	132,839,800
Argentina.....	71,268,700	206,323,200	61,694,400

Other.....	240,791,600	459,721,200	362,900,300
Total exports.....	\$1,327,881,900	\$1,854,823,300	\$1,596,526,000

French foreign commerce statistics for the year 1922 show a grand total of 20,642,000,000 francs for exports and 23,900,000,000 francs for imports. Of the exports Great Britain took 3,855,538,000 francs; Belgium 3,795,098,000 francs, and the United States, 1,972,689,000 francs. Imports to the value of 3,853,618,000 francs came from the United States; and 1,229,036,000 francs from Germany.

Shipping Statistics.—According to the French official statistics, during 1921, 7,776 loaded French vessels of 8,595,738 tons register and 15,144 vessels of other nationalities, registering 18,702,817 tons, arrived in French ports, as compared with 8,021 French vessels of 7,426,723 tons register and 23,741 foreign vessels of 21,363,676 tons arriving during 1920.

Vessels clearing from French ports during 1921 numbered 6,122 French of 6,745,905 tons register and 11,631 foreign of 14,880,560 tons, as compared with 5,701 French of 5,291,395 tons and 11,623 foreign of 11,655,630 tons in 1920. Taking the arrivals and clearances of loaded French and foreign vessels together, the total of French shipping in 1921 was 40,673 vessels of 48,925,020 tons register, as compared with 49,086 vessels of 45,737,424 tons in 1920.

Merchandise loaded and discharged in the ports of France in 1921 mounted to 27,210,838 metric tons, contrasted with 42,218,504 metric tons in 1913.

Finance, Banking and Credit.—The year 1921 was for France, as throughout the world, one of financial depression, the sequence not unexpected, of the inflated boom of 1920. Manufacturers were overstocked with raw materials purchased for the 1920 expansion, prices fell rapidly and it was necessary to use up surplus stocks, generally at a loss, before business could rise again on a more solid foundation. It is probable that the great absorption of available capital in the work of reconstruction and for the liquidation of the cost of the war during 1919 and 1920 had an indirect effect of benefit

to France during 1921, by hindering the industrial overexpansion so prevalent in other countries.
